Appendix

The Port of Baltimore

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31, 1956

Mr. BUTLER. Mr. President, the Port of Baltimore is a vital and important asset to the people of Maryland, and the activities of this great port facility have once again been interestingly portrayed by the able maritime editor of the Baltimore Sun, Miss Helen Delich, in her recent article entitled "A Day in the Port of Baltimore." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A DAY IN THE PORT OF BALTIMORE

A day in the port of Baltimore has no beginning, no end.

Like world commerce, it flows continuously, sometimes in high tempo, sometimes in low. At night the port's activity slows, in the small hours, but the noises of work go on in the glare of floodlights. One familiar with the port's routine may tell the time by movements of men and boats. One familiar movement opens the following chronicle of a busy day in one of the world's greatest ports:

Mornings, about 5 o'clock, cold and dark in January, two big tugs, the *C. Stewart Lee* and the *Holland*, each 100 feet long, suddenly come alive. Their deck lights blazing, they back out from upper-harbor berths as the captains sound two warning blasts on the whistles.

The boats are headed for their tour of duty in a harbor that has been busy all night. Big freighters have been nudged into or away from piers as loading or unloading has gone on in the glare of floodlights. Ships have been arriving all night from Cape Henry or the Chesapeake and Delaware Canal, and the weatherbeaten little pilot boat, *Hi-Jack*, has been busy picking up pilots as they climbed down Jacob's ladders of the incoming ships.

In midharbor the lights gleam on the great dredge *Maryland*. She has been dredging in the channel all night. In the distance brilliant flares of orange-colored light are signs that molten buckets of steel are being poured at the mills on Sparrows Point. Bright flames burn gases at the big oil refinery and there is a whiff of sulfur in the cold air as several other plants make sulfuric acid.

Specific mission of the two tugs in this early morning scene is the usual chore. The speedy *C. Stewart Lee* is to take in tow the supertanker *Esso Santos*, fresh out of Amuay Bay, Venezuela, with a cargo of oil. The spanking-new *Holland* is to pick up the loaded iron-ore carrier *Marore*, out of Seven Islands, Quebec.

On this day, like most others, 20 ocean-going ships will arrive or depart, at all hours around the clock. And another 40 vessels will either be tied up at the piers, or in shipyards undergoing repairs.

At the piers the port will handle 30,000 tons of ore, 50,000 tons of coal for domestic and foreign use, and 1,200,000 bushels of grain. All this in addition to other shiploads of cargo. All told, it is enough to give employment directly to 90,000 persons in the Baltimore area, and indirectly to 400,000 throughout the State.

Soon after the city hall clock strikes 5, tugboat activity increases and the general tempo of the harbor steps up. Among the first offices to open is that of Mike Cataneo who, for years, has made a good business of sending men to piers to catch the tieup lines thrown over from ships. The radio-telephone in his office begins to bark as ships call for linemen. Here are samples:

"*Havmoy* leaves pier 6, Locust Point, at 6 o'clock for Key Highway."

"*Lualaba* docks pier 1, Pennsy, at 5:45."

At about 5:30 the port's two major ship-repair yards step up their activity. At one, the Bethlehem-Key Highway upper yard, the big drydock is lowered. Water rushes up over the pontoons and keel blocks and around the massive hull of the supertanker, *Atlantic Engineer*, which has been in the dock for 6 days having some of her bottom plates replaced. At the Maryland Shipbuilding & Drydock Co., the Honduran freighter, *Augusta*, is set afloat in the same manner after an overnight drying out and routine voyage repairs.

The 2 companies have 10 drydocking facilities, said to be among the finest in the world. They are almost continuously busy. At the Key Highway yard, the Norwegian *Havmoy* is pushed into a dock to undergo minor repairs. At another dock the American passenger-freighter, *African Endeavor*, is raised to check her bottom for damage. She had recently run aground. And the Bull Line freighter, *Edith*, is drydocked for major repairs. She had smashed her bow in a collision in Delaware River.

As these operations go on, the *Lualaba* is inching into Pennsylvania pier 1, where trucks are to drive right down to the end of the pier to pick up general cargo, such as bales of hemp rope, cases of Chianti wine, degelatinized bone meal, aluminum scrap, and toys.

When the loading of heavy machinery aboard the *Lualaba* begins some hours later, rail cars will be run alongside of her for direct loading. Like all general-cargo piers in the port, this one has railroad tracks on the pier aprons right beside ships. Cargo can thus be loaded or unloaded directly from one to the other.

At 6 o'clock on this morning the Maritime Exchange opens. Its first act is to record the arrival of 10 ships during the night. Next it finds out what ships will arrive or leave during the day.

At about the same time the United States Public Health Service doctor, accompanied by the rat inspector, boards his launch at Hawkins Point. They head for the quarantine anchorage, where the Swedish ore carrier, *Raunala*, is flying her yellow flag. It means: "We are from a foreign port and need quarantine clearance before docking."

A for-hire launch bounces out to the stand-by anchorage with crew members of the various ships who have been ashore all night. As soon as all are aboard, the freighter *Patapsco River* heads for the Curtis Bay coal pier to load 10,000 tons for Britain. On the other side of the pier the *Harold T. Andrews* is loading 10,000 tons for Japan.

The port's four coal-loading berths have exported as much as 10 million tons in a single year—in addition to handling many millions more for domestic use.

By 7 o'clock longshoreman's union halls along Clinton, Hull, and Thames streets are jammed with men awaiting assignment for the day's work, though they don't have to report to their assignments until 8 o'clock. Within a few minutes the loudspeakers begin to blare the names of foremen, the number of men they will need and where they are to work.

Al Davis with 20 men at five, Port Covington, for Atlantic and Gulf. Philip with 20 at 3, Locust Point, for Loran. "Beefstew" and J. Scott with 10 each at Cottmans. As they are called men begin to stir, shape into gangs, and leave for their assignments.

And in the harbor the ship chandlers are busy. They begin solicitation on the *Johannes Maersk* as soon as her gangway is lowered at pier 10, Canton Railroad. They sell supplies to the vessel which runs regularly to the Far East with tobacco from Calvert and St. Marys Counties. The ship also carries Ohio tinplate to Manila and Baltimore broom-making machines to Hong Kong.

From now on tempo of the port goes into high gear. Molasses from Ciudad Trujillo is pumped from the Norwegian *Rogn* through hoses and pipes to the giant tanks at Port Covington. At pier 9, Locust Point, dried cherries, wine, and vermouth from Marseille are unloaded from the *Exiria* of the American Export Lines. Straining winches of the Cuban *Bahia de Nipe* unload sacks of raw sugar to be processed at the American Sugar Refinery.

Cork from Spain is being discharged from *Polyphemus* for the Crown Cork & Seal Co. The *Mormacpine*, direct from Santos, Brazil, with a cargo of coffee arrives in the quarantine anchorage. Her captain hopes to get clearance so she can be ready to start discharging at 1 p. m. at the coffee pier, 1 Pennsylvania.

About midmorning the Maryland pilots' dispatcher, Joseph Ignatowski, telephones from the pilot's office on the Recreation Pier to Norfolk to ask how many ships are likely to come up from Hampton Roads this day. He makes about 20 calls a day also to New York, Philadelphia, Chesapeake City and the Maryland pilot boat at Cape Henry to check on incoming vessels and to report in turn on ships leaving Baltimore, giving their destinations. It is important that no ships be kept waiting for a pilot at either entrance to the port, the Chesapeake and Delaware Canal or the Capes.

Though noon is lunch time for longshoremen, work does not stop. During the half-hour when lunch boxes are opened, tugs switch empty lighters and put loaded ones in their places, and railroad crews do the same with cars on piers.

At 2 in the afternoon tugboat crews change. Those who started work early in the morning take their boats back to their respective piers to turn them over to the night men. The crews alternate weekly on the night and day shifts.

Three in the afternoon is an important hour of decision in the port of Balti-

INFORMATION
GPO

more. It is then that stevedoring companies determine whether to work overtime that night, how much longer it may take to load or unload a ship, and they make an estimate of how many longshoremen will be needed the next day.

And from 3 o'clock on, sailings out of the port mount rapidly. Masters of ships headed for New York, Philadelphia, or Norfolk want their vessels to be on hand promptly the next morning so loading or unloading can start without delay. Paying longshoremen while they wait for a ship to arrive is expensive. An owner says he makes money only while his ship is under way—and never while she is in port.

Union halls are open, too, at 3 and after to take work orders for the next day and to send gangs for night work on ships whose captains are anxious to finish loading or unloading late and sail at midnight or in the wee hours of the morning.

As darkness falls on the port, about 5 p. m. in midwinter, night mates and night engineers report to relieve officers on American-flag ships during their stay in port. Gangway guards, pier watchmen, port patrolmen, and police-boat crews have already been switched for the night.

And nightworking gangs of longshoremen amble up ships' gangways with their hooks, crowbars, and cables over their shoulders. In the darkness the looming bulk of the *African Endeavor* is floated out of drydock. She went in earlier in the day to have her bottom checked for damage after running aground. Her place was taken in the dock by the freighter *Kristina Thorden*, in need of routine repairs.

At 5:30 the molasses-carrying *Athelbeach* arrives. It is half an hour before closing time for quarantine authorities. But officials, including immigration and customs inspectors, are standing by to give her quick clearance so she can discharge her liquid cargo during the night at the United States Industrial Alcohol Pier.

Before 6 the *Four-Ace Excalibur* finishes discharging her cargo at Locust Point. She can now take advantage of the night and sail up to New York through the Chesapeake and Delaware Canals, and be there in time to start loading at 1 p. m. the following day. Her cargo was left on the pier overnight for loading into boxcars or trucks. It is an odd assortment of goods—garlic, marble ware, silk tissues, gloves, metal and silverware, Aleppo wool, carpets, copperware, strawhats, Gorgonzola cheese, laurel leaves, olive oil, sheep casings for sausages, mavrodaphne wine, and eggplants. Much of it is bound for the Midwest.

Until 7 o'clock the port is as busy as it usually is in the early morning. Tugs, line catchers, and the little pilot boats rush busily to and from ships and piers as arriving ships tie up and others sail.

As the tempo slows a little later, two radar-equipped tugs are a part of the port's all-night activity. They tow barges of limestone between Port Covington and the Bethlehem Steel plant.

After dark the beltline railroad around the harbor comes to life, as the Pennsylvania, Baltimore and Ohio, Western Maryland, and Canton railroads exchange cars. The city does not permit their operation in the daytime on tracks along busy Key Highway and Pratt Street. Exchange of cars is necessary because some freight brought in over the B. & O. might be scheduled for a ship loading on the Canton road's side of the harbor, and vice versa.

The night operator of WMH, city-owned marine radio station, is relieved at midnight. His relief carries the vigil on for another 8 hours. The station "ears" are tuned in on ships' radios.

Though the port is busy al night, activity slows in the early yours. The shrill sounds of winches, whistles are muted, and in the cold dark one may catch snatches of song and music as ships' crews enjoy themselves.

All night Coast Guard picket boats cruise every part of the harbor, their crews keeping a watchful eye on the security of the port and looking for slicks of bilge oil. It is against the law for ships to pump bilge into the harbor.

The port has still another night patrol. Special officers and customs inspectors in plain clothes prowl the piers and nearby streets, looking for smugglers of narcotics or other goods.

Long-distance calls from every part of the country come all night to the dispatcher in the pilot office from relatives of seamen.

Thus it goes around the clock. A great port attuned to world commerce never sleeps.

Forced Repatriation

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks, I include a letter which appeared in the New York Times on January 26, 1956, urging approval of House Resolution 137, introduced by me on February 8, 1955.

Interest in this resolution is mounting, and it is my hope that the Committee on Rules will see fit to report it to the House at an early date.

The letter follows:

FORCED REPATRIATION—CONGRESSIONAL INVESTIGATION URGED INTO PROGRAM OF OUR AUTHORITIES

To the EDITOR OF THE NEW YORK TIMES:

The undersigned deem it appropriate to call the American people's attention at the start of the second session of the 84th Congress to House Resolution 137, which was introduced by Congressman ALBERT H. BOSCH, of New York, on February 8.

House Resolution 137 calls for the creation of a select committee, authorized and directed to conduct an investigation of the forced repatriation of millions of anti-Communist prisoners of war and "liberated" civilians as carried out by our military and civilian authorities in the years 1945–47 in Germany as well as in other countries. The select committee shall also be authorized to fix the responsibility for the forced repatriation program.

REASONS OUTLINED

Congressman BOSCH has, in the preamble of House Resolution 137, enumerated the reasons which primarily induced him to introduce it on the floor of the House. These reasons may be summarized as follows:

That the forced repatriation of millions of anti-Communists to Soviet-controlled countries brought death and misery to untold thousands who were shot, hanged, or died in the Siberian slave labor camps.

That the forced repatriation of anti-Communist prisoners of war as well as of liberated civilians cannot be justified by the Yalta agreement of February 11, 1945.

That forced repatriation was also in violation of our own Department of State's rulings in implementation of the Yalta agreement, as released by the Department of State on March 8, 1946.

That the forced repatriation of those prisoners of war who were Soviet citizens and who had enlisted in the enemy's army was in complete contradiction to the opinions of the Judge Advocate General of the Army, as repeatedly expressed during the last 40 years.

That this forced repatriation represents an indelible blot on the American tradition of ready asylum for political exiles.

That forced repatriation, and therefore annihilation of millions of anti-Communist Russians, Ukrainians, Poles, Hungarians, Balts, and of anti-Communists of other origin, is still poisoning our spiritual relations to the vigorously anti-Communist peoples behind the Iron Curtain. This constitutes—according to Congressman BOSCH—a serious impediment of our present foreign policy.

FOR QUICK ACTION

The undersigned are agreed upon the validity of all of Congressman BOSCH's motives for the introduction of House Resolution 137. Therefore, they consider House Resolution 137—especially from an ethical point of view—as one of the most significant resolutions ever introduced in the American Congress. They believe that a congressional investigation of forced repatriation is no more than a token payment on a debt of honor, owed by the American people to all freedom-loving peoples behind the Iron Curtain. They desire to express publicly their deep interest in the issue and their hope that Congress will now act upon House Resolution 137 as soon as possible.

Unless our Nation takes a firm, unequivocal stand against forcible repatriation to Communist countries, our honor will be seriously damaged in the eyes of the free world.

William F. Buckley, Jr., James Burnham, Julius Epstein, Arthur Bliss Lane, Isaac Don Levine, Sol M. Levitas, Eugene Lyons, Patrick F. Scanlan, William S. Schlamm.

NEW YORK, *January 23, 1956.*

Federal Aid to and Control of Education

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. GWINN. Mr. Speaker, this Congress is being opportuned to take one more step along the road to socialism by enacting a bill which will place the Federal Government as the overall controlling hand in the direction of the public schools of the United States.

There is presently pending before the powerful Rules Committee of the House of Representatives a motion for a rule to bring to the floor of the House of Representatives for debate the bill, H. R. 7535, introduced in Congress by Representative AUGUSTINE B. KELLEY, Democrat of Pennsylvania's 21st District. Among other features the Kelley bill would provide annual grants for the building of schoolhouses in the States in the total amount of $1,600,000,000 spread over a 4-year period. Thus the amount for fiscal 1957 would be $400 million.

On the basis of the amount in revenues contributed by the several States in fiscal 1954, and on the basis of the number of children in each State of school age, that is, from 5 to 17 years of age, every State would contribute to the program, but the returns would vary greatly.

J11 R5 2d set

For example, six industrial States in the North would contribute 57.654 percent of the Federal funds which would be distributed and would get back only 35.747 percent. Graphically, what each State would contribute to the program and get back is shown by the table following:

Contributions to and returns from the $400,000,000

State	Puts in percent	Puts in dollars	Takes out dollars
California	7.620	$30,480,000	$27,545,819
Illinois	8.228	32,912,000	20,247,262
Michigan	8.711	34,844,000	17,058,887
New York	18.749	74,996,000	32,794,708
Ohio	6.734	26,936,000	20,236,416
Pennsylvania	7.612	30,448,000	25,105,737
Total	57.654	230,616,000	142,988,829

By subtracting the take from the put, the 6 States shown above will contribute $87,627,171 each year for 4 years or a total of $350,508,684 to help other States build classrooms for the children attending the public elementary and secondary schools.

By contrast to the contributions of the 6 northern industrial States the State of Mississippi with a per capita personal income of but $873 in 1954 would contribute $800,000 toward the program and get back $6,506,886 which is better than an 8 to 1 return. Notwithstanding this favorable return the people of Mississippi generally reject the idea of Federal aid and Federal control over their public schools.

Indeed, in recent years a committee of the Mississippi Legislature investigated and rejected the whole idea of Federal aid to education. Yet this proposed bill literally would force the State to take it whether they wanted it or not.

To show the utter ridiculousness of this scheme to distribute Federal tax money all over the 48 States and our outlying possessions I am appending hereto 2 tables.

Table I shows the percent of income payments to individuals spent in the school year 1953–54 by States:

TABLE I.—*Percent of income spent for current educational expenses by States*

[Public elementary and secondary schools]

[Percent of income payments to individuals for the calendar year 1953 used for current expenses of public elementary and secondary schools]

State	Percent of income spent on current expenses	Rank
Alabama	2.92	18
Arizona	3.14	13
Arkansas	2.49	29–30
California	2.87	19
Colorado	2.76	21
Connecticut	1.90	47
Delaware	1.96	45–46
Florida	2.57	26
Georgia	2.61	25
Idaho	3.18	12
Illinois	2.04	43
Indiana	2.26	33
Iowa	3.34	7
Kansas	2.77	20
Kentucky	2.14	40
Louisiana	3.12	14
Maine	2.25	34
Maryland	2.24	35–36
Massachusetts	1.88	48
Michigan	2.19	37–38
Minnesota	3.24	10–11
Mississippi	3.00	16
Missouri	2.07	42
Montana	3.45	6
Nebraska	2.66	24
Nevada	2.16	39
New Hampshire	2.41	31
New Jersey	2.30	32
New Mexico	3.90	2
New York	2.12	41
North Carolina	3.08	15
North Dakota	3.61	4
Ohio	1.98	44
Oklahoma	3.24	10–11
Oregon	3.25	9
Pennsylvania	2.19	37–38
Rhode Island	1.96	45–46
South Carolina	3.32	8
South Dakota	3.49	5
Tennessee	2.49	29–30
Texas	2.56	27
Utah	3.75	3
Vermont	2.75	22
Virginia	2.51	28
Washington	2.74	23
West Virginia	2.97	17
Wisconsin	2.24	35–36
Wyoming	3.99	1
United States	2.43	

Table 2 shows the relative amount put into the $400 million annual fund and the amounts each State would take back if the bill is enacted into law.

This compilation refers specifically to H. R. 7535, the Kelley bill, which provides grants up to $400 million for each of the next 4 fiscal years for schoolhouse construction in the States, making a total possible expenditure of $1,600,000,000 in the 4-year period under title I of the Kelley bill. The table following has been compiled from the official Bureau of Internal Revenue report on collections from the States for the fiscal year 1954. This compilation shows the percent of revenue collected in each State in fiscal 1954, the relative amount of dollars each State will have to contribute to a $400 million fund in fiscal 1956 for grants to the States, and the amount which will be returned to each State as grants-in-aid for schoolhouse construction. This compilation is accurate within one-half of 1 percent.

State	Percent contributed	Dollars they will put in	Dollars they will take out
Alabama	0.542	$2,172,000	$8,968,658
Arizona	.232	928,000	2,537,686
Arkansas	.226	904,000	5,313,957
California	7.620	30,480,000	27,545,819
Colorado	.897	3,588,000	3,611,322
Connecticut	1.841	7,364,000	4,782,562
Delaware	1.288	5,152,000	835,050
Florida	.967	3,868,000	7,623,902
Georgia	1.002	4,008,000	10,237,501
Idaho	.153	612,000	1,691,790
Illinois	8.228	32,912,000	20,247,262
Indiana	2.287	9,148,000	10,226,657
Iowa	.755	3,020,000	6,420,128
Kansas	.719	2,876,000	4,750,027
Kentucky	1.900	7,600,000	8,317,970
Louisiana	.774	3,096,000	8,090,229
Maine	.244	976,000	2,244,876
Maryland [1]	2.726	10,904,000	16,202,148
Massachusetts	2.719	$10,876,000	$10,573,691
Michigan	8.711	34,844,000	17,058,887
Minnesota	1.516	6,064,000	7,699,816
Mississippi	.200	800,000	6,506,886
Missouri	2.532	10,128,000	9,174,710

Washington [1]	1.184	4,736,000	6,355,059
West Virginia	.419	1,676,000	5,747,750
Wisconsin	1.857	7,428,000	8,740,918
Wyoming	.081	324,000	780,826
Hawaii	.194	776,000	1,409,825
Possessions			422,000
Total	99.656	398,664,000	400,000,000

[1] Compilation for Maryland includes District of Columbia and Puerto Rico, while that for Washington State includes Alaska. The possessions are American Samoa, Canal Zone, Guam, and Virgin Islands.

The Pacific War Veterans Speak

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. BURDICK. Mr. Speaker, I desire to place before the American people a policy statement of the national commander of the Pacific War Veterans of America. The veterans who have defended us have a right to be heard.

The statement follows:

STATEMENT OF JOHN V. ABERNETHY, OF NEWTON, N. C., NATIONAL COMMANDER OF THE PACIFIC WAR VETERANS OF AMERICA, JANUARY 26, 1956

"You cannot conquer the enemy abroad without first disposing of his ministers at home" warned wise old Demosthenes. That is true in our country today. The Constitution and most everything for which the veteran fought are in mortal danger, and it is time for every pro-American veteran to get tough. Indeed the hour is late.

Totalitarianism, communism, alien-born socialism, wild-eyed one-worldism, and vicious liberalism, are gnawing at our vitals. They seek to, and do, breed confusion in their planned strategy to divide and conquer. I announce, therefore, that this organization has gone to war with every "ism" except Americanism.

What are the objectives of the "isimites"? The handwriting is on the wall. Their first target is—as they often boast—to wipe out the last vestige of States rights through the instrumentality of the United States Supreme Court, and many, or most, of the "isimites" would supplant our Anglo-Saxon founded government with a one-world totalitarian dictatorship. I submit, therefore, that every pro-American veteran has his work cut out for him. He must make endless war upon:

Red professors and pink teachers; tainted textbooks in every public institution of learning; fellow-traveling ministers; usurped powers of the Supreme Court and Supreme Court-made law; circumvention of the Constitution by Federal regulatory boards and commissions; enforced racial integration; nullification of the immigration laws; alien inspired control of the mails; the subtle undermining of the Constitution by the United Nations which is a fraud and a failure; entangling and unlawful executive agreements, and reckless foreign aid programs.

Not one dime should be appropriated for foreign aid—if indeed, such appropriations are lawful—while a single worthy veteran, or a veteran's dependents, are in need. It is a matter of common knowledge that literally thousands of sick veterans are being denied Veterans' Administration medical care while VA hospitals are being closed in the name of economy—all this when it is proposed to legislate a 10-year foreign aid program.

I call upon Gen. Omar N. Bradley, Chairman of the President's Commission on Veterans Pensions, to submit the Commission report and clear the air. If there are good reasons for further delay, let the general release a progress report. The $64 question in every veteran's mind is: Will this Commission be used as a device to defeat veteran legislation or to stall it?

The Pacific War Veterans of America is mindful that in grateful recognition of their sacrifices, the Congress from our very beginning as a nation has legislated service pensions for the aged veterans of all wars through the Spanish-American War, and we are happy to join forces with our comrades of World War I in sponsoring just legislation in their behalf.

The Honorable Albert Gallatin

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement that concerns an eminent American gentleman of Swiss descent, the Honorable Albert Gallatin:

The celebration on January 29 of America's second Secretary of the Treasury, Albert Gallatin, provides an occasion for remembering this great Swiss-American who was born in Geneva in 1761 and came to this country 19 years later.

Like so many other foreign-born Americans, Gallatin contributed greatly to the development of his adopted land. As the founder of the House Ways and Means Committee, he proved himself one of the ablest Congressmen of his time.

Remembering him gives rise to the thought of the splendid relations that have prevailed between the land of his birth and his adopted country for almost 200 years.

This cordial relationship has proved beneficial in many ways but it is of special interest to note, here, that my State of Illinois profited in 1954 to the extent of nearly $10 million in sales to Switzerland, to rank as one of the leaders among the 48 States.

In this regard, I would ask permission to insert in the CONGRESSIONAL RECORD a clipping from the Chicago Tribune of January 9, showing the advantages of a liberal trade policy in dealing with America's best cash customer in Europe.

Our Trade With Friendly Switzerland

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the Press Intelligence, Inc., regarding our trade with friendly Switzerland:

SWISS SPEND $190 MILLION IN UNITED STATES EACH YEAR—THEY'RE OUR BEST CASH CUSTOMER IN EUROPE

WASHINGTON, January 8.—Switzerland is America's best cash customer in Europe. The Swiss buy more than they sell to this country.

Since the end of World War II the Swiss have purchased a half billion dollars more from the United States than this country has purchased from Switzerland.

Watches account for more than half of Swiss commodity exports to the United States. This fact has promoted the American watch industry to sound warnings that if the American precision industry should be wiped out by this competition, the United States might face a serious crisis in the event of war.

AMOUNT BY STATES

In 1935, during the depression period, American products sold to Switzerland totaled $7.4 million. In the years since exports have climbed sharply. In 1947 they hit a peak of $190 million. In 1954 the total was $150 million.

Since the Swiss have habitually bought more from the United States than they have sent here, the United States has amassed a trade surplus of nearly a half billion dollars since the end of the war.

Switzerland has made purchases in every 1 of the 48 States. The purchases fron States in the Chicagoland area are as follows:

Illinois	$9,612,000
Indiana	5,234,000
Iowa	1,969,000
Michigan	13,440,000
Wisconsin	2,899,000

LIST AMERICAN SALES

The major American export products to Switzerland are as follows:

Automobiles	$9,120,165
Chemicals	7,207,768
Copper ore	6,564,380
Cotton	7,155,399
Electricals	3,811,709
Fruits, vegetables	6,246,045
Furs	4,349,651
Metal goods	2,144,469
Nuts	4,401,433
Steel products	10,495,020
Synthetic fibers	9,699,466
Tobacco	9,763,842

Switzerland has received no economic aid from the United States.

Our System of Electing a President Should Be Reformed

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. ANFUSO. Mr. Speaker, the Washington Daily News, the New York World-Telegram and Sun, and other Scripps-Howard newspapers recently published a most interesting series of three articles dealing with the electoral college and our antique system of electing a President. The series was ably written by Mr. Charles Lucey, a staff writer of these newspapers and a noted journalist and student of American politics.

The primary objection that I have to the electoral college system is that millions of voters throughout the country are disfranchised at each presidential election. On several occasions in our history men were elected to the office of President without receiving the majority of the popular vote but they succeeded in getting a sufficient number of electoral votes in the electoral college. Under such a system, how can we truly say that the President is elected by the people?

I favor the direct way of choosing all elected officials of our country, from the President on down. I firmly believe that the electoral college should be abolished and a new and more democratic system should be substituted. In the near future, I hope to introduce a bill advocating a plan along these lines.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the series of three articles by Charles Lucey, which are as follows:

[From the Washington Daily News of January 23, 1956]

ELECTORAL COLLEGE SYSTEM THWARTS WILL OF AMERICAN VOTERS

(By Charles Lucey)

Congress will begin debate soon on proposals for a basic change in the most important step in the American political process—the election of a President.

The object of reform is the electoral college system which each four years gobbles up millions of votes cast nationwide for the Presidency and translates them into electoral votes.

Political sages have brooded 150 years about this. The electoral college is only a rubber stamp; in fact it elects no one and it is too decrepit to be collegiate. Its usefulness ended even before there were torchlight parades and hard-cider campaigns.

Change is needed because the present electoral college machinery does not reflect the people's will accurately.

It thwarts that will.

It actually disfranchises millions and, in effect, counts their votes not for the man they voted for but for the man they opposed.

Proposals before Congress now would amend the Constitution so the antiquated system of electing a President can be revised to make democracy work better.

GOAL

Simply, the goal is to end the unit-rule, or winner-take-all, system of apportioning each State's electoral vote and to divide the electoral vote among candidates more nearly according to their popular vote.

If the American people knew the basic unfairness of the outmoded electoral system—if they knew that, in effect, millions lose the vote they cast for the presidency—they almost certainly would do something about it.

Political students long have seen and acknowledged the existing flaws. But because the system is so complex—hard to understand and explain—the popular sentiment necessary to reform has been difficult to generate.

Only 50 to 60 percent of the total popular vote for President ordinarily has real effect.

In 1952 Dwight Eisenhower received 34 million votes and Adlai Stevenson 27,300,000. Mr. Eisenhower had 55 percent; Mr. Stevenson 44.4 percent. Yet Mr. Stevenson got only 89 electoral votes to Mr. Eisenhower's 442.

Only 3,200,000 Stevenson votes were effective—less than 12 percent—in winning electoral votes for him.

In 1948 Harry Truman's nearly 3 million votes in New York counted for Thomas E. Dewey, who got the State's total 45 electoral votes. But in Illinois nearly 2 million Dewey votes went into the electoral vote for Mr. Truman.

FOUR PROPOSALS

Today four different proposals are before Congress to change this electoral system. The Senate leadership is ready to bring the issue to the floor if proponents can work out a compromise with a fair chance of acceptance. To amend the Constitution takes a two-third vote in both Senate and House, then a ratification by 36 of the 48 State legislatures.

None of the proposals would affect this year's presidential election.

To understand the need for reform, it is important to trace the development of the electoral college.

When the Founding Fathers wrote the Constitution they scarcely thought in terms of today's brand of democracy. There was limited faith in the ordinary citizen's ability to vote wisely. Constitutional Convention delegates were chary of giving one and all a shot at the ballot box.

"It was as natural," said Virginia's George Mason, "to refer the choice of a proper character for Chief Magistrate to the people as it would be to refer a trial of colors to a blind man."

Popular election proposals got nowhere. The Convention voted first to give Congress power to choose the President—and then changed its mind. But there was insistence on interposing some kind of election mechanism between the masses and the President. The final choice was to let States choose as electors well-informed men who in turn would choose a President.

The States could do this as they wished. Legislatures could name electors or they could be chosen by districts or on State-wide tickets standing in block for one party or one candidate—the method used today.

It didn't take long for State political leaders to see they'd have more influence nationally if they could wield a whole State block of electoral votes than if the votes were split among candidates. Out of this grew today's winner-take-all system by which the candidate who gets the most votes in the State—by no matter how thin a margin—takes the State's total electoral vote.

There is a wide field for mischief in this museum piece. Electors actually could ignore the vote in their States and go their own way—and in a close election with the pressures great they might do just that. In 1948 a Tennessee elector ran on both Democratic and States rights slates, then cast his vote for States-Righter STROM THURMOND instead of Harry Truman despite the fact the State went for Mr. Truman.

It wasn't important—but conceivably it could happen when it would be important.

The idea of a presidential elector exercising independent judgment perished long ago. They're automatons now, hardly doing more than cluttering up the ballot in many States. But there's another hazard in this, too.

JUST SUPPOSE?

What would happen, political students ask, if a man elected President in November died before taking office in January? Independently minded men might choose a President wisely, but what of today's obscure electoral college?

Remote, maybe, yet possible—and capable of chaos. Horace Greeley, who happened to be defeated by U. S. Grant in 1872, died soon after the election. Suppose General Grant had died—or that Mr. Greeley had been the victor? It could have meant vast confusion—and while this has not often happened, the risk recurs with each presidential election.

No one knows how many million Americans stay home and don't bother to vote each 4 years because of the winner-take-all system. Mr. Eisenhower's unusual personal appeal drummed up a fair vote in the South in 1952, but ordinarily Republicans there haven't turned out because they knew their States would go Democratic and their own vote would be lost.

If a State's electoral vote were split this would not be true. There would be greater incentive for Democrats to vote, also, if real competition came into Southern elections.

[From the Washington Daily News of January 24, 1956]

CONGRESS HAS PLANS TO CHANGE OUTDATED ELECTORAL COLLEGE

(By Charles Lucey)

For 150 years political authorities have believed the United States should find a better way to elect its President and today a new ferment stirs in Congress to do something about it.

It takes a constitutional amendment to overhaul the antiquated and outmoded electoral college and at least four different methods of doing this are advanced in proposals to be before the Senate soon.

The goal of all is to end the unit-rule or winner-take-all system of counting each State's electoral vote and, instead, to divide this vote among all candidates more nearly according to their popular vote.

The two plans most likely to attract support are the so-called Daniel-Kefauver and Mundt-Coudert proposals. The Daniel-Kefauver plan has been reported favorably by the Senate Judiciary Committee and is expected to reach the floor in the next few weeks. Sponsors of the Mundt-Coudert and other proposals may offer their measures as substitutes when Senate debate begins.

Senators HUBERT HUMPHREY, Democrat, of Minnesota, and WILLIAM LANGER, Republican, of North Dakota, are advocating a simple nationwide popular polling for direct election of the President.

Senator STROM THURMOND, Democrat, of South Carolina, who as 1948 States' Rights presidential candidate picked up a package of electoral votes himself, is urging a reform which would retain the electoral college but divide each State's electoral vote in proportion to the popular vote.

Here is a sizeup of the two plans now chiefly supported:

THE DANIEL-KEFAUVER PLAN

Backed by Senators PRICE DANIEL, Democrat, of Texas, ESTES KEFAUVER, Democrat, of Tennessee, and a score of other Senators, this plan would abolish the electoral college as such. It would retain, solely as a counting device, the present apportionment of electoral votes among the States. But electors as individuals or as a group would cease to exist.

A State's total electoral vote would be divided among candidates in direct ratio to their popular vote. If a candidate in New York or Ohio or California receives 42 percent of the popular vote, he would get 42 percent of that State's electoral vote, right down to decimal point figuring.

Say a State has 12 electoral votes and casts 2,400,000 popular votes. The Democratic presidential candidate receives 1,600,000, the Republican 600,000 and a third party candidate 200,000. Today the Democratic front runner gets all 12 electoral votes. Under the Daniel plan he'd get only the share the voters gave him—8. The Republican would get 3, and third party man 1 vote.

The Constitution now provides a candidate must receive 266 of the total 531 electoral votes. It has happened often that a candidate received a majority of the electoral vote while leading all other candidates, but without a majority of the popular vote. Three times a candidate won an electoral majority under the present system while actually running second in popular votes.

Senator DANIEL stipulates the winning candidates must have at least 40 percent of the electoral vote. If none has, the Presidency would be decided in both Senate and House, instead of the House alone as happens now if an election majority is lacking. Instead of each State casting a single vote, as today, each Congressman would cast a vote—a more democratic system recognizing population differences among States.

Daniel plan opponents criticize chiefly one point—they say dividing the vote might lead to "proportional representation." In fact, this is not what is known as "PR" or proportional representation as used in local elections in the United States—it might be called more properly a proportional counting plan.

But critics say that minor party votes are wasted now unless cast for the candidate of a major party. And that under the Daniel plan they would be cumulative from State to State across the country in a way to encourage development of minority parties. They see a threat to the two-party system.

Others say a danger would come, not in electing a President by the proportionate count, but in the pressure that would build up later to have Congressmen elected statewide rather than by districts, with each party getting a proportionate share. It is held this statewide cumulative process would let splinter groups elect Congressmen they cannot manage now in separate districts. Hence, it is contended, there is an encouragement to multiple parties and the danger of what has happened in France and other European countries.

THE MUNDT-COUDERT PLAN

This plan would retain the electoral college but would divide each State's electoral votes according to results in congressional districts.

That is, presidential electors would be chosen the same as Senators and Representatives—two electors in each State chosen as are Senators, the rest elected by districts. The Mundt-Coudert plan holds to the requirement of a majority of all electoral votes for election.

This is the system favored by Jefferson and other Founding Fathers and many who came after them. In 1824, Missouri's famed Senator Thomas Hart Benton argued against the winner-take-all system of counting electoral votes:

"The intention of the Constitution is violated because it was the intention of that instrument to give each mass of persons, en-

titled to one elector, the power of giving that electoral vote to any person they preferred. In New York 36 electors are chosen. Nineteen is a majority and the candidate receiving this majority is entitled to count 19 votes—but he counts in reality 36 because the minority of 17 are added to the majority."

VOTES WASTED

Bring the figures up to date and the case is the same today. In 1948 Harry Truman's nearly 3 million votes in New York won him nothing whatever; the State's 45 electoral votes went to Thomas E. Dewey.

The Mundt-Coudert plan also would bring the Senate into a determination of who is President if no candidate gets an electoral majority.

The chief flaw charged against the Mundt-Coudert scheme is that unfairness results because of the unequal sizes of congressional districts. Houston often is cited as having roughly one-sixth the State's population but it has only one of the 24 Texas Congressmen. The 11th Indiana (Indianapolis) District has more than 550,000 population but the Ninth Indiana District has only 260,000. The Dayton district in Ohio has twice as many persons as the smallest Ohio district.

The Mundt-Coudert answer is to urge a stronger law forcing States to make their congressional districts more nearly the same size—in the past legislatures often have dragged their feet on reapportionment.

No plan is without some objections from the constitutional experts. But there is wide agreement for the need of change to wipe out the inequities and dangers of today's electoral college system.

[From the Washington Daily News of January 25, 1956]

ELECTORAL COLLEGE OVERHAUL MEANS SHOT IN ARM FOR UNITED STATES

(By Charles Lucey)

America will see a brandnew kind of presidential election and democracy will get a healthy shot in the arm if the ancient electoral college system is overhauled.

Americans don't vote directly for a President now, of course.

They choose electors in each State and the electors cast the State's ballot for the front-runner in the popular vote of that State.

Sometimes the margin is paper thin. Yet the winner takes all—and millions voting for the other candidates in effect see their votes wasted so far as the national count is concerned.

Each State has as many presidential electors as it has United States Senators and Representatives—New York 45, Pennsylvania and California 32, Ohio 25, Tennessee 11, and so on.

TWO PLANS

The constitutional amendment proposed by Senator KARL MUNDT, Republican, of South Dakota, and Representative FREDERIC COUDERT, Republican, of New York, would have each State's electoral votes on the same basis as Senators and House Members are elected. That proposed by Senators PRICE DANIEL, Democrat, of Texas, and ESTES KEFAUVER, Democrat, of Tennessee, would ignore congressional district lines and divide each State's electoral vote in direct mathematical proportion to what each candidate received statewide.

First result of all this is that millions of voters in effect now disfranchised would see their votes actually count for the man they prefer.

New vigor would be given the two-party system and almost certainly more voters would have a part in choosing a President. In many States today—this is true especially in the South—voters do not bother to vote because one party nearly always wins and determines the State's voice under the unit rule.

But if the Republicans knew they had a chance on a congressional district or proportional-count basis to pick up odd votes in the South even though they could not carry a whole State, there would be incentive to extend and broaden the two-party system.

The same would be true of the Democrats in some normally Republican Northern States.

TRUE INDICATION

A presidential campaign would become more truly national in scope instead of the present concentrated efforts in the big States and cities.

A presidential candidate knows today if he can carry New York or Pennsylvania or Ohio by even the barest margin he gets the entire electoral package. So he devotes most of his time to such States. Under a congressional district or proportional division of electoral votes, in which he would get a fair share of votes cast, there would be inducement for spreading a campaign more evenly over the whole country.

A major evil of today's presidential elections—kow-towing by both major parties to splinter or minority groups—would be ended. Today's winner-take-all system lets the pressure blocs in close States claim they have the number of votes needed to tilt such States. For fun? Not at all—for hard-boiled pledge and promise of what is to be delivered after the election by the winner. It's a what-do-we-get-out-of-it kind of democratic process.

Take away the system which gives the State's entire block of electoral votes to the top runner and the pressure group which has 100,000 votes in New York or Chicago cannot claim its 100,000 is more potent than the same number in Nebraska or Indiana.

NO MORE ARGUMENT

For many years an argument put forth for a presidential candidate was that "he can carry Ohio" or "he can carry New York." The large States have dominated the choice of men to go on the national tickets. Those who would do away with the winner-take-all system say it would give able men from lesser States a reasonable shot at the highest office in the land.

Altogether, proponents of all plans say reforming the electoral college system would bring more people into the active working of American democracy at the highest level. The country could stand it. In 1952 some 61 million voted for Messrs. Eisenhower and Stevenson—the highest total ever—yet an estimated 37 million eligible voters stayed home.

The case for electoral reform is old—but few roads are harder to travel than those leading to constitutional amendment. Altogether, since within a very short time after adoption of the Constitution, nearly 200 proposals for a change in the electoral system have been made in Congress.

Most recent was in 1950, sponsored by Senator HENRY CABOT LODGE, Republican, Massachusetts, and Representative ED GOSSETT, Democrat, Texas. This plan, forerunner of today's Daniel-Kefauver proposal, passed the Senate but was lost in the House. Some of the old lines of opposition would hold in a new test this year, but there have been important conversions, too.

BREAK NEEDED

Amending the Constitution requires a two-thirds vote in both Houses of Congress and subsequent ratification by 36 of the 48 States. Once the dam breaks, the process sometimes is completed rapidly. It needed only a year to get three-fourths of the States to approve electing United States Senators by popular vote. It needed a year to get the Prohibition amendment into the Constitution and 10 months to get it out. It took 4 years to ratify the No-Third-term amendment.

Today, Hill sponsors of the differing plans are speaking a compromise. If there is no compromise all plans may fail; if there is, one may get through. The Senate leadership is ready to give the green light for floor debate.

None of the measures would affect the 1956 election. But reform could be ready for 1960 if what a Senate committee wrote 20 years ago were to be heeded:

"The only object of an election is to accomplish the will of the people.

"If we permit a system to prevail that thwarts that will, we will trifle with one of the most serious purposes of Government. Under our present method, then and now, that will of the people will be clearly thwarted."

WHAT HAS HAPPENED

The following table shows what has happened in the last four presidential elections under the present electoral college system and how major party candidates would be affected under proposed electoral reform plans. Electoral totals under reform plans exclude those electoral votes that would have gone to minor party candidates.

	Popular vote	Electoral vote (present system)	Daniel-Kefauver plan	Mundt-Coudert plan
1952				
Eisenhower	33,666,062	442	290.4	375
Stevenson	27,314,987	89	236	156
1948				
Dewey	21,969,500	189	221	203
Truman	24,104,836	303	258	289
Thurmond	1,169,000	39	52	39
1944				
Dewey	22,066,078	99	223.8	214
Roosevelt	25,602,505	432	294.7	315
1940				
Willkie	22,304,755	82	214.6	182
Roosevelt	27,243,466	449	313.3	344

Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. PHILBIN. Mr. Speaker, this year marks the 38th anniversary of the declaration of the independence of the Ukraine and I wish to join my distinguished colleagues in the House in their recent salutation to the gallant people of the Ukraine.

The Iron Curtain is drawn across the afflicted Ukrainian nation. Its people are shut off from the rest of the free world, but let us work and pray for the day when tyranny, oppression and persecution will be banished from the Ukraine and the other enslaved nations still in Red bondage.

The glorious history of the Ukraine is one of struggle and sacrifice to maintain its precious freedom from the old Ukrainian Kievan state of the ninth century to the Ukrainian National republic of 1917. It was in 1920 that the Ukraine became one of the first victims of Soviet imperialism, but despite the destruction of its national church, famine, mass

murder, purges and banishment of its citizens, the ruthless extermination of its natural resources, the Ukraine has remained a symbol of the hope and burning fervor of a people destined to be free and independent.

The Ukrainian people have fought and died to preserve their freedom. The fight goes on today to regain their independence and free way of life. While oppression again stalks this nation of more than 40 million people, the largest non-Russian nation behind the Iron Curtain, the lamp of freedom still burns in the hearts of its people. It will not be extinguished and will blaze again, proudly and fiercely, when the great goal of liberation has been won.

In this great struggle of the Ukrainian people, our own Nation must continue to encourage and assist the gallant and brave Ukraine to regain its independence. Let us help to speed the day when the Ukraine will again enjoy the fruits and blessings of freedom.

Earl Wilson, of Indiana

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. MARTIN. Mr. Speaker, my esteemed colleague from the Ninth Congressional District of Indiana, EARL WILSON, has been a Member of Congress for 16 years, since 1940, and he is second in seniority in his State only to Mr. HALLECK. Mr. WILSON recently announced his candidacy for his ninth consecutive term and the reaction of the editor of the Madison (Ind.) Courier is significant. The Courier's editorial is as follows:

WILSON ANNOUNCES

Our district's veteran Congressman, EARL WILSON, has formally announced that he will seek reelection this year to his ninth consecutive term. This should be good news to the people of Jefferson County, for Mr. WILSON certainly has shown himself to be a most effective friend of this whole area.

Madison now is one of the fastest growing and progressive cities of the Midwest and our Congressman's efforts have helped us in that growth. His drive for Markland Dam and general acceleration of the Ohio River development have been effective. Almost singlehandedly last year he maneuvered an appropriation of $2.5 million which is getting Markland work off to a flying start. He is determined, he says, to stay behind that project and drive for its completion on schedule.

We know also that Mr. WILSON now is working for a new post-office building for Madison. He already has the attention of topmost postal authorities and he predicts favorable action before long.

Jefferson County last year was honored when its illustrious hero, Maj. Samuel Woodfill, was buried with full military honors in Arlington National Cemetery. The major's grave is just a few yards from that of his beloved commander, Gen. John J. Pershing.

Had it not been for Congressman WILSON'S efforts Major Woodfill's body might still lie in the little Hebron graveyard near Madison.

All these things, and many more, prove that we have in Mr. WILSON a fighting Congressman who never hesitates to go to bat for the people he represents. His long tenure in office—he has been our Congressman since 1940—has given him a know-how and a seniority in Congress which combine to cut through redtape and get things done.

Water Hyacinth Obstructions

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. WILLIS. Mr. Speaker, I have just introduced a bill to authorize a comprehensive project for control and progressive eradication of obnoxious aquatic plant growth from navigable waters, particularly in the States of North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas. My colleague from Louisiana, the Honorable T. A. THOMPSON, a member of the House Committee on Public Works, has introduced a similar measure.

This bill is a culmination of efforts extending over a long period of time to come to grips with this important problem.

On August 4, 1954, I inserted in the CONGRESSIONAL RECORD an article appearing in Collier's magazine and an exchange of correspondence with the Corps of Engineers concerning the deadly menace of the water hyacinth to the Gulf States from Texas to Florida, as well as other areas. I urged upon this body the imperative necessity to take immediate steps to eradicate and remove the source of infestation of this menace once and for all and pointed out the steps that had been taken in that direction up to that time.

In the Collier's magazine article the following stark facts are brought out:

The water hyacinth has caused heavy losses to commercial fishermen, put trappers out of business, greatly handicapped the oil and logging industries, suffocated game fish beyond estimate, and driven wildfowl from their winter nesting grounds. * * *

Moving with the wind and the current like floral juggernauts, the mats have spread through all the Gulf States from Texas to Florida and have reached as far north as Virginia and as far west as California. They cover hundreds of thousands of acres of lakes, ponds, streams, ditches, bayous, canals, marshes, and swamps. * * *

In Louisiana alone, the depredations of the water hyacinth have been estimated by the State Department of Wildlife and Fisheries at $55 million to $65 million per year. This is a high price even for a lavender symphony. In terms of human misery, moreover, the price has been ever higher.

A resolution was adopted by the Congress directing the Board of Engineers for Rivers and Harbors to review the reports on water hyacinth obstruction submitted in House Document No. 91, 55th Congress, 3d session. The resolution provided as follows:

Be it further resolved, That this action be taken with the view to determining the estimated cost of permanently eliminating the hyacinth plants and other marine vegetable growths from these streams, and that the cooperation of the Fish and Wildlife Service of the Department of the Interior, and the Department of Agriculture and the United States Public Health Service be solicited, since the aforementioned obstruction of such streams affects the fishing industry, agriculture, and health conditions.

I am very pleased to report, Mr. Speaker, that Maj. Gen. S. D. Sturgis, Jr., Chief of Engineers, in cooperation with the agencies referred to in the resolution, has submitted to the Secretary of the Army for transmission to Congress the report referred to in the resolution. After reviewing the problem thoroughly, the report of the Chief of Engineers, concurred in by the other related agencies, recommends a separate and comprehensive project to provide for control and eradication of the water hyacinth, alligator weed, and other obnoxious aquatic growth from the navigable waters and tributaries in the States above mentioned.

Mr. Speaker, I wish to pay tribute to F. W. zur Burg, of Southwestern Louisiana Institute and to Tulane University, New Orleans, for their work in preliminary research on the subject in cooperation with Government engineers and scientists.

Following my remarks on the floor on August 4, 1954, I received very encouraging expressions of support of the movement from Representatives and Senators from all the States involved, and I hope that by united effort we can have successful hearings and approval of the measure I have introduced during this session of Congress.

The report of the Chief of Engineers follows:

DEPARTMENT OF THE ARMY,
Washington, D. C.

Subject: Water hyacinth obstructions.
To: The Secretary of the Army.

1. I submit herewith for transmission to Congress the interim report of the Board of Engineers for Rivers and Harbors in response to resolution of the Committee on Rivers and Harbors of the House of Representatives, adopted February 6, 1945, requesting the Board to review the reports on water hyacinth obstructions submited in House Document No. 91, 55th Congress, 3d session, with a view to determining (a) whether any expansion of the scope of operations, or any change in the method now employed, for exterminating and removing the hyacinth plants and other marine vegetable growths from the waters of Louisiana, and such other States as are affected, is advisable at this time; (b) the nature and extent of the various public benefits that would accrue from such extermination and removal; and (c) the amount of local cooperation that may be warranted by reason of the local benefits; and further, that this action be taken with the view of determining the estimated cost of permanently eliminating the hyacinth plants and other marine vegetable growths from these streams, and that the cooperation of the Fish and Wildlife Service of the Department of the Interior, and the Department of Agriculture and United States Public Health Service be solicited, since the aforementioned obstruction of such streams affects the fishing indusry, agriculture, and health conditions. In is also in review of the interim reports on Lake Okeechobee and

its tributary streams, Florida, with a view to removing the water hyacinth, authorized by the River and Harbor Act approved March 2, 1945. The nature of the problems involved does not permit presentation of a final solution for successful eradication of marine plant growths without further extensive research and field operations. For this reason, an interim report is submitted to present a recommended 5-year program of increased scope of operations in the States of North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas. Based on experience gained through this program a final report under the authorization will be submitted at a later date.

2. The existing Federal project authorized by the River and Harbor Act of 1899, as amended, provides for distruction or removal by the Corps of Engineers of the water hyacinth in the navigable waters of Florida, Alabama, Mississippi, Louisiana, and Texas, so far as they constitute an obstruction to commerce, using any mechanical, chemical, or other means whatsoever (except that in Florida the use of chemicals injurious to cattle is prohibited). Annual operations thereunder are carried out to the extent required to meet the essential needs of commercial navigation. Generally those operations have been limited to hyacinth control in the main navigable waterways. While no local cooperation is required under the existing project, local interests in the aggregate carry out considerable removal operations of local benefit independently of the Federal work for navigation. No authority now exists for Federal eradication measures in the interest of flood control, drainage, agriculture, fish and wildlife conservation, and public health.

3. The water hyacinth infestation has spread markedly in recent years into tributary waters and headwater areas, and the alligator weed is now prevalent in a number of localities. The belt of damaging infestation extends across the Southern States from North Carolina to Texas, and from the salt water line on the south to the area of intense winter freezing to the north. Generally after rains and floods large masses of hyacinth plants are carried downstream into the principal waterways. Along the Atlantic coast the infestation is spreading northward from Florida. Clogging of waterways has become so extensive, oftentimes blanketing a long stretch of a watercourse from bank to bank, that, in addition to obstructing commerce and navigation, the problem has assumed a greater scope. Among the additional adverse effects are those to agriculture by blocked drainage and increased flooding of low cultivated lands; to fish and wildlife by destruction of their food supply and depletion of the dissolved oxygen in the water; and to public health by increased malaria hazard and pollution from plant decomposition affecting public water supplies.

4. A comprehensive field survey, including extended research and experimentation, has been accomplished by the Corps of Engineers in full cooperation with the Department of Agriculture, the Fish and Wildlife Service of the Department of the Interior, and the Public Health Service of the Federal Security Agency. The three interagency field committees organized to make the basic study of the coastal region extending from North Carolina to Texas, and the Board of Engineers for Rivers and Harbors, have recommended an expanded Federal program for control and eradication of aquatic plant growths from the waters of those States, in the interest of navigation, flood control, drainage, agriculture, fish and wildlife conservation, public health, and related public purposes, with the provision that the Chief of Engineers may require such local cooperation as he may deem appropriate. Annual cost for a 5-ycar all-purpose program, including continued research for development of most effective and economical control measures, was estimated at $1,520,000 in 1949. That sum included the annual allowance which was estimated as being required under the existing Federal project for reasonably adequate control measures on navigable waters in the interest of commerce and navigation only.

5. After due consideration of this report, I concur generally in the views and recommendations of the Board. It is obvious that the local benefits to accrue from such an expanded program would be substantial, and in my opinion these local benefits warrant participation by local interests either by cash contribution or services in kind. Although I recognize the difficulties involved in prescribing a blanket degree of local cooperation for all areas in which the proposed expanded program is to be prosecuted, I also recognize the need of the Congress for a basis on which it can consider and determine an equitable allocation of costs. Present policies provide for Federal participation ranging from 100 percent for certain flood control and navigation improvements to essentially 0 percent for certain fish and wildlife and public health improvements. A weighted average of local contributions toward the various purposes involved in this program approximates 25 percent. I believe that local responsibility for 25 percent of the program would not be an unreasonable requirement, and that it would not place an undue burden upon local interests.

6. With respect to the use of chemical herbicides, the application of spray solutions including 2,4–D from boats or aircraft is indicated to be effective in attacking infestations in lakes and other large water areas, without harmful effect to fish and wildlife, other animals, or human beings. Such applications must be carefully controlled in order to prevent damage to certain crops on adjacent lowlands. Even when due care is exercised in applying the spray solutions, however, there is a possibility that crops may be damaged. In my judgment, local interests should hold the United States free from claims for any damage that may occur, if any should arise from such operations, and I consider it advisable to secure appropriate assurances as a condition precedent to Federal operations in any expanded Federal program.

7. Subsequent to preparation of the report of the Board of Engineers for Rivers and Harbors, the expanded program set forth therein has been reexamined in the light of existing conditions. It has been found that the scope of the measures proposed is adequate, but the total annual cost of the existing and expanded programs on a 5-year basis is presently estimated at $1,655,000.

8. Current expenditures for removal of the water hyacinth from navigable waters under authority of the River and Harbor Act of 1899, as amended, have averaged about $305,000 during the past 5 years. In view of longstanding Federal responsibility for maintenance of channels for commercial navigation, I am of the opinion that such maintenance work should be continued without contribution of local funds. A substantially lesser amount should suffice for this purpose after the 5-year program is completed.

9. Accordingly, I recommend that in addition to the existing Federal project for Water Hyacinth Control for Navigation, a separate comprehensive project be authorized to provide for control and progressive eradication of the water hyacinth, alligator weed, and other obnoxious aquatic plant growths from the navigable waters, tributary streams, connecting channels, and other allied waters in the States of North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas, in the combined interest of navigation, flood control, drainage, agriculture, fish, and wildlife conservation, public health, and related purposes, including continued research for development of the most effective and economic control measures, at an estimated total cost of $1,350,000 annually for 5 years, to be administered by the Chief of Engineers, under the direction of the Secretary of the Army, in cooperation with other Federal and State agencies, all generally in accordance with the methods set forth in the report of the Board and with such modifications as in the discretion of the Chief of Engineers may be advisable, subject to the conditions that the States hold and save the United States free from claims for any damages that may occur from such operations and participate to the extent of 25 percent of the cost of the additional program. This project will be designated as the expanded project for aqutic plant control.

10. In order to facilitate administration of the proposed program, close coordination between State and Federal agencies will be required. It is contemplated that the portion of the program to be accomplished each year will be determined by agreement between the State and Federal agenices concerned in the light of the availability of local funds which, in turn, will govern the amount of Federal funds appropriated each year for expenditure by the Corps of Engineers on behalf of the Federal agencies.

S. D. STURGIS, Jr.
Major General, USA,
Chief of Engineers.

How Mr. Summerfield Shortchanged Our Postal Employees

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. ASHLEY. Mr. Speaker, a number of our conscientious postal workers have come to me with a complaint against the Post Office Department which I believe to be soundly justified. In all fairness to our postal workers corrective action should be taken.

I would like to take a few minutes of the House's time to describe the circumstances under which employees of our Post Office Department were given reduced pay for December 1 and 2 of last year.

Under Public Law 68, the new postal pay bill which Congress passed last session, the Postmaster General was given discretionary authority to put the act into effect at any time within 180 days after the date of enactment. Postmaster General Summerfield chose December 3, a Saturday, as the date to convert to the higher wage scales. This date, the Department explained, was chosen primarily for administrative considerations in order to simplify their bookkeeping for compensatory time in the future and to allow for a pay lag of 7 days.

But what did the selection of this particular date do to the postal employees? They received their regular salaries through Wednesday, November 30, and the new law did not go into effect until Saturday, December 3. So what happened to December 1 and 2? Employees were paid for these 2 days on a daily basis

set under the old law which specified, in section 7, that a 360-day base should be used in figuring daily rates. Annual salaries were therefore divided by 360. An employee earning $3,600, for example, got $10 for each day. This assumed that Saturdays and Sundays not worked were also figured at this $10 rate to arrive at an annual total wage of $3,600. But what of the new law? Under Public Law 68, Saturdays and Sundays not worked are not counted because a new biweekly pay method of computing on the basis of a 5-day workweek was instituted. Therefore, when the Postmaster General chose Saturday for the conversion date, he deprived the postal workers of getting the pay they would have earned under the old law for these 2 days, Saturday, December 3, and Sunday, December 4. Nevertheless, he went on to figure the pay for December 1 and 2, Thursday and Friday, on the basis of a 360-day year which assumes Saturdays and Sundays are included.

This is commonly known as dirty pool where I come from. By all fair standards, if they used the 360-day pay basis as set forth in the old law, they should have counted the days worked as defined under the same law. In other words, through what appears to be a deliberate attempt to shortchange the employees, our postal workers received reduced pay for these 2 days.

How could this injustice have been avoided? Very simply. The most obvious solution would have been to put the new schedule into effect at the end of the old pay period on December 1 with no lapse of time. Another alternative would have been to convert to the new schedules on Monday, December 5. Under this plan, Saturday and Sunday would have been figured under the old law. Or any number of other days, I am advised by experts on the House Post Office Committee, would have allowed the Department to get its bookkeeping in proper order, and at the same time would have given the postal employees the pay they earned and deserved.

Of course, we may say that this is all academic. The yearly pay of our postal employees is the same regardless, and by next December 3 they will have received the same amount as they would have 1 year after a December 1 or December 5 conversion. This is true. But the fact still remains that their take-home pay for December 1 and 2—those abandoned days between statutes—in effect, was less. And I feel that some action should now be taken to rectify this.

Complaints were made to the Department last December questioning the legality of the Postmaster General's choice of dates. The Comptroller General has ruled that the selection of Saturday, December 3, was legal. But, as has been pointed out by postal regulation experts, the selection of any number of other days more advantageous to the postal employees would also have been legal. Unfortunately, once such a decision is made and declared legal, it cannot be changed administratively if it will cost the Government more.

Complaints are still coming into my office from postal workers—and I have taken them up with the Post Office and Civil Service Committee. I am advised that nothing short of legislative action can correct this situation, which is legal by the letter of the law, but which subverts its spirit, and places a burden on the individual postal employee. I can understand the Department's interest in arrving at reduced costs to the taxpayer through future savings which they say will result from the streamlined bookkeeping methods instituted under the new law. This I heartily endorse. But it should not be done at the expense of our loyal postal employees. If morale is injured by callous administration of a law intended to help our hardworking postal people, no amount of administrative shortcuts will give us the efficient postal service we want and must have. I am hopeful that, with the proper concern registered by the Congress, some action can be taken to pay our loyal postal employees their just due.

Address by Homer S. Brown Before the 1955 State Convention at Harrisburg of the Pennsylvania State Education Association, December 28, 1955

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

EDUCATION, THE ARCHITECT OF TOMORROW

"Ignorance is the curse of God; knowledge the wing wherewith we fly to Heaven." (Shakespeare.)

"All men by nature desire to know." (Aristotle.)

Man's desire for knowledge has brought him to the high noon in his conquest of nature. His insatiable desire to know has made possible the splitting of the atom. On November 30, this year, the Associated Press announced that the atomic submarine, the *Nautilus*, had cruised 25,000 miles without taking aboard fuel, and predicted it could cruise for many more thousands of miles, and perhaps months, before any major replenishment of its nuclear fuel would be necessary.

Heat, now generated from a pound of uranium has been demonstrated to be more efficient than 1,500 tons of coal. The polar route, from Los Angeles to Copenhagen, a distance of 5,800 miles, is now on regular air passage schedule in 24 hours. However, if that is too slow, you can board a British passenger jet in London and arrive in Sidney, Australia, a distance of 11,000 miles, in 34 hours.

The life span of a child born in the United States has been increased to an average of 68 years, as against 30 years in less economic developed areas of the world; and to make for a more abundant life for those who live in less fertile areas, man is now attempting to conquer the desert and polar regions of the earth. In the desert, representing one-fourth of the world land surface, he is harnessing power from the sun and wind; he is attempting to produce rain by coaxing the clouds over an area where the rain is needed to drop this most-needed element to make fertile the arid regions, instead of permitting the clouds to drift elsewhere to shed their rains.

Life magazine of December 12, 1955, in an editorial entitled "1980's Shape of Things To Come" gives this picture:

"A flick of the nuclear switch and presto, the North Pole melts, the vast continent of the Antarctica thaws into productive use; Greenland grows bananas; Vermont grows oranges; and everybody's heating bill vanishes."

Calculation has given way to automation, for an electronic computer, commonly called the human brains, can determine the density of electrons in a nitrogen molecule and the energy of the molecule in 2 hours—a job that would take a man equipped with pencil and paper 800 years.

Dr. Albert G. Conrad, professor of the engineering school at Yale, was recently quoted as saying: "He (man) has increased the speed of communication by a ratio of 30 million. He can send a message around the world seven times in a second. Unfortunately it sometimes requires years to get this same information from the outside to the inside of a human skull."

"Incredible and breath-taking" are feeble and mild terms with which to describe man's limitless accomplishments in the world of science and technology. Why then do we need to be disturbed about tomorrow? Cannot the human race rest its case for plenty and survival on this record alone? Is not man's knowledge abundant proof that education, through science, has already constructed our world of tomorrow?

To answer this question in the negative one could be accused of the highest degree of hypocrisy, for none of us would surrender, if we could, this age in which we live so comfortably for the ages of Shakespeare and Aristotle. Nevertheless it was said many years ago that "man cannot live by bread alone," and wise men of today are saying that man cannot live by material objects alone, created by science, however breathtaking these may be.

It is vital and necessary, therefore, in this advanced age of automation to continue to think of every child as an individual—not a machine—and to strive not only to build better schools but to make possible a greater appreciation on the part of youth of the world in which he lives, and to bring into focus the need for individual responsibility when it comes to belief in and attachment to ideals that machines and gadgets cannot supply. Let us look realistically at man's greatest challenge, as one illustration to show that things of matter cannot build a safe tomorrow. We have deposited in our Pandora box the blueprint for building nuclear weapons so powerful and so destructive that we are searching for places upon which to test these weapons, as the radio fallout is so fatal that the earth, water, and vegetation for miles and miles beyond the testing grounds become contaminated with deadly radiation. We are running a race to see that the lid of this box is not opened in warfare, for if war occurs it will not only destroy life, but as one atomic scientist says, it will also destroy the history of man. Mythology tells us that at the bottom of Pandora's box was hope, and that when she inadvertently opened the lid she released the plagues that descended upon man; that she hastened to replace the lid and hope did not get a chance to escape, and thereby man, since he still had hope, was able to escape being condemned to a state of wretchedness and depravity. We dare not open our Pandora box, unless it is for the purpose of converting our instruments of war to instruments of peace, for otherwise we will not have a chance to retain hope, or anything else.

Broadly speaking it could be stated that the purpose of education is to provide methods by which the child may develop to the fullest extent of his capabilities and to equip the child to become a patriotic, productive citizen. I am sugesting that education, as the architect for a better tomorrow, should place more emphasis upon (1) a greater study of the principle known as the rights of man, and (2) the need to live in a world where all men are neighbors.

In the first category, we are alarmed at the ignorance concerning the most priceless heritage of free people. Linowitz, in an article in the September 1955 issue of the American Bar Association Journal, writes that "at a recent meeting of the American Association for the Advancement of Science, a paper was read presenting the results of a survey of popular understanding of the Bill of Rights in this country. One-third of the American people, the paper showed, do not know what the Bill of Rights is or the function it is intended to perform. And another one-third, the survey found, apparently oppose the principles for which the Bill of Rights stands." This is an appalling and frightful conclusion and it is no wonder that in such a climate men who are demanding "man's right to the free flow of knowledge," "the right of silence," "the right to move freely," "the right of free inquiry," "the right of dissent," "the right to read," "the right to work without being discriminated against because of race, creed, color, or national origin," and "the right to public education without discrimination on account of color" are ofttimes severely criticized and condemned as heretics and subversives. Education must find a way to lay a stronger foundation in the minds of youth concerning these ideas that keep men free. It has a responsibility to see that youth understands not only how we became free but likewise how we can remain free from enemies both within and without.

In this domain of knowledge one encounters what is called the controversial, which stems, in part, from two factors; first, the restrictions on freedom which become necessary to some degree in every society or government, a subject incapable of mathematical proof, but vital to every orderly society; "for where every person has absolute freedom, none in the end has any." The difficulty is to define the area of the maximum degree of freedom and the equal protection of the law, without prejudice and discrimination. This is a question which sometimes challenges the status quo, and cuts across customs and traditions. In the second place, no study worthwhile on this matter can successfully be taught without bringing into focus laws and systems of governments where individual freedom is suppressed. Although the teacher here, like the searcher in the field of fundamental science, is searching for truth, he offends school directors, calls down the wrath of the demagog; silence is the better part of wisdom; or he conforms, knowing full well that by such action reason is dethroned and the light of truth is blacked out. In a somewhat different but related field bearing up the nature and the equality of man, who are afraid of the truth even though chemistry, biology, and anthropology show us the light.

"There is not a truth existing which I fear or would wish unknown to the world," said Thomas Jefferson. This should be our guiding star and our resolve to follow the light of truth wherever it might lead. Malebranche, as quoted in Holmes' "collected legal papers" says this is man's greatest heritage, for, says Malebranche, "If God held in one hand truth and in the other the pursuit of truth, I would say 'Lord, the truth is for Thee alone, give me the pursuit'."

The second point of emphasis in a most neglected area of our education is the failure to teach more of the relationship of peoples to each other, and how vital it is to respect the rights of other people. That all men are brothers lies at the bottom of our basic religious heritage. However, today only a person blind to reality can fail to recognize that the world is divided into two camps—the free world and the slave world. Both worlds possess the know-how to build machines and hydrogen bombs. In the latter live almost 1 billion people, and it is bidding for the minds of many other millions who today are undecided as to which way of life is better for them. Frank C. Laubach, in a letter to the editor of the Ladies' Home Journal, in January 1953 paints this graphic picture: "The illiterate two-thirds of the human race * * * reach up a hand asking 'who will help us?' Anybody who offers to take that hand can have them, even if he lies. They are the easiest people on earth to win as friends—easy for us—equally easy for the Communists. The Communists promise to lift them, because they want to enslave them. We largely ignore them."

I would take issue in part with this indictment of the learned world traveler and point to the fact that dollars-and-cents wise, our Nation since the end of World War II up to June last, has spent in foreign aid $51,366,000,000, of which $36,673,000,000 went for nonmilitary grants and credits. Although in the beginning the largest part of this aid has been directed to Europe, since 1953 the emphasis has been shifted toward the less economic developed countries of the Middle East, south Asia, Africa, and the Far East. In addition, nongovernmental agencies have been steadily working in these areas by teams of scientists to increase food productivity; to relieve against contagious diseases, and to teach fundamental education. Notwithstanding this, there are those who fear we are losing the race for "the minds of men." One writer not long ago stated this case simply by saying "we have neither won friends, nor influenced people." Some may say that this is a problem that can only be solved on the international level and that our youth should not be given such momentous matters; that they are immature and will become confused—they will be led astray into doctrines detrimental to our political philosophy; and that they have no time to indulge in what some people term this area as "pure star-gazing." We forget the youth of today will be leaders of tomorrow, and the wise counsel of the Scriptures "Train up a child in the way he should go, and when he is old he will not depart from it" (Proverbs 22, 6). Have we forgotten the training of youth under Hitler?

In the quarterly report of the Carnegie Corporation of New York for October 1955, is an article entitled "The Values Students Live By," prepared by four Cornell University sociologists. With grants from the Carnegie Corp. and after a 6-year survey where 7,000 students in 12 widely scattered colleges were questioned as to their attitudes toward education, politics, religion, choice of occupation, courtship, marriage, and ethics, the article concludes by saying "the larger picture that emerges from the 12 campus surveys reveals that the students as a group reflect with remarkable consistency the dominant values of their society and their elders." I would say, parenthetically, that the survey did not mention sportsmanship, for had it included this activity, I fear the end result would have been to the contrary, as has been recently demonstrated by student revolt against the Governor of Georgia, in the University of Pittsburgh-Georgia Tech-Sugar Bowl incident. Governor Griffin of Georgia, in saying Georgia Tech could not play against Pittsburgh because of the presence of a Negro on the latter team, was expressing what he thought to be the dominant value of his society of white supremacy. It took the students to rebel against this decadent and moribund idea, and it is well for Georgia, for the United States, and for the free world, that they were victorious.

Youth can be taught that people are different—but differences do not connote racial inferiority. Where there is outward manifestations of inferiority it is due to lack of training and lack of opportunity to acquire knowledge, for all men are equal in dignity, and all men desire and are entitled to the better things of life.

By directing your attention to the matters briefly touched upon above, I am not unmindful of the following factors that also call for immediate solution—the serious shortage of qualified teachers and the inadequate salaries they are paid; the high birth rate which calls for more classroom space. It is estimated that it will cost $30 million for nearly 1 million classrooms in the next decade. In this regard, the United States Census Bureau reports that one segment of our population, children between the ages of 5 to 13 years old, have increased 26.5 percent during the past 5 years; the alarming figure of young people who drop out of high school and college. Only a few days ago the United States Commissioner of Education reported a drop of 4,254 in the number of degrees awarded in 1954–55 as against 1953–54; the $9 billion spent annually on public education, and the cost is still rising; the solution to the plight of the financially distressed school districts and the most alarming, perhaps, of all from the point of view of same, that the schools of Russia are training and graduating more scientists and engineers than are being trained in the United States, as the figures for 1954 show Russia, 58,000; the United States under 20,000. These are factors largely stemming from material and economic weaknesses in our educational structure.

I am confident that our Nation, which represents 6 percent of the world's surface, and 7 percent of the world's population, but which produces over 50 percent of the world's goods, and spends $30 billion annually for a defense program, will quickly find answers to these problems and adjustments made to correct these inequities.

The recent White House Conference on Education, and the small White House conferences held previously in the 53 States and Territories have alerted the people of the Nation to these needs, and once the people are alerted, they will act intelligently to meet the crisis. Today there is a veritable ground-swelling of interest at the grassroots level in our country in the interest of public education. The increase in the number of tax dollars allocated for public-school purposes will make possible larger buildings and equipment; will provide more adequate compensation for the teacher; enlarge our program for the handicapped and the retarded; provide scholarships for students who drop out of school for financial insufficiency; make possible advanced study for the gifted child; replace the courses that have been dropped in physics, mathematics and chemistry, so that more students will graduate from our high schools prepared to continue in the field of science; but tax dollars in themselves cannot produce a healthier climate where ideas of the rights of man may mature. These dollars cannot create a switch, nuclear or otherwise, that can be flicked on as scientists foresee we may be able to do in 1980, to melt the ice of Antarctica, in order to make man truly educated. This is the process that begins in the cradle, and ends, insofar as we know, in the grave; it is the process that requires dedication of the individual to his immediate society or nation to which he owes a priority in the matter of loyalty and devotion; it also requires knowledge about and the responsibility of living in a world community. Especially is this true of Americans, since we

have assumed leadership in the free world. Ignorance of the world around us could be one of the direct causes of forfeiture of this leadership.

These dollars can be a means only to an end—the end finally being the choice we make as to whether we live as free men, or as slaves; and this attachment calls for an understanding and knowledge on the part of the teacher and the pupil alike to things beyond material reach. Herein lie the great challenges to education as the architect of tomorrow—the end result being to build a tomorrow of peace where men may live together unafraid, and with mutual respect for each other. The reach for those ideals that never die, among which are justice, equality, and freedom, may be called the "end attainment" of man. He may never gain the ultimate, and the distance he climbs will be measured by his reach. Robert Browning gives us the chart for today and tomorrow: "Ah, but a man's reach should exceed his grasp, or what's a heaven for?"

Farmer at Mercy of Weather's Whims

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Farmer at Mercy of Weather's Whims" which appeared in the January 25, 1956, issue of the Madisonville Messenger of Madisonville, Ky.

The editorial is as follows:

FARMER AT MERCY OF WEATHER'S WHIMS

We have never cared for that particular description of a farmer which called him a gambling man, although the comparison turns up now and then. It is based on the idea, of course, that those who play cards or put money on a horse's nose at a race track are taking small chances indeed in comparison with farm people who are obliged to stake their work, their year's income and indeed their entire capital upon turns of the weather.

Latest example of the fickle nature of the elements which the farmer is obliged to deal with is seen in the plight of the truck farmers of south Florida. Their business is to raise vegetables when most other regions can't do so, but in this enterprise they take chances, too, for now and then they are frozen out or flooded out.

This winter a lot of the south Florida growers lost. A week of severe cold caused losses which in one county alone—Dade—are estimated at $20 million. And in Palm Beach County—so we note in the Florida papers—only 2,000 acres of vegetables escaped damage out of a total of $100,000.

Florida is not alone in its crop ruin. The citrus growers of the lower Rio Grande valley were hard hit in 1949 and in 1951 in many cases so hard that entire orchards were killed off. Many of the citrus people in this rich region did not replant in citrus, so discouraged were they. Indeed, they went in for winter vegetables, though the famous pink grapefruit of the area is still on the market, praise be.

Anyway, so fickle is fortune and so unpredictable is weather that the misfortune which Florida has just suffered is a gain for the Texas farmers. The Rio Grande crops are unhurt this winter, and are worth more to their owners than would be the case if they had to meet the Florida competition.

One man's loss is another man's gain, in cases of this kind, pointing up again the uncertainty which a farmer must face when he consigns his capital to the ground, hoping to be blessed with favorable weather, rain at just the right time, but knowing all the while that now and then he is going to be dealt a sharp blow by outrageous fortune, in the guise of flood or drought or freezing or blistering weather.

Journalism and Marriage Mix Well, Willises Agree

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith an article entitled "Journalism and Marriage Mix Well, Willises Agree," which appeared in the January 30, 1956, issue of the Courier-Journal of Louisville, Ky.

Mr. and Mrs. James W. Willis, of Irvington, Ky., have devoted the greater part of their lives to dispensing news in line with the true facts. The integrity and high principle which they have established in connection with their newspaper work has been instilled in their children, and fortunately will be carried on by them. The son, James M. Willis, is the owner of the Meade County Messenger. He is ably assisted by his wife in the publication of this paper. The daughter of Mr. and Mrs. James W. Willis is married to George M. Wilson. She and her husband own and publish the Breckinridge News, as well as the Herald of Irvington, Ky.

Not only have the members of their family benefited by the high standards set forth by Mr. and Mrs. James W. Willis, but the entire community has reaped the rewards of their efforts. Their main interest has been in the betterment of their community for they have given their active support to all flood control projects, soil conservation and an improved agricultural program. And certainly the local schools and churches have felt the impact of their influence and aid. To citizens such as Mr. and Mrs. Willis deserved tribute should be paid.

The article is as follows:

JOURNALISM AND MARRIAGE MIX WELL, WILLISES AGREE

(By Gail Ransdell)

BEDFORD, KY., January 29.—Journalism and marriage go well together, agree Mr. and Mrs. James W. Willis, of Irvington.

Actively engaged in printing and publishing for the past 50 years, they were recognized at the midwinter meeting of the Kentucky Press Association in Louisville last week for having celebrated their golden wedding anniversary January 17.

"I suppose I'm about the first Linotype operator to set a story about her own golden-wedding celebration," laughed Mrs. Willis. "We held open house on Sunday (the 17th was a workday), and I set the story the next day."

Mrs. Hattie Willis, 69, has been operating a Linotype for 35 years. But she began setting type long before that, when her husband became editor of the Record Press at Hardinsburg in 1914. Before that they had a job-printing shop.

After a short time at the Record Press they bought The Irving Herald, which they published 38 years. They sold it to their daughter and son-in-law, the George Wilsons, for whom the veteran Linotypist now works daily.

In addition to the Irvington Herald, the Wilsons also publish the Breckinridge Herald. The work on both is done at the Irvington shop, but the Breckinridge Herald is strictly a Hardinsburg paper.

STARTED AS PRINTER'S DEVIL IN 1884

"I have been in the newspaper game longer than that—ever since I was 12," interrupted the 83-year-old James W. Willis. "I started as a 'printer's devil' at Leitchfield, back in 1884. My job was to distribute type.

"I'm still distributing type today. You know, I work for my son, James Willis, owner-editor of the Meade County Messenger."

The elder Willis commutes 10 miles daily, fair weather or foul, from Irvington to Brandenburg to help with the Messenger. In addition to his job on the paper, he is active in the Masonic Lodge and has been a steward of the Irvington Methodist Church for 40 years.

"He can do just about anything around the shop," declares the younger Willis, a past president of the Kentucky Press Association. "He manages the place when I'm away."

Neither of the elder Willises has ever had a vacation from the print shop. But they manage to come to the K. P. A. meeting every year. Willis has missed only three times since 1914. Once was during the 1937 flood when the trains stopped running and the other two times were due to illness.

Three generations of the Willis family attended the midwinter meeting. In addition to the George Wilsons and the James Willises—elder and junior—the family was complete with the presence of 13-year-old Jane Willis. This was the 20th semiannual K. P. A. meet Jane has attended.

The Co-Op Tax Bill

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. DAVIS of Tennessee. Mr. Speaker, I am privileged to include this very splendid editorial which appears in the Memphis, Tenn., Commercial Appeal relating to the bill which I have offered to fairly tax cooperatives.

The editorial follows:

THE CO-OP TAX BILL

Representative CLIFFORD DAVIS a few days ago introduced a bill carefully designed to correct inequities in the Federal tax system as it regards cooperatives. The measure would carry out the recommendations made to Congress last year by Secretary of the Treasury George Humphrey.

The gist of the situation Representative DAVIS' bill would correct lies in the fact that many so-called cooperatives do business in competition with private firms, but do not pay much or any Federal income tax on their earnings. It is estimated that the aggregate of Federal taxes escaped by the cooperatives is $400 million a year.

In commenting on the purpose of his bill, Representative DAVIS said: "In simple language, my bill would require cooperatives to

pay Federal income tax to the full extent on earnings that are not taxed to their patron members; would impose a 20-percent withholding tax which would be paid by the co-op corporation and would be credited to patron members; and would repeal the special co-op income-tax privilege of deducting dividends paid on stock." It adds up to a move long past due.

There is nothing whatever in Mr. DAVIS' bill to inflict any hardship or penalty on either the bona fide cooperatives or the vast concerns that have sprung up under the name to compete with fully taxed organizations while enjoying unfair advantages. It should be emphasized that the Davis bill is aimed at injustices now worked on ordinary businesses that must compete against rivals that get tax benefits by use of the co-op title.

The real cooperative consists of a group of individuals who band together to gain the legitimate advantages that go along with ability to sell and buy in large lots. Concessions were made to such co-ops a long time ago—as far back as 1916 in some cases—when they were small and genuine. What Mr. DAVIS has in hand are the doings of multi-million-dollar outfits that sell practically everything and were not even imagined when much of the existing tax structure was formed.

The goal is to put everybody engaged in competitive business on the same tax footing, and nothing could be fairer or more desirable than that.

Action Needed on Flood Control Projects in California

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. SCUDDER. Mr. Speaker, the January 19, 1956, issue of the Del Norte Triplicate, published at Crescent City, Calif., carried an editorial of special significance on the flood-control problem in California.

Entitled "Let's Demand Action Now," it points out that California's rivers must be tamed to protect our people from floods, and to utilize the water resources demanded by California's present needs and future growth.

The editorial wisely recognizes that the State has a huge stake in this problem, and commends the Del Norte County Board of Supervisors for its action in engaging hydraulic engineers to make a study of the county's needs—both for flood-control measures and for economic utilization of wasted water.

I have advocated and supported projects to control the raging waters of our rivers. I proposed a dam on the Feather River, supported passage of the Trinity River project, obtained approval and funds for the Coyote Valley Reservoir—and am working on flood-control surveys and projects for the Eel, Smith and Mad Rivers.

It is not the premise of the Federal Government to alone construct these projects, its obligation is to assist the local government in their construction. The December floods most certainly dispelled any doubt that an expanded program for flood control must be launched and carried out expeditiously.

I desire to include with my remarks the editorial referred to above, as follows:

LET'S DEMAND ACTION NOW

A cynic once said, "It takes the worst to bring out the best in people."

Although this may be somewhat of an exaggeration, the recent disastrous floods in California have shown that people do open their hearts in times of calamity.

The steady stream of food, clothing, blankets and money flowing to water-logged Klamath indicates a great deal of selflessness when the occasion demands.

If the same degree of unanimous action could have been obtained in the past, it is conceivable that the destruction in Del Norte, Humboldt, and the other 48 out of 58 counties could have been prevented.

It is generally agreed that the Oroville Dam on the Feather River would have prevented the inundation of Yuba City and surrounding territory—if it had been built.

It is generally agreed that Coyote Valley Dam would have minimized, if not prevented, the deplorable losses sustained in Mendocino and Sonoma—if it had been built.

The Smith, Klamath, Trinity, and Eel Rivers, along with others in northern California, must be tamed if we are to protect our citizens and to approach complete utilization of our water resources—demanded for California's present needs and future growth.

To be sure there is great controversy about who will get what proportion of impounded waters. There is equally great controversy about the mechanics of getting north coastal waters to the areas where they will be used.

These factors pale into insignificance, however, with the realization of the immense damage, suffering and loss of life which could have been prevented were the proper dams in existence instead of being simply drams or a focal point for battles over region advantages and governmental philosophy.

Since there is nearly unanimous agreement that these dams must be built sometime, let us build them now.

These projects cannot be completed overnight. While construction is going on, men of good will with a real desire to advance the welfare of all California can solve the vexing problems of rights to the surplus waters which will be stored behind the dams. Competent engineers are already at work trying to determine the easiest, most efficient methods and routes for transporting waters to areas of deficiency.

Perhaps politics is the most shameful aspect of the delay which has characterized taming of California's rampaging rivers. Although many complicated factors are involved, the issues—when stripped to its essentials—is whether California will proceed with construction plans or whether we will wait around for the Federal Government to sometime come in and make them and do the jobs.

Last week the Del Norte County Board of Supervisors made a very wise move when it engaged competent hydraulic engineers to make an intensive study of the county's needs both for flood control measures and for economic utilization of our wasted water. From these studies may well come a new era for our citizens; the birth of a new industrial economy; the protection of the economy we have enjoyed.

While the memory of disaster is still fresh, let us all unite to see that it does not happen again. Californians, whether from "areas of origin" or "areas of deficiency," whether Republicans or Democrats, whether flood victims, their benefactors, or simply observers of the terrible catastrophe, should demand action now.

AMVETS' 1956 Legislative Program

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. SHEEHAN. Mr. Speaker, on January 17 I had the privilege of introducing to the House Committee on Veterans' Affairs, Mr. Rudolph G. Pesata, national commander of the American Veterans of World War II, at which time he presented to the committee the AMVETS 1956 legislative program.

Mr. Pesata lives in the 10th Illinois Congressional District, which adjoins the district which I represent. He is a veteran who became active in AMVETS immediately after his discharge from the service in 1946, and held many major posts in the organization prior to his election to national commander. Besides his work in this veterans' organization he has been active in the National Federation of Post Office Clerks and the National Association of Postal Supervisors. In those capacities his path has crossed mine on many occasions, and I have always been impressed with his keen judgment, objective thinking, and fair approach to the problem at hand.

The AMVETS' 1956 legislative program as presented to the Veterans' Affairs Committee by Mr. Pesata is as follows:

AMVETS 1956 LEGISLATIVE PROGRAM

(Statement of Rudolph G. Pesta, national commander of AMVETS before the Committee on Veterans' Affairs, House of Representatives, on January 17, 1956)

Chairman TEAGUE, Mrs. ROGERS, and members of the Committee on Veterans' Affairs, it is a distinct privilege to accept on behalf of my organization this opportunity to present the highlights of AMVETS 1956 legislative program. I can assure you that this appearance represents a milestone in my year as national commander.

This date, of course, marks the approximate halfway mark of another congressional term. To me, however, it is a beginning—the beginning of a productive legislative year—a year that we of AMVETS hope will have special significance, marked by success in resisting the efforts of those who would place expediency and economy above equity and merit in determining the best course for our Nation's veterans.

This goal cannot be attained by AMVETS alone. It requires the active interest and support of every member of this committee. In the year ahead, you will undoubtedly be called upon to consider many of the recommendations stemming from the recently completed Hoover Commisison study. Some have merit, while others strike at the very heart of the veterans benefit structure. You have already demonstrated an awareness of the implications of the Hoover recommendations on veterans affairs with the release, on March 26, 1955, of an analysis of their report on Federal medical services. We are confident that in your forthcoming deliberations you will reject those recommendations that adversely affect the best interests of veterans.

BRADLEY COMMISSION

The recommendations of the President's Commission on Veterans Pensions will surely be unveiled prior to the adjournment of this session of Congress. Almost a year ago, my predecessor, in a similar appearance be-

fore this very committee indicated that AMVETS would not prejudge the recommendations stemming from the study being conducted by the Bradley Commission. We reiterate that statement today.

Anticipating, however, that recommendations to alter the existing non-service-connected pension structure will be forthcoming, delegates to the 11th National Convention of AMVETS adopted a resolution that opposes any move on the part of the Bradley Commission or any other group to eliminate the non-service-connected veterans pension system. In our judgment, present pension laws are sound. Any move to eliminate or reduce them will be opposed vigorously by AMVETS.

DISABILITY AND DEATH COMPENSATION

Believing that the rates of compensation for service-connected disability and death are not commensurate with today's cost of living, we shall seek legislation to provide such an increase in the immediate future. We recognize that H. R. 7089, the survivor benefits bill, which passed the House of Representatives during the last session of Congress would revise drastically the scale of compensation payments to widows, children, and parents. The proposed revisions are not, in the judgment of AMVETS, the most equitable approach to this problem. We realize, however, that legislation before this committee to increase the rates of compensation to survivors will be dependent upon Senate action on H. R. 7089.

Under current statute, a psychosis that becomes manifest to a degree of 10 percent within 2 years of separation from military service is presumed to be service connected for treatment and hospitalization purposes only. AMVETS contend that the presumption of service connection, being valid for this purpose, would be equally valid for the payment of compensation. Accordingly, we urge you to consider amendatory legislation during this session of Congress.

DISABILITY PENSIONS

In the field of veterans' pensions for non-service-connected disabilities, we have but one legislative recommendation. As you well know, unmarried veterans, who may be obligated to support dependent parents, cannot qualify for non-service-connected pension based on total disability if their annual income exceeds $1,400. It is the considered opinion of AMVETS that unmarried veterans who prove to the satisfaction of the Veterans' Administration that they are supporting dependent parents should receive the same consideration with respect to income limitations as married veterans. We, therefore, recommend that the income limitation for single veterans with dependent parents be increased to $2,700 per year in determining entitlement to non-service-connected pensions under part III, Veterans Regulation No. 1 (a). We respectfully urge that this committee consider this matter during the current session of Congress.

DEATH PENSIONS

A long-standing inequity in the criteria for determining the eligibility of widows for death pension demands attention by this committee. As you know, widows of World War II and Korean conflict veterans to be eligible must establish that the veteran upon whose death the application for pension is based was separated from service for medical reasons or that he had an ascertainable degree of service-connected disability at the time of death. The widows of World War I veterans applying for this benefit are spared this requirement and may qualify merely on the establishment of 90 days' service and a discharge other than dishonorable. We can see no logical reason for the disparity and recommend its correction.

Equally deserving of attention during this session is legislation to provide for the deduction of burial expenses from the proceeds of commercial life insurance in determining a widow's annual income for entitlement to non-service-connected death pension. In many instances, a widow is denied pension for a year because the proceeds from a small insurance policy, most of it consumed by burial expense, cause her to exceed the statutory income limitation of $1,400 or $2,700 as the case may be.

EDUCATION

AMVETS continue to recognize the need for a scholarship assistance program for the children of certain deceased veterans. We have reviewed with approving interest H. R. 588, the bill to provide Federal scholarships for the minor children of our war dead, and introduced by the distinguished chairman of this committee. We believe your action continues the enlightened policy, first exemplified by Public Law 346, which not only recognizes the heroic sacrifices of our servicemen and women, but also acknowledges a responsibility for their future in terms of self-help.

Even more important is the future of those youngsters whose fathers' sacrifices have prejudiced their own opportunities. AMVETS, as you know, have long believed both in the particular need for educational grants under such circumstances and the responsibility of the Nation to provide them. In fact, our current resolution on this subject, first adopted in 1954 and reiterated in 1955, goes even beyond the scope of your proposed legislation and includes the children of all service-connected dead and totally disabled.

Because we feel that scholarships must be provided, whether through private or public action, AMVETS have already taken steps in this direction in the absence of large-scale activity by the Federal Government. Our National Service Foundation has established the AMVET memorial scholarship program which annually awards seven $2,000 college scholarships to the children of deceased or totally disabled former servicemen.

On the basis of our experience with the scholarships and with the problems of the children of servicemen, I should like to recommend that the children of all service-connected dead and permanently and totally disabled veterans be eligible for scholarships. The inclusion of these additional groups will, of course, increase the cost of the scholarship program. No one, however, can or should be pennywise when considering the educational future of these children. Most of them would not face the need for help if their fathers had not been killed or disabled in the defense of our country. We respectfully urge you to assign the highest priority to the consideration of this worthy legislation.

The excellent results of the veterans education program are known to all of us. This investment by a grateful Nation acting through Congress is paying and will continue to pay for many years tremendous dividends in economical, social, and technological advances. Accordingly, AMVETS will continue to actively support all programs to effect improved educational opportunities, and particularly, we will support an educational program for all ex-servicemen that will continue as long as the youth of the Nation are being drafted for military service.

HOUSING

It has been estimated that some 11 million World War II veterans have not used their entitlement to the loan-guaranty provision of the Servicemen's Readjustment Act of 1944. The authority to grant this benefit will expire in July 1957. Like the education program, the effect of this program on the economy of the Nation has been tremendous. Its advantages to the Nation far outweigh any objections that can be cited. With the termination date approaching, it is reasonable to assume that many thousands of veterans will utilize their entitlement in the immediate future. As the demand for housing increases, some inflationary reaction, in the nature of higher prices in both old and new housing, could conceivably follow. Aside from the possibility of inflation, the natural rush of veterans trying to meet the July 1957 deadline could result in a boom-and-bust proposition of greatly accelerated construction activity for a year and a half followed by a sharp decline. Such a situation could have dire effects on the economy of our Nation.

At the time the July 1957 limitation was imposed, no one, of course, could foresee the outbreak of Korean hostilities in June 1950. In the 3 years that followed, substantial credit controls were imposed and construction materials became scarce. These factors undoubtedly interrupted the home buying plans of many veterans.

Because of these compelling reasons, we support a 3-year extension of the loan-guaranty program for World War II veterans.

In discussing the World War II housing program, we cannot overlook the splendid work of this committee in exposing the unscrupulous persons engaged in the illegal sale of GI housing entitlements in certain areas of the country. Such a practice is not only illegal but casts a shadow upon the integrity of veterans everywhere while besmirching an otherwise fine record of achievement. We urge that you continue your vigilance in this direction.

HOSPITAL-REPAIR PROGRAM

We are not unmindful of the fact that the investigations conducted by this committee during the 1st session of the 84th Congress into the state of repair and maintenance of Veterans' Administration hospitals played a major role in the appropriation of additional funds for sorely needed repairs and modernizations in older facilities. In recognition of this outstanding contribution in the interests of veterans, our national executive committee in its spring meeting of 1955, commended the Committee on Veterans' Affairs and urged that the needed overhauling and repairs brought to light by your investigation be completed at the earliest practicable date.

Obviously, this extensive project will require additional moneys. Accordingly, delegates to the most recent AMVETS national convention unanimously endorsed a resolution calling upon Congress to appropriate sufficient funds to permit the Administrator of Veterans' Affairs to increase the tempo of this long-range project. We expect to make these views known to the Appropriations Committees of both Houses of Congress. We are confident that this committee will continue its active interest and productive efforts in support of the so-called Veterans' Administration nonbed betterment program.

CONCLUSION

We have attempted here today, Mr. Chairman, to highlight our legislative program for the coming year. In the interest of time we have, of course, touched only upon certain matters of current interest to veterans and those concerned with the welfare of veterans and their dependents. With your permission, sir, we desire to submit a digest of the resolutions adopted in September 1955 by the 11th annual national convention of AMVETS. These resolutions contain the complete AMVETS legislative program, and, in our judgment, merit the same attention as the portion already cited.

A close analysis of this program will reveal that AMVETS are interested in the perfection of a sound legitimate structure of veterans' benefits—an enduring structure that will adequately and properly discharge the Nation's obligation to its veterans and at the same time earn and merit the respect of the American people.

Basically, the structure should include (1) adequate compensation and medical treatment for service-connected disabilities and adequate but equal care for survivors, (2) pensions for veterans who are permanently and totally disabled from non-service-connected conditions, with need, unemployability, and disability as the fundamental tests to be met, (3) entitlement to hospitalization for the treatment of non-service-connected disabilities when a bed is available and financial need is apparent, (4) vocational rehabilitation to overcome occupational handicaps created by service-connected disability, (5) education and training to replace lost opportunity, and (6) special assistance, including certain priorities and preferences, in obtaining suitable, gainful employment.

This in essence is our program. We look to you who are responsible for plotting the proper course for millions of veterans for assistance. We are confident that your objective thinking and careful study followed by the nonpartisan, vigorous action you have demonstrated so frequently in the past will result in a sound equitable structure of veterans' benefits. We pledge to this committee and its extremely capable staff our continued cooperation and assistance in attaining this goal.

An Expression of Appreciation by Flood Victims to a Unit of the United States Air Force

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks, I desire to include a letter from Patrick J. Murphy and John Menary commending the officers and men of the 777th A. C. and W. Squadron for their outstanding assistance to the community of Klamath, Calif., which was practically destroyed during the recent flood.

The First Congressional District, which I represent, is composed of 7 counties. Every county has suffered severe flood damage and all are included in the Presidentially declared disaster area of California.

I made two trips to the district to inspect flood damage and to assist in coordinating application of disaster assistance. I saw the devastation firsthand, talked to many victims, and heard numerous accounts of acts of heroism performed by individuals, police, firemen, civil defense workers, and various units of the Armed Forces.

I would not endeavor to single out nor list these acts of heroism performed under hazardous conditions to save lives and property. I believe the acts exhibit once again that regardless of race, color, creed or position—the American people can be counted on to rally to the aid to each other in times of distress.

The following letter reveals one such incident among many, and constitutes an expression of appreciation:

HON. HUBERT SCUDDER,
House of Representatives,
Washington, D. C.

DEAR SIR: During the recent flood disaster here in Klamath, many individuals, companies, and organizations proved themselves worthy of the heartfelt thanks and admiration of this community. The purpose of this letter is to tell of the outstanding job done by one of these—the 777th A. C. & W. Squadron, commanded by Maj. Edward G. Cassidy, which, as you know, is an Air Force unit stationed here.

The men of this organization helped individuals move belongings before the waters rose; they fed and housed homeless people during the emergency and immediately thereafter; provided food and bedding for many people in the Requa area; worked with civil defense on guard duty to prevent looting and to provide road block details; helped shovel out schools, churches, many individual homes and businesses; sent out messages by radio to notify friends and relatives of people's safety; and supplied medical care and medicines. They shouldered many of these same responsibilities in the Klamath Glen area.

After people started returning to their homes, the squadron announced that it would pick up, clean, and do their best to repair all electrical appliances damaged by the flood which were turned in to them. To date, they have repaired hundreds of items, such as stoves, refrigerators, washing machines, irons, etc.

Not only is all the actual assistance deeply appreciated, but we were especially impressed by the cooperative attitude in which it was offered and the spirit in which it was executed by the men of the squadron.

We feel that the long hours, the heavy labor, and the generous spirit of these men given to a community where they, as individuals, are only temporary members, deserve more than just a local word of thanks. We would appreciate your discussing our gratitude for the outstanding job done by this Air Force squadron at the Washington level in hopes that they may be commended by one of their own leaders.

PATRICK J. MURPHY,
JOHN MENARY.

Protect Our Armed Services Abroad

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. PHILBIN. Mr. Speaker, a wave of protest is spreading over the country against the status-of-forces treaty. The enormity of the deprivation of the rights of American servicemen and women permitted under this treaty is speedily coming to light.

The Bow amendment which was passed by the House by a substantial margin evidenced the real opinion of the country. It provided that hereafter no American military serviceman could be stationed in any foreign country to which the United States has surrendered criminal jurisdiction of the American military personnel. Unfortunately, it was not accepted by the other body.

I am unable to discern any single, real, substantial justification for the present status of forces treaty arrangement. It is said by the proponents that the treaty provides reciprocal rights, that we are able to try foreign military personnel in American courts just as we confer the right on foreign courts to try American boys. However, it is not pointed out that foreign personnel are tried under American law which guarantees complete due process to the accused—a full statement of the specifications of the crime alleged, right to bail, presentation to the grand jury in all serious cases, fair trial by an unbiased judge and jury, confrontation of witnesses, presumption of innocence, entitlement to counsel, and all other constitutional safeguards to which any accused is entitled in our courts under the Constitution and the law.

It must be recognized that in many countries where our boys are stationed the law does not provide these safeguards, indeed some of them do not comply with the fundamental requirements of due process as known to our constitutional law. There is no justification whatever for this country continuing such an arrangement that is so unfair and unjust to those who are making greatest sacrifices to serve the Nation and who are entitled to the full protection of our Government.

This arrangement has been defended on the grounds that our friends abroad will continue to cooperate as they have in the past in turning over those charged with offenses against their laws to our own military courts for trial. However, the arrangement has not worked out that way. Foreign nations are not surrendering any of our accused troops for trial by our military and they are not meeting the expectation held in high quarters that they would act in this manner.

It strikes me that this is another instance of ill-advised appeasement of foreign nations and so-called reciprocity in which our Nation, as usual, does most of the reciprocating.

If State Department employees are immune from this treaty, there is all the more reason that members of the Armed Forces should also be immune, and I hope that the administration and the Congress will soon act to correct what is becoming truly a scandalous infringement of the basic rights of our beloved servicemen and women serving in foreign countries.

Face of a Farmer

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. THOMPSON of Louisiana. Mr. Speaker, W. R. Oliver and Alton Broussard, editors of the magazine, Rural Power, have over the years done a

banner job in reporting progress and giving information to people of southwest Louisiana as to developments in rural power through REA. The Southwest Louisiana Electric Membership Corporation is the world's largest rural electrification association. Many of the outstanding citizens of southwest Louisiana are responsible for the phenomenal success of this project and the managership of Mr. U. J. Gajan has been extremely successful.

Most inspirational is the coverplate of the February 1956 issue of Rural Power featuring Face of a Farmer and an editorial in that issue similarly entitled. Knowing the man who bears this countenance and the inspiration he has been to the development of our areas in Louisiana, I invite the reading of this editorial, which follows, by all of my colleagues:

FACE OF A FARMER

The face on the cover of this magazine is familiar to many. Some may know the gentleman's name; many others will recognize this visage simply as the face of the American farmer. They will see in it the reflection of all the wonderful qualities that make America great. They will see strength, character, personality, respect, the dignity of labor, the rewards of the good earth.

That the face is that of M. W. "Mike" Scanlan, president of the Southwest Louisiana Electric Membership Corp., is secondary. More important is that "Mr. Mike's" countenance is typical of all farmers. You might say his is the face of democracy at work; democracy with a pitchfork in its hand.

Here is the face of a man who has pride. Not pride in the sense of self-admiration or an exaggerated idea of his own worth, but pride in accomplishment and ownership.

Here is the face of a man who enjoys independence, who operates his own farm, produces much of what he eats, earns his money, voices his opinions, loves his family, serves his God, and enjoys sharing his blessings with his fellow man.

Here is the face of thousands and thousands of member-owners of REA who saw their city neighbors install electric refrigerators, electric washing machines and driers, electric ranges, fans and air conditioners, while their own wives were filling kerosene lamps, cleaning sooty chimneys, breaking ice films on water buckets, scuffing their fingers on washing boards.

This is the face of the farmer who was doing hundreds of farm chores as his great-grandfather did them, while his city friends accomplished the same tasks and many more with a 1 horsepower electric motor at a cost of about 5 cents.

This is the face of the farmer who decided to do something about his situation. He bettered it a thousand times over by obtaining REA power. He not only got electric power to increase his own worth to the soil and the Nation, but to provide his wife and family with the almost limitless number of electric labor-saving devices.

And furthermore, this farmer obtained electric power for himself and his neighbors despite the fact he faced tremendous obstacles. Private industry, when asked, said electricity couldn't be brought to the farm; it wasn't practical, and the farmers wouldn't use it if they had it.

History has proved the farmer was right and the public utility companies were wrong. Yet our farmer is still fighting—fighting to retain his electric co-op, which the utility companies would now like to gobble up.

This is the face of the farmer who owns and operates his electric cooperative and with deep humility enjoys pride of ownership.

This is the face that fulfilled your Rural Electric Association's creed:

"To advance the position of agriculture—to enrich the life of the community—to free men and women from the heavy drudgery of the home and farm—this Rural Electric Association was erected by southwest Louisiana farmers to supply the rural areas with the limitless service of electricity."

It Really Makes a Difference

EXTENSION OF REMARKS
OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of the Members a timely editorial which appeared recently in the Steamboat Springs (Colo.) Pilot.

It has recently become an absolute necessity for Cabinet members to catch up on their magazine reading. Members of Congress have also been observed reading magazines.

For Republican Members who have recently taken up this pastime, I would like to recommend Time, which enjoys thinking of itself as a weekly magazine which interprets the news in an understandable way for those who are not well enough endowed intellectually to interpret events for themselves.

I recommend Time for all good Republicans not necessarily because all good Republicans are lacking in intellect, but because in Time the Republicans will always find satisfying reading.

Time's deft writers are artists of the highest caliber. They must of necessity be artists in order to color the news as they do. This weekly magazine, which is supposed to make some attempt to be objective in its reporting of the facts, presents one of the most slanted news reports in the Nation.

Time, however, is not the only publication today which presents a colored view of the news. In many instances, the press today is not living up to its responsibilities. One of the major concerns of a free press should certainly be to strive for objective reporting in its news columns. I submit that many reporters are not doing that. There are those who are doing an outstanding job, but I am inclinded to believe they may be in the minority.

Certainly one publication which is head and shoulders above all others in its ability to slant and color the news is Time magazine, as the following editorial from the Steamboat Springs Pilot indicates.

The editorial follows:

IT REALLY MAKES A DIFFERENCE

We long have marveled at the adroit fashion in which news magazines color the news to suit their taste and influence public opinion by the way they interpret events of the day.

It has remained for Milton S. Gwirtzman, former Harvard Crimson editor, now at Yale Law School, to point out a few glaring ways in which the public is misled. The article from the Harvard Crimson is reprinted in the January edition of Neiman Reports. As no one saves old news magazines it is difficult for the average reader to discern the direction in which he is being led.

Gwirtzman has had the time to check back on Time, which boasts you can depend on its accuracy. He compares Time's reporting on the same men and the same events during the Democratic administration in 1946–52 and the Republican administration of 1952–55.

Parts of the article follow:

Take the income tax, an event of annoying recurrence. The average American, of whom Time writes with great apparent familiarity, was bent over by his tax burden during the Democratic years. Thus: "This week once again, the American taxpayer * * * was working over his income-tax return. He did not do the job happily. * * * The blow, in full and crushing measure, now lands each March 15 on the chin of a fellow named John Q." (March 10, 1952.)

But in 1955: "Sixty million Americans have by this week signed their 1954 income-tax forms. * * * They did this, wonderful to tell, without riots or protest * * * It has become more and more unfashionable to criticize the income-tax level." (April 18, 1955.)

Or look at the periodic reports on the economic health of the Nation:

April 2, 1951 (Democratic administration): "Never in United States history had the cost of living been so high. Between January 15 and February 15 the consumer's price index jumped 1.3 percent to 183.8."

July 4, 1955 (Republican administration. Consumer price index, 192.3.) "After a considerable shift in domestic economic policy, the United States is more prosperous than ever before."

The sudden glow which accompanied the Republican administration even transformed personalities. George E. Allen, when a Government official in the Truman administration, was worked over as follows:

"For 18 years, roly-poly George E. Allen bobbed around Washington like a pneumatic rubber hose." (October 16, 1950.) "Last week the President (Truman) eased his croniest crony, George E. Allen. into the Board of Directors of (the) Reconstruction Finance Corporation." (January 28, 1946.) "George is all the more remarkable because ,to the naked eye he is a clown." (August 12, 1946.)

But behold: "Last week the President (Eisenhower) chatted quiety with golfing companion George E. Allen, Washington lawyer and friend of Presidents." (December 14, 1954.)

Time's technique is perhaps best revealed in its weekly column on the Presidency. Its reports on Presidential behavior are able to rise above objectively and perceive distinctions where none are apparent. Thus, "President Truman flapped open his leather notebook, and began in his usual flat tone to read his message to Congress on the State of the Union. When he finished 45 minutes later, he had made little news." (January 21, 1952.) However, "President Eisenhower's 1955 State of the Union speech had sweep and calm balance;" and although "it elaborated the obvious, perhaps that was precisely what the Nation needed." (January, 17, 1955.)

What bothered Time about the Fair Deal was its omnibus character. "In this best of all Democratic worlds he (Truman) had something for everybody. For the businessman, he had his new program of Government loan insurance and other aids to small business. For the farmer and consumer, he had the Brannan plan." (May 22, 1950.) "For everyone else, there was a whole grab-bag of social and economic promises." (January 18, 1948.) One might expect that Time would be similarly annoyed when President Eisenhower proposed such familiar Fair Deal items as "lower tariffs, technical assistance,

public works, highways, public housing, strengthened health services, alleviation (of) the shortage of schoolrooms, increase in the minimum wage, higher pay scale for postal employees, amendment of the McCarran Act to eliminate injustices and discrimination." (January 17, 1955.)

But once again, Time was able to spot the difference: "Through the departmentalized details of his (Eisenhower's) proposals runs a clear, consistent thread, joining each fact and each measure wtih all the others. The thread is the general good. He has not thrown together a hodgepodge of group interests. Every proposal seems to be tested by the standard of the whole Nation's interest." (January 18, 1954.)

It is perhaps arguable whether a weekly has any more right than a daily to editorialize in its news columns. Instead, with what must be a great expenditure on interviews and questionnaires, it tells its readers what the people think:

"In the eyes of most United States citizens, Harry Truman's administration had bogged down in ludicrous futility." (June 3, 1946.)

"The public had an impression of a petulant, irascible President who stubbornly protected shoddy friends, a man who has grown too touchy to make judicious decisions, who failed to give the Nation any clear leadership in these challenging times." (April 23, 1951.)

"They saw Ike, and liked what they saw. They liked him for his strong, vigorous manner of speech and for an overriding, innate kindliness and modesty. But most of all, they liked him in a way they could scarcely explain. They liked Ike because, when they saw him and heard him talk, he made them proud of themselves and all the half-forgotten best that was in them and in the Nation." (June 16, 1952.)

It is comforting to know that the educators, corporation presidents, Congressmen, and others who depend on Time, can draw their opinions from such a clear, pure fountain of fact. Makes the rest of us feel more at ease.

Congratulations to the Navy Department for Its Effective Cooperation With Small Business

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. BURNSIDE. Mr. Speaker, I want to take this opportunity to call to the attention of my colleagues in the House of Representatives a program of the Navy Department which has operated so successfully in the city of Huntington, W. Va., that it is being applied to similar situations all over the Nation. I refer to the Navy Department pilot program of assistance for substantial labor surplus areas, first tried in Huntington. The success of this program illustrates clearly the great good which can be accomplished through the sincere cooperation between responsible Government leaders and officials of small business.

Much of the credit for the success of this program can be directly attributed to the outstanding efforts of Navy Department officers who have devoted themselves tirelessly to this project. I want to particularly congratulate Vice Adm. M. L. Royar, Chief of the Office of Naval Materiel. His direct interest in helping small business and labor in a surplus labor area has enabled that area to return to a more prosperous condition in the course of 1 year. Admiral Royar retired only yesterday and to me this program stands as a fitting climax to a successful career.

The personal direction and assistance of Rear Adm. R. L. Swart, Vice Chief, the Office of Naval Personnel, has in equal measure contributed to the success of this program and through it to the economic well-being of a number of industries and thousands of individuals. Therefore, I want to note also a particular vote of appreciation to Admiral Swart.

To those in the Navy Department who cooperated with these men, I think we also owe our congratulations. Dr. Kenneth P. Borgen, in particular, has devoted long hours to creative and practical efforts of immeasurable value in successfully completing this program.

Of course, the businessmen who have participated in this activity in the Navy Department have themselves made an outstanding contribution to their community and the Nation. Through their efforts in cooperation with the Navy Department, not only have their own businesses thrived but their work for the Navy Department has made a real contribution to our national defense. Following is the letter from Admiral Swart explaining the Navy program:

DEPARTMENT OF THE NAVY,
OFFICE OF NAVAL MATERIAL,
Washington, D. C., January 12, 1956.

Hon. M. G. BURNSIDE,
House of Representatives,
Washington, D. C.

MY DEAR MR. BURNSIDE: With this letter I am forwarding to you a copy of ONM Instruction 4803.3 of December 13, 1955, on the Navy program of assistance for substantial labor surplus areas with the hope that it may be helpful to you and the Congress.

Our program of industrial workshops, community production clinics, and technological exhibits, in addition to procurement awards, places maximum reliance on private initiative and vigorous, informed competition. We feel that initial results of the program in Huntington, W. Va., indicate that it is beneficial to both the community and the Department of the Navy.

As you know, in Huntington, a defense-production pool has been formed to produce a critical defense item on an integrated basis in that dispersed geographic area as a mobilization planning project for a military agency. In addition, the community has benefited from the work of their local industries committee formed in conjunction with the program. We are informed that several plants have expanded their facilities and payrolls as a result of increased commercial and Government business. The Navy, alone, shipped out approximately $14 million worth of material produced in the Huntington area in fulfillment of contracts during the first 7 months of 1955. Employment during the period increased from 78,775 to 82,900.

You may also be interested in knowing that our work with the Huntington community proved most helpful in assisting firms in the flood-disaster counties of the Northeastern and Western States this fall and winter. We adapted the labor-surplus area program to the flood-disaster areas and have conducted 28 industrial clinics in these areas for manufacturers. At these clinics, our program of production and procurement assistance is explained. ONM Instruction 4800.32 of October 17, 1955, and ONM Instruction 4800.33 of November 14, 1955, are enclosed for your information in this connection.

Further, you may be interested in our program of technological exhibits for labor-surplus areas. Such an exhibit was held in Detroit, Mich., during October 1954. Personal interviews were held 6 months later with a representative sample of the some 5,000 persons who attended this exhibit of new methods, processes, and patents. Twenty-three percent of those interviewed were in the process of developing ideas gained at the exhibit of significance to defense production or had already put them into effect. Among some of the applications of exhibit ideas were the use of printed circuits in electronic equipment, the use of aluminum ferrous metal in jet engine components, and the use of the shell molding process to cut costs and achieve closer tolerances in castings. It may be that such an exhibit would be helpful to your district.

I feel sure that you are pleased to learn of the great benefits which have been derived from the program which you initiated in Huntington in December 1954. It has been a pleasure to work with your office and the aggressive, cooperative Small Industries Committee of Huntington headed by Mr. Charles Peoples.

Sincerely yours,

R. L. SWART,
Rear Admiral, USN, Vice Chief of Naval Materiel.

UTILIZATION OF INDUSTRIAL RESOURCES OF HUNTINGTON, W. VA.—SUMMARY REPORT OF FINDINGS OF SMALL INDUSTRIES COMMITTEE OF HUNTINGTON, W. VA.

Problem: How can small-business men of Huntington, W. Va., cooperate to make the maximum use of their production resources to obtain more commercial and Government business?

Background: On December 11 and 12, 1954, our Congressional Representative, in cooperation with the Huntington Manufacturers Club and the Chamber of Commerce, arranged meetings of local manufacturers, labor organizations, and Government officials concerned with procurement. The Government officials attending representing the Department of Navy, the Army, the Air Force and the Small Business Administration expressed a positive interest in helping the small industries of the Huntington area obtain opportunities for bidding on defense contracts.

Fourteen manufacturers prepared brochures to help promote their products and many individual contacts were arranged with Government procurement officials who further indicated interest in helping Huntington develop a broader defense production program.

On June 21, 1955 an industrial workshop was arranged in Washington at the Navy Department by Huntington manufacturers. It was the first workshop held by a defense agency for small business firms. As a part of this effort, the manufacturers had personal conferences with representatives of the various naval bureaus. Meetings were also arranged with Air Force procurement officials and Small Business Administration people concerned with organizing production pools. Following the Washington meeting, Huntington businessmen formed a committee to work on the problem of pooling their respective production capabilities in order to broaden their area of competition. Several advisors were obtained from Government and industry to help outline a program of action during the week of July 18, 1955.

It is interesting to note that a total of approximately $3,729,782 in defense contracts has been awarded small firms in the Hunt-

ington area since January 1, 1955. This indicates that there are actual opportunities for Government procurement by small business firms in Huntington.

Summary of findings: Having duly considered the problem in continuing sessions over the period of July 18–21, 1955, a committee of Huntington's small industries makes the following overall recommendation, as the Huntington approach to the problem.

1. The prime and subcontractor method of doing business should be made more effective in Huntington.

2. A production pool should be formed to increase the ability of small industries in Huntington to obtain Government contracts for critical defense items.

The committee recommends that these proposals, as detailed in parts I and II of this report, be studied by appropriate Huntington industries with a target date for approval, modification, or disapproval of August 4, 1955. In the interim period, the committee will be available for discussion of details of the proposals.

A major objective to be served by these proposals is to increase average manufacturers' sales of Huntington firms to both commercial industry and the Government by 25 percent in the calendar year 1956 as compared with 1955. This amounts to a target increase of $30 million and an estimated increase in employment of 3,000 people, which would be further augmented by employment increases in professional and service occupations in other business establishments of the community. In addition, broader defense interests will be served in fully utilizing the capacity of small industries for defense production, broadening the industrial mobilization base, providing for the production of critical defense items in dispersed geographic areas, and insuring full utilization of the manpower resources of labor surplus areas and the availability of occupational skills required for mobilization production.

The committee recognizes that intensive effort and hard work is required to carry out its proposals. However, it is believed that the necessary leadership and cooperative spirit and know-how to accomplish the tasks set forth are present in Huntington. It is also believed that the action program outlined will accomplish the objectives set forth.

Committee members: Paul G. Davis, C. W. Davis & Sons, Inc.; L. Milton Polan, Polan Industries; Charles Peoples, the Peoples Co.

Committee advisers: Darwin Ensign, Ensign Electric & Manufacturing Co., Huntington, W. Va.; Herman Brown, former general manager, International Nickel Co., Huntington, W. Va.; Conley Dillon, Marshall College, Huntington, W. Va.; Kenneth Borgen, Executive Office of the Secretary of the Navy, Office of Naval Material, Washington, D. C.; Comdr. William C. Logan, Inspector of Naval Material, Huntington, W. Va.; Dixon Smith, Small Business Administration, Richmond, Va.; Delbert Williams, Small Business Administration, Charleston, W. Va.

Utilization of Industrial Resources of Huntington, W. Va.

EXTENSION OF REMARKS

OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of findings of Small Industries Committee of Huntington, W. Va.:

PART I

Problem: How can small businessmen of Huntington, W. Va., cooperate to make the maximum use of their production resources to obtain more commercial and Government business?

Facts bearing on the problem: The potentials of small business in the Huntington area are not presently fully utilized by the firms in the area. For example, a Huntington contractor obtained a prime contract for a metal products unit which it had previously manufactured and could largely be produced in Huntington. The purchasing phase of the contract was turned over to the purchasing department for action in accordance with the established buying procedures of that company.

It was determined that:

(a) Presently known sources were being solicited without consideration to local companies except as they previously fitted into the procurement plans of the prime company.

(b) That local sources were not advised of the possibility of work and the availability of tooling.

(c) That many local sources were not calling on the purchasing department of the prime contractor.

Steps were taken to notify other local companies which responded at various levels. Some immediately took steps to obtain orders by submitting quotations. Others, not recognizing the extent of the work, did not take advantage of the notification. All local companies submitting bids were given an opportunity to meet lower prices coming from outside sources.

This and similar examples indicate that the prime and subcontractor method of doing business can be made more effective in Huntington. It has the advantage of utilizing current industrial practice. The following action program is recommended.

Recommendations

1. Increase the knowledge of the productive capacities of all businessmen in Huntington among each other and prospective buyers.

(a) This should widen the area of procurement for both commercial and Government business.

(b) It should make maximum use of production facilities in Huntington prior to subcontracting out of the area.

This may be done by:

(a) Interchange of industrial brochures.

(b) Open house for each manufacturer.

(c) Central file of production resources of Huntington in chamber of commerce for use in obtaining new business.

2. Increase contacts with Government and commercial enterprises.

(a) The Inspector of Naval Material, Huntington, will ensure that all subcontract possibilities are brought to the attention of appropriate manufacturers in Huntington as well as the chamber of commerce in appropriate instances. This includes prime contracts and instances where manufacturers are looking for a second source.

The Huntington group should ensure that the Inspector is fully aware of each manufacturer's capabilities as well as group capabilities.

(b) Invite selected manufacturers to survey Huntington's resources.

(c) Write to selected manufacturers and make known resources of the community.

(d) Augment personal visits to potential buyers. Establish an itinerary for each Huntington manufacturer to visit selected firms and explain his productive abilities as well as other facilities in Huntington.

(e) Ensure placement on bidder's lists of appropriate Government agencies and follow through aggressively on potential business.

(f) Fully utilize Federal, State, and local government services for solving the problem including the Small Business Administration and Area Development Division of the Department of Commerce.

3. Huntington manufacturers should make known to each other business opportunities which come to their attention.

4. Augment Huntington's production capacity as requirements develop.

(a) Subcontract outside of the Huntington area.

(b) Provide facilities locally such as foundry and forging capacity and screw machines and turrent lathe capacity.

5. The local industries committee of the chamber of commerce together with the Huntington Manufacturers' Club should take the necessary steps to carry out the program. A steering committing should be formed from these two groups to carry out the program.

Areas for further investigation

1. What should be the nature of the contents of the master brochure?

2. What supplements of subcontractor potential should each manufacturer include in his brochure to indicate that he as a prime contractor has subcontractors available in Huntington?

3. What sorts of information should be contained in the central file of the Huntington Chamber of Commerce and how should it be used.

4. What staff assistance should be provided to small-business men in the program by the Huntington Chamber of Commerce?

PART II

Problem: How can small-business men of Huntington, W. Va., cooperate to make the maximum use of their production resources to obtain more commercial and Government business?

Facts bearing on the problem: There are many items of Government procurement which are beyond the manufacturing capabilities of an individual small-business man but which could be made by several manufacturers on a pooled basis. The Government has made it possible for such firms to combine in an organization to produce defense items without violating antitrust laws. These so-called production pools cannot operate to produce commercial items.

Recommendations

1. Manufacturers in Huntington should form a pool of their production facilities in order to secure contracts to manufacture guided missiles on an integrated basis or any other item suitable to Huntington facilities. Two committees should be established, namely, a procurement committee and an organization committee with the following responsibilities. These committees should be organized by a steering committee of the chamber of commerce and Huntington Manufacturers Club. They should operate simultaneously and report to the steering committee by October 1, 1955.

a. A procurement planning committee should be designated to determine the possibility of developing negotiations with the military departments for contracts to produce guided missiles or other suitable items.

1. This committee should ascertain the specific opportunities for guided missile production on an integrated basis in terms of the Huntington area production resources.

(a) Types of missiles.

(b) Production requirements for each missile—short and long-range, by rate and dollar volume.

(c) Production resources required to meet requirements.

2. The committee should also explore subcontracting possibilities of guided missiles with current or prospective prime contractors

3. This committee should have available a master brochure of Huntington's production capacity to be developed by the local industries committee of the chamber of commerce. This should be acceptable to the Small Business Administration.

4. This committee should have appropriate security clearances for working with the military departments.

5. The first formal approach of the committee to the military departments should be with the appropriate staff sections of the Department of Defense and the Office of Defense Mobilization. Preceding such an approach, the committee should develop a sound procurement proposal.

b. An organizational committee should be designated to develop recommendations for an organization to conduct the pool's business assuming success of the procurement committee.

(1) The committee should consider legal and financial aspects such as tax problems aspects and relationships of pool members with each other and with the Government.

(2) Determine and recommend the type of pool which will be most effective for its purpose. The committee should look into corporate and unincorporated organizations as well as cooperatives. It should contact existing production pools and ascertain their strengths and weaknesses. Information available indicates that a strong, centralized type of organization has the best chance of success.

(3) The selection of top management for the pool is of maximum importance. The general manager of the pool should be highly qualified from a production and managerial viewpoint and be thoroughly familiar with Huntington facilities. He should command the respect of the community and possess demonstrated leadership abilities.

(4) The committee should establish the qualifications for participants in the pool and ascertain whether there is sufficient interest to warrant an organizational meeting in conjunction with the Small Business Administration.

(5) Draft a proposed charter for the operation of the pool and work out a plan of operation, including production scheduling.

(6) Draft a proposal to finance overhead costs of the pool including allocation of costs among pool members and method of defraying costs. It is considered that organizational expenses will be a minimum of $1,000. Other costs are estimated to be a minimum of $50,000 for the first year of operation.

(7) Determine engineering assistance and staff required for the overhead organization.

2. To carry out the preceding proposals, it is recommended that a steering committee be designated from the Huntington Chamber of Commerce and Manufacturer's Club.

The steering committee should develop and carry out an educational program to inform private industry and the Government of the Huntington effort including full utilization of all information media including the radio, television, and the press.

a. This committee should direct the operation of the program and schedule it.

b. It should insure critical evaluation of results of the program and develop improvements as necessary.

PART III

Subsequent developments as of December 1, 1955

The Huntington community has aggressively carried out the preceding action program. Major actions follow:

1. Formed a local industries committee comprised of an executive committee, organization committee, and procurement committee.

2. Organized a defense production pool which is under review by the Small Business Administration for approval and transmittal to the Department of Justice for their approval. Several major corporations have indicated a great interest in participating in the pool's plan to produce a critical defense item such as a guided missile on an integrated basis in this dispersed geographic area as a mobilization planning project. The pool has had a survey performed by a hired consultant and others by major corporation representatives which indicate the plan is feasible. Members of the excutive committee have also visited other contractors' plants in this connection to insure that they have the manufacturing capability. They have also made arrangements to augment their own engineering staffs if it becomes necessary.

3. Completed a master brochure of production resources of manufacturing plants and the production potential of the community.

4. Visited each other's plants to become thoroughly familiar with the production potential for subcontracting purposes.

5. Have increased their sales efforts with significant results. Several plants have expanded their facilities and payrolls as a result of increased commercial and Government business. The Navy, alone, shipped out approximately $14 million worth of material produced in the Huntington area in fulfillment of contracts during the first 7 months of 1955. Unemployment has been reduced from 5,250 in September 1954, to 4,100 in September 1955. Employment during the same period increased from 78,775 to 82,900.

The executive committee is continuing to push forth aggressively on their program. Its membership is as follows: Charles W. Peoples, president, the Peoples Co., chairman; Paul Davis, vice president, C. W. Davis & Sons, Inc., member; Dr. M. L. Polan, vice president, Polan Industries, Inc., member; Dr. Conley Dillon, Marshall College, consultant.

Huntington industries who are participating in the defense production pool are as follows: Armstrong Products Corp., P. O. box 940, Huntington, W. Va., sheet metal fabrication; C. W. Davis & Sons, Inc., 837 Adams Avenue, Huntington, W. Va., metal fabrication including piping and tubing; Ensign Electric and Manufacturing Co., 914 Adams Avenue, Huntington, W. Va., electrical equipment and controls; Enterprise Wheel & Car Corp., P. O. drawer 1799, Huntington, W. V., manufacturing and fabricating heavy steel items including industrial equipment; Huntington Plating and Polishing Co., P. O. box 9066, Huntington, W. Va., electroplating and metal finishing; LeJohn Manufacturing Co., 111 22d Street, Huntington, W. Va., electrical products and appliances; Fred McCorkle Machine Shop, Inc., 125 3d Avenue, Huntington, W. Va., general machine shop work; Metalcraft Inc., of Huntington, P. O. box 9116, Huntington, W. Va., wire and wrought iron specialties; The Peoples Co., 712 Buffington Street, Huntington, W. Va., textile fabrication including heavy canvas; Polan Industries, Inc., P. O. box 1720, Huntington, W. Va., precision equipment, optical, electronic, mechanical, and fire control and machine tool rehabilitation; A. F. Thompson Manufacturing Co., P. O. box 610, Huntington, W. V., manufacture heating and cooling equipment; C. I. Thornburg Co., Inc., P. O. box 2163, Huntington, W. Va., fabricator and manufacturer of pipe nipples, valve floor stands, and cast iron flanged pipe; W. Va. Steel and Manufacturing Co., P. O. box 118, Huntington, W. Va., production and fabrication of steel products including steel bars and shapes.

It is noted that in addition to the above firms, there is considerable production potential in Huntington or the nearby area.[1] This includes a plentiful supply of electric power, economical rail, highway, and water transportation to consuming and producing centers, large natural resources of salt, timber, limestone, sand, clay, shale, oil, natural gas, and water.

Among the major industrial firms located in or near Huntington are the Allied Chemical & Dye Corp., Sylvania Electrical Products, Inc., Westinghouse Electric Corp., Owens-Illinois Glass Co., International Nickel Co., Inc., Houdaille-Hershey Corp., ACF Industries, Inc., and American Container Corp. In addition, Kaiser Aluminum Co. is building a large aluminum producing and sheet fabricating plant at Ravenswood, W. Va., which is near Huntington.

Seven firms in Huntington produce chemicals, 9 firms produce electrical products, 11 firms are manufacturers of glass, 31 firms engage in metal product manufacturing including steel production, fabrication, forming, machining, and casting in addition to brass foundries and tool and die works, 7 firms are engaged in stone, clay, and concrete products, 8 firms make textile products, and 26 firms manufacture wood products.

Trade Versus Freedom

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. PHILBIN. Mr. Speaker, a great many people believe that the so-called truce in Indochina and Korea evidences a further deterioration of free world unity and emphasizes the alarming growing strength of world communism. To be sure the truce was short lived. Recent events in the Far East abundantly illustrate the continuing aggressive spirit and designs of Red China.

Candor compels me to suggest that it should now be manifest to every thinking observer that communism is continuing to make great headway in Asia just as it has done in certain parts of Europe. In fact, there is no nation in the world today fortunate enough to be free from the ravages of the evil conspiracy which seeks the destruction of human liberty.

The Marxist timetable established long ago is unfolding with almost unbelievable rapidity in the Asian theater. The Reds have capitalized upon the tremendous resentment and rebellious spirit aroused by the evils of European colonialism and imperialism in the East. The conquest of China and Korea and the Indochina truce have tended to diminish American prestige in Asian countries. Communist infiltration, strong pro-Communist sentiment among the leadership of certain of these countries are other factors extremely favorable to the spread and growth of sovietism in the Far East.

The attitude of some of our allies who insist upon carrying on extensive trade and commercial intercourse which strengthens the war potential of the Communist world is making it increasingly difficult for our own Nation to secure real cooperation in effecting measures to check further Red aggression and expansion. It must be clear to us now that so long as some nations sharing our attachment to free institutions think more of securing temporary

economic benefits flowing from Soviet trade than they think of strongly sustaining the cause of the free world and joining in efforts to liberate unfortunate smaller subject nations from tyranny and slavery, conditions will be favorable for additional Soviet aggression and expansion.

Many Americans are disturbed by the ironic paradox of some of our allied nations who are apparently willing to resign themselves to a precarious and dangerous status in this atomic age with those who are militantly striving for complete world conquest. Practically everyone is interested in peace and there is no question whatever that the American people to a man and to a woman, are eager to cooperate with all nations which sincerely seek peace through collective security measures.

As a Nation we undoubtedly squarely stand for genuine wholehearted international cooperation to achieve lasting peace and to check those dangerous movements which threaten to disturb world peace.

Actually at the present time there is only one challenging movement and that is organized world communism and because of its nature, its aims, its secretive methods, its deceitful practices, its willingness to resort to trickery, deception and aggression, it is impossible for free nations to conduct sincere or satisfactory peace negotiations.

Another extremely discouraging development is the apparent apathetic attitude of other free nations which seem to be indifferent to the great perils of the world Communist conspiracy, or who are willing to foster cordial, economic relationships with Communist enemies even while they openly engage in aggression and subversion. All these things are extremely distressing to the American people and tend to diminish their confidence in the effectiveness of collective security measures.

Notwithstanding the obstacles and disappointments, let us take a strong, firm stand against the Communist peril and let us work unceasingly for the peace.

Middle East Caldron—Part I

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Middle East Caldron" by James H. Sheldon which was published in the winter issue 1955–56 of a magazine entitled "Prevent World War III." This article will appear in two parts. It is an article which should be of great interest to all those who fear revival of any Fascist movement in the world. It is an article which makes startling disclosures. I have no reason to doubt its accuracy, and it is well worth reading:

MIDDLE EAST CALDRON

(By James H. Sheldon)

The Middle East is a place where troubles start. It has been such a place ever since dim ages before the Trojan War—because the area lies at the strategic crossroads between Europe, Asia, and Africa.

For the same reason that Caesar and Napoleon campaigned around the Nile, so did the Kaiser and his henchmen talk about the drive to the east and concentrate their energies on such projects as the Berlin-to-Baghdad railroad.

Germany's oldline geopoliticians, and likewise the Nazis of Adolf Hitler's Third Reich, gave top priority to building up their influence in the Middle East—and Germany industrialists and diplomats of today follow the same line, albeit with different labels attached.

The United States has long been at pains to develop a policy which would achieve the near-impossible objective of reconciling opposing forces there—and when the Russians needed a new political line this year, they found the opportunity ready-made in their offer of arms to Egypt and other Arab States.

One important reason for continued tension in the Middle East can be found in the entrenched position which the Nazi regime so vigorously built for itself there—a position which has been given continued support by postwar German developments.

Back in 1945–46 an entire group of some 17 Nazi army and S. S.—Himmler's dreaded elite guard—men were smuggled out of Germany, in spite of the allied occupation, into Egypt. False passports and like subterfuges were involved. Included were two topmen from "Milamt Six"—the secret intelligence section of the S. S., which had been organized by Walter Schellenberg under the direction of the notorious Ernst Kaltenbrunner.

Others were former high-ranking experts from the Abwehr (German Army Counter-Intelligence) department formerly under Lt. Gen. Erwin Lahousen. (This was the Abwehr section concurred with "foreign countries, penetration, and sabotage"). Still others came from the S. D. (a Gestapo intelligence group operating within the S. S. Corps) and at least two of these early migrants to Egypt had served with the notorious Einsatzkommandos ("Special Service Detachments")—the S. S. extermination units operating in Eastern Europe.

This group of Nazi experts soon became accepted as an all-powerful cadre in Egypt, and proceeded to organize the intelligence and policy-forming units of the Egyptian Army. Every man in this setup was at the time on the "wanted" list of the Allied commanders, and subject to automatic arrest, had he been caught within the territory of occupied Germany.

Later, they were joined by a considerable body of military experts and seasoned "top sergeants" who had survived the collapse of the Hitler regime. Among these were Lt. Gen. Wilhelm Fahrmbacher, a corps commander in the Nazi army who had been held for a time by the French as a war criminal, but was released and soon became General Naguib's leading military adviser. Fahrmbacher took along as his deputy Maj. Gen. Oscar Munzel, well known in officer circles of the third Reich, and they were later joined by Gerhard Mertins, who assumed the duty of educating the Egyptians in the techniques of parachute jumping and air attack.

Not long afterward, these military specialists were followed by Dr. Albert Degener—well known to New Yorkers as the prewar director of the German-American Board of Trade, one of the most prolific sources of pro-Nazi agitation in America before his presence was officially labeled undesirable by the State Department. Herr Degener's function in Egypt was the same as that which he had once performed in New York: to organize a German-Egyptian Chamber of Commerce.

The extent of his support at home can be gleaned from the frequency with which the German weekly news magazines feature articles on German-Egyptian trade developments.

The extent of this German penetration into Egyptian affairs has since grown alarmingly, as John Gunther puts it in his highly respected book, Inside Africa, "Bonn is acutely interested in Cairo and vice versa. About 600 German technicians are employed by the Egyptian Government working on several levels—military, engineering, railroads and the like. 'Nasser could never have made his coup without his German advisers,' I heard it said. Probably this is an overstatement but German technical skill has been helpful to the junta in several conspicuous areas."

As Gunther also points out, a German naval specialist is reported at work on Egyptian naval affairs and a German tank officer is engaged in mechanizing the armed forces. Three hundred German firms were represented at a recent trade fair in Cairo and a flourishing German-language newspaper has developed in that city. Meanwhile, German universities have set up special arrangements to facilitate the exchange of students from the Middle East.

On October 26, 1955, the West German news magazine, Der Spiegel, carried a story about the role which a former economic assistant of Hitler played in the arms deal between Egypt and the Communist bloc.

This former Nazi, Dr. Wilhelm Voss, once held a leading position in Hitler's war economy as president of the Skoda Works, a huge armament combine taken over by the Germans after they grabbed Czechoslovakia in 1939.

Evidently, this former Nazi was coached for his role in Egypt by the Bonn Government. Der Spiegel reports:

"Dr. Wilhelm Voss, once a prominent leader in the war economy of the Third Reich, started his career in Egypt with the urgent recommendation of the German Federal Government in February 1951. He was appointed in Cairo by General Naguib as head of the central planning board and as such was the chief advisor to the War Ministry in Egypt. Under his command were employed more than 50 German military and armament experts."

The importance of Dr. Voss' role in Egypt is underscored by the fact that the relation of this former Nazi to the Bonn Foreign Office and other Bonn agencies was so intimate and effective that in 1954 the German Ambassador in Cairo, Dr. Gunther Pawelke, also a former Nazi, resigned from his post in protest.

According to Der Spiegel, Dr. Voss kept intimate contacts not only with Adenauer's chief diplomatic aides, Dr. Blankenhorn and Professor Hallstein, but also with the highest officers in the Blank office, the Bonn War Ministry. These relations were evidently a constant irritation to Ambassador Pawelke, because they meant that certain high circles in the Bonn Government were closer to the Egyptian advisor, Dr. Voss, than to the official Bonn advisor in Cairo.

The report in Der Spiegel also reveals the background of the recent arms deal between Egypt and Czechoslovakia. According to this account, the former Nazi and ex-president of the Skoda Works, Dr. Vorr, "initiated the big armament deal with the Czechoslovak agents Prantel, Nobinec, and Kostrum, who operated under the facade of being refugees but who in reality are Communist agent."

The foregoing report sheds considerable light on the organizers and secret wirepullers of the present unrest in the Near and Middle East.

Again, as once under Hitler, the German industrialists and militarists proceed with

their conspiracies according to a well known pattern. They sow unrest where it is to Germany's advantage to fish in troubled waters. Der Spiegel is not very far from the truth when it comments that "Adenauer's leading diplomats have laid themselves open to the charge that they must share to a considerable extent in the tactical victory gained by Bolsheviks in the Near and Middle East."

German pentration in the Near East is by no means confined to Egypt. The former Wehrmacht Maj. Gunther Elmar von Hardenberg has long made his headquarters at Beirut in Syria where he heads an open organization known as the Association for Christian War Refugees and a secret group called the German Aid Committee for the Near East. When John Roy Carlson visited Beirut in 1950, von Hardenberg said to him: "Whenever a new German comes to Beirut I screen him personally, then register him with the Beirut police as a friend of the Arab cause." "There are already many Germans working with the Syrians as trainers and technicians," von Hardenberg added.

In Damascus, an Arabic group which Hitler youth leader Baldur von Schirach had helped form, was still operating, and was the source of "Boycott U. S. A." posters appearing in Arab shops.

In the same region, Dashnag leaders (the Dashnags were an Armenian Fascist movement allied with the Axis) also continue to exert great influence, moving under the old misleading cry that they are fighting communism, while in reality they are bending their primary efforts against the western cause in the Middle East.

The infiltration of Syria has been repeatedly described by foreign correspondents. The Syrian Government early called in a German military mission, after it was defeated by the Israeli armies. Newsweek reported that "the first to appear in Damascus was a former Gestapo colonel named Rapp. He revamped Syrian Military Intelligence and is credited with a leading role in Syria's first military coup, when a group of army officers under Col. Husni Zayim took over the government." Later, a once high-ranking intelligence officer in Hitler's army, General Stutterheim, was installed in a top Syrian army post, assisted by another influential ex-German, Colonel Kriedel.

An important article ("Berlin-Baghdad" Again) appearing in the January 1953 issue of Prevent World War III, gives many further details on this phase of German Middle East pentration.

At the other end of the Mediterranean, a similar situation continues. The leading Hamburg independent daily, Die Welt, on October 26, 1955, printed a dispatch concerning preparations for the inauguration of a monument at Tobruk, in Libya, commemorating the dead of Hitler's Africa Corps. Said this report: "The West German Government will be represented by the German chargé d'affaires in Tripoli. • • • The association of the members of the former German Africa Corps have announced group trips for this occasion and have chartered a steamship and special planes."

From another source comes a report that when former members of the Africa Corps met in Heidelberg, with the widow of former Field Marshal Rommel as guest of honor, she was greeted by the old Nazi marching song, "Panzer Rollen in Afrika." (Tanks Rolling in Africa.)

Reciprocating such interests, Arab tobacco companies have been taking full-page advertisements in German news magazines, featuring the portrait of a desert chieftan with rifle in hand, a replica of a cigarette package and the caption: "A Testimony of Friendship."

Most of the German press has been discreetly silent concerning these affairs—but in Italy the journalistic organs of the MSI (a powerful neo-fascist movement advocating return to the corporate-state ideal of Mussolini) have had no such inhibitions and some of their comments—even after making allowance for the source—are of striking significance.

On September 6, 1955, Il Secolo D'Italia (a strong supporter of MSI) carried an elaborate illustrated account of the reception in its office of 8 editors of the Egyptian newspaper chain Dar El Goumhourya (publishers of 7 newspapers in Arabic, French, and English). The article, adorned with a 4-column photograph of the visiting editors, declares that "Our Egyptian colleagues found in the editorial rooms of Il Secolo the climate of opinion closest to their views." And adjoining headline declaimed: "Israel Has Violated the Truce with Egypt."

The director of Il Secolo has just published a book lauding Mussolini.

On July 17, 1955, Asso Di Bastoni (the recognized voice of the MSI movement) published a long article lauding the Middle East exploits of the Krupp dynasty, with especial praise for Alfred Krupp, the man who served a war criminal's sentence after trial at Nuremberg.

"Alfred Krupp is today the sparkplug of the fantastic German renaissance. He is in close tough with the surviving leaders of the Reich and has placed his agents in all parts of the globe," the article begins. There follows an outline of Krupp's friendship with "heads of government" in the Middle East and elsewhere, and the comment that "the influence of Krupp is particularly important in Pakistan in view of the existence of a group of intelligent Pakistani who were formerly members of the Wehrmacht."

"The gigantic power of revived German industry," adds Asso Di Bastoni, "extends over the whole world. Krupp has defeated all the other corporations and is constructing on the Bosphorus a 1,600 meter bridge. He has concluded advantageous contracts," the article continues, "with Syria and with the National Government of Egypt.

"The Germans achieved a decisive victory in Saudi Arabia," says the same article, "when German electric firms obtained contracts for the construction of modern powerplants, and in Egypt when the German-Egyptian Chamber of Commerce secured a concession under which German engineers will supervise the tremendous Nile dam project.

"Following up the fine work of Krupp and other perseverant German industrialists," says Asso, "the influence and prestige of Germany is enormous throughout the Arab world, where Otto Skorzeny and other ex-officials of the S. S. supervise the instruction and education of armies and Dr. Hjalmar Schacht is financial adivser." In Iran, General Zahedi (arrested by the English as a collaborationist in 1941) is praised as a factor of great power, and it is pointed out that the mother of beautiful Soraya (wife of the Shah) was German. Then continue details of German political and economic penetration in Iran, the Sudan, Lebanon, etc.

"Everywhere the men of Krupp are present and active," says Asso Di Bastoni, and adds that thanks to this, Egypt today benefits from a German advance of 8,750 million lira. These colossal figures of indebtedness are to be settled by supplies of raw materials, adds this article.

In short, behind the scenes in the Middle East are to be found everywhere the pervasive tentacle of old-line German influence, bolstered up (whether for political or economic reasons does not matter) by the modernized industrialism typified by Krupp, and strengthened by the continual comings and goings of powerful figures such as the financial wizard Dr. Hjalmar Schacht.

Underlying all this are numerous indigenous forces for violence, typified by the hot-heads of the green-shirted Young Moslem League and the fanatic Fadayan Islam (Crusaders of Islam), one of whose agents last week nearly succeeded in an attempt to assassinate Premier Hassein Ala of Iran. Another agent of the same terrorist body was more sunccessful 4 years ago, when he destroyed the life of Premier Ali Razmara, one of Iran's ablest postwar leaders.

Middle East Caldron, Part II

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include part II of an article entitled "Middle East Caldron" by James E. Sheldon which was published in the winter issue, 1955–56, of a magazine entitled "Prevent World War III."

When the United Nations voted the partition of Palestine to establish the new State of Israel, it was hoped that an element of Western democratic stability might be injected into this swirling conflict of forces. Failure of the great powers to pursue a firm course in support of the newly established state, however, left the way open for a kind of simmering war to continue, under conditions which could boil up into a worldwide conflict without warning.

The exodus to the Middle East of so many important military and economic figures from the Third Reich, added to Arab intransigence and extremism, has contributed much to prevent the effective exercise of influence by the Western allies in efforts to bring about peaceful settlements.

As a result, we find Premier Nasser of Egypt declaring that "Israel is an artificial state which must disappear" (May 18, 1954, as quoted in the Greek newspaper Kathenieni); and not long ago, the New York Times quoted King Saud of Saudi-Arabia as declaring: "Israel is like a cancer to the human body and the only way of remedy is to uproot it."

So violently anti-Jewish have been some of the speeches made in the United States by the Syrian Ambassador, Farid Zeineddine, that responsible organizations have been led to ask for his recall. Scarcely less inflammatory have been speeches by Mohammed Jamali, chairman of the Iraqi delegation to the U. N. The friendly State of Israel thus finds itself being denounced on American platforms as a "bastard State," and loyal United States citizens of Jewish persuasion find themselves being falsely accused of dual loyalty, in terms reminiscent of prewar Nazi propaganda.

"Whoever thinks of making peace with the enemy (Israel) signs the death warrant of all the Arab nations," Jamali once said. And a Syrian President, General Shisekly, was quoted in Cairo papers to effect that "The Middle East is not large enough for both Jews and Arabs." (What the Arabs intend to do with their vast empty spaces, and their millions of oil dollars, he didn't add.) Mohammed Naguib himself said not so long ago: "The only solution is Israel's disappearance."

An important background factor in building up this Arab intransigence has been the influence of the former Grand Mufti of Jerusalem, Haj Amin al-Husseini.

The Grand Mufti was one of Hitler's major henchmen—and was a principal influence in

determining the policy of Jewish extermination which Hitler pursued, and especially in making that policy the unbelievably inhuman thing it was in the Balkans and Middle East. The Grand Mufti attempted to organize a Moslem revolt against the British in Iraq at the very outset of the war, and when defeated, was brought to continental Europe by Hitler, where at various places he organized a school for the training of Moslem infiltrators indoctrinated to spread Nazi ideologies; helped to set up the blood-thirsty Moslem Legions in Yugoslavia; and finally, just as the war was coming to an end, directed the "Gross-Mufti Bureau" not far from Hitler's headquarters, from which he was engaged (along with Goebbels, Goering, Vidkun Quisling and the Nazi puppet of Iraq) in organizing a "World conference on the Jewish problem." The plans for this conference collapsed only because the Allied Armies got to Berlin before Al-Husseini and his cohorts could get their delegates there.

The S. S. Hauptsturmfuerer Dieter von Wisliczeny later declared in a war crimes affidavit based on his intimate knowledge of internal Nazi affairs that the Grand Mufti played "an important role" in constantly "inciting" the Nazi powers to more violent measures in their policy of Jewish extermination, particularly in southeastern Europe.

A study of material emanating from behind Arab boundaries today indicates that much of the basic propaganda line of the anti-Jewish agitation now being pursued by Arab League states has come down unchanged from the days of the Grand Mufti's evil liaison with Hitler.

For example, Antoine Albina, a leading tourist agent (of Syrian extraction) with headquarters in Arab Jerusalem, is currently engaged in bombarding his countrymen—as well as visitors to that part of the world—with multilingual propaganda bearing the imprint of the World Truth League. The name, significantly enough is a rough translation of the Fichte-Bund once master-minded by Dr. Goebbels.

We need not quote examples of Albina's output at length. It is sufficient to say that Mr. Gerald L. K. Smith, the most notorious of our domestic hate mongers, finds Albina's publications sufficiently inflammatory to be worthy of reprinting in his anti-Jewish monthly, The Cross and the Flag—and like-minded hate mongers in England, and even in far-away South Africa, also find Albina's material useful in fanning the flames of bias and bigotry, in those areas.

This exchange of hate propaganda also works in the other direction. We pause to cite but one instance. When an American west coast agitator named Frank Britton (who a few years ago tried to stir up a boycott against Jewish-owned businesses in Los Angeles) got out a 102-page book misleadingly entitled "Behind Communism" a prominent Arabic press agency, with offices in Cairo, Baghdad and Beirut, promptly reissued it in an Arabic version and started circulating it all over the Middle East. Britton's opus, needless to say, had little or nothing to do with the real facts about communism, but was merely a book-length diatribe against Jews and Judaism, elaborating upon the old canard that "Judaism and communism are irretrievably bound together."

A dozen pages could be devoted to further examples of the same type of agitation, designed to incite even the most lethargic to violence and guaranteed to help forestall all efforts at peaceful settlements. As a Minister in one Arabic cabinet put it the other day: "No member of my government would even dare to talk about peace with Israel."

Of course, the problem of the refugees is being exploited to the utmost by the Arab governments, so that the refugees have become as much a political tool as a relief problem. Relocation funds made available through U. N. agencies have been in large part rejected by the Arab States, who obviously would prefer to keep the refugees confined to their camps, and use them for purposes of political exploitation.

So obvious is this purpose that Egypt and other Arab countries have actually been collecting customs duties on shipments of relief materials intended for the help of the "refugee victims." A casual inspection of the lurid propaganda leaflets issued by the Arabs in this connection confirms the same conclusion.

So arrogant has this attitude become that the highly responsible Reuters agency reported on December 1, 1955, that the seven Arab League countries have actually issued a circular addressed to Dutch firms trading in the Middle East, demanding detailed information on their business with Israel and their employment of Jews in their home cities. This astounding circular originated with the Economical Siege on Israel Office in Damascus. "The Arab countries," said the circular, "are in a state of war with Israel and for this reason are making an economic siege of that country."

Meanwhile, the East-West controversy added fuel to the fire.

Soviet policy, which has on repeated occasions included the persecution of Jews and Zionists (a fact which makes propaganda like the Britton book mentioned above appear particularly ridiculous to the thoughtful reader), now seems to have entered a pro-Arab phase. According to the current Communist line, as reflected in the New York Daily Worker (Nov. 16, 1955), Israel is now regarded as "a province in Wall Street's middle eastern economic empire." Where this sort of thing may lead to, when coupled with an alarming increase of indigenous anti-Americanism in cities like Cairo, is anybody's guess.

Granting that the Americans, British, and French would like to see the Arabs accede to a permanent and peaceful settlement recognizing the just claims of Israel, the Soviets have been playing whichever side of the fence suited their position at a particular time. Currently they seem to have set out to help arm the 45 million Moslems. Should this policy be long continued, the results could be frightening indeed. Add a supply of Russian rifles and jet planes to inflammatory propaganda of the sort outlined above, mix in the aggressive intentions of the Arabs, and you have the makings of a conflagration that could very readily lead to world war III.

The Living Heritage of Woodrow Wilson

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article by Dorothy Fosdick which appeared on January 1, 1956, in the New York Times magazine.

The article follows:

THE LIVING HERITAGE OF WOODROW WILSON

(By Dorothy Fosdick)

When Woodrow Wilson died in 1924, his career as world statesman appeared to have ended in tragedy. He had failed to rally America sufficiently to the support of his program. The Senate had refused the peace treaty—and with it the League of Nations. America withdrew into the sullen isolation of the 1920's, and Wilson ended his days a physically broken and crippled man, aware that a Second World War was coming. Yet in 20 years America caught up with his convictions and resumed his interrupted work. So powerful has Wilson's influence proved that America now celebrates the centennial year of his birth in a spirit of rededication.

Some men live in history through their actual achievements—like George Washington. Others are known to the ages for their ideas and for the work they began. Thomas Jefferson and Woodrow Wilson belong to the latter group. The Nation which rejected Wilson in his lifetime honors him today as the supreme spokesman for the most urgent task of the 20th century—the adjustment of national power and interest to world organization and to the requirements of peace.

Wilsons great legacy is the United Nations and the concert of opinion and power to prevent aggression, which it represents. With startling clarity he had seen that the community of nations must organize itself to check aggression and to promote peaceable adjustment—or perish. Long before others, he understood that new weapons of mass killing could lead, in his words, to the "absolute destruction of mankind," and that there was not alternative to peace. He further perceived that the chance of peace depended on the United States bearing part of the burden of responsibility, along with others. "The peace of the world," he said, "cannot be established without America."

The League of Nations was Wilson's conception of how to meet this problem. He knew that the machinery would have to be changed and adjusted by experience, but he believed the League was the next necessary step in man's developing conception of order and responsibility in world affairs.

The League came into being in January 1920, without America, and today one stands aghast at the missed opportunities prior to Hitler and World War II, when power was available to be concerted against aggression, and when there was a world organization that needed only to be used.

But the idea of the League lives on in the United Nations. Even before World War II had ended Franklin D. Roosevelt followed Wilson's lead in initiating a second world organization, largely modeled on the first.

Wilson, then, was in a way a prophet. His vision is all the more extraordinary because he displayed very human traits—traits which in some measure accounted for his tragedy. He was, in fact, at one time an isolationist, but in the sense that he had always concerned himself primarily with national matters, and when he was first elected to the Presidency—after a long period of Republican reign—he became absorbed with plans for domestic reforms.

Conceiving of the President as the custodian of the national interest, Wilson submitted national legislation to provide that in the new industrial society every group would share in the expansion and enrichment of American life.

Lasting reforms of the new freedom enacted during his early months in office include the Federal Reserve System, the income tax, the Federal Trade Commission, the Clayton antitrust law, and the Underwood tariff-revision law.

When the war broke out in Europe within 18 months of his inauguration, Wilson's first reaction was a natural one: he dreaded what the conflagration would do to his constructive efforts at home, and he tried, as best he could, to keep America aloof. But Wilson had the basic integrity to face up to hard and annoying facts. He soon realized that if Germany won the war she would not use her land supremacy, as Britain had used her supremacy on the sea, to safeguard peace and freedom.

His conviction deepened that unrestrained national interests abroad, like unregulated

economic processes at home, do not necessarily promote the general interest. Wilson discovered that America was desperately concerned both in the outcome of the war and in the quality of the peace, and that American power might be decisive for both.

In a brief period, thinking hard and rapidly, Wilson emerged as a full-fledged citizen of the 20th century. By 1919 he was saying: "The isolation of the United States is at an end, not because we chose to go into the politics of the world but because by the sheer genius of this people and the growth of our power we have become a determining factor in the history of mankind."

With Wilson's conversion coming late, his homework for the Versailles Conference on the peace treaty and for ratification by the Senate was insufficient. But there was a deeper trouble; his opportunity for a speedy education in the White House had been unique and others were 'way behind him.

Some critics argue that if Wilson had only accepted the proposed reservations to the League Covenant, all would have been well. These reservations ranged from mild changes of language suggested by such moderates as Kellogg and McCumber to more serious objections raised by Henry Cabot Lodge and his followers.

But Wilson felt that he knew from experience what Lodge and his supporters were up to: they were still isolationists; their skillfully devised reservations would in effect have sneaked America in by the back door, released from the full obligation to use its power to prevent aggression.

The heart of the matter was article X of the League Covenant, with its undertaking "to respect and preserve as against external aggression the territorial integrity and political independence of all members of the League." Wilson did accept interpretive reservations to other elements in the covenant, such as those declaring that the League would have no jurisdiction on domestic issues, and providing a special status for the Monroe Doctrine. But on article X he stood firm, unwilling to write American power out of the peace when he knew that only American power would make peace possible.

When Wilson spoke of the "organized opinion of mankind" which must sustain the peace, he had American opinion particularly in mind. He saw that unless this country went into the League with enough conviction to accept and carry out her full obligations, the League machinery would be stalled. But Wilson was not strong enough to drag others with him, and during an intensive speech-making tour in September 1919, appealing directly to the people, he collapsed. The treaty and covenant were first rejected by the Senate in November, and then finally again in March 1920.

Perhaps the result would have been different had Wilson been able to finish his tour, or if, say, radio had been available. Yet before he died, he said this: "I am not sorry that I broke down. As it is coming now, the American people are thinking their way through and reaching their own decision, and that is the better way for it to come."

And so it happened. Wilson could not recover, but his country could, and at the advent of the United Nations the great debate of 1919 did not even need to be repeated.

The legacy of the United Nations would have been enough to assure that Wilson's fame will live. But the mechanism of a general international organization is by no means his only bequest.

When America gives advance notice to any potential aggressor that she has concerted her power with other nations on behalf of peace, and then, as in Berlin and Korea, proves that she means what she says, she stands in Wilson's tradition. Wilson was not naive; he did not advocate the outlawing of power, but rather its organization at the service of justice to guarantee peace. When the League of Nations first met in Geneva Wilson had said: "Force is in the background."

While Wilson distrusted alliances and special blocs as the foundation of a security system, he realized that under some circumstances they might be helpful. In 1915 he proposed a treaty among the American republics mutually to guarantee each other's territorial integrity and political independence, and his plan was fulfilled with the establishment of the Organization of American States at Bogotá in 1948.

Also, it was Wilson who negotiated the Tripartite Pact alining France, Great Britain, and the United States to keep the peace against Germany, only to have the Senate, in 1920, repudiate that agreement, with disastrous consequences for the sense of security of France.

While Wilson saw the necessity of force in the background, he realized that peace could only be safeguarded if other strategies occupied the foreground.

America's emphasis on the peaceful settlement of disputes is part of our inheritance from Wilson. He knew that dissatisfied nations would seek redress, that conflicts would arise, and that, if the threat and use of force were to be minimized and contained, then opportunities for peaceful redress and settlement must be provided and perfected. In 1919 Wilson said: "Settlements may be temporary, but the action of the nations in the interest of peace and justice must be permanent. We can set up permanent processes. We may not be able to set up permanent decisions."

His influence on the conduct of international affairs is still felt. Wilson was against secret agreements, and such agreements have been radically reduced by United Nations arrangements for the registration and publication of treaties. But as Wilson gained experience in practical diplomacy he made known that a phrase he had used—"Diplomacy shall proceed always frankly and in the public view"—was not meant to preclude "confidential negotiations involving delicate matters," and during the later stages of the Versailles Conference he himself insisted on rigorous secrecy. He had come to see that final results might be better if preparatory discussions were private and informal.

America's initiative in negotiating the Human Rights Declaration and in encouraging nations to live up to it reflects Wilson's conviction that the peace will never be secure until the great masses of people feel justly treated. Wilson was a fervent Democrat, eager that America should hold high the light to guide the feet of all peoples struggling for their rights, and he almost anticipated the Human Rights Declaration in these words:

"I do not know that there will ever be a declaration of independence and of grievances for mankind, but I believe that if any such document is ever drawn it will be drawn in the spirit of the American Declaration of Independence."

American encouragement of independence for colonial peoples, as those peoples become able to undertake its responsibilities, is in the tradition of Wilson. He had favored independence for the Philippine Islands, when the Filipino peoples desired it and were prepared to assume the duties of self-government. In Wilson's wartime effort to break up the Austro-Hungarian empire and so to weaken Germany, thinking of the Czech and Hungarian Nations, he had said that "all nations had a right to self-determination."

Subsequently, Wilson regretted that particular wording, and it did prove open to abuse—for example, by Hitler when he prostituted it to his purpose of subverting the Sudetenland. In some areas today independence for a small group is no boon to the native peoples or to the whole free world, if the new state—small, detached and unprotected—proves vulnerable to communism. But still, Wilson's career is an asset in our struggle for the friendship and help of the uncommitted peoples of Asia and Africa—for he is their hero.

This centennial year of Wilson's birth is an occasion for remembering and, in remembering, it is appropriate to recall Wilson's central ideas, to ponder the essence of things for which he strove, and to consider the cost that mankind paid for the rejection of his program. So reflecting, it may be possible for us to recapture the full significance of the cause he championed, in which we are now so fatefully engaged.

A Workable Farm Plan

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of January 10, 1956:

A WORKABLE FARM PLAN

A dynamic farm program has been proposed to Congress by the President. Its broad attack shows the great amount of study that has gone into it plus the urgency of its immediate consideration.

However, the program has no surprises, no panaceas. It will not satisfy those who want farm prices raised tomorrow by Government edict.

Key to the major goal of the program—adjustment of production to demand—is the soil bank plan. It had been expected from developments of recent months. The principal interest in the special message is in details of operation rather than innovations.

Evidence of the basic philosophy of the President and his Secretary of Agriculture, Ezra Taft Benson, is seen time and again throughout the message. Both are determined if at all possible not to put more controls over farmers. Therefore, participation in the soil bank plan as proposed would be voluntary. Of course, the offered Government payments should be sufficient inducement to get compliance.

Next, the President showed his determination to avoid a return to any kind of Government assistance that might create new surpluses which would add, as they have in the past, to the overall problem. His language is specific. The 1954 farm law, he explains, has not been successful because it has been "smothered by surpluses amassed by the old program."

It is extremely encouraging that the President hopes Congress will get the soil-bank plan into law and into operation this year. Even some backers of the plan had doubted it could be made immediately effective. Certainly the current low farm prices call for action with a sense of urgency.

The President has called upon Congress, too, to take action on the question of limiting Government price support to family-size farms. It is one that has bothered farm authorities for years. With Presidential endorsement something constructive may come from the proposal in this session.

All in all, Mr. Eisenhower has given Congress a real base on which to build a new

farm program. Perhaps the most important aspect of the whole presentation is that its different facets appear workable as opposed to many past proposals which were totally lacking in practicality.

Address by Hon. Joseph W. Martin, Jr., of Massachusetts, Before the Young Republican Leadership School

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to insert in the Appendix of the RECORD the speech by the Honorable JOSEPH W. MARTIN, JR., of Massachusetts, before the Young Republican Leadership Training School which was held here in Washington during the week of January 23 through January 27:

The Republican Party was born midway in the 19th century out of the great need in our young Nation for a national party dedicated to the protection of basic human rights and the American way of free Government and free enterprise.

Over 100 years ago on February 28, 1854, a group of Whigs, Free-Soilers and Democrats met in the Congregational Church in Ripon, Wis. This group agreed that individually each would sever his present party affiliations if Congress violated the principles of basic human rights by approving the Kansas-Nebraska bill. This measure would have permitted the extension of slavery into new territories.

After the Kansas-Nebraska bill received Senate approval on March 3, 1854, a second meeting was called for March 20, 1854. This time 53 of the town's 100 eligible voters met in the Ripon schoolhouse and a committee was appointed to start the new Republican Party.

In the words of Maj. Alvan E. Bovay, a prominent Whig who called the meeting: "We went into the little meeting held in a schoolhouse, Whigs, Free-Soilers, and Democrats; we came out of it Republicans and we were the first Republicans in the Union."

On May 9, 1854, a meeting was called in Washington by Representative Israel Washburn, Jr., of Maine, and the 30 Members of Congress who attended this meeting decided that there was a need for such a new political party and that the name Republican would be highly appropriate.

The principles of the new Republican Party won immediate support throughout the country and on July 6, 1854, only 4 months after the first meeting in Ripon, Wis., the first Republican convention was held under the oaks at Jackson, Mich., to formalize the party organization. This meeting attracted several hundred persons including a large number from other cities.

This first convention outlined the basic philosophy of the new Republican Party and adopted a resolution which read:

"*Resolved*, That * * * in view of the necessity of battling for the first principles of Republican government and against the schemes of an artistocracy, the most revolting and oppressive with which the earth was ever cursed or man debased, we will cooperate and be known as Republicans until the contest be terminated."

Since that time the Republican Party has continued its fight to protect the basic human rights and the principles of free enterprise and the essential dignity of man.

During the late winter and summer of 1854 Whigs, northern Democrats, and most of the supporters of the Free-Soil Party endorsed the principles of the Republican Party and Republican State tickets were elected in Michigan and Wisconsin in that year.

In 1855 the Nation's first Republican governor was elected in Ohio and 11 Republican Senators were sent to Washington.

The first formal national convention of the Republican Party was held at Philadelphia in 1856 and Gen. John C. Frémont was nominated for the Presidency on a platform opposing the extension of slavery, advocating improvement of rivers, harbors, and the building with Federal aid of a transcontinental railroad. The new party did not believe that the Federal Government should interfere with the peculiar institution of slavery already established in the South but felt that its spread to any additional territories should be prevented.

In spite of the newness of the Republican Party and its ineffective organization in many eastern States, Presidential Candidate Frémont received 114 electoral votes against 174 for James Buchanan, Democrat.

The new Republican Party had gained sufficient strength by 1858 to elect a plurality in the House of Representatives and to carry several State governments.

In 1860, only 6 short years after the birth of the Republican Party, it elected to the Presidency of the first Republican President, and one of the greatest men in history, Abraham Lincoln, of Illinois.

Lincoln ran on a platform similar to that of 1856, advocating also a homestead law and a protective tariff. In this election Lincoln polled 180 electoral votes.

Lincoln's great faith in the individual and in the American way of free government and free enterprise laid the foundation for the Republican Party's constant devotion to those principles. Lincoln's deep concern for the humble individual is legendary and the Republican Party has ever since held this as a basic philosophy.

From Lincoln, the party also learned the importance of free enterprise, to protect the fruits of labor and to combat a fixed-class system. Every citizen, however lowly his start in life, should be guaranteed the right of a proper reward for his efforts, his thrift, and his ingenuity.

These were the philosophies on which the Republican Party gained its sound beginning during a great trial in the Nation's history. These are the same basic philosophies of the Republican Party today.

Although the Lincoln administration was overshadowed by the Civil War, which had broken out before Lincoln took the oath of office, there were other accomplishments important to the individual man brought about during the administration of this first Republican President.

In 1862, on Lincoln's suggestion, Congress established the Department of Agriculture, passed the first Homestead Act, established the national banking system and passed the first Morrill Act, donating land for agricultural and mechanical arts colleges.

In 1864 Lincoln was renominated by the Republicans in convention in Baltimore. At that time, however, there were other political factions who wished also to share the Republican Party principles and a Union ticket was formed with a Union Democrat from Tennessee, Andrew Johnson, named as Lincoln's runningmate. The Lincoln-Johnson ticket easily defeated the Democrats in this election. Winning by 212 to 21 electoral votes.

On April 14, 1865, Abraham Lincoln was assassinated and new burdens fell on the shoulders of Andrew Johnson, whose former status as a Democrat proved a severe handicap in his sincere efforts to carry out the Lincoln program. Attempting to follow Lincoln's proposals in the reconstruction of the South, Johnson ran into a bitter feud with Congress who wanted to use harsh methods of punishment contrary to the Republican principles Lincoln had laid down. The feud grew so bitter that President Johnson in Febraury of 1868 was impeached and almost removed from office.

In 1868 Gen. Ulysses S. Grant, of Illinois, was the Republican nominee and was elected by an electoral vote of 214 to 80. During Grant's first administration a number of constructive moves were taken to guarantee the basic human rights of all Americans as the founders of the Republican Party had envisioned them.

Against the opposition of the Democrats, laws were passed for the enforcement of the rights guaranteed to Negroes in the 14th and 15th amendments. In 1871 the first civil-service law was passed.

In the election of 1872 Grant was enthusiastically endorsed by the public and returned to office with a popular majority three times as great as in 1868. He received 272 to 63 for the opposition.

In reviewing the Republican Party's record during its first 14 years in office, Senator George F. Hoar, of Massachusetts, in 1874 called attention to the following accomplishments:

"In 14 years it enacted a protective tariff which made the United States the greatest manufacturing Nation on earth; it enlisted, organized and sent back to civil life a vast army; it created a great navy, constructed on principles not invented when it came into power; it put down a gigantic rebellion; it made freemen and citizens of 4 million slaves; it contrived the national banking system; it created a currency which circulates throughout the world on an equality with gold; it made the credit of the country the best in the world; it restored specie payment; it devised and inaugurated the beneficent homestead system; it built the Pacific railroads; it compelled France to depart from Mexico; it exacted apology and reparation from Great Britain; it overthrew the doctrine of perpetual allegiance and required the great powers of Europe hereafter to let our adopted citizens alone; it made honorable provisions for invalid soldiers and sailors. * * *"

In 1876 Grant was still enormously popular but the Republican Party refused to break with their long-standing tradition against perpetuation in office. When a Democrat Representative, William Springer, of Illinois, introduced in the House of Representatives his historical resolution condemning a third term for any President, 80 percent of the Republicans cast their votes for the resolution. Although the Democrat Party later reversed its stand on the principle in endorsing Franklin Roosevelt for a third term, the descendents of Representative Springer apparently found it easier to change party than to change principle for the present Representative WILLIAM SPRINGER, of Illinois, serves in the 84th Congres as a Republican.

Thus from humble beginnings the Republican Party grew and enjoyed a long and memorable history and a popular majority during the most expansive period of its development from 1861 to 1933.

For three-fourths of that period Republicans occupied the White House. They shaped governmental policy, encouraging development of the country's vast natural resources. They built up its defense; they created its national banking system; they established the world's soundest currency; they stabilized the Nation's credit and they formulated an economic policy which has made the United States the first among the nations.

From its minority position in the Federal Government after 1933 the Republican Party

remained true to its basic principles, cooperating in the development of constructive legislation and opposing the trend toward a regimented economy and a collectivist state.

In fact, in spite of their minority position Republicans made many outstanding contributions to national policy during these years. Included among these are:

The Federal Deposit Insurance Corporation.

Defeat of the attempt to pack the Supreme Court.

Exposing political corruption and racketeering and passage of the Hatch Act.

Sponsorship of a pay-as-you-go tax plan.

Leadership in the movement for United States participation in United Nations.

Protection of States rights.

Exposing inefficiency and waste in Government.

Fighting radical elements and trends in Federal Government.

Elimination of wartime controls in the postwar economy.

In 1946 the Nation elected the Republican 80th Congress, faced with the difficult task of reversing the New Deal trends of Government controls and regimentation and wasteful and unwise spending. These trends were undermining the American system of free government and burdening the American people with unprecedented tax loads.

In spite of the stubborn and deliberate opposition of a Democrat President the Republican 80th Congress fulfilled its pledges and made a record of solid legislative achievement including:

Reduction of Government expenditures.

Reduction of taxes.

A revision of the National Labor Relations Act to protect the individual workingman.

Curtailment of Government controls.

Exposure of subversive elements.

Strengthening of national defense.

Expansion of veterans' benefits.

Easing of Government housing controls.

Stopped inflationary deficit spending.

Adopted a long-range agriculture program.

Expanded social security.

Established the Hoover Commission to bring about efficiency and savings in Government.

As a minority group in the 81st Congress the Republican Party fought hard to preserve the constructive program it had initiated in the Republican 80th Congress.

Republicans in the 81st Congress concentrated their efforts on continuing the economy trend introduced in the 80th Congress and on defeating on every occasion the efforts of the Truman administration to foist socialism on this country.

In 1950 a statement of Republican principles and objectives was adopted supplementing the 1948 platform. This statement stressed the importance of Republican liberty as opposed to Democrat socialism. The return of the people to the principles of the Republican Party was displayed dramatically in the congressional elections that year and Republicans made gains of 5 Senators, 6 governors and 27 Members of the House.

The Democrat-controlled 82d Congress was noteworthy for its legislative inactivity. It was during that time, however, that President Truman fired General MacArthur; that RFC investigations disclosed influence peddling by persons close to the White House; and that Republicans continued their battle against nondefense spending.

In 1952 President Eisenhower and the Republican Party were swept into office by a landslide vote of 442 electoral votes.

Taking over the responsibilities of his administration on January 20, 1953, President Eisenhower spelled out Republican objectives in his state of the Union message on February 2. He said:

"The grand labor of this leadership will involve—application of America's influence in world affairs with such fortitude and such foresight that it will deter aggression and eventually secure peace·

"Establishment of a national administration of such integrity and such efficiency that its honor at home will insure respect abroad;

"Encouragement of those incentives that inspire creative initiative in our economy, so that its productivity may fortify freedom everywhere; and

"Dedication to the well-being of all our citizens and to the attainment of equality of opportunity for all, so that our Nation will ever act with the strength of unity in every task to which it is called."

To you who are leaders in the Young Republican organization I need not recount the great strides President Eisenhower and the Republican Party have made in the past 3 years in fulfilling these objectives. We have brought to the Nation' peace; nowhere in the world are American soldiers dying in war. We have brought to the Nation prosperity; never have so many people been employed; never have their wages been so high. We have stopped wasteful Government spending; we have stopped inflation; we have stopped the infiltration of subversives in our high Government offices.

Today Americans are free, prosperous and at peace and they look toward the future with a new confidence because the principles of the Republican Party have been followed in our Federal Government.

In closing, let me say that to many Americans throughout the Nation, the initials GOP, symbol of the Republican Party, have come to mean also guardians of peace, guardians of prosperity and guardians of progress. With the help of such Republican leadership as I see in this room today we can continue these fine traditions of the Republican Party.

Land Exchange Bill

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert the following article entitled "Land Exchange Bill," which appeared in the Washington Post on February 1, 1956:

LAND-EXCHANGE BILL

In a letter which was printed in your paper of January 20, Mr. Fred M. Packard referred to a bill of mine which had to do with the exchange of lands. This bill, H. R. 4646 of the 83d Congress, has also been mentioned in your news columns and in an editorial. In every instance, including Mr. Packard's letter, the bill is grossly misrepresented.

The legislation simply sought a solution of the problems faced by wage earners and small property owners located around a forest-products plant which was about to have its life ended or curtailed as the result of having its forest acreage acquired by the Government.

In such situations the principals in the transaction are satisfied. The Government gets the land. The private owner of the industry gets paid for it and can invest his money elsewhere. The innocent victims in such a situation are those who work and have their homes there and the other elements of the little community which depend upon the industry.

My bill proposed simply that the Government, if it had other equivalent forest lands in the area which the industry could take in replacement for the lands needed by the Government, a simple exchange of lands should be made. Thus several worthwhile things could be accomplished: the Government would not need to pay cash out of the Treasury for the lands needed.

Local government would not lose tax revenue since the exhanged lands would go on the property-tax rolls. The life of a going industry would be preserved, jobs would be saved, and local property values maintained. The privately owned wood-processing business would not benefit to the extent of a single penny.

What about "cutting into the national parks"? My bill carried the following language: "Provided, that such exchange shall not include lands within the boundaries of national parks, national monuments, wilderness areas, or wildlife refuges."

HARRIS ELLSWORTH,
Member of Congress from Oregon.

The Bold New Program

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the February 1956 issue of Farm Journal:

THE BOLD NEW PROGRAM

What do you think of the new proposals for farm legislation? There are some fresh approaches in the message the President laid before Congress last week, and they deserve plenty of discussion.

No one can predict what Congress will finally pass. That may depend on what Members hear from farmers.

Looking at the situation coldly, it is plain that if new laws are to do any good they must take into account that:

1. Nothing can be solved as long as vast surpluses in Government hands hang over the market.

2. Nothing will work if new surpluses are encouraged to accumulate.

3. Positive steps are needed to make farming profitable for years to come.

Moreover, it is pretty certain that not too many years ahead markets will demand much more food than the United States has ever produced. We may have 200 million people to feed by 20 years from now.

It seems to us that President Eisenhower and Secretary Benson have looked the facts in the face. They have recognized that in agriculture there is not just one big problem but several sizable ones. The message shows full understanding that corn can't be treated alone without considering other feed grains; that feed grains can't be treated without thinking of livestock, dairy, and poultry; that cotton and rice and the Great Plains have their own particular problems; and that farms of different sizes need different consideration.

The ideas for using the surplus to reduce the surplus are ingenious and look to be workable.

The proposals at every point take into account the vital necessity that soil resources be conserved and improved.

They do give assurance that the grinding incubus of surpluses can be disposed of and used, and that new surpluses will not be created.

Objection will be raised that the plans will be costly. Actually, they will cost very little more than the present procedures that have not worked. As the President pointed out, the problem has grown out of the war (and out of postwar mistakes). And as he said: "Just as other readjustments from war were shouldered in considerable part by the Nation as a whole, so should this."

As a matter of fact, it might be cheaper in the long run if Congress were to increase the President's figures and get the main parts of the job done faster. Make the incentives attractive enough and farmers will soon bring things back into balance.

Most fertile of all the several proposals, looking to the longtime prosperity of farmers, may well be the sharp increase in research, especially for new uses, better markets and new crops. This is indispensable. "A major frontier of agriculture lies in our laboratories and experimental fields," the President said.

If the entire program is adopted and generously financed, the family farms of America should soon resume their share in the country's prosperity. It may not be perfect; with the mess behind us none could be. But it is constructive, bold, and practical. And no one is offering a better one.

Red China's Inhumanity To Man—Red China Must Not Be Admitted to the United Nations

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, on January 21, 1956, in the city of Kenosha, Wis., the Most Reverend Cuthbert M. O'Gara, O. P., D. D., addressed the Midwest Conference of the Veterans of Foreign Wars, Department of Wisconsin.

Bishop O'Gara spent the most valuable period of his lifetime as a missionary priest in China. He suffered untold indignities from the Chinese Communists who had jailed him on spurious charges.

Under leave to extend my remarks, I am including the verbatim address of Bishop O'Gara because he tells the story better than I can.

Mr. Speaker, the American people are opposed, under any circumstances, to the admission of Red China to the United Nations not even by abstaining from a vote if such a vote should come in the Security Council.

The address by Bishop O'Gara follows:

Gentlemen, we stand today at the crossroads. Christian civilization is closer to dissolution than at any time in its history.

A generation ago, an unholy and materialistic prophet foresaw this very day. Lenin, the high priest and mastermind of communism calmly stated that "the road to Paris lies through China." To paraphrase his statement: the way to the domination of the Christian world was through China, since Paris then was accepted as the symbol of Christian culture.

Thirty years ago, when I first went to the Orient as a young missionary priest, I, like the rest of the world which we now call the Free West, could afford to laugh at such a statement. At this moment, I no longer laugh. I know it can happen. I know it is happening. And, may God forbid that a further prophecy of Lenin should ever come to pass: "We shall not have to fight for America. It will drop into our hands like a ripe melon."

Gentlemen and veterans, we speak a common language. You fought, you suffered, you were willing to shed your blood, and if necessary, give up your lives to protect and preserve your Christian heritage and your country. Many of your compatriots lie buried in foreign soil, mute, but effective witnesses to the fact that you fought valiantly and suffered nobly for God and for country. Now, there is solid reason to fear that you fought and suffered in vain.

I repeat, today we stand at the crossroads.

Our Christian faith is challenged—our country is on the defensive—not to say the run.

The world's spotlight is on the United States of America and China. On this stage will be resolved, either the eventual destruction of Communist domination or the complete enslavement and ultimate liquidation of the Christian world—the free world. There is no other alternative.

If I point the greater part of my remarks this evening to the prevailing situation in Communist China, it is because I have been a personal witness to Peking's method of conquest, her determination to destroy all opposition, and her ultimate goal of enslaving America. This, of course, but follows the pattern which runs through Communist strategy the world over. The Red primer is the textbook and that whether it is read and studied in Moscow or in Peking. If the three celebrated princes of the Catholic Church, Cardinal Wyszinski, of Poland, Cardinal Stepinac, of Yugoslavia, Cardinal Mindzenty, of Hungary, if the great number of missionary bishops and priests, if the host of other Christian missionaries, yes, if any of our brave servicemen who in the line of duty fell captive to the Red enemy and have been delivered from the jaws of death and the mouth of hell—which aptly describes Communist imprisonment—if any of these were to stand here tonight, each would speak to you as I do.

Communism is on the march in the Orient and in the west and no appeasement can stay its inexorable advance.

In view of the present world situation and in the face of Communist successes on all sides, I am amazed and shocked, at the prevailing sentiment in America, that "it cannot happen here."

I lived 4 years under the People's Government of China—2 of those years in solitary confinement in a Communist prison. I was in daily contact with Communists, living with them cheek by jowl, witnessing their day to day activities, listening to their boasted objectives, especially their declared plan for the "liberation" of America.

All this, added to my observations on the home front, since my return from Communist imprisonment, compels me to declare emphatically that in my considered opinion, it can happen here.

While I was in prison, I was often told that I was not in prison at all, that I was in a sort of school, that I was being "reeducated." In a sense I found this to be very true, because I came to discover there things that otherwise I would never have known nor would I have credited. Daily I witnessed a discipline that to me was amazing. Had I seen something of that sort in Japan or Germany I would not have been surprised. But to the Chinese character, such extreme regimentation is not natural—I never dreamed it possible. I saw there a fervor, misplaced and fanatical if you will, yet a fervor in an unholy cause that would put any modern Christian to shame, or would caution any follower of democratic freedom to beware. Believe it or not, I saw in prison a whole-hearted single-minded zeal for the Red cause and a spirit of self-sacrifice to insure its success, that to me was astonishing and not a little frightening.

In the summer of 1952 I observed something, which if I had merely been told about it, I would not have believed. It was what, in Catholic circles, is called a retreat—that is a period when one cuts himself off from all wordly contact and in a series of meditation takes inventory of his spiritual assets and makes certain determined resolutions to assure the improvement of his Christian life. So what I witnessed was a 10 day retreat for the rank and file of the prison personnel. Lectures, meditations, and writing out of resolutions. The individual concentration by each one during the periods of meditation on basic Communist teachings was worthy of the intensive personal soul-searching of any Trappist monk. I walked up and down the narrow confines of my prison cell many a day and thought how much all this was like to the ultrafervent lives of the earliest Christians.

And this prison in which I was confined was but a classroom in the great school of communism that encompassed all China. Out of this nationwide school came ardent Communists—their assured destiny was to have a share in the world conquest for communism. Is it any wonder then that while I was in prison the Red hordes occupied the far western kingdom of Tibet on the one side, and overran the Korean peninsula on the other as active participants in that campaign against the combined forces of the United Nations? Indochina was a common topic of discussion among my prison guards and I saw groups of soldiers training that were no doubt destined for that southern war theater.

Since my release from prison I have seen the free West quail before the ruthless determination of Red China. Look at the record.

The debacle of Panmunjom, the sorry aftermath to a war which the so-called free world was not permitted to win; then the first Geneva Conference which accomplished the sellout of northern Indochina; the evacuation of the Tachen Islands, of which very little has been written about or discussed; the humiliating journey of the Secretary General of the United Nations to Peking, where Dag Hammarskjold knelt before Chou En-lai to beg for the release of 11 American flyers; the illfated Geneva Conference this past summer; little Geneva, an interminable conference, where an emissary of the Red dragon seems pointedly to be able to steer matters away from the question of the release of the remaining United States civilians imprisoned in China and to smother all mention of the 395 United States servicemen languishing in jail; the repeated efforts to seat Red China in the United Nations. Red China indeed is on the march.

Here in this country we hear and read much of vaunted religious freedom in China. As a Catholic bishop, a Christian churchman, I know this to be a hoax and a travesty on the truth. True, the principle of religious freedom is written into the constitution of the People's Government of China. But that is a mere blind, written down merely for foreign consumption. Where are the 4,000 bishops, priests and nuns, and several thousand other Christian misisonaries, who lived and worked in China in comparative freedom before this precious principle of freedom of religion was written into the constitution? A handful are left. And practically all in prison. The remainder have been exiled and expelled as enemies of the state and of the people. Hundreds of stanch Catholic Chinese bishops and priests and Christian ministers are mostly in jail, if they have not been sent to the firing squad. The churches profaned, violated, and turned into "palaces of culture." A

rather sinister commentary on freedom of religion.

Furthermore, a diabolical pressure has been brought to bear on the faithful to make them abandon their Christian faith. They have been compelled to take indoctrination classes, to endure calumny and to suffer scorn. Even attempting to hear Mass or receive the sacraments or to attend any religious service, brands them as reactionary and unpatriotic. Perhaps I emphasize the Catholic side in these matters, but then I am a Catholic bishop and know firsthand of what I speak. Yet the same can be paralleled in regard to the Protestant missions in China. As an instance, in the city where I lived, in the western part of Hunan Province, the seat of the diocese which I governed, the large Protestant mission there was confiscated and all the missionaries, men and women, were expelled. A fine Christian gentleman, Mr. Karl Beck, of the Evangelical and Reformed Church, who had spent 40 years in China, was cast out into the street when his church and home were confiscated by the Communists, and turned into propaganda centers of Red teaching. We invited him to live with us, and he was still living in the Catholic mission with the Fathers when I was arrested and imprisoned. After 15 months, he eventually was expelled too as an enemy of the people. Those of you who have seen the monumental Christmas issue of Life magazine of a few weeks ago recall the accounts of the two Protestant missionaries featured there; the Baptist, Dr. Levi Lovegren, of Seattle, who spent 4 years in 4 different Communist prisons—and the Presbyterian missionary, Sarah Perkins, who states, "For 28 months I was in solitary confinement but what matters is what God did for me in that cell." Let Red propaganda try and refute these witnesses.

You remember about a year and a half ago, the former Prime Minister of Great Britain visited Red China. He and his party were feted in Peking and along the coast. And after 3 weeks he came out of Red China to Hongkong and gave a report to the world. No religious persecution in China as far as he could observe. Anything that smacked of such was more in the nature of an antiforeign reaction.

Even a person far less astute than a former Prime Minister would have known before he ever set foot in Peking that the Red regime there had, up to that time, murdered 166 bishops and priests. Of this number, 127 were native bishops and priests. Hardly an antiforeign reaction. Had he dared penetrate the interior of China, had he gone into Hunan Province where I lived with the Chinese for 30 years, had he gone into the prison where I spent 2 years of solitary confinement, he would have found in that very prison a young Chinese priest, American trained and a graduate of St. Mary's Seminary, Baltimore, lying in a dungeon then in his fifth year of imprisonment and solely because he was a Catholic priest.

Apart from this, at the time of the former Prime Minister's visit, in the city of Peking itself, or in the immediate environs, there were at least 31 priests in prison. These could have enlightened Mr. Attlee. Yet the astute British statesman seems to have heard nothing of this. And at that very time, the rector of the Catholic University, Father Harold Rigney, a commissioned chaplain in the United States Army during World War II, was completing his third year in prison. He has since been released. But Mr. Attlee seems to have heard nothing of this eminent American educator. And the Catholic University of Peking is not an insignificant out-of-the-way school but a nationally known institution and one of the showplaces of Peking which is a must for visiting dignitaries.

Mr. Attlee, with remarkable powers of observation, reported that he had inspected a market completely free of flies. Yet he failed to observe, or failed to report his observation, while on the flight from Peking to Hongkong, of the number of British vessels known to be at that time in Red China ports, discharging the sinews of war with which to carry on aggression against the combined United Nations forces in Korea.

Imagine how the intelligences of the common people of all free nations are being continually insulted by this type of Communist propaganda. One of the preposterous charges for which I was imprisoned and later expelled was that I objected strongly and forbade any Catholic under my jurisdiction from signing a petition, circulated by the People's Government of China, demanding the expulsion of the papal representative, Archbishop Riberi, on the false charge that he was a spy of the American and other foreign governments. This under the guise of freedom of religion.

Yet, despite every effort to crush Christianity, there are innumerable instances of heroic resistance. The suffering that results is harrowing. In that internal resistance to a godless regime lies the hope of the future. a hope kept buoyant in the belief that one day the people of free nations will restore to the enslaved Chinese people their stolen freedom.

Dr. Liou, archbishop of Chungking.

These are the types who want to belong to our world, to the free world, and who want to live as we do in freedom and security. But we have sold them into slavery—them and their children.

The numbers of this kind in China are multiplied by the millions when we count all those in the satellite countries of Europe whose chains must haunt our dreams by night. They belong to our world; they were part of our world; and we have let them go, and now how are we to reclaim them? There is no greater tragedy on the pages of history than the sellout of our friends in Europe and in Asia.

In 1932 a tragic blunder was made. The United States recognized the U. S. S. R. The reasons given at that time, were supposedly reasons calculated to benefit America. As an added incentive and bait, a veritable flood of gold was promised—a flood that was to pour into America, creating hitherto undreamed of riches and economic security beyond relief.

This flood of gold never materialized. On the contrary, it seems that ever since that tragic year, our precious American gold has been constantly siphoned off for the benefit of almost every nation under the sun and the nations we have favored most are now the most communistic and the most ungrateful.

But a flood did come upon us. A flood of locusts, a flood of termites, a flood of spies, of saboteurs and of fellow-travelers, each a carrier of vicious, deadly Communist propaganda. Like the plagues of Egypt, these locusts and termites overran the land, burrowed into the understructure of our country and penetrated every crack and cranny of the noble edifice that had been designed, constructed and dedicated by our Founding Fathers; they infiltrated—these termites—into the uppermost levels of the Armed Forces and the country's Government, and—as documents and statements attest—they even wormed their way into power at the very summit of our national administration.

Now are we to stand by as helpless observers and as mute witnesses to a calamity thrice compounded? Are the powers and the forces—and make no mistake, they are powerful and carry immense weight—are they to succeed in compelling us to betray our honored ally on Formosa and to recognize the perfidious regime that masquerades as the People's Government of China?

As was done in 1932, specious and beguiling reasons are now being advanced to persuade an unwary public, that it is to the national advantage to enter into a peaceful coexistence with the Red monster of Moscow and the Red dragon of Peking.

Peaceful coexistence. What a mockery to the free peoples of the world. What a betrayal of those who have fallen martyred slaves to communism.

Your compatriots, who gave their lives for God and country, would rise from their graves and denounce those deluded leaders who would propose peaceful coexistence as a solution to world tension. The martyred living, who, with leaden hearts and pain-wracked frames, lie in dungeons foul and dank, would, like a mighty army of vengeance, expose their broken bodies, and open the wounds of their souls, and in one tremendous outburst cry, "These are the festering sores of 'peaceful co-existence.'" And those 10,000 times 10,000, who as serried ranks of cowed slaves, doomed forever to trod under the lashes of the Red oppressor, they with eyes that speak their eternal dismay, would ask us, "would you also become like unto us?"

Do the high-placed proponents of peaceful coexistence mean that we should forget, even to applaud, the deaths of millions of our martyrs in Russia and Asia? Do our Kremlin-minded diplomats want us to welcome with open arms the purveyors of atheism into our homes? Into our schools? Into our churches? Are we to admit into our unmatched and fertile farmlands, the Bolshevik butchers who cold-bloodedly engineered the manmade famines of the Ukraine? Has our national memory become so atrophied and grown so craven?

Do the advocates of peaceful coexistence demand that we spinelessly stand by and watch the barter of imprisoned Americans, pawns in the crafty back-door game now being played to seat Red China among the United Nations? Is it part of the plant to cover up the plight and the number of those who lie rotting in some Chinese Communist prison, in North Korea or Manchuria or perhaps Siberia, even as I languished in a Chinese prison for 2 years? What can we think when a New York newspaper under date of January 19 of this year, quotes Government circles as insisting that a mere 18 United States citizens are in Chinese prisons or denied exit permits when on that very same day I was in possession of the irrefutable fact that there are 395 American prisoners composed of military, air, and naval personnel and civilian Army employees being held by the Red Chinese. It is common knowledge that at Panmunjon it was the Chinese Reds and not the Northern Koreans, who dominated the peace negotiations and dictated the terms. We know that one billion orientals look upon Panmunjon as a colossal defeat for the free world and that the faith of these billion people in the leadership of the West was shattered by the cynical abandonment of any show of spiritual principle to the cold expediency of the moment. Those of us who have lived many years in the Orient know only too well the magnitude of the tragic defeat of Panmunjon.

When peaceful coexistence means shaking hands with the Devil, and accepting in silence and without protest his nefarious philosophy, I choose to stand with Stephen Decatur, who preferred death to the betrayal of his country and its sacred institutions. We may not purchase security, or even freedom, at so high or so lethal a price.

I lived 4 years under the oppression of the Communist regime, under the so-called People's Government of China. Two of those 4 years were spent in solitary confinement in a Communist prison. From a prison cell I was ignominiously expelled from the country, accused as a spy for the American Gov-

ernment, an arch-imperialist, and as an enemy of the people of China.

During those years I was well schooled in Communist doctrine and in Communist objectives. My jailers, constantly emphasized to me that between atheistic communism—of which they boasted—and the Christian world, a knockdown struggle was natural and inevitable. Time and again these zealots repeated that their main objective and primary goal, was the liberation of the United States. Moreover, in their arrogance, they assured me that they had many friends and sympathizers in America and that from these sources they could always draw upon for whatever information they wanted.

And indeed, gentlemen, I have every reason to believe them. In the spring of 1944, a high official in Washington, who had just been in Chungking—so he told me—took the opportunity while in that wartime capital, to impress on the Chinese Government officials there, that their future lay with Soviet Russia and not with the United States. Not so long afterward that same official was promoted to a position of still greater influence and later mounted still higher in international affairs and today lives in peace and comfort.

But our unsophisticated servicemen, with varied backgrounds, were drafted into their country's forces, sent to Korea, and were captured there. They were thrown into filthy Chinese war prisons to be tortured and made victims of an inhuman, relentless brain-washing technique. A few of them did succumb to the frightful pressure and went over to the Reds. Three of them repented, sought repatriation, and were brought home. On arrival in their native land they were permitted to meet with their families for exactly 1 hour—and then were taken into custody, charged with criminal connivance with the enemy. Mark my words, within 24 hours, the other turncoats in China were given a detailed account of what happened that day on the west coast.

Oh, my friends, what of those who as free American citizens betrayed their country by giving away our most precious security secrets—a treachery imperiling our national life—a treachery surely of greater consequence than the defection of a handful of GI's.

When I was a youth at college, I once saw Robert Mantell, the celebrated Shakespearian actor, in Richard the Third. I took away from that memorable performance one indelible impression, which remained vividly with me until only a few months ago. I felt that the second scene of the first act was much overdrawn, that, for once, Shakespeare was asking his audience to credit the impossible.

You will recall the scene. The Lady Anne comes on stage with her entourage, bearing the murdered body of her husband's father. She encounters Gloucester, the villian and the murderer. She opens the full fials of her flaming wrath upon him. Scathingly, she reproaches him. Gloucester only smiles; then with honeyed words and fair promises he disarms her. Then, shamelessly, proceeds to woe her and before the scene closes, he has gained the Lady's consent to marry him. No sooner has the widow turned her back than the solemn promise he has made to give honorable burial to the corpse lying on the ground before him is ruthlessly broken and in a treacherous cynical mood Gloucester soliloquizes thus:

"Was ever woman in this humour woo'd?
Was ever woman in this humour won?
I'll have her but I will not have her long.
What! I, that kill'd her husband and his father,
To take her in her heart's extremest hate;
With curses in her mouth, tears in her eyes,
The bleeding witness of her hatred by;
Having God, her conscience, and these bars against me.
And I no friends to back my suit withal,
But the plain devil, and dissembling looks,
And yet to win her, all the world to nothing!
Hath she forgot already that brave prince,
Edward, her lord, whom I, some three months since,
Stabb'd in my angry mood at Tewkesbury?
A sweeter and a lovelier gentleman,
Fram'd in a prodigality of nature,
Young, valiant, wise, and, no doubt, loyal,
The spacious world cannot again afford:
And will she yet abase her eyes on me,
That cropp'd the golden prime of this sweet prince,
And made her widow to a woeful bed?
On me, whose all not equals Edward's moiety?
On me, that halt, and am mis-shapen thus?
I do mistake my person all this while:
Upon my life, she finds, although I cannot,
Myself to be a marvellous proper man.
I'll be at charges for a looking glass:
And entertain a score or two of tailors
To study fashions to adorn my body;
Since I am crept in favour with myself,
I will maintain it at some little cost.
But, first, I'll turn yon fellow in his grave,
And then return lamenting to my love.
Shine out, fair sun, till I have bought a glass,
That I may see my shadow as I pass."

Now, let us check the background of Bulganin, since he is thrust forward as the official head of the Soviet Government today—not the background of the man himself but that which he represents.

At least—and I have the figures—38 million of enslaved human beings in the prison camps of Russia and in the satellite nations. Just as examples:

Czechoslavakia, 300,000 in prison camps.
Lithuania, 500,000 in prison camps.
East Germany, 300,000 in prison camps.

And there are the hapless 20 million who were liquidated in the cold-blooded decimation of the Ukraine during the great man-made famines.

How can he—Bulganin—explain away the 1,000 violations that his Soviet Government has been guilty of in the treaties entered into with other powers, and, as documented in the Eastland committee report—even the Austrian treaty, only a few months old, yet casually broken with apologies to no one.

About Bulganin are the satellite countries—dismembered and enslaved—their fetters clanking on the floor of Europe.

That's the back-drop against which Bulganin, the voluble exponent of "democracy for the masses" appears. Now on the evening of July 23, 1955, when our eminent statesmen have left the Geneva stage, flattered, mollified, and tragically betrayed, like the Lady Anne, can't you hear from out the chorus of sardonic laughter that reverberates in the Soviet villa, the mocking tones of the Supreme Voice of the Soviet Republic?

Were ever statesmen in this manner woo'd?
Were ever statesmen in this manner won?
I'll charm them but I'll not charm them long.
What. I, the spokesman of the USSR,
Who had no friends to back my suit
But the plain devil and dissembling looks;
Forsooth, I have much mistook my proper worth.
Fatuously, they see me to be what I cannot
Myself to be a marvellous superman.
I'll get me a squad of tailors
And go along with these smart clad competitors
For the world's applause;
I'll play their game of make-believe cricket all the while;
But first I'll rid me, for the nonce, of these tell-tale corpses
And personally compromising war-victims,
I'll pressure too, Peking to do the same,
Then I'll return asmirking and lamenting
To my new made friends.

Since that evening the same Bulganin has publicly insulted the three other statesmen who sat about the summit table with him.

Peace or peaceful coexistence, to the Communist strategist, is only the vestibule to the next world war. Dimitry Manuilsky spelled out the Communist concept of peace to the party trainees in the Lenin School of Political Warfare in 1931—just 25 years ago:

"War to the hilt between communism and capitalism is inevitable. Today, of course (1931), we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bouregeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

Gentlemen, how are we to meet and to stop the onward rush of communism.

First, you must be on the alert, continuously vigilant against the insidious and false propaganda that is being spread through the slanted press, the slanted radio, and the slanted television. If you are to stave off this disaster you must inform yourselves and be prepared to protest falsehoods and to defend the truth.

Second, you have the inborn right and conscientious duty to demand of all candidates to public office, whether county, city, State, or Federal, to declare openly and in unmistakable terms where they stand in the matter of Red infiltration, and what views these candidates for office hold in regard to the admission of Red China into the United Nations. And don't let any of them dodge the burning issues of the day by invoking the fifth amendment.

Third, remember always, we of the free world, follow a Christian tradition, built on the teaching that right is superior to might and that principle must prompt our decisions and shape our course and not a rudderless, spineless, unscrupulous expediency.

Christ, the Son of God, did not hang upon a cross and wear a crown of thorns as a gesture of appeasement to the venal politicians of His day, but rather to teach the world for all ages to come that there are things in life of infinitely more value even than life itself.

Tax on Gasoline for Farm Use

SPEECH
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. SCHWENGEL. Mr. Speaker, because of my strong feelings in favor of H. R. 8780 which exempts farm machinery fuels from Federal excise tax, and because I was detained at Bethesda Medical Center until noon Tuesday and could not get back in time to register my vote, I wish to take this means of going on record in favor of the bill. Had I been here, I would have voted "yea." In a

nonrecord voice vote the previous day, I voted "yea." I have long been a proponent of this type of legislation, having championed similar measures in the State legislature of Iowa. I am confident that it will soon become law and the farm people can start enjoying this saving. I ask leave to have this statement entered in the permanent RECORD immediately following the vote on H. R. 8780.

Spanish Economic Situation

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following keenly analytical article by the Honorable John Lodge, Ambassador to Spain, before the Spanish-American Board of Trade, New York, on January 5, 1956:

PROSPECTS FOR EXPANDING SPANISH-AMERICAN TRADE

(By John Lodge, Ambassador to Spain)

This evening I would like to discuss certain aspects of the Spanish economic situation, in particular, the prospects for expansion of trade between our two countries. In the past few years visible trade between Spain and the United States has, as you are aware, been rather limited, usually averaging in the neighborhood of $50 million worth of imports from Spain and $70–80 million worth of exports to Spain, with the difference being offset to a large extent by the spending of American tourists. Spain would like to import much more American goods but has for a number of years been faced with an extreme shortage of foreign exchange, and the levels of imports from the United States have been limited by the availability of dollars. The basic reason for this situation is that Spain is a poor country whose economic development has been retarded by the scars of her 3-year civil war, by the effects of the Second World War, and by the shortage of foreign exchange which made it impossible for her to import necessary machinery and materials which would permit her to make the economic advances she desires.

The situation, however, has improved markedly in the course of the past 5 years. This is partly due to two good crop years in 1950 and 1951, but of particular importance recently has been United States economic assistance, both in the form of Export-Import Bank loans and direct economic assistance furnished as a result of the military and economic agreements which were signed in September of 1953. Spain has also been an important market for our surplus agricultural commodities. Sales of these commodities to Spain have been part of our economic program in that country and have contributed importantly to the Spanish effort to overcome crises caused by crop failures. Our economic program is giving the Spanish economy a lift and is helping to put it in a position, for the first time in 25 years, where it is not living on a strictly hand-to-mouth basis and can make some plans as to the best use of its not inconsiderable resources.

In assessing the progress which has been made in Spain and the role of our help, we must fully realize the importance of the efforts which Spain has made in the past and is now making to help herself. The Spaniards are a hard-working people, and they have made advances in the past 10 years which I consider truly impressive. Even more important, perhaps, is the fact that the Spaniards have developed concrete programs to improve key deficient sectors of their economy and are moving as fast as they possibly can to achieve these objectives. Through their own efforts and with our assistance, Spain has developed her industry and agriculture to the point where, in a very few years, she should have overcome the worst effects of her dependence on a dry climate which, in years of drought, not only retards economic development but sets it back to a significant degree.

I think I should mention here one aspect of our cooperative efforts in the industrial area which has an interesting potential. For the past century Spain's industrial progress has lagged behind that of other European countries. An important cause of this is the inadequacy of power and power generating resources, such as coal, water, and petroleum. The keenness now being manifested in official Spanish circles in the possible utilization of atomic energy for generation of electric power is sharpened by their desire to try to make up through atomic energy some of the ground lost. On our part, we have been doing all we can to help the Spaniards move ahead in this field. Our two governments signed an agreement last summer under which the United States will assist Spain in designing and fueling an experimental nuclear reactor. One element of this assistance provides training for Spanish technicians in the United States in operating a reactor; some of them are here now. The most recent development in our cooperative effort in this field took place just prior to my departure from Madrid when I had the privilege of presenting an extensive atomic-energy technical library to the Spanish Nuclear Energy Board an behalf of the United States Atomic Energy Commission. Our cooperation on atomic-energy matters with the Spaniards is much appreciated by them, and I look forward to future progress in this area in Spain.

These advances in the Spanish economy are important to American business because I believe that the outlook for expanding trade between Spain and the United States is good, particularly if certain obstacles can be removed. In reaching this conclusion, I have had in mind several important positive factors.

SIGNIFICANCE FOR AMERICAN BUSINESS

First, the Spaniards have been cooperating closely with us for the past 2 years in working out the military and economic programs agreed upon in the 1953 accords. Contacts between Americans and Spaniards are increasing rapidly, and they welcome us in their country. In addition to the more than a quarter of a million American tourists who visited Spain in the past year, other Americans are there working on the base construction program, and more American businessmen than ever are now in Spain.

Second, with only limited United States assistance, Spain's economy should continue to expand and strengthen in the next few years, and this in itself provides a climate for a greater exchange of goods.

Third, under our technical exchange program, American experts are working with Spanish technicians to stimulate increased production in a number of key sectors of the Spanish economy, such as industry, agriculture, transportation, and mining. The essence of this program is to make available to Spain new developments in production and marketing—not only technical processes but concepts of organization and management relations. Such concepts when put into practice can promote the better use of present facilities as well as the maximum output from new investments. One of the principal means which we are using to make these new methods available to more people is the arrangement of visits to the United States of technicians from other countries, and visits to cooperating countries by American experts. There is strong interest in technical exchange in Spain, and the program is, I think, being successfully carried out. Spanish business leaders and executives in a number of industries have visited the United States to observe our production and managerial methods, and many more will be coming in the course of the next few years. These officials have shown a receptivity to American ideas and will welcome American goods.

PROBLEMS WHICH MUST BE SOLVED

While my optimism remains untempered, there are some real problems which must be solved if the full possibilities of expanding Spanish-American trade are to be realized. Spain needs more capital goods and a greater flexibility in her foreign exchange reserve situation. These cannot be provided entirely from United States economic aid because of our own budgetary and fiscal problems. A mutually beneficial way by means of which some of Spain's requirements could be met is through American private investment. Good business opportunities exist in Spain, and several American companies have during the past year established themselves there, usually in partnership with Spanish interests. At the same time, there are other American businessmen who are hesitant to invest in Spain because of certain obstacles which they have encountered, including difficulties in the transfer of earnings.

This problem is further complicated by a backlog of accumulated blocked peseta earnings. We must remember that the Spanish Government has had a severe shortage of foreign exchange and that it felt that priority had to be given to absolutely essential imports before allowing the blocked peseta accounts to be converted to dollars. There is, however, reason to expect that this situation will improve. One of the provisions of the 1953 Spanish-American economic aid pact included Spain's agreement to work out with us the liquidation of previous earnings which were blocked and the establishment of a regular system for the transfer of future earnings. Certainly there is ample evidence of the steady improvement in the Spanish economic situation during the past year, including its holdings of foreign exchange, and this helps put Spain in a financial situation where she is able to meet the blocked peseta problem without seriously endangering her economic stability.

Another barrier which makes American potential investors reluctant to invest in Spain is the limitations which are now placed by Spanish legislation on the degree of foreign ownership of new manufacturing enterprises. While I can report no specific progress on this question, Spanish officials are certainly aware that American investments would be increased if these restrictions were loosened, and I am hopeful that this can be accomplished in the not too distant future. Expanding American investments in Spain would strengthen the tie between the economies of our two countries and would therefore stimulate the expansion of Spanish-American trade. The importance and desirability of increasing trade between Spain and the United States is recognized at the highest levels of the Spanish Government. Last spring, General Franco sent a special message in this sense to American businessmen in the course of an interview which was published in U. S. News & World Report. The Chief of State said:

"We want to increase the purchasing power of the Spaniards so as to multiply and intensify all trade. In this sense we believe that at this moment financiers and promoters of enterprise from the United States

have a very vast field for collaboration with us."

THE HUMAN FACTOR

In conclusion, I would like to mention a human factor. Americans who are now in Spain are coming in close contact with the Spanish people at all levels, from high Government officials to the most modest worker. There is a real enthusiasm in Spain for things American, and this is the fundamental basis for my feeling that we can look forward to a period of closer understanding and expanding trade between the United States and Spain. Another important factor is the general attitude of Spanish Government officials and their businesslike approach to commercial and economic problems. I was particularly impressed by a speech made by Minister of Commerce Arburúa last month, in which he noted the improvement of the economy and stated that it was necessary that the "ways of commerce be brought back into their traditional channels, to those classic formulas which base commercial prosperity on the rise in volume of sales at reasonable margins in place of restrictive sales at excessively high profits."

As for the contribution which can be made by you gentlemen, members of the Spanish-American Board of Trade, I want to say again how important I think is the work of this organization. You are already playing an important role in improving overall relations between Spain and the United States, as well as stimulting greater trade between the two countries, and I am sure you will find greater tangible rewards in the future.

In this connection, it is my opinion that too many of our citizens feel that foreign policy is something removed from them and limited to officials in Washington and our diplomatic representatives abroad. In this day of rapid transport and communications, and with an unstable international situation to consider, this is a grave oversight. More than ever before in history, foreign relations have become joined with domestic relations and are, therefore, the concern of each and every one.

The continuance of good Spanish-American relations is a task to which Americans and Spaniards alike should set themselves. An indication of the state of our relations with Spain may be seen in the fact that the Spanish people have contributed recently 1,335,000 pesetas to American flood relief. I am proud and deeply touched by this entirely spontaneous display of friendship and sympathy for our people.

As you know, I have spent the past month here in consultation with officials of the Department of State and other Government agencies, and I return to my post in Madrid within a few days. I look forward with enthusiasm to resuming my duties as Ambassador because I feel that it is not only a unique opportunity for public service but that the alliance we are building with Spain is on firm ground. Prospects for the future are most encouraging for both Spaniards and Americans.

Spain today is playing a more active role in international affairs. The Spanish Government is a dependable ally. It is heartening to see our relationships developing so closely. In my day-to-day association with Spaniards themselves, I have been impressed by the forward looking enthusiasm with which they welcome military and economic cooperation with us.

Although not a wealthy country, Spain today is a vigorous nation on the march which is making a determined effort to raise the living standards of her people. Any assistance that we can give to bolster her economic potential—and I know of no better one than the ecouragement of trade—is a contribution not only to Spain but to our own national safety and that of the anti-Communist nations whose leadership we have assumed.

We can be thankful, gentlemen, that in the present divided and troubled world we have on our side a friend and ally which shares our resistance to Soviet communism and which supports the cause of international peace.

Natural Gas Dispute

EXTENSION OF REMARKS
OF
HON. PRICE DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1, 1956

Mr. DANIEL. Mr. President, on January 26, the New York Journal-American carried an editorial which set forth vigorously and forcefully the reasons why Congress should pass the Fulbright-Harris natural-gas bill. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATURAL GAS DISPUTE

Fundamental facts of interest to the consumer are being obscured in the Senate controversy over Federal control of the natural-gas industry.

The natural-gas business falls in three divisions—producers who obtain the fuel at the wells and who operate mainly in six States; interstate pipelines which transport natural gas to consumer markets, the bulk of which are situated in 33 large importing States, and distributors or, in plain language, local gas companies. Pipe lines and local gas companies operate as monopolies.

To protect the public, local gas companies are regulated under State laws as public utilities. The Federal Government has no jurisdiction in this field.

Further to protect the public, Congress in 1938 passed the Natural Gas Act, giving the Federal Power Commission authority over the pipelines engaged in interstate commerce. The act specifically exempted producers at the well from Federal regulation.

In June 1954 the Supreme Court ruled, by a split decision, that producers were also subject to Federal control if any part of their production was sold across State lines.

In sum, the Court held that a law passed by Congress contained something that Congress had not put in the law.

This, as in the preceding matter of oil-bearing tidelands, was a case of the Federal judiciary invading the legislative powers of Congress.

Congress nullified the earlier decision by passing a law that returned the tidelands seized by the Federal Government to the States which had owned them for 100 years without dispute.

BASIC ISSUE

Following that precedent, the Harris-Fulbright bill was introduced in Congress to rescind the natural gas decision and was passed by the lower House last year. The bill is now pending in the Senate.

The basic issue, therefore, is that legislative powers under the Federal Constitution belong solely to Congress and may not be usurped by either the executive or judicial branch.

Obviously, if the Federal Government has power to regulate the production of natural gas, then, as Senator BRIDGES has said:

"We must also extend Government control to the production of coal, lead, zinc, copper, and all other mining."

Opponents of the Fulbright bill assert that the production of natural gas is a monopoly from which the public must be protected by Federal intervention.

No reliable facts are offered to support this contention.

It is true that 197 companies produce 90 percent of the natural gas supply. But of these 197 companies competing with each other none controls 5 percent of the total production. Moreover, in this highly competitive industry there ar actually 8,000 producers operating 71,000 gas wells in 28 States.

That is hardly a monopoly.

Opponents of the Fulbright bill also allege that the consuming public is the victim of price extortion by the natural gas companies.

There are some 25 million residential natural-gas consumers, mostly in the large cities, and the millions of families who read the Hearst newspapers are among them. Naturally, we are on their side; always have been and always will be.

PRICE INDEXES

But here are some facts:

Prices vary geographically, but taking New England for an example:

The producer averages only 10 cents per 1,000 cubic feet for natural gas piped into New England. The pipelines get only 50 cents. But the average home price in New England is $2.40 per 1,000 cubic feet, the local distributor getting $1.80. The distributor's price is thus 2,400 percent of the producer's price.

In Washington, D. C. a residential consumer pays $1.31 for natural gas for which the producer receives 12½ cents.

According to a congressional estimate, a local utility company collects 18 cents for delivering 2 cents worth of natural gas.

Plainly, the high costs to consumers are attributable much more to local service and distribution than to exploitation by producers; and local utilities are subject to State or municipal regulation.

Opponents of the Fulbright bill contend that Federal regulation, as unconstitutionally decreed by the Supreme Court, will increase the market supply of natural gas and reduce consumer prices.

Market statistics indicate exactly the opposite effects.

Expanding potential markets demand expanding supplies.

But the interestate supply is diminishing. Because the Federal regulation at the wellheads, many independent producers are selling their product only within their own States, where Federal control is absent. Likewise, wildcatting, or bringing in new wells, is declining.

The long-range result of Federal control must be a future market shortage and high consumer prices.

Farm Aid, Not Bonanzas

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of January 13, 1956:

FARM AID, NOT BONANZAS

Persons who remember the potato scandals of a few years ago will hardly be surprised by the figures Secretary of Agriculture Benson presented to Congress in support of

the administration proposal to place a dollar limit on the amounts to be paid in price support to farmers.

When potato prices were being heavily supported in spite of excessive production, it was disclosed that farmers—and some get-rich-quick operators, were receiving Government payments of thousands of dollars for potatoes nobody could use. The public clamor resulted in congressional action to cut down potato supports.

But the payments of huge amounts in Government supports was not limited to potato growers. Benson submitted figures showing that it occurs in the case of virtually all crops. One percent of the cotton growers, for example, got 18 percent of all support payments. Of the money paid in supporting wheat prices, 12 percent went to 1 percent of the growers, while 24 percent of barley payments went to 1 percent of the farmers.

The figures provide strong backing for the idea of a dollar limit. If the aim is to keep up the income of the individual farmers, it doesn't make sense to hand out huge sums—running into hundreds of thousands of dollars in some cases—to underwrite competition against family farms by corporate farms. Farm supports should be to aid the bulk of farmers. They shouldn't provide bonanzas for a few.

A Time for Praise

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1, 1956

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Time for Praise," written by Dr. George S. Reuter, Jr., of the Arkansas A. & M. College, College Heights, Ark.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A TIME FOR PRAISE

(By Dr. George S. Reuter, Jr., Arkansas A. & M. College, of College Heights, Ark.)

PART I. THE SOUTH

God is serving the needs of the people of the world so wonderfully yet millions are either unaware or not interested. Perhaps it is desirable once each year to pause and give thanks for this service. Only eternity can tell the full story of the Christian statesmen. It is so difficult to praise all who should be praised, but below are a few worthy institutions and religious statesmen from the South:

1. Highland Park Baptist Church, Tennessee Temple Schools, and Dr. Lee Roberson.

Dr. Lee Roberson was called as pastor of the Highland Park Baptist Church at Chattanooga, Tenn. on November 18, 1942. He resigned on December 4, 1955, to become effective on January 15, 1956.

This congregation was organized on October 26, 1890. It has been called the Orchard Knob Baptist Church and Beech Street Baptist Church. The charter members were W. F. Huffaker, H. D. Huffaker, Mrs. H. D. Huffaker, Mrs. W. H. Saylor, Mr. W. H. Saylor, Mr. J. N. Keelin, Mrs. J. N. Keelin, Miss Nancy Roberts, and Mr. L. N. Perdell. The original deacons were J. N. Keelin, H. D. Huffaker, and W. H. Saylor.

When Dr. Roberson came as pastor in 1942 there were about 1,300 members. Now there are 13,609. Last year 1,163 were saved and baptized into the church. There were over 1,000 others who were saved but not baptized into this church. The church budget total is $301,059.82. There are nine full-time church employees.

The following ministers have been pastor: J. M. Chauncey (1890–92), B. M. Jackson (1891, acting), B. F. Barttes (1892–93), W. A. Simons (1893–94), Spencer Tunnel (1894), T. J. McClondiss (1895), S. H. Johnson (1895–97), J. H. Martin (1897–99), W. H. Fitzgerald (1900–01), D. B. Vance (1901–04), B. N. Brooks (1904–06), R. D. Cecil (1906–08), W. S. Keese (1908–21), J. B. Phillips (1921–30), Dr. C. F. Clark (1930–38), Carl A. DeVane (1938–42), and Dr. Lee Roberson since 1942.

Dr. Roberson was born on a small farm within 4 miles of English, Ind., 46 years ago. His early years were spent in Indiana, Illinois, and Kentucky. His father was a motorman on a streetcar, and the family had financial difficulties. He was graduated from Fern Creek High School when he was 18.

His family was not Christian and this caused additional difficulties. Through the teaching of Mrs. Daisy Hawes and the preaching of J. N. Binford, he came under conviction and surrendered to Christ at home. When he went down the aisle the next Sunday, his mother and father followed him. He started as a church singer when he was only 16.

He attended Bethel College (now a dead Baptist college), the University of Louisville, and the seminary. He studied voice under John Sample and Miss Loudon, and at the Cincinnati Conservatory under John Hoffman. He sang at the Nashville Conservatory for DeLuca, and was offered a chance to prepare for Broadway, but he declined. Mount Vernon University at Arlington, Va., awarded him an honorary doctorate (D. D.) on September 4, 1943.

Dr. Roberson has held a number of pastorates, but he became noted at the First Baptist Church of Fairfield, Ala., where he became pastor on October 31, 1937. Dr. E. J. Daniels, another noted Baptist minister succeeded him. From 1936 to 1940, Dr. Roberson conducted 52 revival meetings too.

Dr. Roberson married Caroline Allen. The following children came to their home: Lee Anne, Johnny, Joy (deceased), Patricia (adopted), and June. Lee Anne has made public the fact that she has been called as a missionary. Johnny has made public profession of faith in Christ.

The Robersons live modestly. Dr. Roberson has refused raises even though some Baptist ministers in Tennessee are receiving about three times his salary and he is pastor of the largest white Baptist church in the world and the greatest soul-winning church in the Southern Baptist Convention. He once said: "As long as there are buildings to build and missionaries to be sent out, I want no more. I can get along on what I am getting." He always gives first, as when the youth building was being built, he gave the first $1,000. He has established Tennessee Temple Schools, which was very wise.

Dr. Roberson's preaching is dynamic. He preaches an average of twelve messages every week, including the daily radio ministry. His preaching is simple, but he emphasizes the Bible. He never takes a vacation. Ever since he first went to Chattanooga, he has had more invitations to preach in outside meetings than he can fill.

Thank you, Lord, for Dr. Lee Roberson, the Highland Park Baptist Church, and Tennessee Temple Schools.

2. Bellevue Baptist Church and Dr. Robert Greene Lee.

This Memphis, Tenn., congregation was organized on July 12, 1903. It was a child of the Central Baptist Church. There were 32 charter members. Mrs. Marion S. Lemman and Mrs. P. D. Martin still belong to this great body. Mrs. M. G. Bailey, Mrs. E. L. Bass, Miss Mary Wells, Miss Julia Mae Swift, and Mrs. Robena Woods Mustin are the other charter members who are still alive. Dr. E. Y. Mullins, president, Southern Baptist Theological Seminary, preached the dedicatory sermon.

The pastors have been: Dr. H. P. Hurt (1903–14), Dr. R. M. Inlow (1915–21), Dr. W. M. Bostick (1921–27), Dr. T. B. Brown (1927, acting), and Dr. Robert G. Lee since 1927.

There were 8,992 members on October 31, 1955. Last year, 334 additions came from baptism, and there was a total of additions of 1,022. The church budget for the year ending October 1, 1955, was $548,404.81. There are 19 full-time employees.

Dr. Lee, whose biographic sketch appears in Who's Who in America, is extremely well-known and highly respected. Since the death of Dr. George W. Truett, he should be termed "Mr. Southern Baptist." He was president of the Southern Baptist Convention for three terms. His writings and recordings are known around the world.

Thank you, Lord, for Dr. Robert G. Lee and Bellevue Baptist Church.

3. First Baptist Church of Dallas, Dr. George W. Truett, and Dr. W. A. Criswell.

This congregation at Dallas, Tex., has become one of the most noted because of the late Dr. George W. Truett. He was born on May 6, 1867, and died on July 7, 1944. Dr. W. A. Criswell, Jr., has carried on the fine tradition.

This body was organized on July 30, 1868. The place of meeting was the Masonic hall. Four Baptist ministers composed the presbytery. They were: W. W. Harris, J. F. Pinson, W. B. Long, and W. J. Brown. A series of revival services had been conducted in the schoolroom by Reverend Harris, during which a number of Baptists then living in Dallas expressed their desire for a church. The first members were: Col. W. L. Williams, Mrs. W. L. Williams, E. G. Mays, John Hanna, Mrs. M. L. Bowen, Mrs. C. E. Mays, Mrs. A. C. Mays, Mrs. N. E. Collins, Mrs. Martha Seegar, Mrs. S. C. Akard, and Mrs. M. E. Kerfoot. Colonel Williams was elected clerk and Reverend Harris was called as the first pastor on August 22, 1868.

Prior to this time, Rev. J. M. Myers and Rev. C. W. Pearce aided in organizing a Baptist church in Dallas on October 19, 1857. Rev. Jacob Ruth was called as pastor on March 13, 1858, but this group voted to dissolve on February 12, 1860. Later the First Baptist Church of Dallas, Tex., was constituted on February 13, 1860. Rev. Joshua W. Terrill and Rev. Jacob Ruth were the presbytery. There were the following members: Fleetwood Rice, Samuel Dean, Maj. J. Dean, Josiah H. Payne, W. W. Barton, R. C. Milburn, Elizabeth L. Rice, Taphath Barton, Martha J. Payne, Mary H. Dean, F. C. Dean, S. E. Dean, Rebecca Swing, and Jane Carter. This group changed its name on August 15, 1863, to the Pleasant View Baptist Church, and that is the present name. Rev. W. E. Callahan was the first pastor.

The pastors of the present First Baptist Church have been: W. W. Harris (1868–70), C. A. Stanton (1871–72), W. Abram Weaver (1873–75), G. W. Rogers (1876–77), J. H. Curry (1878–82), R. T. Hanks (1883–89), A. M. Simms (1890–91), C. L. Seasholes (1892–96), George W. Truett (1897–1944), and W. A. Criswell, Jr., since 1944.

The first building was opened on June 22, 1873, the second one in 1890, the enlarged second one in 1908, the Truett Building in September 1925, the activities building on August 2, 1953, and the parking and recreation building in September 1953.

There are 11,115 members, and there were 311 converts last year. The church budget for 1956 totals $685,000. There are 45 white and 17 colored staff members.

Dr. Criswell was born in Eldorado, Okla., December 19, 1909. He attended grammar

school and 2 years of high school in Texline, Tex., and the last 2 years in Amarillo, Tex., where he was graduated in 1927.

His earliest recollection of being called to the ministry was when he was about 6 years old. He made his public profession in Christ when he was 10, and 2 years later made a public commital of his life to the gospel ministry. He began preaching when he was 17.

He was educated at Baylor University (B. A., 1931, and D. D., 1945) and Southern Baptist Theological Seminary (Th. M., 1934, and Th. D., 1937). He was pastor of the First Baptist Church of Chickasha, Okla. (1937–41), First Baptist Church of Muskogee, Okla. (1941–44), and he has been in the present position at Dallas, Texas, since 1944.

Dr. Criswell married Bessie Marie Harris, one of the young schoolteachers in his congregation. Their only child, Mabel Ann, was born in 1939. He is active in Southern Baptist life. His books include The Gospel According to Moses, Passport to the World (with Dr. Duke K. McCall), and These Issues We Must Face. His program is planned so that one-half of all church income goes to missionary, educational, and benevolent causes, which is ideal.

Thank you, Lord, for Dr. George W. Truett, Dr. W. A. Criswell, and the First Baptist Church of Dallas, Tex.

4. First Baptist Church, Fort Smith, and Dr. J. Harold Smith.

This Arkansas congregation was organized on December 1, 1857. The charter members were: William H. Byers, Mrs. C. A. Byers, Mrs. M. A. Singleton, Siley M. Ellis, Mrs. M. H. Wheeler, and Mrs. M. E. McKinney. The original deacon was Siley M. Ellis.

The pastors have been: D. Buckley (1857–58), E. L. Compere (1860–70), F. L. Kregel (1871–78), G. W. Reaves (1878–79), E. L. Compere (1880–81), A. S. Worrell (1881–82), William E. Paxton (1883), G. W. Reaves (1883–85), J. B. Wise (1885–86), A. J. Kincaid (1886–92), W. P. Throgmorton (1892–95), O. L. Hailey (1895–99), N. P. Pittman (1900–02), Finley F. Gibson (1902–16), B. V. Ferguson (1916–50), and Dr. J. Harold Smith since December 1950.

The present resident membership is 3,232. There were 414 baptized last year. The 1955 budget was $225,000. There are 12 full-time employees.

Dr. Smith was born in Woodruff, S. C., on June 14, 1910. He married Myrtice Rhodes on October 12, 1933. They have two children: Martha, a senior at Ouachita Baptist College, and Donnie, age 10.

Reverend Smith received his education at Furman University (B. S., 1931) and Southern Bible Institute (honorary doctorate, 1941). He was converted on September 4, 1932, and ordained to the gospel ministry by the Poinsette Baptist Church, Greenville, S. C., in March 1933. He preached his first sermon on September 17, 1932.

In the first 2 months of his ministry, over 2,000 people were converted and reclaimed. He started a radio ministry in December 1935, that is still in operation. He now has 50 broadcasts each week. For 9 years, he has been preaching over XERF, Del Rio, Tex., for 1 hour daily.

After being a successful minister of the Woodland Park Baptist Church in Chattanooga, Tenn. (1949–50), he came to his present position at Fort Smith, Ark. He now has an average Sunday school attendance of 1,567, and 712 are in training union.

Dr. Smith is a dynamic personality, a fearless preacher of the gospel. He is fairly new in Arkansas, yet he ran second for president of the Arkansas Baptist Convention in 1955. He has been to Europe and the Holy Land twice (1950 and 1954).

Thank you Lord, for Dr. J. Harold Smith and the First Baptist Church of Fort Smith, Ark.

5. Immanuel Baptist Church and Dr. W. O. Vaught, Jr.

This Little Rock, Ark., congregation was organized on Sunday, April 17, 1892, as the Third Baptist Church. There had been a mission Sunday school at 10th and High Streets in March 1891; there had been discussion in November 1891, about the feasibility of organizing a church; and there was a West End Mission organized on March 6, 1892.

Those coming into the new church were: Rev. and Mrs. J. B. English, Mr. and Mrs. J. H. Reynolds, Mr. and Mrs. J. B. Hall, Mr. and Mrs. W. H. Rankin, Mr. and Mrs. M. D. Shields, Mrs. Mollie Rankin Huffman, Mrs. John G. B. Simms, Miss Fairy Carter, Mr. G. W. Pitts, Mrs. Lelia Peay Morrison, Miss Sally Peay, and Miss Lizzie Peay (now Mrs. Taylor Reynolds). The last two mentioned are granddaughters of Reverend English, who was the first pastor. The church was received into the Caroline Association in October 1892, with 36 members.

The pastors have been: J. B. English (1892), Dr. W. A. Welcher (1892–93), Dr. Frank White (1893–98), Dr. A. B. Miller (1899–1901), W. S. Roney (1902–04), Dr. J. U. H. Wharton (1904–05), O. J. Wade (1905–13), Dr. E. P. Alldredge (1913–19), Dr. Otto Whitington (1919–36), Dr. Will C. McClung (1937), Dr. R. C. Campbell (1938), Dr. C. C. Warren (1938–45), and Dr. W. O. Vaught, Jr. since 1945. Dr. Welcher was pastor when the present name of the church was selected.

Dr. Vaught was born in Versailles, Ky., during January 1911. At the age of 8 he was baptized into the Brookville Baptist Church, Brookville, Miss. He was graduated from the Caledonia High School in 1928 in first place. Immediately after being graduated from Mississippi College at Clinton, he entered Southern Baptist Theological Seminary, where he too was graduated. He has been honored with an honorary doctorate.

He has been secretary, Missouri Baptist Student Union (1935–41); pastor, Bethany Baptist Church, Kansas City, Mo., (1941–42); pastor, University Baptist Church, Abilene, Tex. (1942–45); and in his present position since 1945. His service as president, Arkansas Baptist Convention (1953–55) was outstanding. He is married to Mary Frances Bostick. They have one son, Carl Gray Vaught.

Immanuel Baptist Church has 4,310 members; 3,358 in Sunday school; 1,235 in training union; 436 in W. M. U.; and church property valued at $1,221,400. The members gave $240,000 to all purposes during the year. There were 3,271 additions by letter and 1,848 by baptism.

Thank you, Lord, for Dr. W. O. Vaught, Jr. and Immanuel Baptist Church.

Thank you, Lord, for other Southern religious leaders, among whom are Dr. E. J. Daniels, Dr. J. Powell Tucker, Dr. C. Roy Angell, Dr. Roy Mason, Rev. and Mrs. C. J. Jacobson, Dr. Sam Morris, Dr. J. D. Grey, Dr. Louie D. Newton, Dr. Bob Jones, Dr. T. F. Adams, and Dr. Bob Jones, Jr.

The Importance of Belonging to a Political Party

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to insert in the Appendix of the CONGRESSIONAL RECORD the speech by the Senator from Ohio, the Honorable GEORGE H. BENDER, which he gave before the Young Republican Leadership Training School held in Washington during the week of January 23 through January 27.

The speech follows:

THE IMPORTANCE OF BELONGING TO A POLITICAL PARTY

(By Senator GEORGE H. BENDER)

The history of America is the history of our political parties. You cannot think of our country's development in any other terms. From the days of the American Revolution right down to the present time, our country has believed in the power of political action. Politics has been our lifeblood from the 1760's right on down.

Colonial legislatures were the fountainhead of every major program in our fight for independence. In 1768, Samuel Adams drew up the famous Massachusetts circular letter. It denounced the decrees of the British Government, and it was approved by the courageous House of Representatives of Massachusetts. The Revolutionary Party was the first political party in our country's history, even though it was illegal. The Sons of Liberty had no opportunity to grow into a political party, but they had all the makings.

By the time of our first President, two strong and opposing political elements were on the scene. The Federalists under Hamilton and their opponents, the strangely named Democratic-Republicans under Jefferson represented basic and conflicting viewpoints. This difference of opinion on important issues has been the trademark of political developments ever since.

Unlike the experience of many European countries, ours has been an emphasis upon broad agreements. In France and in Italy, relatively obscure intellectual differences express themselves through rigid, inflexible contending political parties. As a result, party lines harden and voters find it necessary to shift from one party to another, from one election to the next.

The parties themselves are so dogmatic in their views that they cannot accommodate people who differ only slightly among themselves.

In our country, the political parties are, basically, coalitions. We have room within the Republican Party for people of diverse specific beliefs as long as they share our fundamental point of view. The Democratic Party finds itself in much greater difficulties on this score. To have the same political party speaking for desegregation in the North and segregation in the South is a gymnastic feat which even Messrs. Stevenson and SPARKMAN found impossible 4 years ago. But they are still in there trying to do it.

Our own party occasionally finds it impossible to absorb all the people who are originally attracted to it. In one notable case, we found that a political marriage "for better or MORSE" was not made in Heaven, but we don't contract too many of these. By and large, our Republican Party succeeds by assimilation, not elimination. We are broad enough in our outlook to welcome people of every background, as long as they believe in our system of free enterprise and individual initiative.

This is all obvious and true, but it leads me to the $100,000 questions. Why should anyone join a political party? Why should anyone commit himself to the support of one party? I think the answer is self-evident.

The late Peter Marshall gave it to us in his own clear, simple language. He prayed, "Oh, God—let us stand for something, lest we fall for anything."

All of us can join in this prayer. Anyone looking at the world scene today must realize that the major problems which beset us are due directly to the failure of good men

everywhere to stand together for something. Political organizations are, in the last analysis, groups of men and women who stand for something.

Let me give you a few propositions. Most young people still remember their geometry, and so I shall put these propositions to you as modern-day Euclid.

My fundamental axioms are these: If any emergency arises to threaten our Western citization, it must be met by the united action of free nations. Our free nations must act effectively and promptly. This action requires political decisions. Decisions cannot be rendered by indecisive people who do not know where they stand, where they are going, or where they have been.

Let me emphasize this last idea because it represents one of the peculiar misconceptions of our time—the trend toward political independence.

Frankly, I believe that political independence means nothing but political indecision. The so-called "independents" like to think of themselves as voting for the man and not for the party. But the man and his party are inseparable in our country's political machinery. No one in the Congress of the United States votes as an "independent" upon public issues. No one in the Senate votes independently upon the organization of the Senate—or upon the confirmation of appointees nominated by the President. A man may vote with his party or against his party on particular issues, but he never votes independently of his party, even if he thinks he is voting that way. If he finds himself voting in opposition to the majority of his party most of the time, he ought to get out and join the other party.

Why should young people join the Republican Party? The Democrats claim to be "liberals" in quotation marks. "Liberal" is a fine, high-sounding word. But when we stop to think a moment, we remember that every radical, every demagog, every Communist in history has stolen the word "liberal," to pervert it to his own use.

The Republican Party for 100 years has represented the idea of constitutional government. We stand for the principle enunciated eloquently by the great Senator from Ohio, whom it was my privilege to call friend, the late Robert A. Taft. Bob Taft said that "liberty under law" was the watchword of the Republican Party. He believed in progress under the Constitution; in the protection of human rights—and property rights which are fundamental elements of human rights.

As Republicans, we believe in the distinction between ourselves and the Democratic Party. There are some areas in which both parties are in agreement, but there are larger issues upon which we differ fundamentally. We differ in our approach to world peace. The Democrats think in terms of personal conferences behind closed doors, where Yaltas and Potsdams and Teherans can blossom in secrecy. We believe in world diplomacy, in publicly declared, publicly subscribed agreements among the nations of the earth. In our approach to the spending of Federal funds, the importance of a balanced budget, we are in sharp disagreement with our opponents. They do not consider the reduction of taxes as anything larger than a popular campaign issue. They regard the Federal payroll as a jet-driven flying carpet, designed to soar upward into the stratosphere. We have never accepted these attitudes toward government, even when we were compelled by temporary need to increase payrolls and spend large sums.

There are some people who pretend that they can pick and choose the principles of both parties at their convenience. Some candidates for office have adopted this pretense. I am happy to say that these folks are not found often in the Republican camp. They are usually confused Democrats who would like to be Republicans but lack the courage to make the leap of faith. Our voters seldom share this confusion. They have an uncanny knack for discovering political hypocrisy wherever it arises.

Americans like their politics straight. That is why we have political platforms. The first party platforms ever adopted in our country were written out exactly 125 years ago by a young national Republican convention here in Washington. Some folks say that party platforms are meaningless. This is not true. They are important and significant.

In the State which I represent in the Senate, our law requires each candidate to sign a declaration under oath pledging his support to the national and State platform of his party. Anyone who signs that declaration not intending to carry it out should be disqualified to speak for his party. Anyone who does sign it must work to carry out the platform.

I am convinced that the future of our country is tied up with the continuing growth of stronger political organizations. For many years, there has been a current of discontent with politics and politicians. This current is showing signs of ebbing. More and more, young people are interesting themselves in politics and in the prospects of political careers. They are discovering that the great game of politics is more than a pastime. It is an absorbing and vitally important life interest.

Today, we must recognize realistically that the political decisions being made by our country will determine our future. We have resisted the Communist effort to drag the world over the "brink of war." I am sure that America approves our resistance. I am equally sure that America did not approve the Democratic Party in its sad record of rushing over the brink into three wars within a single lifetime.

These are the issues which make political parties. You young Republicans have chosen to cast your lot with the party which emphasizes individual freedom, personal initiative, and the dynamic expansion of America. I hope that you will persuade your friends to join you in belonging to a political party—and make that party our party.

Middle East Situation

EXTENSION OF REMARKS
OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting the most recent of the many letters I have written to the Secretary of State, expressing my concern over the Middle East situation. This letter, dated January 23, speaks for itself; however, I would like to make clear that the alarm I feel for the future of the State of Israel is not prompted because I am a Jew. I would feel the same concern for any country whose territorial integrity and security were threatened. It behooves every American to go to the defense of democracy and freedom whenever that democracy or freedom is threatened by annihilation.

Israel demonstrated her loyalty to democracy and proved herself an ally of the United States by refusing every Communist gesture of friendship and assistance, even at the danger of its very existence. Egypt has accepted Communist arms and all the implications that go with them.

The small State of Israel came into existence at the will of the United Nations. It stands to reason she should be given every opportunity to survive and develop in a normal way. Our country, being the first to recognize Israel as an independent country, must consistently feel the responsibility to help protect its existence, as well as its borders. We cannot sit idly by and watch this young country be wiped off the face of the map. As the leading democratic nation in the world today, it is our duty to aid and assist her in this struggle for life.

One of the basic factors which keeps the Middle East in a state of crisis is the absolute refusal of the Arab States to reconcile themselves to the existence of Israel as a State. During the adjournment of Congress, I had the good fortune to visit Israel and learn and see firsthand, the amazing progress she has made during the scant 8 years of her existence. If the Arab people could only be made to realize the economic and social benefits available to them through mutual trade with Israel, I am sure there would be little hesitancy in accepting the United Nations decree that Israel is here to stay.

However, since the Arab States are adamant in their refusal to recognize Israel as an independent country, our Government must act swiftly, justly, and effectively to prevent further aggression and another local war which could well develop into a third world war. The prevention of a third world war is vital to our own national security in this atomic age.

Therefore, we must, No. 1—without delay—make a clear-cut demonstration, through a security guaranty, that our Government will not tolerate Israel's destruction, and, No. 2, we must take measures which will correct the imbalance of power created by the Communist shipments of arms to Israel's neighbors, namely, by promptly supplying Israel arms to be used for the defense of her homeland.

The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 23, 1956.

The SECRETARY OF STATE,
Washington, D. C.

MY DEAR MR. SECRETARY: May I again stress that I believe it is imperative that our Government grant Israel's request for arms to enable her to defend herself against the threat of Arab aggression. I am convinced that any delay increases gravely the danger to Israel and to democracy. I hope, in addition, that our administration will negotiate a security pact with Israel to guarantee the existing frontiers and that the administration will abandon the idea that any such pact should be postponed until after an agreement is reached with the Arab countries. I see no prospects of such an agreement and I am afraid that the peace propaganda that is now being circulated in Washington is intended primarily for the purpose of deceiving the administration and thus delaying vital action for Israel's defense in the form of military equipment and a security guaranty.

I hope that our Government will reject any proposals that Sir Anthony Eden may have to offer which are aimed at Israel's territorial integrity and security. I am afraid that the British Foreign Office is now trying to bring the United States into line for a pro-Arab and anti-Israel policy.

Sincerely,

SAMUEL N. FRIEDEL.

Sale of Government-Owned Synthetic Rubber Producing Facility at Institute, W. Va.

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. BYRD. Mr. Speaker, under previous leave to extend my remarks, I am including in the RECORD a statement which I made earlier today during hearings conducted by the Senate Committee on Banking and Currency on Senate Resolution 197 which would disapprove the sale of the Institute, W. Va., synthetic rubber-producing facility to Goodrich-Gulf Chemicals, Inc.:

STATEMENT BY ROBERT C. BYRD, M. C., SIXTH DISTRICT OF WEST VIRGINIA, BEFORE THE SENATE COMMITTEE ON BANKING AND CURRENCY, FEBRUARY 1, 1956

Mr. Chairman, I am ROBERT C. BYRD, Representative of the Sixth Congressional District of West Virginia. I appear before your distinguished committee today for the purpose of opposing Senate Resolution 197, which would disapprove the sale of the Government-owned synthetic rubber plant at Institute, W. Va. The Institute facility is located in my district, and I am the author of H. R. 7301 which became Public Law 336, 1st session, 84th Congress, and which amended the Disposal Act to direct the Rubber Producing Facilities Disposal Commission to invite proposals and open negotiations for sale of the Institute plant. Pursuant to the enactment of Public Law 336, and in accordance with its terms, the Commission proceeded to invite bids on the Institute plant, entered into negotiation for a contract of sale with Goodrich-Gulf Chemicals, Inc., and submitted its report to the Attorney General. The Commission also submitted a report to the Congress on January 12. According to the law, unless the contract is disapproved by either House of the Congress prior to the expiration of 30 days continuous session following the day the report was submitted, the contract shall become fully effective, and transfer of possession of the facility shall be made. We are presently in that 30-day period, and the resolution before us resolves that the Senate does not favor sale.

Mr. Chairman, I submit for the consideration of your distinguished committee the following reasons why Senate Resolution 197 should not be passed:

1. The Government will receive a full fair value for a facility which has not operated since September 1953 and which annually costs the Government approximately $240,000 to keep in standby. Out of 6 proposals for purchase of the Institute plant, the $11 million offered by Goodrich-Gulf was the only bid which represented full fair value. The next highest proposal was $5.8 million and, although the Commission was indued with discretion to contract for sale of the facility at a price below the highest amount offered, the second highest price does not represent full fair value nor would sale at this price provide for the development of a competitive synthetic rubber industry. Sale of the plant at the $5.8 million figure would actually have constituted a Government subsidy to a private producer and would have given the purchaser an unwarranted competitive advantage over other producers.

2. It is important that, from the standpoint of national security and from the standpoint of healthy competition in the synthetic rubber industry, this facility, with its annual capacity of 122,000 long tons, be sold to private industry and reactivated. Burgeoning demand for synthetic rubber has been taxing the capacity of all other GR–S plants sold, and in order to meet the increased demand, publicly announced plans for expansion have been made by purchasers of the other plants. With the increasing needs for synthetic rubber, it is reasonable to anticipate increasing expansion to meet the needs. New plants will be built in the future, there will be sharp competition among present producers and new producers will undoubtedly enter the field.

3. The development of a free competitive synthetic rubber industry would be better fostered by permitting this facility to begin producing than to allow it to lie idle. Increased production of synthetic rubber would naturally strengthen rather than stifle competition. This fact is recognized by the Attorney General who, in his opinion, stated that the proposed sale would not lessen competition on the production level, because it would create additional production and it would eliminate no competitior. He further emphasized that it would increase competition on the fabricating level.

4. The position of Goodrich-Gulf, should it acquire Institute, will not be one of control. Actually, if Goodrich-Gulf is to maintain its competitive position, it must either acquire Institute or expand at Port Neches. The Attorney General, in his statement of findings, said that the sale of the Institute plant to Goodrich-Gulf will result in its having 25.2 percent of the total GR–S capacity. He proceeded to add, however, that this percentage figure does not take into account any proposed expansion of existing capacities by other competitors. The 25.2-percent figure is based upon the total capacities of GR–S Government-owned plants at the time of the original sale in April 1955, and includes in the total the capacity of the three production lines at Institute. Since that time, the capacities of a number of the plants have been increased, and further increases in the capacities of these plants have been announced. Moreover, only one of the production lines at the Institute plant can be operated during the next 18 months because butadiene is unavailable for the operation of the other two lines. Following is a statistical table which appeared in the Disposal Commission's report, and which mirrors the production of the GR–S industry at various stages of disposal.

Plant	Original plant capacity (long tons)	Percent of 1st disposal (total capacity, 689,600)	Percent with Baytown (total capacity, 733,600)	Including Institute and current announced expansion to 1,091.9 thousand long tons	
				Thousands of long tons	Percent
Institute	122,000	----------	----------	122	[1] 11.2
Goodrich-Gulf	90,000	13.1	12.3	95	[1] 8.7
American Synthetic	44,000	6.4	6.0	44	4.0
Copolymer	49,000	7.1	6.7	61.3	5.6
Firestone-Akron	30,000	18.8	17.7	189.9	17.4
Firestone-L. C	99,600				
General Tire (new plant)	40,000	----------	----------	40	3.7
Goodyear-Akron	15,200	16.6	15.6	149.4	13.7
Goodyear-Houston	99,600				
Phillips	63,000	9.1	8.6	116.3	10.7
Shell	89,000	12.9	12.1	[2] 89	[2] 8.2
Texas-United States	88,000	12.8	12.0	118.8	10.9
United States Rubber	22,200	3.2	3.0	22.2	2.0
United Rubber & Chemical	44,000	----------	6.0	44	4.0
Total	895,000	----------	----------	1,091.9	----------

[1] Goodrich-Gulf plus Institute equals 217,000 long tons or 19.9 percent.
[2] Shell has announced that capacity will be "materially increased" but assigned no figures to the expansion. In the absence of a specific figure, no expansion could be reflected in the table. The effect of this expansion will be to reduce all other percentages.

5. Goodrich-Gulf has agreed to make available to small-business firms at fair-market prices 50 percent of the production of the first line at Institute, and 73 percent of the production of the next 2 lines. According to the Commission, this commitment in favor of small business is by far the largest firm commitment offered by any of the bidders for this plant.

6. The $11 million bid might well prove to be considerably higher than any which can be obtained at a future time under changed conditions in the rubber industry. Now is the time to sell, while conditions are most conducive. If Congress disapproves this proposed contract, the opportunity for sale of the plant doubtlessly will not return.

Mr. Chairman, in conclusion, an idle plant means unemployment and economic distress. Reactivation of the Institute plant would provide jobs for more than 700 men and women in an area which has been hard hit by mine closures and the economy of which has been severely affected by the loss of coal markets. Thousands of applications for work are on file at the plant now.

Thus, on every count, congressional approval of the sale of the Institute plant seems advantageous to the Government, to the West Virginia economy, and to the consumers of rubber products.

Regardless of the convictions of any Member of Congress at the time the original disposal legislation was passed in the 83d Congress, the facts are that 25 plants have been sold with the approval of an overwhelming majority of both Houses of Congress. One plant has been leased. The 27th plant, Institute, is now up for congressional review. To keep it idle and out of competition with the other 26 plants at this time would seem to be an empty gesture which contributes nothing to the present situation.

The die is cast. The Congress of the United States nearly a year ago decided that the synthetic-rubber industry, born a Government monopoly in World War II, should be denationalized and should revert to private enterprise. Even if the Institute sale is disapproved, it could not possibly change the concept or pattern of synthetic-rubber manufacture today.

Mr. Chairman, I am grateful for this opportunity to express my views before your great committee, and I urge that Senate Resolution 197 not be favorably considered. The way would then be open for final approval and consummation of the sale of the Institute facility.

One Treaty Is Enough

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from the Quincy (Ill.) Herald-Whig, Monday, January 30, 1956:

ONE TREATY IS ENOUGH

President Eisenhower's reply to Premier Bulganin of Russia was couched in language that will be clear to the Kremlin and should have the unanimous approval of all free governments.

In rejecting the Russian proposal for a 20-year friendship treaty between the United States and Russia, Mr. Eisenhower was frank. Perhaps diplomacy has changed. There are none of the complimentary phrases covering uncomplimentary intentions in the communications of the President. But the letter strikes to the point.

Perhaps the best clause was the one pointing out that we already have a treaty with Russia—a treaty shared by all members of the United Nations. That body was formed as the "United Nations Organization for Peace." Its purposes haven't changed. Its major failures have been caused by refusal of the Communist bloc to live up to the high purposes of the organization.

This was cited by the President. The record of the last 10 years is filled with efforts, often successful, of Russia to circumvent the aims of the U. N. How then can an under-the-table bilateral agreement, lacking the moral aid of the other free nations, be expected to accomplish more.

The purposes of the Kremlin are clear. A bilateral pact between this country and Russia would destroy the leadership of the non-Communist world. It would leave standed all other free nations. It would end the hope of freedom in slave countries. It would open the door to Red infiltration all over Asia, Europe, Africa, and even South and Central America.

There could be only two possible outcomes. Either we would eventually be encircled and engulfed by the Reds, or we would maintain strength so great as to force a working agreement with Russia by which our two countries would divide the world and the spoils. Americans want neither choice.

During the second great war, we were concerned by the possibility of Russia making a separate peace with Hitler. More recently, we feared West Germany might be enticed by prospects of Moscow's consent to reunification, a fear which happily proved groundless. Yet the thing Bulganin proposed would constitute a separate peace in the cold war—a conflict as determined as was the hot war.

The Kremlin probably had no expectation of American acceptance, but the Reds probably hoped to further their claims as a peace-loving nation and to confuse the meeting this week between Britains Eden and Eisenhower. If that was Bulganin's real purpose, it too is doomed to fail.

Shipments of Arms to Egypt

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. CANFIELD. Mr. Speaker, concerned about the shipments of arms to Egypt by Czechoslovakia with the blessings of the Soviets and believing we cannot delay action on Israel's request for defensive arms, I present copies of letters I have directed to Secretary of State John Foster Dulles; also, a copy of a resolution adopted last Monday night by the American Zionist Council of Paterson, N. J.

The letters and resolution follow:

NOVEMBER 9, 1955.

Hon. JOHN FOSTER DULLES,
Secretary of State,
Washington, D. C.

DEAR MR. SECRETARY: I am deeply concerned that Czechoslovakia, with the approval of the Soviet Union, is furnishing arms to Egypt, obviously to be used against Israel.

Here is a definite threat to the peace of the Middle East and the whole free world.

While I do not advocate a competitive arms race, I am ever mindful of the oft-repeated aims of world conquest expressed by the Communist leaders of the Kremlin. The time to take strong preventative action against serious trouble is now, and in the event this fails we simply cannot permit the people of Israel to become defenseless.

I cannot help but feel that our Government, through your good offices, is properly appraising this dangerous situation and preparing to take swift action if such is warranted.

With assurances of my high esteem, believe me,

Very sincerely,

GORDON CANFIELD,
Member of Congress.

JANUARY 28, 1956.

Hon. JOHN FOSTER DULLES,
Secretary of State,
Washington, D. C.

DEAR MR. SECRETARY: You will recall I addressed you almost 3 months ago expressing my concern over the reported sale and shipment of arms to Egypt by Czechoslovakia with the apparent approval of the Soviet Government.

The little Republic of Israel, providing a long-sought homeland for so many of the persecuted and wandering Jews of Europe, was brought about in no little measure as a result of the interest and support of the American people and their Government. We have called it "a bastion of democracy in the Middle East," and we have helped nurture its rapid progress.

As one who has supported the movement for the homeland years before its consummation and all of our Government's programs extending needed aid in recent years, I hold we cannot delay action on Israel's request for defensive arms. According to reports, tension mounts daily, and it is unthinkable we would permit this small and friendly nation to be placed in a position it could not adequately protect its people because of any equivocal or unrealistic position on our part.

I am mindful of your own strong dedication to the maintenance of world peace, and I feel certain that you are aware of the threat in this Middle East area and will act accordingly.

With assurances of my high esteem, believe me,

Very sincerely,

GORDON CANFIELD,
Member of Congress.

RESOLUTION OF AMERICAN ZIONIST COUNCIL OF PATERSON, N. J.

We, the assembled members and friends of the American Zionist Council of Paterson, representing 20,000 citizens, are viewing with alarm the Communist arming of Egypt and other Arab states, the mounting Arab threats to the security of Israel, the attacks upon American institutions, and the insults to the American flag in Arab countries, and call upon the Government of the United States to strengthen the American position in the Middle East by supplying arms for defense to Israel, a stanch friend and reliable ally of the United States.

We welcome the effort of Secretary of State John Foster Dulles to establish peace between Israel and her neighbors, but we call upon our Government to reject the proposal of the Prime Minister of Great Britain to appease the Arab dictators and to force the surrender to them of parts of Israel's territory. We trust that the United States will not swerve from the path of justice and will continue determinedly to uphold Israel's independence and the integrity of her borders.

Town Meeting on the Potomac

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1, 1956

Mr. McCLELLAN. Mr. President, it was my pleasure to serve with a number of distinguished Americans on both the first and second Commissions created by the Congress on the reorganization of the executive branch of the Government, which Commissions were known as the Hoover Commissions.

One distinguished American who served on both of these commissions was the former Postmaster General, Hon. James A. Farley. At a dinner meeting of the chamber of commerce on October 19, 1955, in Waterbury, Conn., Mr. Farley was the principal speaker, the subject of his address being Town Meeting on the Potomac.

Mr. President, I regard Mr. Farley's remarks on that occasion as most informative and challenging respecting the duty of the Congress, the executive branch of the Government, and the people, regarding the implementation of the reorganization recommendations submitted by the second Hoover Commission, which recommendations are now awaiting appropriate attention and action by the Congress and the executive branch of the Government.

I consider the thoughts he expressed worthy of the serious consideration of all of us, and I therefore ask unanimous consent that his address be published in full in the Appendix of the RECORD.

Also, Mr. President, the Waterbury Republican in its issue of October 21, 1955, published a splendid editorial on Mr. Farley's speech, entitled "Do Your Part."

I ask unanimous consent that this editorial be published in the Appendix of the RECORD immediately following Mr. Farley's address.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

TOWN MEETING ON THE POTOMAC

(By James A. Farley)

It is indeed a pleasure to be here tonight, and I deeply appreciate the courtesy I have encountered on every hand. Of course, I am not a stranger to Waterbury for I have spoken before your political and civil gatherings on other occasions.

Tonight I am going to talk to you about one of the most exciting and encouraging governmental developments of our time. It has recently been my privilege to assist in the most searching and thoroughgoing study of our Federal Government that has ever been made. Today, nearly 4 months after the completion of the task, I am more enthusiastic about, and more deeply impressed by this experience than I was on the day it began.

You all know something about the Hoover Commission, of course. You will recall that the pattern was set in 1947, during a Democratic administration, when Congress voted unanimously to create the first Commission on Organization of the Executive Branch of the Government—to give it its full, official name. This bipartisan, 12-man body made a 2-year study of the organization and management of the Government and submitted to Congress a series of recommendations for streamlining and strengthening the Federal structure.

Now, mind you, all through the Nation's history there have been committees and commissions without number, all seeking to impart order and efficiency to the Federal Government. They all worked diligently and reported at length. But nothing substantial ever came of their work. Against this dismaying precedent, some 72 percent of the first Hoover Commission's recommendations were accepted in the years between 1949 and 1953. The savings which can be clearly traced to the Commission's work have so far totaled nearly $7 billion and the nonmonetary benefits have been even more impressive. I wish I could dwell on them at length.

This was a phenomenal record of achievement, against great odds, and I for one attribute it primarily to the stature, the statesmanship, and the tireless and unselfish labors of the Commission's chairman, the Honorable Herbert Hoover. No one else could have done what he did.

It seems to me that the success of the first Hoover Commission marked a turning point of great significance in our national life. Through force of circumstance we as a people came suddenly into the era of "big government." I suppose this was concurrent with the breathtaking leap which the world has taken from the horse-and-buggy days of my boyhood to the atomic marvels of today.

At any rate, "big government" took us by surprise. It left us baffled by its complexity, frightened by its size, and constantly conscious that its overwhelming cost might, at any time, cause it to topple over on us, crushing the productive economy which supports its weight.

That danger exists importantly today. It has not been materially diminished in any way. But at least we know that the danger exists. And now we have a means, if we care to use it, of bringing the Leviathan of big government under control. In all honesty, I never fully realized the force of that point until I became a member of the second Hoover Commission.

Thanks to the precedent of the first Commission, it was logical that a Republican administration and a Republican Congress should carry forward this vital work. The first Hoover report was a good beginning but it was only a beginning. As the Honorable Harry S. Truman put it in 1951: "Reorganization is a never-ending task."

So it was that, in August 1953, Congress again unanimously, and I want to underscore that word unanimously, created the second Hooover Commission in the image of the first. And again Herbert Hoover responded to the call, as he has to every worthwhile invitation to public service in all his 81 years.

Frankly I felt deeply honored when President Eisenhower invited me to serve as a member of the new Commission. It meant a 2-year commitment, of course, but it meant also an unparalleled opportunity to look behind the scenes of big government and examine every aspect of its operations. It meant a chance to work closely with Mr. Hoover and the other 10 members of the Commission, to mull over the research reports, and formulate finally the report of the Commission to Congress.

You know, of course, that there were 19 research committees, or task forces, composed of more than 200 of the Nation's most eminent experts in many fields. Working largely as volunteers, they gave freely of their time and energy to amass the 3,500,000 words of facts and figures which provided the Commission with background for its findings.

I simply can't say enough for the quality and caliber of the task forces. No one asked and no one cared whether they were Republicans or Democrats. Regardless of their business or professional associations, they were just good Americans doing a job. Among them were 3 former Cabinet officers, 5 men who had served as under secretaries or assistant secretaries in Cabinet departments, and many former members of Federal regulatory commissions, 3 former governors of States, and 7 college presidents. To a man, they worked with the greatest objectivity, heeding faithfully the instructions of Chairman Hoover:

"First get the facts. Both sides. No preconceptions. When you get all the facts, come up with whatever conclusions they induce."

As the research work proceeded, the Commission met more and more frequently. Toward the end, in fact, we were in session 3 and sometimes 4 days a week, often at late hours. I think I can speak for the rest of the commissioners when I say that we all worked hard but none of us came close to matching the magnitude of our chairman's own labors. To every task force report and to each recommendation the Commission gave the most conscientious thought and study. Let me repeat here a statement I made at the time we completed the report:

"At no time did politics enter into the deliberations of the Commission. Where we differed, they were honest differences of opinion, and Mr. Hoover recognized the right of each member to give free expression of his views."

What we had, in effect, was a true "town meeting on the Potomac" in the best New England tradition. We had our disagreements, of course, and the report in its final form contained a number of dissents and separate statements. The dissents of the Hoover commissioners were not as numerous proportionately, however, as those recorded in an average session of the United States Supreme Court.

On June 30 of this year, the Commission sent the last of its 19 reports to the Congress and, on September 29, wound up its affairs and officially disbanded. I might add that, true to its own precept of economy, the Commission returned some $85,000 to the Treasury from the congressional appropriation which financed its operations.

The Commission's reports contain, in all, some 314 recommendations for modernizing the conduct of the Government's business, eliminating waste and duplication, and removing the Government from unjustifiable competition with private business. If fully applied, these recommendations would yield eventual savings of more than $5 billion a year—enough to balance the Federal budget. Additionally some $6 billion could be returned to the Treasury, thus helping to reduce the national debt, through the recommended mutualization or liquidation of the funds of certain Government lending agencies.

Great though its potential financial rewards may be, I believe that values of equal importance reside in the Commission's report as an educational document. By no other means could we have gotten the facts which reveal to the executive branch, the Congress, and the citizen the mountainous dimensions of the problem we face in trying to keep big government within bounds. Let me cite a few of the more important findings of the Commission and its task forces:

First, the magnitude of government today. You may recall that I entered the Federal service as Postmaster General in 1933. Looking back it seems to me that most of us thought we had a pretty extensive executive branch even then, with 572,000 employees, some 450 different departments and agencies, and a budget of approximately $4 billion.

But depression, war, emergency, cold war, more war, and the creation of a huge peacetime military establishment have brought about a mushroom growth in Government that is almost inconceivable. With 2,300,000 civilian employees and nearly 3 million more in uniform, we have built a vast structure of more than 2,100 departments, agencies, boards, bureaus, and commissions which operate on a budget of $62 billion.

The Hoover Commission found the Government in possession of $115 billion worth of personal property; land equal to one-fourth of the acreage of the 48 States; and floor space equivalent to 1,250 Empire State Buildings. Government-owned storage space alone occupies acreage twice the size of Manhattan Island. The paperwork turned out by the Government each year would reach from here to Moscow; it absorbs the full-time energies of 75,000 persons and costs more than the whole Federal budget during the Taft adaministration.

I don't think I have been exactly asleep these last 20 years, yet I confess I shared some of the sensations of Rip Van Winkle as I studied the findings of the various task forces.

Second, the huge cost of government today. Only 25 years ago, the Federal budget called for taxes equivalent to $113 per average American family per year and the national debt amounted to $1,076 per family. Today Federal taxes come to $1,600 per family and the national debt to $7,000 per family.

In the race between inflation and productivity during the last 15 years, America's magnificent industrial machine has performed superbly. But taxes, debts, and deficits must be met from the profits of industry and the earnings and savings of the people. Facing, as we do, continuous immense expenditures for many years to come, we must be alert to the dangers of waste, confusion, and duplication in every area of Federal operations. We must stop the spreading trend toward Government competition with private industry. We are at the point of peril.

The full force of the danger is felt when we examine more closely the actual rather than the merely "visible," extent of our Government's "promise to pay." The official national debt stands at $274 billion, an appalling sum in itself, and the interest on

it is half again as much as the whole Federal budget 25 short years ago.

Yet this indebtedness is only the surface showing of the total obligations which the Nation has undertaken in "moral" terms. The Hoover Commission found that the Government is committed to a gross figure in the neighborhood of $240 billion additionally through loans, guaranties, and insuring activities conducted by some 104 different lending agencies.

Add to this the unfunded liabilities of the retirement program of $265 billion, and the real total of our national commitments is probably over $700 billion rather than $274 billion.

No nation, however rich its resources, however productive its industries, can long maintain its stability if it continues to pile unnecessary expenditures on top of a staggering debt.

Third, duplication and waste in government today. It is not my intention to belabor you tonight with the scores and hundreds of dramatic examples of confusion, delay, group favoritism, and sheer extravagance which the Hoover Commission uncovered in every area of government. I advise you, in fact I beseech you, to study these facts if you have not already done so. Digests of the Commission's findings can be obtained through such organizations as the Citizens Committee for the Hoover Report.

I do want to make it clear that the Hoover Commission pursued no human villains in its researches and never singled out individuals for personal reproach. The overwhelming majority of our Federal employees are sincere, diligent, and conscientious. They find red tape, delay, organizational confusion, and waste just as frustrating, just as appalling as other good citizens do. Without their active cooperation, the Hoover Commission and its task forces could never have amassed the facts it needed to complete the report.

The real root causes of our governmental dilemma, in any case, are to be found in haphazard, unplanned, mushroom growth; in hasty, ill-advised expansion; in tangled lines of authority and responsibility; in a welter of conflicting laws; in pressure spending; and in outmoded and ill-organized budgeting and accounting procedures.

These things manifest themselves in spectacular illustrations of duplication, waste, and sheer folly: The Government borrowing money at 3 percent and lending it at 2 percent, carloads of canned tomatoes shipped from the east coast to the west coast by one Defense Department branch while another ships carloads of the same commodity from the west coast to the east coast, 25,000 pounds of cement shipped by air to Bermuda, an 8-year supply of flashlight batteries on hand in one defense unit, a 128-year supply of simple gear drives in another, some 1,000 business-type establishments in needless competition with private business, new hospitals rising while thousand of beds stand idle in existing hospitals, waste of precious medical and technical skills already stretched paper-thin by modern requirements.

There is no end to these examples but they simply add up to a frightening picture of large-scale loss which we dare not ignore. The Hoover Commission sought to cure causes, not symptoms, and it provided constructive, practical remedies in the form of recommendations.

Some of these recommendations are arguable and will be argued. But no sensible citizen can face the facts in the Hoover report without acknowledging the gravity of the problems it reveals and the urgent necessity for affirmative action. This report is a majestic gift to the Nation. It gives us our big chance—at a critical juncture in our history—to get a grip on "Big Government" before it overwhelms us utterly.

Make no mistake: The Hoover report tells us plainly that we have been a foolish people in our use of our resources, both human and material; that our citizens have been neglectful of their responsibilities; and that we must, now or never, adopt some of the simple self-disciplines which free, self-governing people must practice if they hope to remain free.

This brings us to the big questions: What is the outlook for implementation of the Commission's 314 recommendations? Where does responsibility lie? What are the obstacles to action? And what can we, as citizens, do to make sure that the national benefits of this document are not lost and forgotten in the "dusty pigeonholes of Washington?"

The answer to the last question is the key to all the rest. There must be teamwork on a bipartisan basis between the administration and Congress—between any administration and any Congress. But first and foremost there must be strong, bipartisan citizen support. If we as citizens want maximum action, demand maximum action, and work for maximum action, there will be maximum action. If we are indifferent or neglectful, the results of the Commission's work will be negligible. It is just as simple as that.

As for the mechanics of implementing the Hoover report, some 45 percent of the Commission's recommendations can be put into effect by administrative action within the executive branch. Most of the balance will require congressional approval. At this point, the initiative rests with the administration. When the 1956 session of Congress begins, the legislative and executive branches of the Government must share responsibility for enactment of the Commission's proposals.

I feel strongly that forthright action by the administration and the various Cabinet departments is the real key to executive branch action on matters of this sort. In order to get economy there must be a "will" to economy and the impetus must come from the top.

We have so far heard certain announcements concerning action and plans for action in the executive branch. Defense Secretary Wilson has ordered the closing of some 50 business-type establishments competing with private businesses and has designated a special assistant to coordinate the utilization of those Commission recommendations which apply to the Defense Department.

Elsewhere in the executive branch, it has been announced that President Eisenhower has also named a special assistant to do something about the Commission's recommendations in all the departments and agencies and that an advisory committee of administration officials has been appointed to assist him. This is encouraging and I hope it is the preface to an early announcement of substantial and tangible actions already achieved. For unless the executive branch has a good record to point to, it will be in a rather poor position to take the lead on legislative action when Congress returns.

This is important, for two reasons: First, the administration encouraged the creation of the Commission in 1953 and thereby assumed its share of responsibility for the Commission's success. Second, at the administration's request, Congress has twice renewed the President's powers to submit reorganization plans under the Reorganization Act of 1949 which will not expire until June 1, 1957. Ten such plans were submitted in 1953 and these, based on the report of the first Hoover Commission, were accepted by the Congress with very little question.

The reports of the first Hoover Commission were issued between February and May of 1949. By October of that year over 20 percent of the Commission's recommendations had been adopted through a combination of executive branch action, legislation, and Presidential plans. This is a much better performance than the record established since the first of the new Commission's reports made its appearance in February of this year. It seems to me that the public may justifiably become impatient unless there is a real speedup in executive branch application of the Hoover report between now and the first of the new year.

It is unfortunate, of course, that the Commission's report was completed so late in the 1955 session of Congress that there was time only for the introduction of a massive program of legislation but no time for congressional hearings and debate. At the start of the new session, undoubtedly, the legislation will again be introduced and I believe and hope that the congressional leaders of both parties will join in bipartisan sponsorship of the bills. It is also unfortunate that we are heading into a presidential year for, as the national party conventions draw closer, it will be increasingly difficult for the Congress—or the Nation as a whole, for that matter—to keep its mind on nonpolitical issues.

Nevertheless there is a strong possibility of substantial congressional action on important portions of the Hoover Commission's report during the early months of the 1956 session. Both political parties were pledged, by planks in their 1952 convention platforms, to support further Federal reorganization along lines laid down by the first Hoover Commission. I hope that both will repeat this avowal in the 1956 conventions with respect to the current report. In that case both will want to have good records on the issue.

There will, of course, be efforts to inject partisan considerations into our national discussion of the Hoover Commission's proposals. Special interest groups will seek to pull the parties one way or another in their effort to defeat certain portions of the report which they find displeasing. But I think we have learned by now that the Hoover report has no place in partisan politics. Both parties can make it succeed and share the credit or let it fail and share the blame.

There will also be vigorous efforts to discredit the entire Hoover report by finding fault with portions of it. It has already been said, on the one hand, that some of the Commission's recommendations are "socialistic" and, on the other that the Commission has tried to "turn the clock back." Now I don't for a moment contend that the Commission is completely infallible in every single recommendation. At the same time I deplore any tendency to restrict full, free, frank consideration of all the Commission's proposals—and prompt agreement on as many as possible. Only about 16 percent of the recommendations are deeply controversial, after all, in the sense that they face outright, organized opposition. We will be losing something precious if we become so preoccupied with the trees of controversy that we neglect the forest of fruitful and vital economies and improvements which are ours to command.

It is not the opposition of hostile groups, in the last analysis, that we have to fear so much as public indifference. Good citizens all over America must assume the vantage point afforded by the use of their own hind legs. They must express themselves in favor of sincere, forthright, bold official and legislative attention to the Hoover report and the issues underlying the report. Then the controversies will fall into perspective and we shall be back on the

path to national stability and solvency from which we have strayed so far.

To me it is not a matter of deciding whether to have, or not to have, action on the Hoover report. Such action is a plain and urgent national necessity. History tells us that more than one big, rich, foolish nation has perished because its citizens lost their sense of responsibility and learned to lean on government instead of taking an active hand in its wise and frugal management.

No nation on earth has ever undertaken the burdens which this Nation has borne, still bears, and will continue to bear for years to come. We simply cannot carry these burdens forward indefinitely and carry a single ounce of waste along with them.

So the real question is: Are we, as citizens, awake? Will we, as citizens, give thought and study and good hard work to the solution of the terrible problems we face? Do we realize that we can lose the struggle to preserve world peace and freedom through our own folly at home as easily as we can through any action of our foes abroad?

I believe we do, and I predict that we will seize the opportunity provided by the Hoover report to take the right turn in the road toward a glorious national future. Victor Hugo once said: "Greater than the power of armies is an idea whose time has come."

The idea is at hand. The time is now.

[From the Waterbury (Conn.) Republican of October 21, 1955]

DO YOUR PART

That big government can become an intolerable weight, and, if not checked, can crush the nation is a commonly accepted truism. Talking about it is popular. Doing something about it can be achieved by steady support for the recommendations of the Hoover Commission.

What James A. Farley had to say at the chamber of commerce banquet of the other night has all been said before. But it certainly bore reiteration as keynote for an organized effort to put the Hoover Commission's reforms into practice. We need a sobering sense that it is our money that is wasted by all the cross-purposes and effort duplications turned up by the commission's task forces in their study of government operation. And in commonsense protection of the interest of each and everyone of us, adding up to the national interest, we need to be alert to the course of legislation designed to put the Hoover recommendations into effect and vocal in their behalf. All this Mr. Farley was effective in advocating.

In what Mr. Farley had to say in tribute to the labors of Herbert Hoover and the inspiration Mr. Hoover has given the men associated with him in the arduous work of his commission, there was an historic irony of which the former Postmaster General and national Democratic chairman seemed altogether unaware. There used to be a disreputable straw man labeled "Herbert Hoover" whom Mr. Farley and the others in charge of the national campaigns of the 1930's loved to lambaste and deride. And in the Roosevelt Administrations which these tactics put in office came the tremendous impetus for the big government trend which now calls so strenuously for ordering and pruning.

But a lot of political and economic history has happened since then. The obvious reason and logic of the Hoover reforms command support from all good citizens irrespective of party party allegiance. And whatever scope any of us thinks government should have in the affairs of citizens, we can find common ground in wanting the role of government, big or small to be at least efficient and economic. Let's follow Mr. Hoover's and Mr. Farley's lead in creating an overwhelming public sentiment for putting the commission's proposals into effect.

Address by Wesley A. D'Ewart, Assistant Secretary of the Interior for Public Land Management, Before the American Society of Range Management, January 25, 1956, Denver, Colo.

EXTENSION OF REMARKS

OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, there follows an address given by our distinguished former colleague in the House of Representatives, the Honorable Wesley A. D'Ewart. Mr. D'Ewart is now serving with distinction as Assistant Secretary of the Interior for Public Land Management. The following most comprehensive and analytical remarks were made before the American Society of Range Management on January 25, 1956, at Denver, Colo.:

It always gives me pleasure to meet with people who work with the land. This is especially true when the meeting involves a discussion of the problems and policies affecting the management of our range lands.

If you will pardon a rather obvious pun, I feel at "home on the range." Many years ago I was a ranger with the United States Forest Service. After leaving the Forest Service I put together a cattle operation in Montana. I still own that ranch, which is now managed by my son, and I am proud of the conservation measures taken by him and by myself to increase the productivity of its range. During the decade that I served as a Member of Congress from Montana a great many of my committee assignments involved studies of the administration of range and other public lands. A number of bills introduced by me, some of which became law, were designed to improve range management. When I was appointed Assistant Secretary of the Interior it became my job to direct the activities of 5 Federal land-use agencies. One of these agencies, the Bureau of Land Management, administers public range lands. It is with considerable pride that I say I can look back on more than 4 decades of first-hand experience with the conservation and development of our range lands and other natural resources.

Today, however, I would like to limit my remarks to a few of the more important things that have happened in the field of land management during the last 3 years. I have been accused, you know, of being a star member of what some people have chosen to call Secretary McKay's "giveaway gang" at the Department of Interior. Let me play that role for the moment and give away a number of facts regarding the recent and current operation of the Department of Interior. Perhaps I should say secrets instead of facts because many of our critics apparently have never heard of the facts, or if they have they have conveniently forgotten. But either way, facts or secrets, they add up to significant accomplishments, as I shall point out, and I give them to you for your unbiased appraisal.

Three years ago President Eisenhower laid down the basic philosophy for our guidance in carrying out the trust that is ours in managing our soil, water, mineral, and vegetative resources.

The President did this when he said in a message to Congress:

"Our basic problem is to carry forward the tradition of conservation, improvement, and wise use, and development of our land and water resources—a policy initiated 50 years ago under the leadership of President Theodore Roosevelt. To do this within the framework of a sound fiscal policy and in the light of defense needs will require the maximum cooperation among the States and local communities, farmers, businessmen, and other private citizens, and the Federal Government." Secretary of the Interior McKay is pledged to carry out this program.

As members of the American Society of Range Management you are well aware of the importance of partnership in the management of our natural resources. Land use is a dynamic thing. There is an increasing number of competitors for the privilege of this use. Growth in population and a rise in per capita income, currently at an alltime high, have contributed greatly to the pressures upon our land resources. This pressure is certain to grow and the use conflicts are sure to multiply. Few land uses are exclusive. But though multiple use of our lands has been accepted in principle we still have a lot to learn about putting it into practice. This is where the partnership concept becomes so important. Putting these lands to their highest use is a responsibility shared by private owners, and by local, State, and Federal Governments.

I think it would be helpful if at this point I would indicate more specifically what I am talking about. The Federal Government owns and administers nearly one-half billion acres of land in the continental United States. They are located in all of the 48 States, but are mainly concentrated in the western third of the country. This area is generally divided into two general categories, that is 408.6 million acres of public domain lands and 47 million acres of acquired lands. About half of all Federal lands have been withdrawn from entry under the public land laws for specific national requirements such as military reservations, national forests, national parks and monuments, reclamation withdrawals, wildlife refuges, Indian reservations, or similar management areas. That leaves 180 million acres or 39 percent of present Federal owned land, not including the Continental Shelf, located almost entirely in the 11 Western States as that portion of the original public domain which has not yet passed from Federal ownership and which has not been set aside for specific public uses. This area is exclusively managed under Secretary McKay by the Bureau of Land Management.

Present extensive landholding by the Federal Government in a Nation where private ownership of land has always been considered an essential feature of political and economic democracy, is largely the result of two major factors. First, the national interest has required that certain lands be set aside or acquired from time to time for national forests and parks, wildlife refuges, and military reservations, and other public purposes. Second, the remaining, vacant unreserved public domain is still in Federal ownership because of its submarginal or marginal character for private ownership and the lack of demand for private or State acquisition.

Three departments of the Government administer over 99 percent of all Federal lands. The Department of the Interior administers the largest area, 57.5 percent of the total, the Department of Agriculture 37 percent, the Department of Defense 5.1 percent, and all other agencies less than one-half of 1 percent.

It is my purpose today to discuss that portion under the Department of the Interior.

Reserved lands may have multiple use, but such multiple use must be subject to the primary purpose for which the area is reserved.

A reexamination of the policies under which public lands are withdrawn for military and other purposes is now underway in Washington. By tightening regulations governing the granting of withdrawals we have created a marked downward trend in the total acreages withdrawn from the public domain. Bureau of Land Management figures for 1955 show that a total of 1,238,000 acres was withdrawn for use of Federal agencies. This is only slightly more than half the total acreage withdrawn in 1952 and is more than 500,000 acres less than the total in 1951.

Under our new regulations withdrawal requests must now be filed in State land offices. Notices of proposed withdrawals are widely publicized, opportunity is given the public to object before any withdrawal is made, and public hearings are facilitated where circumstances warrant. At such hearings the requesting agency is asked to defend its need and the extent of acreage desired. Formerly applications were filed in Washington, D. C., processed on a case basis, and withdrawals were announced in the Federal Register without previous notice.

The Department of the Interior also has been cooperating with the House Committee on Interior and Insular Affairs in studying the withdrawal problem. Toward this end we have suspended final action on all requests for withdrawals for military purposes until the committee concludes its hearings and we have had time to evaluate its findings and those of our own reviews.

When I discuss withdrawals and the other functions of the Bureau of Land Management I am always pleased to note that BLM is one of the few revenue-producing Federal agencies; that is it takes in more money than it spends. Last year BLM's gross revenue was $239,548,731. Its operating budget was $15,451,573. More than $142 million of the revenue total was made up of cash bonuses and first-year rentals from oil and gas leasing of Outer Continental Shelf in the Gulf of Mexico, but even excluding this as more or less of a "windfall," BLM management of public domain resources last year earned approximately $97 million, or about $7 for each operational cost dollar. Grazing fees paid by users of the Federal range accounted for almost $2,500,000 of the total earnings.

The job being done by BLM takes on added importance when it is realized that fewer than 2,000 workers execute its multiplicity of duties. But to continue to do its fine job this Bureau needs additional personnel. New laws which add new responsibilities and workload will necessitate recruitment of more mining engineers, cadastral engineers, foresters, range conservationists, land law clerks and clerk stenographers. More hearing officers are needed, and to pare down the tremendous backlog of appeals the adjudication staff must be enlarged. Naturally we cannot increase the BLM staff without getting increased appropriations. We have asked Congress for the necessary additional funds to carry out our forward-looking program.

I mentioned a moment ago that land use is a dynamic thing. An example of what I mean is the interest in lease and purchase, under conservation restrictions, of public land tracts of 5 acres or less covered by the Small Tract Act. This interest stimulated a 50 percent increase in land use and disposal activities of BLM last year, and that was on top of a 100 percent increase in 1954. The demand for these small tracts has been highest in southern California and southern Nevada, although sizable acreages have been classified for application in the vicinity of Phoenix, Ariz.

The atomic age has had its impact on public land management, too. Enactment of Public Law 585, the multiple mineral development bill, and Public Law 359, which opened 7.2 million acres of public lands in power and water site withdrawals to mining location, greatly stimulated the rush for uranium on public domain and acquired lands. Although uranium claims are filed with county recorders, the expanded search for this precious and strategic material was reflected in a 49 percent increase last year in mining patent applications received by BLM. The total number of applications in 1955 was 334, as against 156 in 1954.

But let's leave uranium to the prospectors for the moment and get on with a report on some of our work at the Department of the Interior that deals more directly with the range.

Administration of the Taylor Grazing Act is a case in point. As you know, this act is the basic legislation governing the management of the vacant, unreserved and unappropriated public land in the United States. Contrary to its title, the Taylor Grazing Act does not include provisions for a single use only. It is a multiple-use conservation law. Recreation, mineral prospecting, wildlife, watershed development and flood control are among the other uses to which the act pertains.

During the past month, the Department of Interior has issued revised regulations under this 22-year-old act governing the use of grazing district lands. The revision was designed primarily to strengthen the regulatory controls under the act and to facilitate management of the range and improve the degree of conservation accomplishments. These revisions have been under intensive study during the past 3 years and their recent adoption seems to be mutually acceptable both to the Government and to the range users.

Another recent change inaugurated by this administration was the adoption about a year ago of a new basis for charging grazing fees on the public lands. This new formula ties the fees directly to livestock prices received by producers. It provides for a sliding scale of fees determined by average livestock prices at western markets during the previous calendar year. During the transition years of 1955 and 1956 the fee has been set at an arbitrary level with the sliding scale becoming effective on January 1, 1957. The majority of range users seem to regard this new system as fair and reasonable.

In tackling the problem of inadequate improvements on the range, the Department last year doubled the amount of grazing fee receipts returned for expenditure on range improvements. This move is accelerating the installation of stock waters, control fences, roads and other improvements essential to the proper management of the range. The long-standing lack of adequate improvements has caused a great many headaches. It has contributed to local over-use caused by poor distribution of livestock and a lack of uniform utilization of the available forage.

Range users have fully recognized the need for range improvements and last year contributed $2 million of the $5 million spent for this purpose. In some cases grazing district advisory boards have recommended charging special fees for speeding up the construction of badly-needed improvements. The Department of Interior has been in agreement with these recommendations.

It is the aim of my Department to reach the ultimate goal of completely replacing uncontrolled and destructive use of the range with orderly use. With this in mind Interior began an intensive drive 2 years ago to complete the adjudication of grazing privileges and stabilize range use on a permanent basis. When the adjudication program has been completed, major adjustments in range use will have been accomplished and the next step will be more emphasis on range supervision and improved management practices.

While continuing efforts have gradually cut down grazing trespass, this problem probably will be with us as long as we have unfenced common-use ranges. One measure that has been helpful in controlling trespass is the establishment of individual and small group range allotments. Here the individual is inclined to keep a watchful eye on his range and to quickly report any unauthorized use. Most of the Federal range in the Southwest has been divided into allotments and many more will be created in other States as the adjudication program moves forward. At present we are also considering new legislation to provide for a uniform trespass law on public land.

Now let us take a look at what we have accomplished in the way of improving the condition of the range, as contrasted with the achievements in the management phases.

Fully realizing the importance of range condition and trend studies in determining the success or failure of managing the Federal land, the Department of Interior embarked on such a study program a year ago last spring. The study included every grazing district under a uniform system. We started our program with training sessions for range technicians under the leadership of a specialist who had spent considerable time developing methods especially adaptable to the Federal range that were readily understandable by both technicians and stockmen. As this program picks up momentum we expect it to yield a reliable measure of range management practices locally. It will also be helpful in increasing the accuracy of the area of condition and trend classes in service-wide annual reports.

Getting down to the ground, so to speak, one of the major potentials for improving federally-owned rangeland is through reseeding. Gradually improved cultural methods have been developed for obtaining a fairly high degree of success in restoring the vegetal cover on depleted soils. It has been reliably estimated that there are nearly 10 million acres of depleted rangeland susceptible to successful reseeding.

The Bureau of Land Management has reseeded about 1,200,000 acres of rangeland with increasingly better results. Some of the earlier efforts, tempered principally by a desire to keep costs to an absolute minimum, met with only partial success. In the past 10 years nearly three-quarters of a million acres have been successfully reseeded. Productivity on the reseeded areas has been increased from almost zero grazing capacity to as high as 2 or 3 acres per animal unit month. Beef production on seeded areas has been increased from about 2 pounds per acre to as high as 40 pounds per acre. Currently the Bureau of Land Management is reseeding depleted range at the rate of 150,000 acres per year. This represents an enormous farming operation, but we find that the lasting results well justify the effort.

A striking example of putting sagebrush land into increased productivity through reseeding is a project in southeastern Idaho. Idahoans once called the area along Highway 40 between Rupert and American Falls "the desert." They don't anymore. More than 40,000 acres in this region now have been reseeded, and I don't need to tell you that the stockmen are pretty happy about this.

Not too far from this Idaho project is another operation that is a prime illustration of the value of reseeding. This one is located in northeast Nevada. Here we have reseeded a total of 63,000 acres in a series of big range pastures. These pastures, now all fenced, provide forage about 2 weeks earlier in the year than the surrounding open range. Utilizing this early growth in the fenced areas keeps the stock off the outside range until it has had a chance to get a good start. This pilot operation is now in its third year.

One of the measures which has aided materially in improving the success of range reseeding has been the joint effort by interested Federal and State agencies in developing new equipment for range seeding and new cultural techniques. While not considered as research, the investigations conducted by this joint effort, and with the assistance of the Forest Service Equipment Development Center, have been of benefit through the direct application of the findings. This is a continuing program and one which strives for constantly better success in improving public land ranges. Other research endeavors are conducted largely on a cooperative basis with the established research agencies, both Federal and State experiment stations. Of greatest benefit in managing the Federal range have been the findings on the use of specific range forage types. Recently completed studies in the intermountain area have pointed the way to better methods of managing winter sheep ranges. Continuing tests on the yields of reseeded range pastures have provided much-needed information in managing artificial stands.

Weed-control research now conducted in cooperation with several western land-grant colleges and the Department of Agriculture have aided materially in attacking serious range weed problems—halogeton, for example. This weed, with its poisonous qualities and its explosive character of spread, is by far the most serious weed on the Federal range. It poses a serious threat to the continued use by livestock of the Federal range, since a large part of the public lands is susceptible to halogeton invasion. Death losses to both sheep and cattle from the weed's poisoning, particularly in Utah and Idaho, continue in spite of the efforts of stockmen to escape them by avoiding areas of heavy infestations.

While halogeton does continue to spread, encouraging results have been obtained, and several hundred thousand acres are being successfully controlled. Experience has proved that range revegetation is the most practical known method of control for large areas. Chemical control is used to eradicate small isolated spot infestations to prevent seed production and reduce the rate of spread in perimeter areas and along avenues of spread. Since inception of the control program more than 402,900 acres have been successfully reseeded to hardy perennial grasses. Improvement practices have been completed on over 87,000 acres, and chemical treatment has been applied to more than 83,000 acres.

Cooperation with the United States Department of Agriculture, State departments of agriculture, universities and colleges, county weed organizations, railroads, State and county highway departments, and individuals in most instances has been very good. Research studies conducted by the Department of Agriculture and State land-grant colleges, with Bureau of Land Management cooperation, have developed information that will be very helpful in future control programs.

In 1956 it is expected that halogeton surveys will be carried out on more than 5 million acres of land. About 80,000 acres will be reseeded and improvement practices can be applied to an additional 6,500 acres of public land. Chemical control and other direct measures will be applied to about 25,000 acres of halogeton.

Next to the importance of livestock use of the Federal range, geographically speaking, is the use made by wildlife, principally big game. The amazing increase in big game numbers on the Federal range in recent years has resulted in a host of difficult problems in range management. Reasonable numbers of big game have priority for forage on the Federal rainge. The remainder is allotted for livestock when the adjudication is made. However, people differ in their opinions as to what constitutes "reasonable numbers." The big-game animals do not distribute themselves uniformly over the total range area, but tend to concentrate in areas of their particular liking. The result is conflicts in use and difficulty of management.

Faced with the increasing complexity of these problems, the range users, through the National Advisory Board Council for Grazing, recommended to the Department 2 years ago that wildlife interests be given an expanded representation on advisory boards. By law each of the 59 grazing district advisory boards has one wildlife representative. Under the new arrangement, each of the State boards has a wildlife member and the national council has three with the Director of the Fish and Wildlife Service acting in an advisory capacity. After 1 year trial we adopted the recommendation last fall as permanent policy and accordingly provided for it in the recently revised Federal Range Code. Only by working together and joining forces in attacking these problems can we expect to resolve serious conflicts in the use of the range.

One of the major public lands conservation accomplishments in many years was the adoption by the Department of the Interior of a 20-year soil and moisture conservation program. Fiscal 1956 is the initial program year in this long-range endeavor.

Under the program, conservation plans have been made for public lands by major river sub-basins to take advantage of basic data accumulaed by the Department in various river basin studies. Short range operating plans are developed by community watersheds in priority order within the river sub-basin. This concept has been in a transitional stage for several years anticipating the eventual enactment by the Congress of small watershed legislation such as Public Law 566 in 1954.

The Department of the Interior is now ready to gear its watershed program with the small watershed program of the Department of Agriculture. In fact, initial work by the two departments is already underway in several watersheds having substantial areas of public land.

In the grazing districts watershed protection operations are now in progress in 128 community watersheds. Plans for fiscal year 157 include 137 community watersheds. The objective is to complete all needed conservation work before moving into the next priority watershed. Several completely treated pilot watersheds are under continuing study as a means of guiding future planning and operations in other watersheds. We have great hopes for the success of this program. If we can lick a problem like the one in the Rio Puerco drainage area in New Mexico—and we're licking it—this hope is justified. The 6,000-acre Rio Puerco watershed has been overgrazed literally for centuries—since the time of Coranado—and to say that its soil is badly depleted is an understatement. The river, emptying into Elephant Butte Reservoir, carries 56 percent of the reservoir's silt yet provides only 8 percent of its water. Work will continue on the Rio Puerco during the span of our 20-year program and by 1975 we'll have stabilized this area and learned a lot in the accomplishment.

Before I close I would like to say a few words about water. No element in this world is more important to us, not only as land users but ordinary citizens as well, than water. And this Nation is fast approaching a water crisis. The administration has formulated a comprehensive water policy to cope with this crisis. It was sent to the Congress last week by President Eisenhower and deserves your careful study.

In this brief report I have touched on a number of phases of our work at the Department of the Interior that I thought members of the American Society of Range Management would be especially interested in. However, in discussing the control, management, and use of our public lands we must always keep in mind the broad view—that our greatest asset of all is a strong, upright, free citizenry, the kind of people envisioned by our forefathers when they wrote the Constitution with its limited powers of Government. Such a citizenry can be developed—not by bureaucratic control, but by use of its capabilities through encouraging wise use of our great natural resources. Our public lands are a great heritage. Let us make sure that future generations find the range and the other God-given natural resources that go to make up this heritage wisely conserved, improved, and developed for their use and enjoyment.

Bestiality of Red China Communists Now Fully Exposed—Red China Must Not Be Admitted to United Nations—II

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, on yesterday I inserted in the RECORD the first article of a series now running in the Washington Daily News on the subject to Red bestiality toward American citizens imprisoned by the Chinese Communists.

The second article is inserted at this point:

FIVE YEARS OF TORTURE—THERE WAS NOBODY AT THE HOSPITAL TO TAKE OVER THINGS

(Second of a series)

(By John Troan)

PITTSBURGH, January 31.—Dr. Homer V. Bradshaw, medical missionary who landed in a Red prison because he's an American, was advised by the United States consul in Hong Kong to leave in May 1949, a good 22 months before the Reds seized him and his wife and tossed them into jail.

"But there was nobody at the hospital to take over things," Dr. Bradshaw recalls. "I just couldn't leave."

The hospital was the one at Linhsien, 250 miles above Canton. The Pittsburgh physician was operating it on behalf of the American Board of Foreign Missions of the Presbyterian Church.

Dr. Bradshaw and his wife, Wilda, a dietitian, had been Presbyterian missionaries since 1928, serving all their time in southeast China.

Things didn't seem so bad for a while. But by 1949 the Red tide was swirling over Free China.

It was then that some of the members of the American colony at Linhsien "went home expeditiously," as Dr. Bradshaw puts it. But the Bradshaws stayed on, along with a nurse, Miss Sarah Perkins, of Tennille, Ga., now 63, and a few others.

Canton, a neighbor of Hong Kong, fell to the Communists a few months later. But the Reds did not move on Linhsien "until the night of the 6 and 7 of December, 1949."

"The military came in first," Dr. Bradshaw relates. "They were not too bad.

"For example, they had to have space for their troops and wanted to take over the church for this. But we talked them out of it.

"Of course, our best talking point was the fact that 100 wounded soldiers were being cared for at the hospital. And we told

them the church belonged to the same group the hospital did."

RED TROOPS LEFT IN MARCH, 1950

The Red troops moved out of the town in March, 1950, a year before the Bradshaws were seized. And the civilian authorities—the agents of the Communist "People's Republic"—moved in.

Dr. Bradshaw says it was incredible how the Red officials went about "converting" the native teachers at the mission. By the opening of the fall school term, he says, the Communists had "infiltrated" both the grade and the high school and had started stirring up the students against all foreigners.

"On September 16, 1950, Mrs. Bradshaw and I made official application to leave," the doctor recalls. The Communist authorities demanded "a local guarantor."

"This had to be a local Chinese who would certify that we were not spies," Dr. Bradshaw explains. "We had no trouble getting one and on September 26 we sent in a second letter with the endorsement of a local guarantor.

"We were then told it would take about a month to get a permit to leave."

But the permit never came.

HE WROTE TO POLICE CHIEF THREE TIMES

Three times—"on November 27, 1950, and December 26, 1950, and January 7, 1951"—Dr. Bradshaw wrote to "the local bandit chief—excuse me, I was more polite then, and called him the chief of police."

"I reminded him of our request to leave, but he gave us the same acknowledgment for all letters—a stony silence."

Meanwhile, real trouble was brewing for the Bradshaws.

One afternoon, the doctor asked Miss Perkins, the nurse, to go over to the church with him "to practice a song we were going to sing together the following Sunday at the church service."

The piano was out of tune so Dr. Bradshaw asked the mission mechanic to go along and see if he could "fix it up." (The mechanic later was reported to have ended his life in a Communist prison.)

When the three arrived, however, they discovered the students attending a Communist rally—in the church auditorium.

Dr. Bradshaw says he and the nurse and the mechanic waited around. But when it looked like the meeting would never end, they gave up and went home.

"Meanwhile," the doctor says, "Communist interlopers among the students stirred them up by telling the students we were trying to bust up the meeting."

THEY PARADED THROUGH THE HOUSE

To Dr. Bradshaw, all of this was more or less like shadowboxing.

"But on January 19, 1951, came the McCoy," he says. "The 'home guard'—about 9 or 10 of them—came over to our residence and paraded through the house for an hour.

"They claimed they were looking for a radio transmitter. But all they found was a small gasoline-driven powerplant which I had got in May 1949, to operate an X-ray machine.

"I could never use it, though, because the British technician who agreed to install it was refused a travel permit by the Communists."

Dr. Bradshaw says the Commies "pasted a piece of paper" on the equipment and told him it had been "sealed off by the Government" so he couldn't use it.

The next night, he says, "another dozen or so Reds walked in again and gave the house a real going over."

This time, they sealed up his radio receiving set "and took a few papers out of our files."

Next came a student demonstration, during which tombstones in the foreign burial plot were wrecked.

Some of his native friends, incidentally, stuck by him as much as they dared even when the going got rough.

In fact, 5 months before Dr. Bradshaw and his wife were seized, "one of our Chinese friends told me I wouldn't be permitted to leave China because I had been in the United States Air Force and the Communists didn't like the Air Force."

Address by Ralph A. Tudor Before the National Conference on Water Resources Policy

---

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. HOSMER. Mr. Speaker, former Under Secretary of the Interior, Ralph A. Tudor, now president of the Tudor Engineering Co. of San Francisco, delivered an informative address before the National Conference on Water Resources Policy in St. Louis on January 25, 1956. Mr. Tudor's text was titled "Partnership in Water Resources Development and Conservation." The text of his address is as follows:

The concept of partnership in the development and conservation of the Nation's water resources has become a lively subject for discussion and debate during the past 2 or 3 years, and will be one of the prominent issues during the coming political campaign.

While the principles involved are to me quite simple, I am aware that a great many people are honestly very confused in the matter. They hear of the "tragedy of exploitation by big business" and then of "dictation by the bureaucrats and socialists." They hear of absentee ownership in Wall Street on the one hand, and in Washington on the other. They hear of "local rights" versus the "rights of all the people." I sometimes wonder if the debates of these issues and the resolution of the attendant political philosophies has not become more vital to many parties than the business of getting ahead with the Nation's construction progress and prosperity.

This confusion can, I believe, be reduced to a few simple and understandable questions that keep repeating themselves whenever the subject is discussed. These questions are:

1. What is meant by "partnership" insofar as developing our water resources is concerned?

2. Why should the Nation undertake a new method of developing its water resources?

3. Will this method work or is it just a fancy dream?

4. If others than Government agencies develop our water resources, how can proper conservation of these resources be assured?

These are very fair and reasonable questions and deserve to be answered. And the answers must be just and fair and reasonable. More particularly the answers must be clear and understandable. Actually the answers are not difficult to find or to state.

The response to the first question in this matter is that whenever local interests, be they private or public, are able to develop a water resource, they should do so and be permitted to do so without interference by the Federal Government other than reasonable regulations. When local interests are not able by themselves to complete a justified water resource development, the Federal Government should join with those interests and fairly assist them. When projects cannot be handled even in part by local interests and these projects are fully justified in the national interest, then and only then should the Federal Government undertake the whole project.

The answer to the question of why should the Nation undertake a new method of developing its water resource is very simply that this method is not at all new. This partnership is nearly as old as the Nation itself and has been employed innumerable times. The newness is not in the principle of partnership, but rather in the opposition to the principle.

The next question is a concern as to whether the partnership principle will work or if, perhaps, it might not be just a fancy dream. The answer has almost been given in the response to the second question. The very fact that partnership has been used so many times and is continuing to be used on new projects starting even now is the best proof that it is workable, practical, and successful. If it had been a failure it would not have been repeated again and again over such a long period of time.

Finally, there is the question of effecting sound conservation of the water resources if parties other than the Federal Government are permitted to develop them. To ask this question is to forget the regulatory functions performed by various established Government agencies or to assume these agencies do not fairly carry out their responsibilities. There is adequate Government regulatory authority and machinery to assure the application of proper conservation principles when any development is undertaken by private interests at least. If there is any weakness in this regulation, it is in the lack of aedquate regulation of the agencies of the Federal Government itself and, in some instances, of local public bodies.

What I have said really completes my talk. I have nothing more to add except some emphasis. And to me there is no more understandable or irrefutable way to supply this emphasis than to cite some historical and current examples of the application of the partnership principle. The list is amazingly long and varied.

Since partnership in hydroelectric power projects is probably the most vigorously debated item, let us look at its historical record. It goes way back to at least 1897 when the Federal Government built a navigation dam on the Kentucky River. This dam was capable of producing power, but machinery was not installed until 1926 when the Kentucky Utilities Co.—a private utility—was granted a license by the Federal Power Commission. The utility pays the Government for the falling water.

By 1953 there were at least 26 time-tested examples of partnership on this basis where the Federal Government built the dam and local interests installed the power facilities. The Government dams were for navigation, reclamation, flood control, or debris control. These plants are in 13 different States from Vermont to Florida on the east coast, and Washington to California on the west. The local partners include 14 public bodies, 10 private utilities, and 2 industrial users. Twelve partnership agreements have been concluded during Republican administration, and 14 during Democratic administration. These projects are tabulated in the accompanying table.

Partnership projects before 1953

State	Project name	Federal purpose	Power licensee or operator	Year of license or installation	Administration
Utah	Spanish Fork [1]	Reclamation	Water users	1908	T. Roosevelt.
Arizona	Roosevelt	do	do	1909	Taft.
Nevada	Lahontan	do	do	1911	Do.
Arizona	South Consolidated.	do	do	1912	Do.
Do	Arizona Falls	do	do	1913	Wilson.
Do	Cross Cut	do	do	1914	Do.
Washington	Rocky Ford	do	do	1916	Do.
Oregon	Link River	do	California-Oregon Power Co.	1917	Do.
Arizona	Chandler	do	Water users	1919	Do.
New York	Green Island	Navigation	Henry Ford & Sons, Inc.	1921	Do.
Minnesota	Twin City	do	Ford Motor Co.	1923	Coolidge.
Florida	Moss Bluff	do	Florida Power Co.	1924	Do.
Kentucky	Ohio Falls	do	Louisville Gas & Electric	1925	Do.
Do	United States Dam 7.	do	Kentucky Utility Co.	1926	Do.
Arizona	Morman Flat	Reclamation	Water users	1926	Do.
Do	Horse Mexa	do	do	1927	Do.
Do	Stewart mountain.	do	do	1930	Hoover.
Colorado	Grand Valley	do	do	1932	Do.
West Virginia	Marmet	Navigation	Kanawha Valley Power Co.	1934	F. Roosevelt.
Do	London	do	do	1934	Do.
Do	Winfield	do	do	1936	Do.
Oregon	C Canal Drop	Reclamation	Water users	1938	Do.
California	All-American Canal.	do	do	1941	Do.
Do	Narrows	Debris control	Pacific Gas & Electric Co.	1941	Do.
Oregon	Cove	Reclamation	Pacific Power & Light Co.	1946	Truman.
Vermont	Waterbury	Flood control	Green Mountain Power Corp.	1951	Do.

[1] 3 plants.

Another project of large size and complication that attests to the practicability of the partnership principle is the construction of a series of dams on the Grand River in Oklahoma. This was started in 1937 and has been carried on under Presidents Roosevelt, Truman, and Eisenhower. The most recent addition to this series of projects was successfully pushed through Congress by Senator KERR.

In 1937 the Federal Government loaned $16,200,000 and granted $10,800,000 to the Grand River Dam Authority to build the Pensacola dam. This was a flood control and power project. The Federal Power Commission issued a license to the Authority to install 90,000 kilowatts. Ownership of the entire project in this instance was in the hands of a local public agency.

Some years later the Federal Government alone built the Fort Gibson Dam also on the Grand River, and Congress provided that it should be operated in cooperation with the locally owned Pensacola Dam.

Finally in 1954 Senator KERR of Oklahoma gained a favorable vote in Congress on the Markham Ferry Dam—the third unit of this combined project. This legislation was supported by President Eisenhower, and when passed was approved by him.

The Markham Ferry Dam and Reservoir will be built, owned, and operated by the Grand River Dam Authority. The Federal Government will contribute to the Authority not to exceed $6,500,000 to pay for the flood control features of the project. Flood control operation will be in accordance with rules established by the Army engineers and to assure coordinated operation of the other two dams. The remaining cost of the project, estimated at about $32 million, will be provided by the Authority from the sale of revenue bonds secured by power revenues from this and other facilities of the Authority.

Thus there is here a partnership involving the coordinated operation of three dams built in the interests of flood control and power generation, with one dam built, owned, and operated by local interests using loaned and granted Federal funds; a second dam built, owned, and operated by the Federal Government; and a third dam to be built, owned, and operated by local interests with funds partially supplied by the Federal Government and the remainder by the local interests.

At Priest Rapids on the Columbia River in Washington, another partnership plan has been authorized. This project was earlier (1950) approved by Congress for Federal development. It is large and was estimated in 1950 to cost $364 million, of which $65 million would be for flood control, $10 million for navigation, and $289 million for power production.

In this instance the legislation, which was passed by the 83d Congress and approved by President Eisenhower in 1954, authorizes a local public utility district to develop the project. Its plan must be approved and a license issued by the Federal Power Commission to assure optimum development of the resource.

The legislation provides that if the Federal Government requires the local utility district to include navigation and flood-control facilities as a part of the initial construction, the cost allocated to these features will be paid for by the Federal Government in the form of a contribution to the district. If such features are not included in the initial construction, the district is required to provide basic features for future installation of these features and the cost of these basic facilities will be at the district's expense. Thus according to present cost estimates, the local district would finance approximately $289 million of the cost, and only if the Federal Government requires initial inclusion of navigation and flood-control facilities will it participate in the cost. This Federal participation is now estimated at a maximum of $75 million.

An unusual partnership provision in the legislation is authority for the local district to have the Army engineers act as the construction agency since the district is relatively small and has no adequate construction organization of its own.

One of the most interesting of the proposals under consideration by Congress is that of the John Day Dam on the lower Columbia River where it forms the boundary between the States of Oergon and Washington. This is a navigation and power dam estimated by the Army engineers to cost $310 million of which approximately $273 million would be allocated to power production.

A group of local utilities have proposed that they advance to the Federal Government the full cost of the power allocation and that in return they receive the power from the project for a period of 50 years, less any power needed to operate the dam and its locks. In effect these utilities would pay in advance for their power, and this advance payment would be used to pay for construction. Ownership and operation of the dam would remain with the Federal Government. The Federal contribution would be about $37 million.

The leigslation under consideration is such that any local utility wishing to do so may participate in the proposal, and if there are more applicants for power than there is power available, allocation is to be made by the Federal Power Commission. It also provides that the local utilities must pay their proportionate share of the costs of operation and maintenance of the power facilities and portions of the joint project costs allocated to power.

This plan has the merit of providing the navigation facilities which are badly needed now, and the power which the Pacific Northwest will surely need in a few years, without the delay that is inherent in waiting for large Federal appropriations.

It is significant to note that for the Priest Rapids and John Day projects on the Columbia River the Federal Government would be expected to invest an estimated $684 million exclusive of transmission-line costs, and to pay all maintenance and operating expenses unless some partnership arrangement is worked out. It is unlikely that this amount of money will be appropriated by Congress for this one geographical area without extended delay. If, on the other hand, the two partnership plans described above are effected, the Federal contribution will not exceed $112 million. If navigation and flood-control facilities are excluded in the Priest Rapids Dam, the Federal contribution will be nearer $37 million. This is a much more likely amount to expect Congress to appropriate in the reasonably near future.

In northern California there is a proposal to develop the upper reaches of the Trinity River for power and irrigation. The Bureau of Reclamation has a plan which is estimated to cost $219,067,000. Of this amount $156,528,000 would be allocated to power and the remainder to irrigation, municipal and industrial water, and fish and wildlife protection.

The Pacific Gas & Electric Co. has made a proposal that it build all the powerplants and transmission facilities under the existing licensing provisions of the Federal Power Act in very much the same manner as was done in those numerous cases described in the first part of this talk. According to the company estimates, this would reduce the Federal investment by some $50 million and during the 50-year license period it would pay the Government $3,500,000 per year for the use of the falling water to generate power. This is estimated by the company to be $36 million more net revenue than the Federal Government would receive from power sales if it does its own generating and sells at existing Federal rates in this area. In addition, the company estimates it will pay $135 million in taxes, of which $70 million would be Federal and $65 million to State and local governing bodies.

This project was authorized just before the Congress adjourned in 1955. The authorization includes a condition that the Department of the Interior fully investigate the proposal of the company and report to Congress on this phase of the plan within 18 months.

The Hoover Dam project has partnership features worthy of note. The dam was built by the Federal Government. The power generating facilities are financed by the Government, but are only installed when local

interests make firm contracts for long-time purchases of the energy and provide the transmission lines at their own expense. These local interests are both public and private.

There are innumerable navigation projects in which local interests join with the Federal Government. The most usual responsibility of the local interests is to provide the areas into which the material dredged from the channel may be deposited. Local interests often provide other contributions. One such partnership arrangement may be found at Portland, Oreg. In this instance the Port of Portland provides a large dredge which is available to the Army engineers for channel dredging as needed and costs are shared. The port also provides deposit areas for the dredged material.

I must admit that I am a bit confused when the opponents of the partnership principle of developing our water resources contend that this is a natural resource that should not be touched by our free-enterprise system. I fail to understand why it is wrong to permit private enterprise, under fair regulation, to manufacture electricity from falling water. If this is wrong then it must similarly be wrong for private enterprise to use coal, or oil, or atomic energy to manufacture electricity, for all of these are also natural resources.

If to generate electricity from natural resources by private enterprise is wrong, then isn't it equally wrong to permit private enterprise to cut trees for lumber, mine minerals, or even use the soil to grow crops? Is there something separate and peculiar about our water resources that justify the application of a basically different set of rules and principles to their development than are applicable to our other natural resources?

I cannot satisfy myself that this is the case. I strongly believe that it is equally proper for local enterprises—public and private—to participate fully in the development of all our natural resources under fair and proper regulations.

The record of partnership in natural resource development is long and it is successful. It deserves more extended application rather than less, for if we are to proceed with needed development of our water resources it will require the combined efforts of all agencies—Federal, local public, and private.

The Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. RADWAN. Mr. Speaker, I have been receiving considerable correspondence in opposition to the natural gas bill which is presently being debated by the other body. I know that the opponents of this measure are having a very difficult time of it because the public interest is not represented by any lobby in the Congress, whereas the gas interests are.

I am, therefore, grateful for the support that is being accorded my opposition to the pending bill such as received in the form of a resolution adopted by the Erie County Board of Supervisors.

In accordance with my previous statements and with the sense of that resolution, I reiterate my most vigorous opposition to the present legislation which seeks to nullify the existing law as enunciated by the United States Supreme Court.

I submit herewith the very helpful resolution adopted by the Erie County Board of Supervisors:

Whereas in 1954 the Supreme Court of the United States decided that the authority of the Federal Power Commission to regulate prices under the Natural Gas Act attached at the wellhead where gas is produced; and

Whereas the Harris-Fulbright bill would overcome the effect of that decision and exempt independent gas producers and gatherers so that the authority of the Commission would not attach until the gas is delivered at the depots of interstate carriers; and

Whereas the present regulation keeps prices down and that to remove it would up prices for ultimate consumers at distant points from the gas fields; and

Whereas an increase in the amount of gas bills would have an undesirable impact on the cost of living of the citizens of Erie County, many of whom are in the lower-income brackets: Now, therefore, be it

Resolved, That this board of supervisors memorialize the Congress of the United States to oppose this bill which would ultimately cause an undue burden upon the taxpayer; and be it further

Resolved, That the clerk of the board of supervisors forward copies of this resolution to the Clerk of the House of Representatives and to the Secretary of the Senate, to the following Representatives, Hon. WILLIAM E. MILLER, Hon. EDMUND P. RADWAN, Hon. JOHN R. PILLION, and to the following Senators, Hon. HERBERT H. LEHMAN and Hon. IRVING M. IVES.

ALFORD J. FARLEY,
Deputy Clerk of the Board of Supervisors of Erie County.

America's Shortage of Engineers

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. PRICE. Mr. Speaker, an article in the New York Times describes the tremendous shortage of engineers now afflicting American business and industry.

It is excellent from the standpoint of young engineering graduates, no doubt, for them to find their services in sharp demand. No one begrudges them the benefits they gain from the competition between companies for their skills and knowledge.

It should be a sobering thing for the country, from the standpoint of national defense, to realize that we have more than twice as many job vacancies existing right now than the graduating college classes of engineers of this year can be expected to fill.

We are short of engineers and scientists for technical work. We are short of scientists for pure research. We are short of engineers and scientists in private industry and business, short of engineers and scientists for Government.

And all the time, the Soviet Union is pouring out more and more graduate scientists and engineers, cutting down on the quantitative lead we have previously held. The difference is now very small; it is growing smaller; the advantage soon will be with the Soviet power bloc.

Mr. Speaker, the President has belatedly recognized that our trained medical personnel is inadequate to meet the country's health needs. In his fourth year of office he has belatedly recommended a program he previously refused to support, a Democratic program for Federal grants to increase facilities for medical research and for training physicians, dentists, and other health personnel.

He has not yet acknowledged in any concrete form the country's desperate shortage of engineers and scientists.

The engineering schools and the great schools of science in our colleges and universities need Federal assistance to expand their facilities. They may need much more than that; this much, at least, they should have, and very quickly.

It would be extremely welcome if the proper departments would get the President to follow his message on health with another message, supplementing his education program by proposing Federal grants to encourage the speedy education of more scientific and engineering manpower.

Without objection, I offer the article from the New York Times:

(By Wayne Phillips)

In America today the engineer-scientist is king.

There are 5,000 organizations bidding for his services, and they have 50,000 job openings—twice as many as the number of new graduates expected this June.

Salaries are climbing—twice as high at the bottom as a decade ago, and rocketing out of sight at the top. Noncash inducements, pyramiding one atop the other, include moving expenses, free insurance, medical care, and education.

The companies concerned don't like to talk about it; they wish it were not so. They try to hold back the tidal wave of wage increases. They try to cushion the raiding of competitors. They minimize what often is desperation.

But the fact is that a wild scramble unlike anything the country has ever seen before is on to attract and hold technical personnel.

It is a scramble described by those caught in the middle of it as "panic," "frenzy," "chaos" and "stampede." And it is a competition waged with the vocabulary of war—"recruiters," "task forces," "invasions," "raids," "crash programs" and "logistics."

THREE THOUSAND DOLLAR BOUNTY OFFERED

All the characteristics of a situation in which the supply is short have cropped up. Companies are accused of inflating their needs and "squirreling away" talent against the future. Others are busy finding substitutes—less highly trained personnel who can take over routine duties.

A new profession has been born—the technical recruiter. Half technician and half personnel man, he tours the country in task forces, invading campuses in search of promising young students and raiding the staffs of competitors.

A new business has been created, the sale of services to aid in the search. Publishers, research organizations, advertising firms, and employment agencies are cashing in.

So, too, are the colleges and the universities, the professors, and the placement officers. Companies have been lavish with grants to institutions training technical personnel, and are liberal with cash and favors for educators.

The thin line between an honest interest in aiding the education of badly needed technical personnel and paying cash for the delivery of that personnel has become smudged. One company offers institutions $3,000 for every graduate it gets.

In the pirating of skilled men from other companies and activities there are no holds barred. Advertising in newspapers, through the mail and on television continually tries to lure the dissatisfied, the frustrated, the ambitious.

Every engineer or scientist a company employs is a potential recruiter, and he in turn is the target for his counterpart in another company. At social gatherings, over the telephone, at professional meetings—wherever engineers and scientists meet—the recruiting goes on.

The reason for the present situation is deep-rooted. The United States has entered upon a new age, the age of technology. The military forages on the frontiers of science, and civilians live in a mechanical wonderland.

To design and build hydrogen bombs and intercontinental ballistic missiles and earth satellites takes armies of engineers. And so, too, does the production of radar kitchens, television sets, computers, and mechanical monsters to vend cigarettes.

In 1900 United States industry employed 1 engineer for every 250 employees; in 1950 it was 1 for 60. Then came the Korean war, and the demand for technical personnel started on an upward swing that has not yet been checked.

A company like General Electric had in 1953, 1 engineer for every 15 employees; today it is closer to 1 in 10. With about 18,000 technical employees now, it needs 2,000 more. To get them it has only two sources, newly trained men and those already working in the field.

INFLUENCING THE EMBRYO

The effort to attract the embryo engineer begins when he is in high school—through literature telling of the advantages of a technical career, and by helping good students to enroll in good colleges.

It continues throughout college in the form of scholarships, fellowships, research grants, summer employment and trips to plants "to get acquainted." One company went so far as to hire selected college seniors and let them continue in school full time until they had graduated.

As graduation nears the efforts become intense. The student is bombarded with direct mail appeals. There are advertisements in the student newspapers—eight of them appeared in a recent issue of Lehigh University's Brown and White. And there are visits—at company expense—from recent graduates urging former schoolmates to follow in their footsteps.

The climax comes in the interview season from February to April, when companies beslege the campuses to sign up the June graduates not already committed. Columbia University has more than 250 such visits scheduled this spring—nearly as many as it has graduates seeking positions.

Some companies send recruiting teams of as many as 8 men to stay for 2 or 3 days—and on a given day as many as 10 companies may be talking to Columbia students.

Open money competition is avoided. The recruiters stress the intellectual challenge of their companys' work, the security it offers, the living advantages of areas where its plants are located, and opportunities for advancement.

But even so the rate for the starting and inexperienced engineer has jumped from $200 a month a decade ago to $300 3 years ago to more than $400 today.

THE RAIDS ARE STAGED

Companies cannot get all the technical personnel they need from the annual crop of graduates. The rest of their requirements are sought from competitors in industry, from college and university staffs, from Government laboratories, and from the Armed Forces.

The methods they use are not unusual—personal contact, field recruiting, advertising, professional placement services, and employment agencies. It is the intensity with which they are used that is new.

The companies have learned that its best recruiters are satisfied persons who work for them—engineers and scientists who will by word of mouth and personal letters attract their compatriots in other activities. No Machiavellian maneuver is left untried in encouraging such recruiting.

Advertising in newspapers and professional journals for technical personnel is heavier now than ever before—and has overflowed from classified sections to display ads in the news, business, sports, and other sections.

Teams of field recruiters are kept continually on the move by some companies, invading areas where there are heavy concentrations of engineers. There they set up shop in a hotel room, run an ad in the newspapers, sit back and hope for the telephone to ring.

One such team made forays within the last few weeks to Los Angeles, Oakland, Dallas, Fort Worth, Philadelphia, Boston, Atlanta, Miami, Pensacola, Seattle, Spokane, and El Paso—looking for engineers to work at a relatively small plant in Utica.

All these efforts are concentrated wherever professional meetings bring together a large number of skilled technicians.

The American Institute of Physics opens tomorrow at the New Yorker Hotel. Ten thousand physicists from all over the country will be there. And the meeting will be, in the words of one personnel worker, "the biggest flesh market in the world."

In the New York Times this morning there are more than 15 pages of advertising for technical personnel, both display and classified. It is spread from the regular help-wanted columns through the sports, financial, and Review of the Week sections. And much of it is aimed directly at those who will be at the meeting tomorrow.

The advertisements do not mention the meeting by name. But they are appeals from companies that could use the skills of those attending it. And many of them, far from New York, offer New York interviews during the period of the meeting.

Some attempt to regularize this stampede for technical talent is made by the placement service of the American Institute of Physics, a year-round operation.

It has prepared a directory of the qualifications of 217 physicists who are openly looking for jobs—fewer than 10 of them currently unemployed. And it has reservations from 300 employers who want to interview these men—or any others.

One company is sending a team of 15 recruiters, another a dozen. To provide space for this army the service has taken over two floors of the hotel for interview rooms—and expects an overflow.

The cost of such intensive recruiting is great, but companies are reluctant to say how great.

One concern that maintains a year-round recruiting activity in New York estimated its cost at $1,000 for every man hired—exclusive of moving costs. Another company sent 3 executives to New York recently, hired a hotel suite for 4 days, advertised extensively, and said it would be happy to return with 1 good engineer.

The result of it all has been a bonanza for technical personnel and for those who have found a way to contribute to the search for them.

AVERAGE PLACEMENT: $7,200

Engineering Societies Personnel Service, Inc., a nationwide service cooperating with professional societies, found its average placement last year was at $7,200 to $7,500 a year.

The year before the average placement was at $6,800 and 2 years before, $5,600. Already this year the service has placed 2 men at $18,000 and a third at $22,000—and has a list of jobs in the $18,000–$20,000 range that are going begging for lack of qualified men.

Commercial employment agencies are expanding their activities in the field. New agencies are cropping up. And companies report that some of them are demanding retainers as the price of even launching a search for a needed man.

Publishers, too, are benefited. The income from technical employment advertising is not small. For a college publication it is a windfall. For a metropolitan newspaper it is a hotly contested plum. Other publishers have moved into the field to make money by publishing directories financed by company advertising to be circulated to the career-shopping student.

Advertising agencies also profit, and some have appeared that specialize in such campaigns. One, Deutsch & Shea, of New York, maintains a research department to find and tap soft spots in the employment market.

EDUCATIONAL INDUCEMENTS

Big profits have been reaped by the educational institutions and those who work for them. Scholarships and fellowships have been set up. Professorial chairs have been endowed. Faculty members receive retainerships to serve as corporation consultants. Research projects are financed.

Summer work is provided for the college professor or the high school science teacher. Summer study is sponsored for them. They and the personnel directors of universities are invited on plush tours of company facilities and to expense-paid conferences where they get better acquainted.

Ostensibly this is all in the interest of better education. But its close link to influencing the minds of those who influence the students' choice of employment is lost on no one—and deplored by some. It is they, also, who deplore the effect of the competition on the young engineer.

Many of the technical students are confused and bewildered by the attention lavished upon them, the placement director of a large university reported. The transition from sought-after undergraduate to working employee is not always easy. And the discovery that high starting salaries sometimes imply slow future increases is painful.

But, he was quick to add, the disillusioned and dissatisfied graduate can always find his way to another and possibly greener pasture—as long as the present shortage continues.

Government Should Provide Disaster and Flood Insurance

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. BOLAND. Mr. Speaker, the House Banking and Currency Committee is now conducting hearings on several disaster and flood insurance bills that have been introduced in this session.

The terrible destruction caused by the 1955 floods in the Northeastern States and in California has resulted in an open market for such insurance, but private companies are unable to offer the neces-

sary protection due to the enormous risk factor.

It is apparent that private citizens and private enterprise cannot for long sustain such great economic losses without it having an extremely detrimental effect on the overall economic condition of some of the Nation's most productive areas.

I am sure that private insurance companies are sympathetic to the need for such insurance, but cannot accept risks that might bring about bankruptcy and destroy the protection against other losses presently being given existing policyholders.

Therefore, I think it is clearly the responsibility of the Federal Government to meet this need by providing disaster insurance. With this view in mind, I have filed a bill that will provide for an insurance and reinsurance program for citizens and business.

Farmers Not Covered by Extensively Advertised "Blanket of Good Times"

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1, 1956

Mr. JOHNSON of Texas. Mr. President, I have received a letter from a Texas county judge which sets forth deeply disturbing facts about the situation faced by farmers in his area.

That situation is not, I am afraid, peculiar to those farmers. It exists on an alarming scale in agricultural regions all over the country.

Farmers simply are not receiving a fair share of the national income. The sad results of that fact are set forth plainly in the letter written me by the Honorable Merrill L. Connally, county judge of Wilson County, in south central Texas. I ask unanimous consent that Judge Connally's moving report be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FLORESVILLE, TEX., *January 21, 1956.*
LYNDON B. JOHNSON,
United States Senate,
Office of the Democratic Leader,
Washington, D. C.

DEAR SENATOR: In answer to your previous request I give you the following information to keep you abreast of conditions in this county and surrounding counties in this area.

It is a fact that we in Wilson County now have on the relief rolls (surplus commodities program) 178 families (772 individuals). This number is rapidly increasing as the drought condition continues its stranglehold on our people. In Karnes County, our neighbor to the south, as of January 13, 1956, they had 1,500 families on their rolls representing over 7,000 of their 17,000 population.

In view of this great wave of national well-being and prosperity we find ourselves outside this blanket of good times that we are continuously reminded of through the press and by our administration.

It might interest you to know that by and large the aforementioned recipients are our farmers and our stock farmers who were once not only their own bread winners but a part of that great segment of farmers known as the bread winners of our Nation.

Most concerned and sincerely,

MERRILL L. CONNALLY,
County Judge.

Latest Land Purchases Push Battle To Save Vital Watersheds

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Ogden (Utah) Standard-Examiner of Saturday evening, January 28, 1956:

LATEST LAND PURCHASES PUSH BATTLE TO SAVE VITAL WATERSHEDS

"To rule the mountain is to rule the river."

An old proverb attributed to the Chinese, that statement is a good "rule of the thumb" for staying alive in all semiarid lands.

It was good advice for the people of Mesopotamia, Egypt, Lebanon, and for the people of China, who are apparently better at giving advice than acting wisely.

In all of those countries, and many more, great civilizations have died because they abused the mountains that supplied the water for their streams.

It is also good advice for the people of Weber, Davis, Box Elder, and Cache Counties in particular, Utah and the United States in general.

Here the wisdom of controlling the source of our water supply has been recognized. Action has been and will be taken. Our forests will not disappear as did the 2,000 square mile forests of Lebanon that flourished in the time of Solomon.

Archaeologists, 20 centuries hence, will not root our cities out from beneath 50 feet of soil, as they have done 11 Mesopotamian empires.

CONSERVATION REMEDY

Soil conservation, particularly in the high watersheds that feed water to our fields and bathtubs, is recognized as the only weapon to combat the evil of erosion.

Modern scientists, Soil Conservation people, Forest Service members, and others early recognized the symptoms of erosion along the Wasatch front.

Before action was taken, though, many of the watersheds that serve the people from Wellsville and Brigham City on the north to Bountiful on the south were already in bad shape.

It didn't take an expert to recognize something was wrong in the early 1920's, when a sudden heavy downpour sent boulders, trees, and tons of silt down on Willard and Farmington crushing homes and covering farms with several feet of rock, sand, and silt.

It was evident that water which once soaked in around the matted roots of heavy vegetation on the mountain slopes now hit bare soil and started rolling hellbent for the Great Salt Lake. The water carried giant portions of topsoil with it.

Those catastrophes which took eight lives were reenacted time after time along the Wasatch front.

NEW PIPELINE

Ogden ran a pipeline up Ogden Canyon to take culinary water from Snow Basin watershed. Officials found that a heavy runoff left the water to filthy with topsoil it couldn't be used for a shower, let alone to cook with.

Oldtimers in Liberty and Eden noticed that, besides the destructive floods that roared out of North Fork Canyon with every heavy rain, their late summer water supply was only half as great then as 50 years earlier.

What happened to the vegetation on the important watersheds? Some of it was destroyed by fire, most of it was gnawed away by sheep and cattle. It was privately owned land subject only to the will of the owner.

It was a typical late-summer storm that triggered action to correct the condition in Weber County. It fell on August 19, 1945.

A young man just out of the Army had bought a farm on the north edge of Ogden. A cloudburst roared out of Cold Water Canyon across the farm and a canal and down to Harrison Boulevard, spewing boulders, debris, and dirt in its path.

Not only conservationists but everybody was concerned. The next spring, A. L. Christensen, Weber County agent, called a meeting of officials and civic-minded groups at the site of the most recent catastrophe—the ruined farm.

NAME COMMITTEE

Julian Heppler, representing the Kiwanis Club at the meeting, was appointed chairman of a committee to investigate the condition and to take action.

The committee called in the Soil Conservation Service for an appraisal of the watersheds. The committee found the mountainsides in serious shape and recommended they be retired from grazing use and held for a higher use—watershed protection.

A second meeting was called on October 2, 1946, at Liberty, where people living below Cutler Basin, were concerned over the danger of flood and of losing a dependable water supply.

By coincidence, there was a heavy rain that night and a flood rumbled down North Fork Creek. One man brought a jar of water to the meeting he had taken from his house tap. It was heavy with mud.

The next month, on November 20, 1946, the Weber County Watershed Protective Association was formed. It was the means to end erosion and destruction of watersheds above Weber County communities.

Mr. Christensen was the first chairman. Other members included Harold Welch, John M. Mills, Charles A. Halverson, John Whitely, R. R. Rowell, and Charles Empey.

SNOW BASIN TROUBLES

When Ogden's trouble with Snow Basin developed, the city bought most of the watershed, stopped grazing on it, and started its rehabilitation. Willard took similar action, purchasing Willard Basin. Both areas were rehabilitated and now hold precipitation nearly as well as if they had never been grazed.

But smaller communities, like Eden, Liberty, and North Ogden, didn't have the means to buy huge tracts of mountain land. And what about areas where only a farm or two were directly dependent on a watershed?

The Weber County Watershed Protective Association was the legal entity that could take appropriate action, buy, barter, and beg watershed land.

The Ogden Kiwanis Club, with conservation-minded Julian Heppler stimulating the

drive, raised the first money and pledged $2,000 to the corporation.

With that sum to begin with the Weber County Watershed Protective Association started a land purchasing project that hit a peak this week with purchase of 2,400 acres of land at the head of North Fork Creek for $1,700.

The corporation made its first purchase in 1947—2,115 acres on Mount Ben Lomond for $8,463. Since then the corporation, which of course gets nothing for its efforts, has either purchased or negotiated the purchase of 9,300 acres of land in Weber County.

To complete the immediate job, only 3,840 acres of land must be purchased.

OTHER COUNTIES BUY

Box Elder, Cache, and Davis Counties have had similar programs underway and all counties along the Wasatch front have taken about 50,000 acres of land out of private ownership.

Once bought from private owners, the land is either donated or sold to the United States Forest Service, which then manages the watersheds and takes whatever action is necessary to put it back in good shape.

The Weber County Watershed Corp. finances its purchase under a complicated, and sometimes precarious plan. Some of the money is donated, like that from the Kiwanis and other civic clubs, irrigation companies and others.

With that money the corporation buys the land and then resells it to the Forest Service, always at a loss.

Also, with the mountains within Cache National Forest, a small share of the receipts from sale of timber, summer home leases, etc., is turned over to it for purchases—when it's okay with Congress.

Congress can approve $10,000 yearly for purchase of land in Cache National Forest. However, since 1952 Congress has been reluctant to give that approval.

In 1953 no money was appropriated and since then special lobbying has been necessary to get it. And that money is needed to complete payments for land purchased by the corporation.

To complete purchase of land in critical condition in the four counties will require about $200,000.

ASK FEDERAL AID

Hoping to wind up the job, the combined watershed corporations plan to ask Congress for that amount this year, besides the regular $10,000 from forest receipts. They would spend $65,000 of it this year.

In the meantime, however, the Watershed Corp. is in a tight squeeze.

To make this week's purchase in North Fork Canyon, it drained the treasury of its last cash, $5,000. But it is obligated to pay an additional $12,000, divided into $5,000 this year and $7,000 in 2 years.

But the corporation doesn't have the money, Stanley Brewer, president, said. "And we won't get Federal help in time—if we get it."

Mr. Brewer said the corporation plans to start a countywide community drive to raise the funds and hopes to enlist the aid of civic clubs.

This week's purchase virtually guarantees restoration of Cutler Basin, the watershed area above Liberty and Eden.

At the same time the Weber County commissioners spent $45,000 for a slightly smaller acreage just below the basin. It will eventually be used for recreational purposes.

The upper area, according to Clark Anderson, forest ranger, is in bad shape and before it is completely restored an expensive terracing program will be necessary.

Besides Mr. Brewer, present members of the corporation include Orson Slack, vice president; Elmer Carver, secretary-treasurer; and John Woodfield, Charles Empey, Melvin Burningham, and John Whitely.

Tribute to Adolf C. Robison

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. OSMERS. Mr. Speaker, on December 13, 1955, a memorable dinner was held at the Teaneck, N. J., Jewish Community Center honoring one of my most distinguished constituents, Adolf C. Robison. A capacity crowd of over 500 leading citizens attended this testimonial dinner to Mr. Robison. A very fine tribute to the infant State of Israel and to the guest of honor was given by Mrs. Eleanor Roosevelt, who was the principal speaker at the dinner. Those present purchased an estimated $190,000 of bonds for Israel.

Adolf C. Robison is no ordinary citizen. Among many other honors, he is an elected member of the governing body of the township of Teaneck—population about 40,000—which is considered by many to be one of America's most outstanding and progressive communities. Mr. Robison, who is a highly successful businessman, was introduced by his longtime friend, the Honorable Edward Silver, district attorney of Brooklyn, N. Y. Mr. Silver described the great work which Mr. Robison has done over a period of many years for Israel, for members of the Jewish faith and for humanity. He also pointed out that Mr. Robison is the great-great-grandson of a German immigrant and that his grandfather, a Civil War captain, was the first member of his faith ever awarded the Congressional Medal of Honor.

Mr. Robison's remarks on the occasion were so typically modest and inspiring that I include them in the Appendix of the RECORD:

It is a strange paradox that at this moment, one of the most important in my entire life, there is a mixture both of deep appreciation of the honor you have bestowed upon me, and a profound feeling of the insignificance of any one person's efforts in a word-shaking and world-changing cause. In fact, as Mrs. Roosevelt knows better than anyone, a man's claim to fame as an individual is at best a tenuous and ephemeral one; it is only the cause to which he cleaves that make his work significant.

For the past generation we have been witnesses to and participants in several cataclysmic struggles—the growth and overthrow of fascism, the rising peril of another totalitarian tyranny, the twilight of colonialism, the awakening of the peoples of Africa and Asia from the feudal age. And, overshadowed perhaps in size, but not in its spiritual and intellectual portents, is the return of Jews from all corners of the earth to their ancient homeland and the rebirth of the State of Israel.

To have been a part of all this has been doubly exciting, because events that usually are spread over several hundred years have been telescoped into barely 50. Think of our own country—the first settlers in the 17th century, painfully carved out of the wilderness and subjected to continuous harassment from the Indians—the growing feeling during the 18th century that a colonial status was an intolerable one, culminating in our War of Independence—the rush of immigration from all parts of the world that characterized the 19th century, thus giving our country the manpower necessary for our unparalleled economic upsurgence of the 20th.

These 4 phases, which took us 4 centuries, have been covered by Israel within the short span of a man's lifetime. There are people living today who were present at the first Zionist conference in Basle in 1897 when Theodor Herzy proclaimed his unique program for the establishment of a Jewish State. It has been a continuing privilege for me to be able to play a small role in a struggle that normally would have required the labor of a dozen generations. Looking at the history of Israel during the past 10 years has been like watching a science motion picture short, where, in 1 minute you can see a plant bud, leaf out, and blossom into bright, shining flowers.

A question which is frequently asked me, and which I am sure you have often asked yourself is "What has all this to do with you? Why have you identified yourself with the problems of a little country 5,000 miles away?" The answer is not a simple one, and surely must vary from person to person. I think it not inappropriate on this occasion to explain my own motivations as well as I can unravel them; perhaps what I say will parallel your own thinking on this very complex subject.

To begin with, my ties are those of consanguinity. What do I mean by consanguinity? The dictionary says, "A state of being related by blood or descended from a common ancestor." It is that tie which has one invite family to a Passover, a Thanksgiving, a Christmas dinner; it is the bond which causes you to lend money to Uncle Dave who is starting up a new business; it is the link which sends mom over to Aunt Mary's for a week because she is ill and the children need someone to take care of them. It is the magic ingredient that causes sisters who have been separated when they were babies and who have lived in different countries for 40 years to feel a warm kinship when they are finally reunited.

The emotions and the duties of consanguinity have been extolled by every civilization, by every religion, by every code of ethics from time immemorial. There is a tacit awareness that this is not in substitution for or in diminution of our love for our neighbor, our caring about the needy of the community, or for that matter the starving children of India, but surely the universal approval of all mankind of the fulfillment of the duties of consanguinity is an impressive one.

Secondly, as a citizen of the free world in general and these United States of America in particular, I have a deep feeling of gratitude toward that handful of people in the Middle East who have been valiantly fighting our fight for the past 20 years. Historians are agreed that the two decisive battles of World War II in the European theater were Stalingrad and El Alamein. If the Nazis had broken through in either place, the war could well have been lost for us. It is a fact little known and less publicized that a substantial percentage of the British Eighth Army fighting there were Jewish volunteers from Palestine. In all, some 40,000 Jewish Palestinian volunteers out of a total Jewish population of 600,000 entered the war to fight on our side as against less than 2,000 Arab Palestinians from an Arab Palestinian population of nearly a million.

At Tobruk there was a Palestinian Jewish regiment that played a vital part in the defense and final victory at that strategic and hotly contested spot. So much so that Gen. Richard O'Connor stated that "The capture of Tobruk would have been impossible without the help of the units of the Palestinian regiment."

The Palestinian Jewish units were of equally vital importance during the battle of El Alamein. No less a military authority

than General Wavell was prompted to say to Gen. Gordon Young about these troops that "the success of the campaign was in no small measure due to the Jewish units that brought the essential war materials through to the front lines." Who can say? Perhaps these thousands of our forgotten allies so tipped the balance in these battles that 160 million Americans are free men today because of them.

We are now faced with a terrifyingly grim coalition of Communist totalitarianism and Arab feudalism, both antitheses of our democratic way of life. In that whole area, there is one country upon which we can depend if the chips are down, for harbor facilities, for repairs and replacements, for sources of strategic materials, for trained manpower; and that country is Israel. We would be poor students of history were we to ignore the past in drawing up our blueprint for the future.

It is gratifying to feel that the dollars we have pledged this evening for the purchase of Israel bonds will act as a safeguard not only for the future of Israel but of our own country as well.

And finally, I cannot escape the mystical feeling that this ingathering of the people of the book is a portent of great events to come. We are daily witnesses of earth-shattering happenings, physically in the splitting of the atom, economically in the ever increasing abundance of articles for our daily use and comfort, socially in the breaking of outmoded, time-worn bonds by the multitudes of the underprivileged peoples of the world.

Why not spiritually? Can anyone deny that the need was never more desperate in that portion of the globe in which Israel is located? It is no more coincidence that from the confines of what is now Israel sprang two world religions that have caused hundreds of millions of people throughout the last three millennia to lift their faces to the stars. Is it too much to dream is it too much to hope, for the entire Middle East or any area of the world where freedom and the rights of man are still only empty phrases, that from this sun-soaked, tradition-soaked, blood-soaked, soil, the answer to some of our present problems will be found?

One hundred and sixty-five years ago, George Washington wrote a letter to the congregation of the synagogue at Newport, R. I. Like so much of what he said and wrote, its contents are applicable today to the people of Israel, to their Arab neighbors and to men of goodwill all over the world. I would like to end with his closing paragraph. "May the children of the stock of Abraham, who dwell in this land, continue to merit and enjoy the goodwill of the other inhabitants while everyone shall sit in safety under his own vine and fig tree, and there shall be none to make him afraid. May the Father of all mercies scatter light and not darkness in our paths, and make us all in our several vocations useful here, and in his own due time and way everlastingly happy."

Libya: Official Washington Notes Its Independence Day

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. BOLAND. Mr. Speaker, the independence of Libya was marked yesterday by the Libyan Embassy. The United Kingdom of Libya was proclaimed a free and independent state on December 24, 1951. It was officially celebrated yesterday with the opening of the new Libyan Embassy quarters. The independence of Libya stemmed from a United Nations resolution of November 21, 1949.

Mr. Speaker, it was my privilege and pleasure to have visited Libya last December. I was deeply impressed by the spirit of its people, the dedicated character of its leaders, and the progress toward a better life for its people which it is making under very difficult circumstances. The United Kingdom of Libya lies along the Mediterranean Sea and is bounded on the east by Egypt and the Sudan; on the south by French, West, and Equatorial Africa; and on the west by Tunisia and south Algeria. The country covers an area of 680,000 square miles—about one-fourth the size of the United States. It is divided into three provinces: Tripolitania, Cyrenaica, and the Fezzan. The total population is about 1,500,000, with 75 percent engaged in farming. Farming is difficult because the land is scarce and the methods are not modern. The agricultural land represents 5 percent of the area of Libya, with 1 percent being arable and 4 percent grazing land. However, the Libyan Government, with the assistance of the United States, is making great strides in teaching new farming methods and attempting to get more land under cultivation. I am pleased to inform the House that the United States officials are doing a magnificent job. Ambassador John L. Tappin, the Deputy Chief of Missions David G. Nes, the Director of the ICA Mission Mr. Marcus Gordon are men of whom the State Department can be proud. Their tremendous interest in Libya and their personality, together with that of their assistants, is bringing about a basic friendship with the Libyan Government and its people that augurs well for our future. Wheelus Air Force Base in Tripoli is one of the finest air bases in that part of the world. Its essentiality to the United States cannot be argued. The commanding officer of the field, Col. William Kane, is to be congratulated on the excellent manner in which he exercises his command.

Mr. Speaker, I take this occasion to congratulate and felicitate King Idris I, Mustafa ben Halin, Prime Minister and Minister of Foreign Affairs, and his Cabinet, and the Ambassador to the United States, Saddigh Muntasser, on the celebration of Libyan Independence Day.

Family-Size Farms

EXTENSION OF REMARKS

OF

HON. PRICE DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1956

Mr. DANIEL. Mr. President, under our present farm program we are making the corporate-size farms larger, while decreasing—if not entirely destroying—the small family-size farms.

The human equation is not being considered sufficiently under a program that has resulted in our State alone to losing half of its farm population. Something must be done about it if we are to preserve the economic and political philosophy which made America great.

On this subject I ask unanimous consent that an editorial by Mr. Walter Malec, appearing in the Hallettsville Tribune, be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A HISTORIC CHOICE

Congress will again have its historic choice.

It can go on subsidizing big farmers as they have been. That's what the present farm policies were doing. This especially the one of the ungraduated allotments, and only in acres, instead of also in lint.

That's what the soil bank will keep on doing. Big farmers get most of the cotton money, including most of the cotton loans. Hence they will be getting most of the soil bank money, too.

The soil bank is what the big farmers want and what they will get.

Favored as they have been, the big farmers were prospering and growing in numbers, while the family farmers were going down as never before. Texas alone lost a half of its farm population already and will keep on losing. This has been one choice so far.

Or Congress may take the other choice. Instead of subsidizing the big farmers, it may treat the family farmers as the foundation of this country, as they are.

No special favors are needed or asked. Just the same commonsense as in the income tax, making the cotton allotments too graduated.

Since it's the bales that count in the end, why not the bales at the beginning—in the allotments? Why not consider the lint, as well as acres in figuring the allotments?

Also why not free our cotton of its artificial handicap? Why not sell at the market price? Not merely a domestic allotment, but sell at the market price both abroad and here—to sell more cotton.

And why not pay the parity separately, limited more to the family farmers, to have more farmers?

This would not cost half as much as the soil bank would. And it would be safe and natural. It would be also a natural answer to our surpluses.

If Congress goes on subsidizing big farmers, that's what this country will have. We'll have mostly big farmers—and big cities. With small farmers, also, our small towns are bound to go down.

Today Congress is subsidizing big farmers.

Tomorrow it will have to subsidize, one way or other, those people driven from farms into big cities. They will still have votes and power to get almost anything they want.

This talk of big farms being more efficient and the age of small farmers being gone should fool no one. Communists evidently feel the same way when wiping out small farmers and making workers out of them.

Congress need only stop the policies destroying small farmers.

As Senator LYNDON B. JOHNSON warns, "So many farmers are moving to the cities and so few young people stay on the farms, it's bad—very bad."

"It's very bad, indeed—far worse than the people, the press, and Congress generally realize so far. That's the core of our farm problem. And the soil bank will not even touch this problem.

Support for President Eisenhower in 1956

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1, 1956

Mr. COTTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Will Support Eisenhower in 1956," which was published in the Laredo Times on January 29, and was reprinted in the Washington Daily News of today, February 1.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of February 1, 1956]

WE WILL SUPPORT EISENHOWER IN 1956

Playing politics with the welfare of our Nation has been overindulged in, and the politicians generally have only considered what is good for themselves as individuals and their party first, and the well-being of our Nation and the blood of our young men second. The Korean War was a fine example of what happened when the party in power played politics and put young men in the front lines and then refused to protect them for fear of reprisal.

Thousands of our boys were sacrificed by seemingly good Democratic politicians, but inside the Democratic Party the fellow-travelers and Communists were telling those in the White House not to protect our boys in Korea beyond a certain point. And that point was death and sacrifice to Democratic corruption, influenced by fellow-travelers from Minnesota, from Illinois, from Michigan and New York.

President Eisenhower corrected this blood sacrifice and restored hope not only to our Nation, but hope and peace to the peoples of all nations, and we are going to support him for the Presidency in 1956.

A good example of Democratic fellow-travelerism is the sickening statements by the so-called Democrats in Congress who criticize Secretary Dulles for avoiding war by looking the Communists squarely in the eye and telling them, "This far and no further." These same Democrats in Congress, belonging to a party of which the writer has been a Member for many years, have gone far afield from the Democratic Party that brought many social gains.

The Democratic Party has ceased to exist for the good of the Nation, except in great men such as Senator LYNDON JOHNSON, Senator PRICE DANIEL, Congressman SAM (Mr. SAM) RAYBURN, Governor Shivers of Texas, Senator GEORGE of Georgia, Senator BYRD of Virginia, Senator WARREN MAGNUSON of Washington; and of course there are a good many others in a minority, on the Democratic side who believe that the good of the country, the Nation and the world, comes ahead of playing foul and dirty politics.

The H-bomb, the atom bomb and guided missible, all fit into reelecting President Eisenhower for 4 more years.

The Democrats are demagogs, in some cases, and sit back and holler because President Eisenhower, through Secretary Dulles, has stopped the Communists repeatedly. This same type of vile politicians would have criticized Daniel in the lion's den because he looked the lions in the eye and said, "This far and no further."

In supporting President Eisenhower in the coming campaign, we must add up that he has calmed the seas of human bloodshed. Labor is receiving the highest per-hour take-home pay and has never had it so good. Little business and big business have never had it so good. And unions have never been freer of strikes and stoppages, and they have the highest number of dues-paying members in history.

The farmer and the rancher have not fared so well, but the Eisenhower-Benson plan seems to be the only real practical solution to the problem.

The Democratic Party was the first party to ask President Eisenhower to be its candidate, and he refused because of the hopeless mess which existed in the party.

Actually, 20 percent of the people in the United States are the ones who swing from party to party and finally elect the Congress and the President of the United States, and these people are too smart to be fouled up by partisan selfishness, partisan crookedness, where it involves the welfare of the Nation. And our three family-owned newspapers, the Montrose Press at Montrose, Colo., and the Daily Alaska Empire at Juneau, Alaska, will support President Eisenhower on the basis that he is going to bring peace to the world. It is our belief that this man has been inspired by God to carry out the mission of peace, rather than the mission of self-destruction; the mission of progress and prosperity for the peoples of all countries.

Now, let us see what the fellow travelers continue to try to do to the Eisenhower administration, by having the darling of the left-wing columnists keep hammering away at the administration. His Attorney General Brownell has brought credit to our country. The appointment of Chief Justice Earl Warren will go down in history as the greatest. The columnist charges the greatest Secretary of Interior we have ever had with a giveaway program, when the real facts are our national resources under Secretary McKay have increased and appreciated.

As far as voting for members of the United States Senate and United States Congress is concerned, we are going to support individually those candidates of either party who offer the greatest good to our Nation as a whole.

We can't escape the fact that the Democratic Party is controlled by the big-city bosses who are hand in glove with gangsters. And Eisenhower changed all that, and as far as we see, the only weakness in the Eisenhower administration is that the countries of Latin America have been shamefully sidetracked and ignored. (Editorial reprinted from the Laredo Times of Sunday, January 29, 1956.)

Financing of TVA

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1, 1956

Mr. MARTIN of Pennsylvania. Mr. President, since becoming a member of the Senate I have been very much interested in public works as they relate to the various parts of our Nation. Recently there has come before the Public Works Committee a plan to issue bonds for the financing of TVA and its proposed expansion. I have had made a study and analysis of the various bills and proposals to finance the future expansion of TVA. I have also had prepared a statement showing the approximate amount paid toward the cost of TVA by the various States of the Union.

This study does not necessarily voice my own views.

The study so impressed me that I sent a copy to each member of the committee. Since that time I have had many requests for a copy of this study.

I have had an estimate made by the Government Printing Office, and I find that it will make 5¾ pages of the RECORD, at a cost of $460.

In view of the importance of this study, Mr. President, I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

Proportionate share of States in TVA appropriations of $1,950,000,000 (includes $45,000,000 of transfers of property from beginning) in fiscal year 1934 through fiscal year 1955

[Millions of dollars]

Alabama	$20.1
Arizona	7.6
Arkansas	11.1
California	170.5
Colorado	18.3
Connecticut	34.5
Delaware	9.0
Florida	27.5
Georgia	26.5
Idaho	5.6
Illinois	148.8
Indiana	45.8
Iowa	27.1
Kansas	20.9
Kentucky	21.2
Louisiana	22.0
Maine	8.0
Maryland	36.3
Massachusetts	65.3
Michigan	100.6
Minnesota	34.3
Mississippi	10.9
Missouri	51.3
Montana	6.4
Nebraska	15.8
Nevada	2.7
New Hampshire	5.5
New Jersey	66.9
New Mexico	5.9
New York	290.0
North Carolina	29.2
North Dakota	5.3
Ohio	118.4
Oklahoma	20.7
Oregon	19.3
Pennsylvania	145.3
Rhode Island	10.5
South Carolina	13.5
South Dakota	5.7
Tennessee	24.4
Texas	82.9
Utah	6.6
Vermont	3.3
Virginia	28.8
Washington	31.4
West Virginia	15.4
Wisconsin	40.2
Wyoming	3.3
District of Columbia and possessions	29.4
Total TVA appropriations, including transfers of property, fiscal year 1934 through fiscal year 1955	1,950.0

NOTE.—Proportionate shares borne by each State based on allocation of the Federal tax burden among the States and possessions as calculated by the Council of the State Chambers of Commerce and averaged for the fiscal years 1949 through 1956.

REVENUE BONDS FOR TVA

Proposals to finance the future expansion of TVA by means of revenue bonds are again before the Congress. The idea has considerable appeal to the public. It sounds good to the average citizen. It sounds like it will aid the taxpayer. It might remove the TVA from the political scene, and avoid the annual debate over appropriations for its expansion. It appears to be a self-liquidating step. These are advantages of considerable value to the public, and the idea might prevail because of them.

This memorandum is a factual analysis of the proposed legislation and its probable end results, with particular reference to its impact on the taxpayers, and is designed to promote further study of this important matter.

LEGISLATION BEFORE THE CONGRESS

Four bills have been introduced in the Congress providing, among other things, for the future financing of additions to TVA power facilities by the sale of revenue bonds. These bills are: S. 2373, June 29, 1955, Mr. KERR; H. R. 6575, May 31, 1955, Mr. DAVIS of Tennessee; H. R. 6576, May 31, 1955, Mr. JONES of Alabama; H. R. 6770, June 13, 1955, Mr. BUCKLEY (by request).

Hearings were held on the Kerr bill last summer by the Senate Subcommittee on Public Works, and it seems probable that it may receive prior consideration by the Congress. Therefore, these comments are primarily directed to the Kerr bill, but notes are appended explaining the differences between it and the other three bills.

The Senate bill introduced by Mr. KERR would repeal the last three paragraphs under the subtitle "Independent Agencies and Corporations" in title II of the Government Corporations Appropriations Act, 1948 (61 Stat. 576–577), and amend the present Tennessee Valley Authority Act by inserting a new section immediately after section 15c thereof (16 U. S. C., sec. 831n–3). In addition, the Kerr bill adds some language to paragraph 7 to section 5136 of the revised Statutes (12 U. S. C., sec. 24) which would make the proposed revenue bonds legal for investment purposes by national banks.

REPEAL PROVISIONS

The clauses of the Government Corporations Act, 1948, which the Kerr bill would repeal require TVA to repay to the United States Treasury a total of $348,239,240 over a term of years and in a specified manner.[1]

The $348,239,240 specifically stated in the Government Corporations Act was computed at the time the act was passed in the following manner:

Appropriations for power property through June 30, 1946	$287,771,841
Transfers of property from War Department	19,026,418
Bonds sold to Treasury and RFC	65,072,500
Total	371,870,759
Deduct repayments already made, including bond retirements	23,631,519
Remainder to be returned	348,239,240

The Government Corporations Act of 1948 further required that in addition to the above amount the total of all appropriations for power made after June 30, 1946, should be returned to the Treasury over a period of 40 years after the facilities go into operation. Thus, the repayment requirement as of June 30, 1955, was:

Appropriations for power property plus transfers as of June 30, 1955	$1,317,446,058
Remaining bonds	14,000,000
Total	1,331,446,058
Deduct repayments into general fund exclusive of bond retirements	$100,059,019
Present repayment obligation	1,231,387,039

A further provision of the Government Corporations Act of 1948 required an act of Congress for TVA to use any of its power revenues for construction of new power-producing projects.

The Kerr bill would repeal all these safeguards. The TVA would be under no specific requirement to repay the $1,231,387,039 obligation. Furthermore, it would be free to use its power revenues for any purpose it desired without the consent of the Congress.

Further repayments of appropriation investment would be made only "as the Board may consider desirable * * * having due regard for * * * the objective that power shall be sold at rates as low as are feasible."

Under such an option, the way would be opened immediately upon the Kerr bill becoming law, for repayments of appropriation investment to stop, and for the money to be diverted to building new facilities.

The total repayments made in fiscal year 1955 were over $55 million.[2] While payments in subsequent years probably would not be as large, nevertheless they constitute an important factor in the situation.

REVENUE BONDS

The new section to be added to the TVA Act would permit the Authority to issue revenue bonds at the sole discretion of its Board. The features of this permission would be—

The bonds would be confined to new money for construction, acquisition, and replacements of property in connection with facilities for the production and transmission of power or in conection with lease-purchase or any contract for such facilities.

This provision is so broad that TVA could carry on almost any operation or build any property it desired. The inclusion of replacements as one of the purposes for which revenue bonds can be issued will be commented on in a subsequent paragraph.

2. The term of the revenue bonds would not exceed 50 years. The Government Corporations Act of 1948 specifies 40 years as the repayment term.

3. No regulatory commission or board would have to pass on the bonds. They could be issued at will by the vote of two men constituting a majority of the TVA board.

Nor is there any provision for congressional or budgetary control. Under the bill the proceeds realized from issuance of such bonds are not included in the computation of receipts, expenditures, surpluses, or deficits in the budget of the United States. Certainly as long as the taxpayers have an investment in TVA Congress should and must retain and exercise control. The bill follows the principle of the dual budget theory, making possible the hiding of huge annual expenditures in a debt budget and thereby eliminating any effective control over the national debt. Also, TVA (and ultimately other Federal agencies as well) would be able to accomplish indirectly what Congress might be reluctant to do directly. Thus, in the final analysis, the bill would preempt congressional control over Federal spending and place it in the hands of Federal agencies.

4. The interest and amortization on such bonds would be a first lien on the net revenues ahead of depreciation and everything else.

Principal of and interest on the proposed revenue bonds would be payable solely from TVA's net power proceeds. The Kerr bill then goes on to define net power proceeds as what is left of revenues after operation and maintenance, including payments in lieu of State taxes but before depreciation and amortization of capital expenditures. It also includes in the amounts which can be used to pay interest and amortization on the revenue bonds, the net proceeds of the sale of other disposition of any power facility or interest therein, including reserves created from such sources.

Thus TVA could use depreciation accruals to service the revenue bonds, and, to the extent required, could issue revenue bonds to make replacements. The REA cooperatives are following this practice. The only difference is that arey are borrowing the needed money from the REA instead of issuing revenue bonds.

The depreciation assigned to power for fiscal year 1955 was as follows:

Total depreciation for year	$30,092,618
Retirements	2,736,907
Balance to reserve	[3] 27,355,711

To give an idea of the importance of this provision of the Kerr bill, the $27,355,711 balance to the reserve would pay interest and amortization on more than $700 million of 50-year 3-percent interest revenue bonds.

5. The bonds and interest on them would not be guaranteed by the United States. This has little meaning, as the Federal Government would be pressured into making good on any default.

In the hearings last summer Senator KERR, author of the bill, had this to say:

"I want to say, as far as I am concerned, I regard any bond issued by this Authority (TVA) of the same dignity and obligation as that of a Government bond. * * * My position would be at any time these bonds get into default, that I would sponsor legislation to hold the holders of these bonds secure."

6. The bonds would be exempt both as to principal and interest from all taxation by any State or local taxing authority except estate, inheritance, and gift taxes. For example, the bonds would be tax-free in respect to State income taxes.

7. TVA operations would not be included in the budget, except in respect to such repayments of the appropriation investment as may be made from time to time.

The net effect of the revenue bond proposals would be to free TVA from the control of the Congress and enable it to expand in any direction and to any extent it desired, on an extremely favorable financial basis.

DISPOSITION OF GROSS REVENUES FROM THE SALE OF POWER

The Kerr bill directs TVA to charge rates for power high enough to meet:

1. Operation, maintenance, and administration of the power system (exclusive of depreciation—see preceding section).

2. Payments to States and counties in lieu of taxes.

3. Debt service on outstanding bonds.

4. A return to the Treasury on the appropriation investment in the Corporation's power facilities. This return would be at the average interest rate payable by the Treasury upon its total marketable public obligations.

As of June 30, 1955, the appropriation investment was $1,217,387,039.[4] The average interest rate on marketable public obligations of the Treasury (which includes Treasury bills) was 2.043 percent as of June 30, 1954, the latest date available. On this basis, the annual return in fiscal year 1955 would have been $24,871,216.

During fiscal year 1955, TVA had the following resources to meet the above return.

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

Net revenues from power operations	$47,900,665
Depreciation accruals	30,092,618
Total available	77,993,283

These figures emphasize the importance to TVA of being able to make depreciation accruals available for paying returns as outlined in the Kerr bill.

5. In addition to the above firm obligations, the Board as it may deem desirable, can charge enough to cover the following:

(a) Investment in power system assets.

(b) Retirement of outstanding bonds in advance of maturity.

(c) Reduction of appropriation investment.

(d) Other purposes connected with the corporation's power business.

Under such optional treatment the reduction of appropriation investment, now a prime obligation of TVA, would be the last on the list under the Kerr bill, as a reduction would be made only if the Board found it desirable so to do.

NET EFFECTS OF THE OTHER PROVISIONS OF THE KERR BILL

It is obvious that the provisions of the Kerr bill relating to the disposition of its gross revenues would greatly change the TVA situation. For example:

1. The taxpayers' money (retained earnings) that the TVA has reinvested would never be recovered nor would any return be paid on it.

2. Appropriations by the Congress would still be needed to meet the costs of the nonpower features of TVA. The bill does not prohibit further appropriations by the Congress to the power operations of TVA but would allow TVA to go ahead on its own if Congress did not desire to let TVA have the money. As no firm requirement would exist to pay back the appropriation so made TVA would be in the position of being able to get all the money it could from the Congress and issue revenue bonds when the Congress turned down the request.

3. The question would be raised as to the extent of further repayment of appropriations to the United States Treasury. Making repayments of this nature would be entirely permissive on the part of TVA.

4. The Federal Government would continue in the power business in the TVA area.

5. TVA would not stand on its own feet and pay its own way in full. On the contrary, it would become less of a self-liquidating undertaking than it is now.

GENERAL OBJECTIONS TO THE KERR BILL

The Kerr bill, with its modification of the Government Corporations Appropriations Act of 1948, the proposed sale of revenue bonds, and the other changes in the TVA situation, would adversely affect the public interest because:

1. Socialistic programs involving proprietary businesses are bad for the people of the United States. The proposed legislation would perpetuate, enlarge and strengthen such a program and remove the present controls which the Congress has over it.

The United States would still own the undertaking, and the taxpayers' money would still be invested in it. Congressional control should be strengthened rather than removed, to protect the national interest and the Federal taxpayers.

2. Government, at both the Federal and State levels very properly and wisely, regulates the electric utility companies in the public interest and as protection to investors sets up rules for financial structures which, among other things, require a reasonable proportion of equity money in the capital structure as a cushion for debt.

TVA asserts, of course, that the appropriations represent equity in the property, which is absurd, as the taxpayers' contributions to the enterprise were forced from them and the individual taxpayer cannot sell, pawn or control his so-called share in the undertaking.

Obviously the revenue bonds to be sold at TVA option, could and might be made large enough to cover all the cost of the facilities to be built.

A departure by the Federal Government in its own proprietary operations from the financial principles that it prescribes for its citizens, appears to be unjust and unwise.

3. The proposed legislation would remove whatever restrictions presently exist on the expansion of TVA's service area. TVA is an unregulated Government monopoly enjoying a long list of valuable special privileges that makes it an invincible competitor of the utilities.

As TVA could issue revenue bonds at will to pay for acquisitions and would not have to get the consent of the Congress, it would be free to move in on its utility neighbors anywhere it wished and destroy them, as it has done in the past in the area it now serves. The resulting loss of tax revenues would be serious to the Federal Government. Even more serious would be the further transfer of industries using large amounts of power from non-TVA areas to locations where they could obtain subsidized TVA power.

4. The legislation would not clean up the TVA mess. The authority would not stand on its own feet and pay its own way in full. None of the inequities which exist in the TVA situation would be removed or alleviated. TVA would continue to pay no Federal taxes and an insufficient amount of State and local taxes, and would remain a political and social issue.

5. If TVA would obey its own act, it would be unnecessary to supply additional facilities at this time.

The effect of the revenue bond financing approach to the TVA's problem is to imply that TVA (or the Federal Government) has a public utility responsibility to perform which of course it has not.

As to the future power supply in the TVA area are the following facts.

TVA has a preference clause, which reads as follows:

"In the sale of such current by the board it shall give preference to States, counties, municipalities and cooperative organizations of citizens or farmers, not organized or doing business for profit, but primarily for the purpose of supplying electricity to its own citizens or members."

In fiscal year 1955 the sales of energy by TVA were as follows:[4]

Class of customers	Proportion		Revenue mills per kilowatt-hour
	Kilowatt-hours	Revenue	
	Percent	*Percent*	
Preference customers:			
4 large cities	15.03	13.40	3.97
Smaller towns and cooperatives	17.21	17.67	4.65
Total preference customers	32.24	31.07	
Nonpreference customers:			
Industrials and others	15.98	13.98	4.09
Federal agencies and TVA itself	51.78	54.95	4.73
Total nonpreference customers	67.76	68.93	
Grand total	100.00	100.00	4.46

Footnotes at end of speech.

If the nonpreference users were to furnish their own needs, TVA's present power supply plus the capacity under construction would be sufficient to take care of the preference customers' needs for many years in the future.

There is no sound reason why this could not be done in respect to the industries served directly by TVA. They are all nonpreference customers. They have been the main beneficiaries of TVA subsidized power. All of them could construct their own powerplants and serve themselves.

The largest group of nonpreference customers consists of the Federal agencies, accounting for over one-half of TVA's energy sales. There is no reason why they could not construct their own facilities. It is not commonly realized that over one-half of TVA's revenue from the sale of power comes from the Federal Government itself—in other words, from the taxpayers. Obviously the service to the Federal Government is responsible for a substantial portion of the net power income, which is used in part to build new facilities, and from which repayments to the Treasury are made from time to time.

Inspection of TVA data discloses that, as a group, the Government agencies are paying the highest average rate for energy of any of the other groups served by TVA. As the Government service is mainly at high load factor and includes a large amount of nonfirm service, it should be at a very low average rate.

It seems probable that TVA is making a greater margin over bare-bones cost out of serving the Federal agencies, than it is out of its other groups of customers. In this way it is getting a large amount of taxpayers' money and using it to further subsidize service to other customers. A mill a kilowatt hour of undue margin on the service to Federal agencies in fiscal year 1955 would total $21,770,451.

If the Government agencies would undertake to build their own facilities as the TVA area needs additional power, they would release the required capacity for preference customer use, and at the same time clear up any discrimination against the taxpayers that may exist by reason of the rates charged the Federal agencies by TVA.

The end result would be to save money for the taxpayers.

6. These are other methods whereby the future power needs of the area could be met without further major expenditures by the Federal Government. One of there is the construction of steam-electric stations by the large municipalities now served exclusively by TVA.

This could be easily accomplished by requiring TVA to free the local municipalities from the stringent provisions of its "sole supplier" clause and relax its restrictive control of municipal resources derived from the resale of its power. This would enable the municipalities to use these financial resources to meet their future needs for power by providing their own facilities or purchasing supplemental power from outside sources. Once freed of TVA domination these municipalities would be free to choose public power by providing their own generating plants or, if they prefer, by purchasing what they want from neighboring electric companies.

The four largest cities in the TVA service area use an amount of energy equal to about 87½ percent of the remainder of the preference customers. Obviously if the four largest cities would supply their own power needs, which they could do just as cheaply as TVA, an abundant supply would be available for the smaller cities and the rural cooperatives.

The latest available information indicates peak demands of the four cities to be:

Twelve months ending October 31, 1955:

	Peak demand kilowatts
Nashville	428,765
Chattanooga	406,086
Memphis	392,532
Knoxville	262,032
Total	1,489,415

The city of Memphis is now undertaking to supply its own needs. The other three cities could do likewise.

It also is possible to get a substantial amount of additional power from outside the TVA area.

7. A rash of similar bills would certainly result if the Kerr bill becomes law. An REA bill (H. R. 8243) has already appeared. Every other Federal proprietary undertaking could be expected to follow.

For the reasons set forth in this section, it seems reasonable to conclude that the Kerr bill is not in the public interest.

SPECIFIC OBJECTIONS TO THE KERR BILL

If the Kerr bill is to be amended to meet the major objections to its end results, the following steps would be required:

1. The Congress should strengthen its control over TVA, and its approval should be required of every step taken by the Authority, especially in respect to the amount, terms and guaranties of the revenue bonds to be issued.

2. An effective and specific territorial limit should be set to keep TVA within reasonable limits.

3. In order to protect the taxpayers, amortization and interest on present investment should have first priority on the net income, and the interest and amortization on the revenue bonds should be subordinated to it.

4. Interest rates should be at least equal to the highest interest rate being paid by the Federal Government plus enough to cover overheads. The "average" rate proposed by the Kerr bill includes Treasury notes and other low-interest items that have no relation to long-term obligations.

5. All TVA costs should be included.

6. The taxpayers should come out "whole" at the end of the repayment period, making the project truly self-liquidating.

FACTS AND FIGURES

The amount of money that has passed through the hands of TVA since its beginning totals more than $3,131 million.[8] About $519 million of this went for operating its power facilities. Other large sums were spent for operating the other purposes of TVA, in retiring property and in writeoffs.

As of June 30, 1955, the general funds of TVA, exclusive of operating expenses, and net after various prior transactions totaled $2,488,420,626. (See tabulation marked "Exhibit A.") Not all of this total would be subject to repayment and interest (return).

The TVA has prepared figures on the present investment (June 30, 1955) in the power business which total $1,533,838,694. From the data given in the annual report of TVA for 1955 the appended tabulation (exhibit B) has been prepared which shows the total investment of TVA, divided between power and other. This appears to be a correct statement if the TVA allocations and other accounting practices are accepted.

Some question could be raised to treating repayments taken from net power revenues as a return of capital. Nevertheless the end result on the total investment is the same as it would be if they had been considered as a payment of "return," and it does not seem necessary to explore the question further.

The taxpayers have furnished additional large sums of money which do not appear on TVA's books, and which have been overlooked in the proposed legislation.

The first of these is taxes. The task force of the Hoover Commission computed the total taxes that TVA should have paid to June 30, 1953, to be $199,501,868. Projecting this ahead to June 30, 1955, gives a grand total of $285,666,588. This probably would divide about as follows:

Federal	$171,889,669
State and local	[7] 113,776,919
Total	[8] 285,666,588

TVA pays no Federal taxes of any kind. Therefore, the $171,889,669 represents Federal taxes which TVA avoided and which the other taxpayers had to contribute to the support of the Federal Government in addition to their proper share.

TVA has made token payments in lieu of State taxes which have totaled $37,208,229 to June 30, 1955. Deducting these from the total State and local taxes leaves $76,568,690 as the contribution of the people of the TVA service area to the project.

The second is interest. The taxpayers continue to pay interest on Government bonds that otherwise would not exist if the appropriations to TVA had not been made. A conservative estimate of the amount of this interest at 3 percent per year from the start of the project to June 30, 1955, is $279,733,275,[9] exclusive of interest on interest, and exclusive of the interest actually paid on the few TVA bonds that have been held by the Federal Government.

The third group of items are the miscellaneous operating items which other business pays, but which TVA escapes. For example, the social-security tax on its civil service employees is paid by the Federal Government, and does not appear on the books of TVA.

TVA gets freight rate rebates and is free of a number of excise taxes that other people pay. It franks some or all of its mail.

With the limited information available for this study, an estimate of the amount of money involved in this third group is not possible.

A fourth group concerns $95,781,420 of cash items (see exhibit B) that in the tabulation is included in "other." This money will no doubt be used for power operations, and if a break is to be considered as made as of June 30, 1955, it must be included in the total if it is to be ultimately recovered.

The fifth group includes writeoffs, allocations, and other items, such as:

1. The writeoff of over $92,500,000 [10] which took place at the start of TVA operations. This was a direct loss to the Federal taxpayers. One of the results of the writeoff was that the 64,000 kilowatt Wilson steam-electric station was taken on the books at zero dollars. It has been in operation ever since.

While a portion of the writeoff may have been justified, it seems evident that a substantial part, especially that applying to Wilson Dam and Wilson steam-electric station, were greater than the facts justified.

2. Past expenditures made by cooperating governmental agencies and not reimbursed by the Authority are not included in the amounts to be recovered under the proposed legislation. For example, the CCC furnished labor on the reservoirs, rights-of-way, and pole setting for transmission lines, office buildings, and on the streets and sewer system at Norris Town. The WPA also did work on the project, and so did the Army engineers.

3. Questionable allocations of property to navigation and flood control which have unduly favored the power end of the business. For example, a total of $158,142,107 [11] has been allocated to navigation. This is over double the $67 million cost of an equivalent low dam navigation channel.

The $183,995,636 [12] allocated to flood control is less easy of anlysis. A greater amount of land has been permanently flooded in the Tennessee Valley by the TVA works than was ever flooded under natural conditions. The total benefit in the valley probably is confined to the city of Chattanooga. Some benefits may be realized in the Ohio Valley but they are problematical.

None of the general property has been allocated to power, although a large part of it is used in the power operations.

A reasonable estimate of the amount including interest on the items in this fifth group that should have been charged to power required to make the taxpayers whole in respect to the items of this group would be $118,756,942.

The total required to make the taxpayers whole is summarized by the following tabulation:

Investment in power as of June 30, 1955, per TVA books	$1,533,838,694
Additional items necessary to make taxpayers-"whole":	
Additional cash items	95,781,420
Back interest	279,733,275
Back Federal taxes	171,889,669
Needed to clear up allocations and miscellaneous items	118,756,942
Total to make taxpayers whole	2,200,000,000

CONCLUSIONS

As a guiding and fundamental principle and to the extent that TVA is engaged in the public utility business, TVA should be subjected to regulation like private enterprise. It should pay its full share of Federal taxes like private enterprise and its full share of local taxes like private enterprise. Further, it should pay the same rates of interest as those paid by private enterprise and it should show its true costs of doing buisness by the same accounting methods and legal principles that private enterprise, under the law, is required to do. Yet at this moment, and under the several TVA revenue bond proposals under consideration, TVA has accepted only the privileges of private enterprise and few, if any, of its limitations.

The Kerr bill has as a base for interest ("return"), an investment of only $1,217,387,039. It does not include outstanding bonds. It proposes to charge only 2.043 percent interest on this, which would be $24,871,216 per year. A major omission is that no specific repayment program is set up for adequate interest payment or amortization.

If the Congress wishes to waive or make no attempt to clear up back matters, then the least amount to be considered as a base should be the investment admitted by TVA of $1,533,838,694.

Under existing law the investment in power must be repaid over not more than a 40-year period. In respect to the average investment remaining in the property 5 of the years have passed, leaving 35 years yet to go. The following table shows what the interest and amortization would be at 3 percent interest rate on several setups:

	Amount	Annual amount as of June 30, 1955	
		35-year amortization	40-year amortization
	Dollars	*Dollars*	*Dollars*
TVA's admitted investment in power	1,533,838,694	71,383,747	66,357,513
Plus cash on hand and back interest	1,900,353,389	88,859,952	82,603,193
Total to make taxpayers "whole"	2,200,000,000	102,386,460	95,177,280

Footnotes at end of speech.

Footnotes at end of speech.

Cashwise, TVA would have available to pay the above—

Depreciation accrual	$30,092,618
Net income	47,513,278
Total	77,605,896

The Kerr bill certainly contemplates the use of these items for interest and amortization purposes. Any change in TVA procedure should include payment in lieu of Federal taxes in future years.

These figures emphasize the importance of TVA paying the equivalent of Federal taxes imposed upon electric companies in the general area.

There is precedent in other countries for the payment of Federal taxes or their equivalent by Government-owned power projects (see Hoover Commission Task Force Report on Water Resources and Power, vol. 1, p. 204).

The British Electric Authority is liable for and pays both local and national taxes in the form of income, profits, and excess profits levies.

The State Power Board of Sweden pays local taxes the same as any private undertaking. Enough is allowed in the rates to cover national taxes on the same basis as if the power were supplied by a private undertaking subject to income tax.

Electric utilities owned by the State in Norway pay local taxes and the income and fortune tax imposed by the State. The rate of taxation is about the same for the State-owned and the private companies.

Electricite de France, a Government body, pays taxes equal to about 10 percent of income.

There is, in fact, precedent in the TVA itself for inclusion of taxes, and the other factors not covered by its present books, in the cost of the project.

Mr. Lilienthal, then a member of the TVA board, said in July 1938, during his testimony before the Joint Committee on the Investigation of the Tennessee Valley Authority, 75th Congress, 3d session:

"In fixing TVA wholesale rates, the liquidation of the actual total investment devoted to power purposes, fixed charges on that investment, including taxes, depreciation, interest, and all other appropriate items, and all operating expenses be accepted as a minimum below which those rates should not be permitted to go."

It seems reasonable to conclude that if any legislation is passed, it should be comprehensive, and settle, once for all, the past and future situation of TVA. The settlement should be based on the representations made to the public by the TVA at the time it was being "sold" to the American people.

EFFECTIVE DATE

It is, of course, impossible to estimate when the effective date might be. Obviously it will not be June 30, 1955. Any subsequent date will change the figures of this memorandum somewhat but not the principle.

OTHER BILLS

Three other bills having as their foundation the future financing of TVA by revenue bonds are: H. R. 6575, May 31, 1955, Mr. DAVIS; H. R. 6576, May 31, 1955, Mr. JONES; H. R. 6770, June 13, 1955, Mr. BUCKLEY.

H. R. 6575 and H. R. 6576

These are duplicate bills, and are almost the same as the Kerr bill, with one exception, which is the provision that the United States Treasury can buy the revenue bonds, either directly or in the market. This puts a ceiling on the interest rate, as the Treasury would buy the bonds if the rate were too low for them to sell on the open market. This provision for all practical purposes makes the bonds a Government obligation.

If the Treasury sells bonds to buy the TVA bonds, then these Treasury bonds are exempt from the debt limitation.

H. R. 6770

This is the Buckley bill, and is different in some particulars from the Kerr bill, as follows:

1. It does not cancel the last paragraph under the subtitle "Independent Agencies and Corporations" in title II of the Government Corporations Appropriations Act of 1948.

By leaving this paragraph in effect, the Buckley bill would require an act of Congress before power revenues of TVA could be used for the construction of new power-producing projects.

2. Revenue bonds would be limited to $750 million outstanding.

3. Revenue bonds could only be sold to the extent necessary to meet TVA's budget program as approved by the Congress.

4. No provision is made for the purchase of revenue bonds by the United States Treasury.

5. Interest on appropriation investment would be based on interest of Treasury marketable public obligations neither due nor callable in less than 15 years from date of issue. Just what this interest rate might be is not presently available, but inspection of the latest report of the Secretary of the Treasury indicates that it would be around 35 percent higher than the rate called for by the Kerr bill.

6. TVA would be retained under the Government Corporations Control Act.

7. TVA would be required to contribute to Government civil-service costs including administration.

8. The TVA would be required to pay into the Treasury each year from net power proceeds, an amount equal to the estimated annual depreciation on the appropriation investment until the appropriation investment shall be reduced to $250 million. Data are lacking to calculate what this might mean dollarwise but on a proration basis it would be about $24 milion a year under present conditions.

9. TVA would be required to charge rates sufficient to accomplish the above.

Obviously the Buckley bill is much more favorable to the taxpayers than either of the other three bills. But, except for a somewhat better financial setup and the retention by the Congress of some measure of control over the authority, the Buckley bill has all of the other infirmities of the Kerr bill.

COMPTROLLER GENERAL'S OPINION

On June 30, 1955, Senator CHAVEZ, chairman of the Senate Committee on Public Works, requested the views of the Comptroller General of the United States, Mr. Joseph Campbell, on this proposed TVA legislation. Mr. Campbell's letter in response appears in exhibit C and, in brief, points out—that if TVA is allowed to obtain funds through issuance of revenue bonds, provision should be made as follows:

1. TVA should be required to get congressional approval of each new power-producing project.

2. A ceiling should be placed on the total amount of bonds which can be outstanding at any time.

3. TVA should be subjected to geographical limitations.

4. The Secretary of the Treasury should have authority to approve in advance all terms and conditions under which such bonds were to be issued.

5. All provisions of the Government Corporation Control Act relating to deposit and investment of TVA power funds should be retained.

6. Provision should be made for a definite plan for repayment of the investment made in TVA.

7. Appropriate restrictions should be placed on TVA's authority to convey property.

8. Provision should be made for TVA to be paid for any engineering or other services furnished others by it.

EXHIBIT A.—*General Funds of TVA as of June 30, 1955*

Item	Amount	Reference to page in TVA annual report for fiscal year 1955
Appropriations and transfers of property net.	$1,950,418,029	A 7.
Net income from power operations.	301,427,523	A 7.
Depreciation reserve	222,271,657	A 6.
Debt	14,000,000	A 7.
Contributions in aid of construction.	303,417	A 7.
Total	2,488,420,626	
Used for—		
Fixed assets	2,034,418,811	A 6.
Net expense of non-income-producing programs.	159,290,652	A 7.
Payments into general fund U. S. Treasury.	127,563,390	A 7.
Cash	159,716,263	A 6.
Net current assets	7,431,510	Current receivables plus inventories minus current liabilities and deferred credit —see pages A 6 and A 7.
Total	2,488,420,626	

EXHIBIT B.—*Investment in TVA program, June 30, 1955*

Derivation	Total	Power	Other
Appropriations of Congress and transfers of property—net	$1,950,418,029	$1,317,446,058	$632,971,971
Less:			
Payments into general fund of U. S. Treasury	127,563,390	100,059,019	27,504,371
Net expense of non-income-producing property	159,290,652		159,290,652
Total	286,854,042	100,059,019	186,795,023
Balance	1,663,563,987	1,217,387,039	446,176,948
Long-term debt:			
Total bonds issued	65,072,500	65,072,500	
Less bonds redeemed	51,072,500	51,072,500

Balance	138, 700, 391

EXHIBIT C

JULY 26, 1955.

Hon. DENNIS CHAVEZ,
Chairman, Committee on Public Works,
United States Senate.

DEAR MR. CHAIRMAN: Reference is made to your letter of June 30, 1955, acknowledged by telephone July 1, enclosing a copy of S. 2373, 84th Congress, and requesting our views and recommendations thereon.

Since the purpose of the proposed bill is to provide for an expansion of the TVA system, we suggest the importance of obtaining a careful analysis of the power requirements of the several Government agencies presently dependent upon the system. Your attention is invited to various published statements to the effect that national-defense agencies of the Government will absorb half the total output of the system by 1957. Should these demands sharply decrease, the effect on the TVA power operation could be most serious, if not disastrous, to the power-rate structure as well as to the general economy of the area. We have particularly in mind the operations of the Atomic Energy Commission.

This great dependence of the system on a continued enormous Government-power demand leads to the suggestion that, in any expansion program, the affairs of the TVA should require unusually close control by the Congress and the executive branch of the Government. Therefore, the proposed bill, which, in essence, would grant unlimited authority to the TVA, seems highly inappropriate.

It is, in our view, basically undesirable to amend the TVA Act of 1933 in order to authorize the TVA to issue its own obligations to the public for the purpose of obtaining funds to finance the construction or acquisition of facilities for the generation or transmission of electric power.

In a press release dated April 5, 1955, the TVA suggests that the particular method of financing is proposed for the reason that in periods of national deficit financing there is a reluctance on the part of the executive branch and the Congress to increase budget deficits by using appropriations to finance new powerplant construction. To our mind this reasoning alone does not justify the financing of a Government activity by the sale of bonds to the public. In effect, such action would accomplish indirectly what Congress and the executive branch might be reluctant to do directly.

In our opinion, the financing of Government activities of this character should be by appropriations. If, to obtain needed funds, borrowing from the public is necessary, the Secretary of the Treasury should perform this function under the authority of the Second Liberty Loan Act, as amended. This act provides, among other things, a limitation on the total amount of direct and guaranteed obligations which may be outstanding at any one time. Under the proposed legislation, the borrowing authority of TVA would be outside of the public debt ceiling and, as a result, the true financial facts of the Government's debt position would be obscured.

We do not think that agencies of the Government, other than the Treasury Department, should be authorized to borrow from the public for purposes of the character involved in this legislation, nor do we believe that the fiscal and debt management responsibilities of the Department should be weakened by authorizing other Government agencies to enter a field which is a normal function of the Treasury Department.

The proposal provides that the obligations issued by the TVA would not be obligations of, or guaranteed by, the United States. However, despite such a declaration, we think that, so far as the investing public is concerned, they would be regarded as obligations of the United States Government and, as a practical matter, they would be moral and equitable obligations of the United States since they would be issued by a wholly owned and controlled corporate instrumentality of the United States Government.

By using the appropriation method of financing, two important results are achieved. First, the Congress is placed in a position to review, annually, TVA needs which can be weighed against the overall picture of revenue and expenditures of the Government. Second, any borrowings necessary to fund the appropriations granted by the Congress will be handled by the Treasury Department and automatically treated and disclosed as a part of the public debt of the Federal Government.

The proposed legislation would remove any effective control by the Congress over the TVA power operations. The provision of title II of the Government Corporations Appropriation Act, 1948, requiring approval by the Congress for the construction of new power producing projects would be repealed. The TVA would be authorized to borrow from the public unlimited amounts to finance the construction, acquisition, enlargement, improvement, or replacement of electric power generation or transmission facilities. The only limit on expansion would be its ability to borrow. We do not believe that any agency of the Government should be granted such freedom from the normal controls exercised over Government activities.

The Government Corporation Control Act, 1945, was enacted by the Congress in order to exercise better controls over the corporations of the Government. The proposed legislation would exempt TVA from the provisions of section 302 of that act relating to the deposit of funds. We think the Secretary of the Treasury should continue to have control over the deposit of funds of the TVA, and we believe section 302 as now written is broad enough to take care of the conditions TVA seeks to meet. It should be noted that the Secretary of the Treasury is by law given authority to waive the requirements of section 302 under such conditions as he may determine.

Further, we see no reason to exempt TVA from the control of the Secretary of the Treasury with respect to the issuance of obligations. Section 302 (a) of the Government Corporation Control Act requires the Secretary of the Treasury to approve the form, denomination, maturity, interest rate, terms and conditions, manner of issuance, and price of all obligations issued by Government corporations. The purpose of this provision was to formalize existing arrangements for cooperation between Government corporations and the Treasury in the issuance of corporate obligations and to assure unification of the financial policy of the Government. See House Report No. 856, 79th Congress, page 10.

In addition, we do not believe that TVA should be exempt from the provisions of section 303 (b) of the Government Corporation Control Act relating to the sale and purchase of obligations of the Government. We think it necessary for the Secretary of the Treasury to maintain control over such purchases and sales when the amount involved is in excess of $100,000 at any one time.

In summary, it is our opinion that the proposed legislation is basically objectionable because of the extent to which it removes TVA from the controls now exercised over its activities by the Congress and the executive branch. If, notwithstanding the above considerations, it should be decided to authorize TVA to obtain funds through the issuance of its own bonds, we feel that the authority should be limited as follows:

1. Require congressional approval of each new power-producing project before the issuance of bonds to obtain the funds needed to build, lease, lease-purchase, or otherwise acquire power facilities, or, as a minimum alternative, place a ceiling on the total amount of bonds which can be outstanding at any one time and prescribe a definite geographical area in which TVA can construct or otherwise acquire power-producing facilities.

2. Leave with the Secretary of the Treasury the authority to approve, in advance, all terms and conditions of bonds to be issued and the time and manner in which they are to be issued, as now required by section 303 (a) of the Government Corporation Control Act.

3. Retain the applicability of sections 302 and 303 (b) of the Government Corporation Control Act relating to the deposit and the investment of TVA power funds.

In addition, there are other provisions of the proposed legislation which we think are undesirable or should be clarified.

Section 15d (a) provides that the corporation is authorized to enter into binding covenants with the holders of bonds, and with the trustees, if any, with respect to the establishment of reserve funds and other funds, provisions for insurance, charges for supply of power, application of net power proceeds, restrictions upon the subsequent issuance of bonds, or the execution of leases

or lease-purchase agreements relating to power properties, and such other matters not inconsistent with the act as the TVA may deem necessary or desirable to enhance the marketability of the bonds. We have considerable concern over the possible effect of this provision for the reason that it could result in the bondholders having a strong control over the power operations of the TVA, notwithstanding TVA would be a wholly owned Federal agency.

Section 15 d (c) would authorize TVA to arrange for audits of its accounts and for reports concerning its financial condition and operations by commercial accounting firms, in addition to the audits and reports required by sections 105 and 106 of the Government Corporation Control Act, 1945. Insofar as the granting of authority to engage commercial accounting firms is concerned, we doubt such authority is necessary and have no reason to believe that the audit performed by the General Accounting Office will not serve the purposes of the TVA and the investors. However, should such authority be deemed advisable, we believe that the law should provide that it be exercised subject to the specific concurrence of the Comptroller General in order to assure avoidance of duplication and consistent classifications of revenues and expenditures in the determination of net power proceeds for all purposes.

Under the provisions of the Government Corporation Appropriations Act, 1948, TVA is required to repay the Federal appropriation investment over a definite period of years. Under the proposed legislation, the first section of this requirement would be repealed and, while, under section 15d (c), TVA would be directed to pay interest on the Government's investment, no definite plan for repayment of principal is substituted. We believe that a definite repayment plan should be established.

Section 15d (g) provides, among other things, that the TVA, in connection with the construction of a generating plant or other facilities under an agreement providing for lease or purchase of said facilities, or any interest therein by or on behalf of the corporation, or for the purchase of the output thereof, may convey in the name of United States by deed, lease, or otherwise, any real property in its possession or control, may perform engineering and construction work and other services, and may enter into any necessary contractual arrangements. We believe this authority is entirely too broad, particularly with reference to the granting of authority to convey real property. The term "real property" includes both improved and unimproved property, and consequently the language proposed would authorize TVA to convey an entire plant or other facility with the only criteria being that the TVA enter into a lease or lease-purchase agreement, or an agreement for the purchase of power output. We believe that, as a minimum, the authority to convey real property should be limited to unimproved real property. Also, the section should be clarified as to whether conveyances of real property, as well as the performance of engineering and construction work and other services by TVA may be without charge, or whether and when it is intended that TVA be paid for real property at the fair market value, and be paid for engineering and construction work and other services.

Accordingly, for the reasons indicated, we do not recommend favorable consideration of S. 2373, in its present form.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

---

[1] "Not later than June 30, 1948 and not later than June 30 of each calendar year thereafter, until a total of $348,239,240 has been paid as herein provided, the board of directors of the Tennessee Valley Authority shall pay from net income derived the immediately preceding fiscal year from power operations, not less than $2,500,000 of its outstanding bonded indebtedness to the Treasury of the United States exclusive of interest, and such a portion of the remainder of such net income into the Treasury of the United States as miscellaneous receipts as will, in the 10-year period ending June 30, 1958, and in each succeeding 10-year period until the aforesaid total of $348,239,240 shall have been paid, equal not less than a total of $87,059,810, including payment of bonded indebtedness exclusive of interest on such bonded indebtedness. Total payments of not less than $10,500,000 shall be made not later than June 30, 1948. Amounts equal to the total of all appropriations herein and hereafter made to the Tennessee Valley Authority for power facilities shall be paid by the board of directors thereof, in addition to the total of $348,239,240 specified in the foregoing paragraph, to the Treasury of the United States as miscellaneous receipts, such payments to be amortized over a period not to exceed 40 years after the year in which such facilities go into operation." (Government Corporations Appropriations Act of 1948, pp. 3 and 4.)

[2] Repayment made in 1955.

Payments into the general fund of the U. S. Treasury:	
On power investment	$35,000,000
Of nonpower proceeds	5,465,224
Retirement of bonds held by Treasury	15,000,000
	55,465,224

From U. S. 1956 Budget, p. 229.

[3] Depreciation: $30,092,618 from TVA annual report for fiscal 1955, p. A–12.

Balance to reserve for power properties:

Total at June 30, 1955: $168,211,522 from TVA annual report for fiscal 1955, p. A–32.

Total at June 30, 1954: $140,855,811 from TVA annual report for fiscal 1954, p. A–3.

Total for fiscal 1955: $27,355,711.

Difference: $30,092,618–$27,355,711. $2,736,907 represents retirements.

[4] Power investment at June 30, 1955:

Appropriations (U. S. budget, fiscal 1957, p. 227)	$1,298,081,000
Transfers of property (U. S. budget, fiscal 1957, p. 227)	19,365,000
Total (TVA annual report, June 30, 1955, p. A–4)	1,317,446,058
Payments into the general fund of the Treasury	100,059,019
Balance	1,217,387,039

Average interest rate on marketable public obligations from annual report of Secretary of the Treasury, June 30, 1954, p. 471.

[5] Sales by TVA in 1955, TVA annual report, June 30, 1955, pp. A–39 to A–41:

		Percent	Amount	Percent	Rev/kilowatt hour
4 large cities	6,320,502,090	15.03	$25,104,664	13.40	3.97
Towns and cooperatives	7,236,120,329	17.21	33,099,494	17.67	4.65
Total	13,556,622,419	32.24	58,204,158	31.07	
Industrial and other:					
Industrials	6,030,518,975		23,555,417		3.91
Private utilities	31,289,648		145,070		4.64
Interdivisional	656,072,300		2,493,851		3.80
Total	6,717,880,923	15.98	26,194,338	13.98	4.09
Federal agencies	21,770,450,713	51.78	102,962,859	54.95	4.73
Total	28,488,331,636	67.76	129,157,197	68.93	
Grand total	42,044,954,055	100.00	187,361,355	100.00	

[6] Money that has passed through hands of TVA:

Total power operating revenue	$896,194,921
Other gross revenues, disposition of fertilizer and munitions	219,651,948
Bonds issued	65,072,500
Appropriations and net transfers of property	1,950,418,029
Contributions in aid of construction	303,417
Total	3,131,640,815

Revenues were compiled from income statements in TVA annual reports. Remainder of figures from TVA annual report, June 30, 1955, pp. A–4 and A–7.

[7] The table is as follows:

Year	Total taxes	State and local taxes	Proportion	TVA State and local taxes
1955			[a] 39.18	$18,798,270
1954	1,437	563	39.18	14,961,106
1953	1,339	515	38.46	12,088,831
1952	1,224	471	38.48	9,561,578
1951	1,150	431	37.48	7,584,363

[a] Estimated.

NOTES ON PROJECTIVE OF TVA TAXES

Page 441 Hoover Task Force Report on Water Resources and Power gives the total tax obligation to June 30, 1953, as $199,501,868.

Method of projecting taxes—TVA only

Fiscal year	Kilowatts installed including Army engineers plants	Average	Taxes	Per kilowatt	Fiscal year
1950	2,648,050	2,741,800	$20,235,761	7.38	1951
1951	2,835,550	3,347,230	24,848,176	7.42	1952
1952	3,859,910	4,305,480	31,432,219	7.30	1953
1953	4,751,050	5,230,900	38,185,570	7.30	1954
1954	5,710,750	6,572,500	47,979,250	7.30	1955
1955	7,434,250				
Subtotal			86,164,820		
			199,501,868		
Total			285,666,688		

Payments in lieu of State and local taxes:

1933–1953	$29,751,095
1954	3,578,668
1955	3,878,466
Total	37,208,229

Hoover Task Force Report, p. 242.

[9] Interest was figured by multiplying the average funds employed in the power program by 3 percent which gave a total of $290,370,791. From this was deducted the interest paid on bonds of $10,637,516, leaving $279,733,275.

[10] Page 52 of the 1940 TVA Annual Report.

Original cost	
Wilson Dam	$46,950,748
Steam plant	12,326,392
Nitrate plants, etc	65,073,387
Total	124,350,527
Took on books, see p. 55:	
Wilson Dam 31,300,000	
Equipment, etc 485,787	
	31,785,787
	92,564,740

[11] Allocation to navigation:

Navigation facilities, including locks, channel improvements, etc	$46,142,069
Allocation of multiple facilities	112,000,038
Total	158,142,107

(TVA annual report June 30, 1955, p. A–17.)

Cost of equivalent low dam navigation channel $67 million. From H. Doc. 328, 71st Cong., pt. I, p. 99. TVA did not build the large locks at all dams.

[12] Allocations to flood control:

Direct flood-control investment	$55,403,000
Allocation of multiple facilities	128,592,636
Total	183,995,636

(TVA annual report, June 30, 1955, p. A–17.)

Nomination of Wesley D'Ewart To Be Assistant Secretary of the Interior

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1956

Mr. LEHMAN. Mr. President, there is shortly to come before the Senate the nomination of Mr. Wesley A. D'Ewart to the Post of Assistant Secretary of the Interior. Consideration is now being given in the Interior Committee, I believe, to this appointment.

I have received many protests against this appointment.

On October 18, of last year, the New York Post printed an editorial on Mr. D'Ewart. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FUNNY TEAM PLAY

The case of Wesley A. D'Ewart has received inadequate attention. It throws painful light on the heralded operations of "the team" that is alledgedly carrying on for Ike in Washington.

D'Ewart is a former GOP Congressman from Montana. During his tenure in the Capital his servitude to the wealthy cattle interests was so shameless that it evoked denunciation from Secretary of the Interior McKay, a man not previously considered a fighting foe of special interests. It was McKay who said of a bill introduced by D'Ewart back in 1953:

"The D'Ewart bill would give cattlemen vested rights to their grazing permits. I'm confident we'll live up to the campaign pledge and do something for the cattlemen, but not at the expense of all of the rest of the people. There's going to be no giveaway program on the public lands."

Lest there be any doubt as to the meaning of his words, McKay summed up his feelings by terming the O'Ewart bill "lousy." It was rejected by the Republican Congress.

Subsequently D'Ewart ran for the Senate seat occupied by Senator MURRAY, Democrat, of Montana. As Tom Stokes reported in this newspaper last week, his campaign was distinguished by the publication of a pamphlet called "Senator MURRAY and the Red Web Over Congress," a document rivaling any of the most scurrilous McCarthyite trash of the period.

D'Ewart lost and we had reason to assume he would not be heard from for a while. We were wrong. One of the first noncontroversial matters Sherman Adams rushed to the bedside of the President was the interim appointment of Wesley A. D'Ewart as Assistant Secretary of the Interior for Public Land Development. In the face of Democratic criticism Secretary McKay now insists that D'Ewart is "a man of very very good judgment." The team marches on.

The Democratic-ruled Congress is likely to reject the D'Ewart appointment. Admittedly it is questionable how much damage he can do before it reconvenes. But the episode surely invites speculation as to how many other funny things wil be the product of the new era of teamwork.

Dismissal of Frederick B. Lee as Civil Aeronautics Administrator

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the RECORD three excellent editorials regarding the dismissal of Frederick B. Lee as Civil Aeronautics Administrator. The first is an editorial from the Washington Post and Times Herald of December 12, 1955; the second an editorial from the St. Louis Post-Dispatch of December 13, 1955; and the third an editorial from the Denver Post of December 14, 1955.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of December 12, 1955]

POLITICS AT COMMERCE

Secretary of Commerce Weeks does not seem to have learned much from his abortive attempt to fire Dr. Allen V. Astin, Director of the National Bureau of Standards. His dismissal of Frederick B. Lee as Civil Aeronautics Administrator smacks of the same disdain for the career service and an inadequate appreciation of the importance of technically skilled administrators. Mr. Lee is a Vermont Republican with a wealth of background for the exacting requirements of his job. After aviation experience during the war, he entered the CAA as a civil-service employee. He rose rapidly and won the respect of his fellow employees and of the aircraft industry, the airlines, and the pilots. In 1953, President Eisenhower promoted him from the ranks to be Administrator.

Obviously, anyone in a position of this kind has provoked criticism. Mr. Lee has made decisions without regard to politics and has fought vigorously for improved safety regulations. Within the Department he has opposed budget cuts imposed on the CAA because of his belief that a rapidly expanding aviation industry requires a larger and more alert supervisory agency. Last month, without explaining why, Under Secretary of Commerce for Transportation Louis S. Rothschild demanded Mr. Lee's resignation. Secretary Weeks insisted that the resignation be handed in without delay. Mr. Lee, however, was unable to obtain any reasons for his dismissal. If there have been any complaints regarding his work, they have not been stated; on the contrary, many persons in informed positions assert that Mr. Lee's work as Administrator has been exemplary and that he is a man of integrity and unusual ability. He is being replaced by Charles J. Lowen, Jr., of Colorado, Deputy CAA Administrator since May. Mr. Lowen has considerably less transportation experience but he has strong political backing.

Chairman MAGNUSON, of the Senate Commerce Committee, is justified in calling for an investigation. Secretary Weeks has violated no law or regulation and is within his rights in dismissing the CAA Administrator if he believes a better man is available. But he should have a greater consideration than he has shown in this case for the morale of an agency employing 15,000 persons and which is intimately concerned with some of the most highly technical problems of

modern aviation, aircraft safety, and aircraft design. The outsider cannot make a final judgment in the matter.

[From the St. Louis Post-Dispatch of December 13, 1955]

WHAT'S GOING ON IN CAA AND CAB?

There is a crying need in the interest of good government and fair play to find out just why Frederick B. Lee has been forced out as head of the Civil Aeronautics Administration. Joining the CAA 10 years ago, he became Administrator in March 1953 and nothing has been brought to light to indicate that he has not performed his duties ably.

The CAA, a unit of the Commerce Department, is a very important Federal office charged mainly with building and operating air navigation aids, enforcing air safety regulations, and promoting development of a national airport system. Senator MIKE MONRONEY, Democrat, of Oklahoma, charges that Secretary of Commerce Sinclair Weeks ousted Lee as part of a campaign to obtain czar-like powers over civil aviation.

The appointment of Charles J. Lowen, Jr., to succeed Lee is evidence of a plan to squeeze Lee out. For Lowen, who joined the CAA only last May, is reported to have been put in a job handpicked for him by Secretary Weeks and his Under Secretary, Lewis S. Rothschild. It was about this time that Lee testified in the Senate in favor of a bill authorizing a $250 million Federal outlay to aid in airport construction. Weeks and Rothschild, according to MONRONEY, fought this bill bitterly.

It is a sardonic coincidence that the Lee ouster comes right when the administration is launching a campaign to give recognition to career employees who have outstanding records. As Jerry Kluttz, Washington Post columnist, commented: "If officials such as Lee, who have worked themselves to the top, are fired for no good reason, the worthwhile campaign will be doomed as hollow and insincere."

In the opinion of Mr. MONRONEY, Secretary Weeks is also trying to get the CAB completely under his thumb. Someone blocked the reappointment of Josh Lee to the CAB. And Mr. Weeks, no doubt cognizant of the likelihood that Ross Rizley will resign as head of the CAB soon to take an Oklahoma judgeship, would have an opportunity to get a chairman of his own selection appointed.

Senator MONRONEY's announcement that the Senate Commerce Committee will start digging into Commerce Department policies under Weeks and Rothschild is most timely. The committee should dig into them deeply enough to determine whether it might not be wise to take the CAA and the CAB away from the Department of Commerce and let them have their freedom.

[From the Denver Post of December 14, 1955]

AIRING OUT THE CAA

The right of the President to oust Civil Aeronautics Administrator Frederick B. Lee and appoint Charles J. Lowen, Jr., in his place cannot be doubted. The job of administrator is not under civil service and he is one of those officials who serve at the pleasure of the President.

Neither can it be doubted that reasons for the ouster are matters of legitimate concern for Congress if they involve policy and appropriations which have been written into law.

Senator MONRONEY, Democrat, of Oklahoma, chairman of the Senate Aviation Subcommittee, believes the firing of Lee is the result of sentiment within the Department of Commerce which favors rail transportation and opposes the expansion of air transportation, particularly if such expansion would require Federal expenditures such as aid for the modernization and improvement of airports.

The Commerce Department attitude, Senator MONRONEY believes, comes from the top—Commerce Secretary Weeks and Under Secretary Louis B. Rothschild. The latter seems to be the sponsor of Lowen who has been with the CAA only a few months as Deputy Administrator.

Lee had been with the CAA for 10 years. Rothschild in discussing the ouster stressed the complaint that Lee lacked a desire for teamwork. Senator MONRONEY says Lee has been punished because he urged Congress to adopt a larger airport-aid bill than the Eisenhower administration had asked.

The expanded aid program will provide $63 million a year for 4 years beginning in 1956. In his testimony before the Senate subcommittee on the aid bill, Lee said many airports are overcrowded and only seven airports in the entire country are prepared to handle jet aircraft with safety.

Senator MONRONEY says the ground minded Commerce Department opposed the feeder airline bill which has given air service to many smaller communities which could not support trunkline service.

The Senator's charges or suspicions or whatever they are appear serious enough to justify a full airing of Commerce Department and CAA attitudes toward aviation development. The Congress and the people should be allowed to know just where Secretary Weeks stands on commercial airline policies.

If the Secretary should prove to be hostile to programs Congress has evolved, Congress can find ways of placing those programs in more sympathetic hands.

Address of Guatemalan Ambassador

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an address by Lt. Col. Jose Luis Cruz Salazar, Guatemalan Ambassador to the United States, which was delivered at Rollins College on Saturday, January 21, 1956. The speech follows:

Ladies and gentlemen, I appreciate most deeply the honor you have paid my country, by inviting its ambassador to address such a select audience.

I cannot say, however, that I take any pleasure in discussing the topic that is before us. No sane man can derive the slightest pleasure in reviewing the subversion of his country by a ruthless, imperialistic foreign power, in collaboration with local dupes and traitors. To we Guatemalans the subject before us is a painful one.

Nevertheless, the case of Guatemala, when presented in its true perspective, contains some valuable lessons; lessons which, if they are studied well by the peoples of the Americas, will surely contribute to the safety of our hemisphere.

Therefore, ladies and gentlemen, even though the task is an unpleasant one, I must welcome the opportunity to discuss with you briefly, and attempt to analyze, the Guatemalan case.

Let me first try to put the topic in perspective. In recent years many thoughtful Latin Americans have become increasingly concerned at three factors prevalent throughout the hemisphere, which we feel, threatens the welfare of all of us. This concern is particularly felt by those of us in Guatemala, who participated in the liberation movement.

1. In many of the American nations there is a serious lack of understanding by the great majority of the people, as to the benefits and the responsibilities incurred by the individual in a democratic society. To most of us, I am sad to say, democracy is a subject that evokes much emotion, but too little thought.

2. It is equally true that in many of our countries there is among all classes of people a lack of knowledge as to the true nature of the Communist conspiracy, of its peculiar techniques and tactics devised for this hemisphere, and, especially, of its imperialistic aims.

3. Many of us are too little aware of the very real threat that communism poses to the freedom and security of our hemisphere, and of the truly alarming progress it has made. Ironically, we are better informed on developments in Europe, Asia, and the Middle East than we are of those right here in the Americas.

Ladies and gentlemen, I believe any objective analysis of the case of Guatemala must lead to the conclusion that the existence of those three factors enabled a small handful of ruthlessly efficient Communist agitators to gain control of my country, and to exercise that control, almost unnoticed by the rest of the American nations, for nearly a decade.

Guatemalans, in our country located in the very heart of the Americas, have enjoyed political freedom in only a few brief periods of our history. We have had little experience with democracy—except as a catch phrase by demagogic politicians. Most of our experience has been with the old-fashioned type of personal dictatorship.

As the Second World War drew toward a close, Guatemala was caught in a tide of political, social, and economic unrest which swept most of Latin America, and which still prevails in many countries. Jorge Ubico, the last of the old-school dictators, who had ruled for 14 years, was forced out of office by public pressure in 1944. A few months later, his successor, Gen. Federico Ponce Vaides, was unseated after a brief, but bloody, revolution, when it appeared that he, too, was following the policy of dictatorship.

General Ponce followed his predecessor, Ubico into exile, on October 20, 1944. And that date opened the gates for new hope by the people of Guatemala. But unfortunately, it also opened a new opportunity for international communism to secure a foothold in the Western Hemisphere after years of patient preparation and careful testing and revising of its subversive tactics.

Please note, ladies and gentlemen, that at that time our people had no real knowledge of democracy—we merely had the desire to possess it. Even our intellectuals lacked any real concept of the responsibilities that democracy invokes on all classes of individuals—private citizens as well as public officials. It is equally true that we were utterly lacking in knowledge of the Communist conspiracy, and of the real threat it presented to the achievement of our democratic aspirations. All three of the factors that I listed a few moments ago were prevalent. And the Communists immediately seized the advantage. They knew precisely what they wanted and had careful plans as to how they would achieve it. In Europe the Communists used as the tool for expansion the presence or the threat of the powerful Red army. In Asia they armed local masses and organized them into trained armies under Red instructors and advisers. But in Latin America, in Guatemala, they were forced to rely on guile, conspiracy, demagogery, and subversion.

So, in accordance with what was obviously a careful plan to exploit any similar opportunity, presenting itself anywhere in the

hemisphere, the Communist leader concentrated on Guatemala.

With almost unbelievable speed, they swung into action. Guatemalan Communists who had been living in exile returned to their homes and engaged in tireless, carefully coordinated political activity. They were joined by comrades from all over Latin America, and even from Spain.

I believe it is important that only a few of these, in the beginning, acknowledged their Communist beliefs. Most of them sailed under the false colors of liberals, or Marxian Socialists, or even the new spiritual socialism invented by President Arévalo.

Their early tactics have since become standard Communist practices throughout the hemisphere. They allied themselves with all of the revolutionary parties, and immediately set about winning the confidence of the more radical elements in our intellectual and working classes. And they succeeded so well that they were able to secure the nomination of Juan José Arévalo for the presidency by all of the revolutionary parties. And Arévalo, if he was not an actual card-carrying Communist at that time, was certainly a true Communist sympathizer.

Needless to say, Arévalo was elected by an overwhelming majority. Then came the second phase of the Communist program, a phase that was already well under way before the elections—the organization of the workers under Communist leaders. At the invitation of Arévalo, Vicente Lombardo Toledano came to Guatemala to supervise the organization of the unions. Toledano maneuvered into leadership of the labor movement a young Communist intellectual, Víctor Manuel Gutiérrez. Later Gutiérrez selected as his lieutenant a man whom many observers believe was the No. 2 Communist of Guatemala, Carlos Manuel Pellecer. The direct tie-in between the Guatemalan labor leaders and Moscow, was clearly revealed in 1951, when Louis Saillant, of France, head of the notorious World Federation of Trade Unions (WFTU) came to Guatemala to personally supervise the organization of a central labor body, the Confederación General de Trabajadores (CGTG), which, of course, became affiliated with the World Faderation of Trade Unions (WFTU) and Lombardo Toledano's Communist-controlled Latin American labor organization, Confederación de Trabajadores de América Latina (CTAL).

Meanwhile the peons and the small farmers were also being organized into the Rural Confederation of Guatemala, under Leonardo Castillo Flores, an ardent advocate of communism, who made his pilgrimage to Moscow and to various so-called peace conferences. It was Castillo Flores who attempted to combat the liberation movement directed by Col. Carlos Castillo Armas, by organizing the rural workers into armed militia, and at one time even dared to give orders to the army's chief of staff.

Meanwhile the Communists were moving at top speed along three other highly important fronts. They were maneuvering controlling positions in the important government agencies, the educational system, and the political parties.

In the government they obtained control of the propaganda agencies, including the government-owned and subsidized newspapers, and the National Broadcasting System, the Social Security Institute, the Electoral Tribunal, the Labor Courts, the President's General Secretariat, and finally even the Congress. They put through a Communist designed agrarian reform program, and staffed its administrative agency with Communists. They took over the Foreign Office, and perverted the Guatemalan diplomatic corps into a Communist courier service. And finally, when a decision of the supreme court displeased the party leaders, at the request of a single Communist deputy the entire court was impeached by a fellow-traveling Congress, and sympathetic judges were appointed to replace them.

In the educational field, Mario Silva Jonama, a fanatic Communist teacher became virtually a dictator of the men teachers' school; María de Sellarés, another Communist, became director of the School for Women Teachers; Virginia Bravo Letelier, a Chilean Communist, headed the rural educational system; Rafael Tischler, a notorious Communist, became director of the Labor Union for Workers in Education. A Communist front was organized to penetrate San Carlos University, and with typical Communist irony, it was called the Democratic University Front. Thus, in our educational system, we soon found that the Communists were in control not only of the hiring and firing of teachers, but also of the selection of curricula.

And in the political field, using their control over the important labor and agrarian vote as a weapon, the Communists soon gained controlling positions in all of our major political parties.

I believe it is highly significant that through this period of securing control of the important fields of our political, social, and economic life, the Communists either remained in the background, or maintained the disguise of liberals. From the very beginning, however, a few of us knew, they were actively recruiting the young intellectuals and workers, organizing them into cells, and indoctrinating them in Marxist principles and tactics.

Then, shortly before the election of Jacobo Arbenz Guzmán, the party came out into the open. In 1950 the Communist Party of Guatemala made its public appearance under the leadership of José Manuel Fortuny. About the same time another branch of the party came into being, apparently for the purpose of evading article 32 of the constitution, which in effect outlaws the Communist Party. This branch was called the Labor Revolutionary Party and was headed by Gutiérrez. After a trip to Moscow by Gutiérrez, however, the two parties were united into the Guatemalan Workers Party, under the leadership of Fortuny. An interesting aspect is that the Guatemalan Government directly subsidized the party's official newspaper, Octubre, which carried as its motto, "For a strong, large Communist Party," by placing complimentary ads in its issues.

I think that another highly significant aspect of the political tactics of the Communists in Guatemala, is that even after they came out in the open, with their own official party and candidates, the Communists continued their dominant positions in the other political parties. On more than one occasion, they supported their handpicked candidates from the other parties, over their own official party candidates.

After the election of Arbenz, the Communist tactics became increasingly bolder, and more apparent to the public. In Arbenz the Communists had a disciple who declared, shortly before his inauguration, and I quote: "The world is divided into two groups; on the one side the United States and the nations of the capitalistic system, with their great economic power; and on the other side the Union of Soviet Socialist Republics controlling a group of nations with the almost mystic ideology opposed to a decadent imperialistic system." And he added, "Perhaps we, the men of the present generation will not see it, but in this fight the Union of Soviet Socialist Republics is going to win." This, of course, is the typical Leninist formula of reducing the political problems of the world into the oversimplification of the inevitable fight between communism and capitalism. Arbenz, on assuming office, named as his principal adviser, the Communist leader, Fortuny. It is small wonder that the Communist conspirators, in order to secure the election of Arbenz went even to the lengths of contriving the assassination of his popular opponent, Col. Francisco Javier Arana, and an outspoken anti-Communist.

I regret deeply, that I do not have the time to go into detail on the second aspect of the Guatemalan case, one in which I as all loyal Guatemalans can view with real pride—our liberation from the Communist tyranny. And ladies and gentlemen, it was a tyranny—of the most ruthless sort. From the very beginning of the Arévalo regime, the secret police resorted to search without warrant, and arrests without formal charges or trials. Hundreds of opponents to the Communists were forced into exile. After the murder of Arana and the election of Arbenz the oppressive tactics became increasingly harsh, and finally culminated in the reign of terror that preceded the liberation, a reign of terror during which hundreds of anti-Communists were seized, brutally tortured, mutilated and finally murdered.

It is not only lack of time, but my main purpose here is to analyze the tactics the Communists followed in Guatemala, and the factors that made them successful. In the discussion of these factors, I believe there is one aspect of the liberation movement which must be considered. For it was by attacking these factors that Colonel Castillo overthrew the Communist regime. It was ideas that won in Guatemala—not guns and tanks and planes. For months preceding the revolution, Colonel Castillo and his followers bombarded the people of Guatemala with a systematic barrage of pamphlets and newspapers published by groups in exile, and with broadcasts over the clandestine radio. All of these were aimed at exposing to the people of Guatemala the true nature of the Communist-controlled government and its ties with the Kremlin, and at convincing them of the superior advantages of democracy. So when the final test came, Arbenz and his Communist mentors found that not only were they unable to command the army and air force, but even the workers and the Campesinos deserted them. The people had become convinced, and in Castillo Armas they had found a leader. Permit me, for the sake of emphasis, to repeat those factors briefly; first, the lack of real understanding of the political and philosophical meaning of democracy; second, the lack of understanding of the tactics and imperialistic aims of communism; and third, the unawareness of the danger that communism presents, and the headway it has already made. To these I could add a fourth factor, although it is of a slightly different nature, the spirit of political, social and economic unrest. I did not list this in the beginning, because it is to a considerable degree, Communist inspired. The principal tactic being used by the Communists throughout the hemisphere today, is the fomenting of discontent and unrest, in an obvious plan to create a chaotic situation they will be able to exploit.

Those are the factors that made the Communist control of my country possible. And, also let me repeat, for emphasis, those factors are prevalent today in many nations in this hemisphere.

We in Guatemala do not believe that our fight against communism is won, by any means. That is why we are so determined to prove to our people that democracy, once properly understood and applied, offers to all individuals willing to accept its responsibilities, the better way of life. However, even then, we shall not feel secure. We know that we are part of this hemisphere. And as long as a single nation remains vulnerable, we in Guatemala, too, are vulnerable.

Therefore, speaking entirely unofficially, I should like to propose for your discussion and consideration, an idea that is provoking considerable thought in my country. Not a detailed solution, but at least an idea.

I am convinced that we must find a way to mobilize the anti-Communist thought in this hemisphere, into an effective force to cope with these prevailing ignorances that endanger our freedom. I suggest a movement on a hemispheric basis, which would:

A. Educate all classes of people, in all of our countries, in the full political and philosophical meaning of democracy; not only in the benefits that it offers the individual, but also in the duties, the responsibilities that it imposes on him if these benefits are to be enjoyed.

b. Educate all classes of our people in the true nature of communism, and particularly its tactics and its imperialistic aims.

C. Acquaint our peoples with the day-to-day, week-to-week, and year-to-year activities of the Communist conspiracy, so that we can better evaluate its gains, and so that our governments can devise methods to counterbalance them.

I present this idea not as a cure-all. But simply as one step to be taken in the continuing fight, which I fear will outlast our lives, between the two great ideological forces, democracy and communism. Surely the knowledge, not only of what we are fighting against, but also of what we are fighting for, is an indispensable weapon in this historic struggle. And since all of us in the hemisphere are the objects of Communist attack, and all are to a greater or lesser degree, vulnerable, I propose a defense on a hemispheric scale. I limit this particular program to this hemisphere, because, as I already pointed out, the imperialistic tactics of the Communist conspiracy here, differ from those followed in other critical areas of the world.

If this were possible, if we should team our resources in a common effort and bring the whole truth to the peoples of our hemisphere, we would have taken a long and sure step toward the goal of true freedom that only democracy can bring.

I once again thank Rollins College for the opportunity given me to address you here today and thank you, ladies and gentlemen, for your attention.

Social-Security Poll

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NEW JERSEY STATE BAR ASSOCIATION,
Trenton, N. J., February 1, 1956.

Hon. GORDON CANFIELD,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: In connection with the very important matter of social security, which is now before you, this association has taken a poll of its 3,000 members with the following results:

1. Do you favor social security for self-employed lawyers? Yes, 1,368; no, 88.

2. Do you favor their complete exclusion? Yes, 89; no, 1,064.

3. Do you favor voluntary coverage? Yes, 959; no, 248.

4. Do you favor compulsory coverage? Yes, 555; no, 658.

5. If voluntary coverage cannot be obtained, do you favor compulsory coverage? Yes, 1,098; no, 242.

While this poll was taken primarily to advise the American Bar Association of our opinion in the matter, we felt that you would like to have the feeling from New Jersey separately.

If we can be of further assistance in this matter, please advise us.

Sincerely,

EMMA E. DILLON,
Secretary.

The Middle Eastern Danger

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. HOLTZMAN. Mr. Speaker, the challenge in the Middle East must be met now, with true leadership and courage and without any further appeasement. By our indecision, bewilderment, and confusion we have suffered the problem to become too acute and much too explosive and can no longer afford to vacillate and sit on both sides of the fence. This is not merely a challenge to the life of Israel but to the very peace of the entire world.

When the Communists began to pour arms into the Middle East, we should have shown a little more of that boldness we read about in Life magazine. Instead, we sat back doing absolutely nothing affirmative, while the military balance is being, and perhaps has been, upset.

Certainly no decent thinking individual or country wants to see an arms race in the Middle East. But is there anyone who would like to see Egypt and the other Arab countries, all avowedly dedicated to destroy Israel, so strong that the only democracy in the Middle East may be overrun?

Mr. Speaker, it is not too late if we act immediately. We must grant the request of Israel for arms and enter into a security pact guaranteeing the present border. If we do this, we still can avoid open conflict and reassure our allies and friends all over the world.

Mr. Speaker, we are again at the brink. Let us not go over it.

At this point I would like to insert an editorial entitled "The Middle Eastern Danger," which originally appeared in the Manchester Guardian Weekly, and which has been reprinted in today's issue of the Washington Post and Times Herald, as a public service by International Latex Corp.

I urge all the Members to read the article and to give it very serious consideration.

The article follows:

THE MIDDLE EASTERN DANGER

If Russian MIG fighters have been seen over Cairo, as the Minister of Defense suggested in the House of Commons on Tuesday, the supply of ancient British Valentine tanks to Egypt appears comparatively trivial. Indeed, much of the debate in the House on Tuesday seemed to be on secondary issues. It is important, of course, that any laxity in the administration of arms exports should be tracked down, and Mr. Gaitskell made the most of the failings which there have evidently been. But a trickle of old tanks to the Middle East—and it has been no more than that—is insignificant beside the delivery of fairly new arms both by Communist countries and by the British Government. The Minister of Defense was justified in his contention that, even if the obsolete tanks which have been allowed out of this country were remilitarised, they would not add materially to Egypt's armed strength. It is a different story with Centurion tanks and jet fighters from this country as with Stalin tanks and MIG aircraft from Russia and Czechoslovakia. These have added greatly to Egypt's power and have unbalanced the military situation in the Middle East. The British Government has placed itself in a weak position to complain about Communist supplies, because it was first in the field. Sir Walter Monckton refused to give details of the arms sold by the Government to Egypt, taking refuge behind the old excuse that it would be "contrary to all practice" to disclose what had been sent. (Why should it be contrary to all practice when in Jordan and Iraq only a few weeks ago we held public ceremonies, with ambassadors and press photographers in attendance, to hand over tanks and aircraft?) There is, however, no doubt that Centurions and Vampires went to Egypt before the first Soviet deliveries began.

The preponderant supply of arms to Egypt, as Mr. Gaitskell said, has created grave danger. The hope of the Arab States for revenge against Israel has been enhanced, and they may soon feel tempted to try to drive the Jews into the sea. The Israelis, too, may feel that because the balance is clearly going against them for the first time since the war, they should strike before the situation becomes worse. The danger is in part of the British Government's own making. It has been aggravated by the Soviet intervention, but Britain itself must bear part of the preliminary blame. For that reason action ought to be taken to make more plain our intentions under the Tripartite Declaration of 1950. Jointly with the United States and France, we ought to say what we shall do both to restore a balance of arms and to deal with any renewal of the war. The promise of supplies to Israel would do much to remove her feeling that she should strike while there is time, and the promise of military action against the violation of frontiers by either side would help to deter Egypt. It is ironical that, having said in the 1950 declaration that an arms race ought to be avoided, Britain has promoted one to the extent that she ought now to send extra supplies. But the damage has been done, and Israel cannot safely be left weak. As to violation of frontiers, the wording of the 1950 declaration was plain enough. It said:

"The three governments, should they find that any of these States was preparing to violate frontiers or armistice lines, would, consistently with their obligations as members of the United Nations, immediately take action both within and outside the United Nations to prevent such violation."

Our obligation to defend the present dividing line is evident. (The meaning of Sir Anthony Eden's intervention last Tuesday, when he told Mr. Gaitskell that the language of the declaration was not so clear as Mr. Gaitskell thought, is puzzling.) That undertaking ought, nevertheless, to be reinforced by a statement that Britain and the United States would, if necessary, take military action. Britain has its troops in Cyprus and Libya, and the United States has a fleet handy. In Washington this week their readiness should be reaffirmed.

(Presented as a public service by International Latex Corp., Dover, Del.)

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Appendix

American Bar Membership Week, February 10–17

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 2, 1956

Mr. JOHNSON of Texas. Mr. President, the week of February 10 to 17 will be observed by the legal profession nationally as American Bar Membership Week, in which an organized effort will be made by lawyers all over the Nation to increase the membership list of the American Bar Association.

I ask unanimous consent that a statement I have prepared in connection with this effort be inserted in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Formed in 1878 by a small group of lawyers in Saratoga Springs, N. Y., the American Bar Association has evolved from semisocial beginnings into the largest legal organization in the world. While it has grown steadily although not spectacularly, in size, it has wielded great influence for the benefit not only of its members but of the general public as well.

This month, during the week of February 10 to 17, 10,000 lawyers, volunteering their time and effort, will go out in every city and town in the United States in a synchronized, mass personal interview campaign to double the size of the national association of the legal profession.

The lawyers joining in this unusual campaign are themselves members of the American Bar Association. Their immediate goal is to enroll, in that single week, 50,000 new members of the association. The present membership of the ABA is about 60,000.

Its membership doubled in the 20 years between 1916 and 1936, and redoubled in the last 20 years, but the American Bar Association has never before undertaken a membership development campaign such as that to be carried out this month.

E. Smythe Gambrell, of Atlanta, Ga., president of the American Bar Association, and Cecil E. Burney, of Corpus Christi, Tex., former president of the State bar of Texas and present national chairman of the Conference of Bar Presidents, have provided national leadership for this great organizing effort. Mr. Burney, as chairman of the campaign, heads a national executive committee made up of distinguished leaders of the bar from every section of the country.

The public, as well as the legal profession itself, has a direct interest in this project. The bar associations—National, State, and local—traditionally devote a large proportion of their time and energies to activities and services that are in the public interest and for the protection of the public. The maintenance of high standards of legal education; enforcement of discipline in the profession; improvements in the administration of justice; citizenship training programs, and civic activities of all kinds—all these and many other subjects are constantly the concerns of the organized bar.

The legal profession includes some 241,000 judges, lawyers and law teachers. They are organized into more than 1,400 bar associations, which together constitute the "organized bar." While the State and local bar associations are organically independent, they work in close cooperation with the American Bar Association in many professional and public enterprises.

All of the State associations and many of the local bar associations are represented in the house of delegates, which is the policy-making body of the association. Members of the house of delegates directly represent more than 200,000 lawyers.

The American Bar Association is a voluntary organization. Its members are under no compulsion to join. The lawyers, judges and law teachers who serve on its 64 committees and in its 17 sections do so out of a sense of professional duty and dedication. Some outstanding figures of the law—men like Elihu Root, Simeon E. Baldwin, Charles Evans Hughes, and John W. Davis—have been among its presidents.

The association is entirely nonpartisan, and its recommendations as to legislation have frequently been invited by the Congress. It has performed many valuable services through the years in providing congressional committees with information and expert guidance in the drafting of legislation in many fields.

Some of the American Bar Association's accomplishments have been truly notable. For example, the ABA was responsible for the promulgation of the canons of professional and judicial ethics. The ABA has worked and is working for uniform State laws. The ABA has consistently opposed efforts to impair an independent judiciary. The ABA has exerted strong influence in the promotion of responsible American citizenship.

Efforts of the ABA helped lead to the enactment by the Congress of the law establishing the Federal codes of civil and criminal procedure.

The association has furnished the leadership through which the organized bar has made legal services available, by means of the legal aid and lawyer referral programs, to many thousands of persons with no resources or limited resources for employing counsel.

In recent years the American Bar Association was active in helping to achieve the enactment by Congress of the Administrative Procedure Act and the 1955 bill adjusting upward the compensation of Federal judges and Members of Congress.

The association advises the Justice Department as to qualifications of nominees for the Federal bench.

Among other functions, the ABA has the responsibility of approving, or not approving, law schools after examination of their curricula and facilities.

In short, the American Bar Association has been the focal point through which the legal profession has discharged its professional responsibilities through the years. It seeks, through the present membership effort, to enlarge its resources to perform all the tasks to which it has committed itself.

In discussing the membership-development program, ABA President Gambrell recently stated:

"The American Bar Association is embarking on a long-overdue campaign to double its membership and its personal and financial resources—to bring the rank and file of the country's lawyers into its fellowship and its civic and educational enterprises.

"The association seeks to guide the profession into a future of broader and richer service and usefulness. To do this we need the personal participation of a substantial majority of the legal profession, to claim public respect, to have influence and to finance the institutes, studies, surveys, research, and publications which are so vital to our great objectives. Nothing short of a mass revival can marshal our forces and keep us spiritually, culturally, and technically fit and in step with the amazing developments of this era."

Mr. President, success of this membership campaign will result in future benefits both to the legal profession and to the American people.

Interview of Hon. Alexander Wiley, of Wisconsin, Over Mutual Broadcasting System

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 2, 1956

Mr. WILEY. Mr. President, recently I was intereviewed over the Mutual Broadcasting System. The interview concerned the importance and significance of Africa in the world today. I have the text of the questions and answers of that interview, and I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

Question. Senator WILEY, what is your feeling concerning the importance of Africa in the world today?

Answer. I believe Africa—with its 200 million people—is one of the most strategic areas in the world of 1956, and for many years to come.

There is a tremendous ferment all over what was formerly known as the Dark Continent—the unknown continent.

World communism is shifting more and more of its focus to Africa. It is trying to exploit issues in every land which would help increase tensions, issues like the racial issue, fanning hatred by the colored peoples against the white race.

Question. What other issues is communism trying to exploit?

Answer. Obviously, the issue of colonialism.

Ever since World War II, there has been a tremendous stirring among the underdeveloped countries which had been held as colonies, protectorates, and dependencies of the various European powers.

The Bandung Conference last year in Indonesia—attended by 29 Asian-African nations—showed that the colonial and ex-colonial areas regard freedom from colonialism as the No. 1 issue today in the world.

Unfortunately, many of these peoples do not seem to want to recognize that the Western Powers have obviously largely been giving up their colonial controls. Since the end of World War II, more than 600 million peoples have gained their independence from western rule. Great countries like India, Pakistan, and Burma, for example, have emerged free and independent.

On the other hand, during that same period, more than 700 million people have been enslaved under the new Red colonial rule—the bloody imperialism of the Kremlin. This is the most savage imperialism in the history of the world.

But regrettably, many Africans, like many south Asians, don't seem to be concerned about Soviet colonialism, only about western colonialism.

Question. What is America's position?

Answer. We have no time for colonialism. We are ex-colonies ourselves. Where we controlled nations, like Cuba and the Philippines, we gladly and promptly freed them.

But we don't want communism to move into Africa or anywhere else. We don't want peoples to be unprepared for their own self-government.

Question. What action have you personally taken with regard to Africa's self-government?

Answer. I have been glad to take several steps.

For example, I have been glad to join as a cosponsor of a resolution offered by Senator H. ALEXANDER SMITH, of New Jersey, to convey the greetings of the people and the Government of the United States to the new sovereign nation of the Sudan.

We are hoping the Sudan will join with the western lands in striving for freedom prosperity and peace. Already, however, we note that the Soviet Union is making overtures to the Sudan.

Question. What else has been done, Senator, by yourself and others with regard to African nations' sovereignty?

Answer. Well, it was at my suggestion that the Senate adopted a resolution last year to convey our greetings to the Gold Coast and to Nigeria.

These countries are two of the best demonstrations in Africa, of orderly progress toward self-government.

The Gold Coast has been moving ahead in a commendable way toward control of its own affairs. It is the first colony in Africa to have an all-African legislature and an all-African cabinet.

Nigeria, with a population of 13½ million, has also made a good deal of progress toward freedom.

Question. Why do you feel the Gold Coast and Nigeria are so important?

Answer. Well, you see, the important question today is whether th African countries are going to be ready for freedom when it is granted to them. Fortunately, the Gold Coast and Nigeria are making splendid progress, as I have indicated. I point out however that if Western powers grant freedom prematurely, they might only be playing into the Communists' hands unwittingly, because freedom without the real ability to govern oneself, can lead to chaos. And communism thrives on chaos.

Question. Would you have any other reactions to the African situation as a whole?

Answer. Well, it should be pointed out that there are really many Africas, and many African problems.

By that, I mean that each of the areas trends to have its own special needs, although there are a good many common needs.

For example, North Africa, with its 23 million Arab—Berbar people, and its 2½ million Frenchmen, has its own special problems. The recent riots and disturbances in Morocco and Algeria involve special legal, military, economic, political, and social problems in relation to France.

On the other hand, it is obvious that far to the south, the Union of South Africa, with its concept of apartheid involves special problems.

Then, there are the separate problems of the free nations of Africa—countries like Liberia, Egypt, the Sudan, Ethiopia. Their problems today obviously are not a matter of gaining freedom, because they already have it. Rather it is to raise depressed standards of living.

Question. What would you say would be some of the common factors throughout the whole continent?

Answer. Well, of course, the most common factor is the terribly low economic condition of most of the natives of Africa. I refer, too, to depressed education and health standards—vast illiteracy and disease.

Another common factor is, of course, the most of Africa lives within communal organization, in family, village, or primitive tribal units with all sorts of ancient superstitions and ideologies.

Question. Any other common problem?

Answer. Yes; a problem of most of Africa south of the Sahara is that it is not the land which is poor, but the people who are poor.

In other words, the land is rich. It is rich with agricultural possibilities. It is rich with minerals. More than 90 percent of the world's known deposits of uranium, for example, are in the interior of Africa. The continent holds most of the world's reserves of industrial diamonds, cobalt, columbium, and chromite. It has copper, manganese, tin, iron ore, and other strategic materials.

So the real problem is how to translate these riches into a higher standard of living for the Africans themselves.

Question. Turning back to your own work, what else have you done, Senator WILEY, affecting Africa?

Answer. Well, I have been glad to do my part to help strengthen the various U. N. specialized agencies which have performed so excellently in the African area.

I am thinking, for example, of the World Health Organization, which has sent in wonderful medical teams to combat all sorts of disease in Africa—whether it be malaria, traechoma, yaws, sleeping sickness, or other dread scourges.

I am thinking, too, of the U. N. International Children's Emergency Fund, which has done such a great job for the children of Africa, as it has done for the children of Asia and of South America.

Question. Are there any other fronts in which you have been active?

Answer. Yes, I have been glad to do my part to strengthen the International Exchange Program.

I want more African youngsters to visit America to get to know us better, to study in American colleges and universities.

Of course, it is a fact that some of them may encounter a racial problem here. But we should ask ourselves: Would we prefer that these youngsters study in universities in Moscow—to be trained in revolution, in sabotage, in espionage—or would we prefer them to become more familiar with America—with our free-enterprise system, with our anticolonial history, with our progressive and welcome rise in the standards of our own Negro citizens.

Question. What is your feeling about the point 4 program?

Answer. I believe that it offers one the best opportunities for constructive American work in Africa.

I mean point 4 help in sanitation, in farming, in education, in handicrafts, in housing.

Of course, we want to make sure that the assistance is genuinely tailored to meet the individual needs of each country and people or tribe. In some instances, throughout the world, we have sent in supermodern, expensive equipment which simply could not be used.

What Africa needs is simple know-how, whether it is in the use of farm implements, or insecticides, or seeds.

Question. Do you have any further suggestions for our future program toward Africa?

Answer. Yes. One of my suggestions is that we use more of our own skilled American Negro manpower in our diplomatic, economic, and information contacts with the African peoples.

Report after report has stated how able American Negroes, serving as visiting point 4 aids, or lecturers, teachers, missionaries, can do a wonderful job as they travel around African areas.

They, themselves, can best answer Soviet lies concerning our treatment of our Americans of Negro ancestry.

Question. Just how serious is the Soviet threat in Africa?

Answer. It is growing more serious with each passing day.

The Soviets are obviously committing themselves to spending a great deal of time, money, and manpower to win over African leadership and to stir up African tensions.

You can see increasing Soviet activity in Africa, in everything from more Red trade delegations, expansion of Soviet embassies, additional Soviet propaganda broadcasts in native languages, Soviet shipments of literature, Soviet and satellite conclusion of new trade agreements.

And what you don't see beneath the surface is even more important than what you do see openly.

Question. How do you feel about the overall prospects for the future?

Answer. I am certainly not a pessimist as regards Africa, or any other area of the world.

I believe that if we take sound, intelligent, well-planned action there is no reason why the free world should lose Africa or, for that matter, any additional area or country of the world.

We have learned lessons from our difficulties in the past. We and our friends don't intend to see the Communist pattern of mainland China or the pattern of communism in Indochina or communism in Malaya repeated in Africa.

We hope for example that the dreaded Mau Mau movement in Kenya, instead of being duplicated in other African countries, will be eliminated for the good of the African peoples themselves.

There is a limit, of course, to what we ourselves can do as regards Africa. But we can render reasonable, sympathetic assistance.

And we can urge our Western European friends to continue to help the African peoples to move, as they are ready, toward more and more self-government in an orderly, democratic fashion.

Address Given by Dr. You Chan Yang, Korean Ambassador to the United States

---

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, February 2, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent that there be

printed in the Appendix of the RECORD the text of the address made by the Korean Ambassador to the United States before the Rotary Club at Phoenix, Ariz., on January 20, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My dear American friends, the truth is in distress in this world today. Russia's foremost journal, Pravda, can be translated only as the truth. But is it? It tells the story of a little group of men who occupy the Kremlin. They are not truthful men. They are far beyond our conception of the truth. They misuse it for their own purposes, and they misuse it to the detriment of mankind everywhere.

So resorting to the truth as we know it, may I say I deeply appreciate being with you and the opportunity you have given me to address you.

I am conscious of the fact that you are honoring my people, still the most beaten-up and battered people on the face of the globe. I am their servant in this country, and I am most grateful that you have asked their servant to talk to you.

I should like today, with your permission, to talk about foreign affairs. They are far removed from domestic affairs with which you and I are more familiar. Yet, at this stage of the sad and weary world, foreign affairs seem to dominate. Your great Secretary of State, Mr. John Foster Dulles, has commented on them. They dominate also the headlines of your press. They are a part of the fabric of your everyday life. Yet, are not domestic affairs equally important?

If one has heat in the house and food in the dwelling, one has his domestic affairs basically taken care of. His foreign affairs are far off.

My country lacked food in its houses and heat in its dwellings because an enemy overran it. The enemy came to kill. The enemy was and is aggressive communism.

I wonder if the danger of aggressive communism can be transmitted to you, my listeners? You have not experienced it. We in Korea have. The Communists came down out of the north and set our homes on fire. They dispersed our people. They left us without food. And we shall never forget or forgive what they did to us. I pray God they shall never be able to do the same thing to you good people.

In this time of ordeal we were blessed by having a man among men, Syngman Rhee. He told us that we would have to fight the enemy. We did fight the enemy. The magnificent spirit of this man was behind us in the fight we made. We would have lost the fight had it not been for the United States coming to our rescue. You helped us win it part way. I think we should have won it the full way. But that is something for historians to debate and write about. My country, since the war, has been a shambles. You can see gutted-out buildings and ruined towns and villages all over Korea. But we have hope. We have hope because the United States of America has given us hope. Your aid has been tremendous. It has taken many forms. It has taken the form of fertilizer for our farms; it has taken the form of new and different kinds of buildings for our families. It has enabled us to repair our railroads and resurface many of our streets. Has your aid been entirely one way?

I shall let you give the answer to that. There is in Korea today an army of 750,000 men who will fight for freedom to the end. If you should come with me to the last frontier of freedom, I could show you these men and the munitions they possess. All of these have come from you, but there is something infinitely more valuable that you have given this army. In my mind it is the spirit that activated your own soldiers at Valley Forge. Korea is a long, long way from Valley Forge, but the battle still is the same. Are we to remain freemen or are we to be enslaved by a system which freemen have fought for almost a thousand years? My fellow Koreans out there on the firing line are to me your fellow Americans of days gone by. They have the same purpose. They are willing to fight to the end for liberty.

At one time in my experience in America, I was asked to talk about foreign affairs. I am much more familiar with domestic affairs. They are part and parcel of your personal life. I try to think of how domestic affairs can intrude on foreign affairs and I must be honest in telling you they cannot. Switzerland has never declared war on Korea. Korea has never declared war on Switzerland. We lived far apart. When a Swiss comes to my country he is regarded as a stranger and a man of good will. He is not in possession of a gun and a person who wants to shoot somebody. He is a traveler in a far-away place and he conducts himself as a decent, ordinary person. He is not an enemy in any way, shape, or form.

I wonder why nations can't be that way? The stranger coming to you and receiving your hospitality and in turn giving you his friendship. Wouldn't it be a lovely world if we dealt this way with one another?

There is a story I must tell you about my country. There are two million dead out there, all Koreans. There are many thousands of American dead out there. Why did we fight and why did we perish? There is only one reason, and it is a desire deep within us to preserve decency. It is a desire within us to fight as long as we can for all the things we respect. It is a desire to make the greatest sacrifice of all for the one thing we respect above all others—liberty.

My country is a sad, sad land. It has had the devastation of a tremendous war. It has seen conflicting armies marching up and down our little peninsula four times. It has seen death rained out of the skies. It has seen napalm bombs which spread fire almost electrically. It has seen the handicraft of the men and women go up in sudden smoke. Yet we still are not without hope, because we have the pledged faith of the United States of America.

We are not without hope for another reason, because we have the largest anti-Communist army in the world. We are 750,000 strong. We manned the hills and the valleys right next door to communism. From our bombproof shelters we look out upon the enemy. He is scarcely 20 miles away. He is only 8 minutes from our ancient capital city of Seoul, that is, if he boards a Russian MIG with bombs. So you see, we live on tenterhooks out there. We are closer to death and destruction than any people on the face of the earth. But I want to tell you, my dear American friends, that we remain unafraid.

Again, I repeat, we have the assurance that the United States is behind us. Then we have other assurance—a Korean one, that Syngman Rhee is our leader. He is a great and gentle man, who has worked for 5 decades to redeem the liberty of his people. After World War II, and the signing of the peace, when the Japanese aggressor which had held my country in bondage for 45 years, had been sent back to his own land, Syngman Rhee came home to his own country and his own people. He is out there now, and I am the recipient of his faith. I cannot tell you how humble I feel. I see him, not as just a Korean, but as a symbol of everything we believe in, in the free world of today.

My great President and Patriot, Syngman Rhee, is a frail, little man in appearance, but with a great spirit. He possesses the gift that God gives to certain men—great men—and that is a design to fight for freedom up to the final and dying moment, and never for an instant to let go of that flaming torch. He is the epitome of what I want for my people. He is Korean Independence. He is Korean Liberty. He is Korean Freedom, and as a Korean, I am greatly disturbed by the Communist propaganda which has so many times made our great Patriot misunderstood. I have heard him referred to as "an obstinate, unyielding man." Men of great courage do not yield to the enemy.

I wonder how many fathers are remembered here in America for those same qualities? I remember the story of Mark Twain. He said that he had to live until he was 25 years of age, before he discovered that his father had a grain of sense.

There is not much difference between the farther in Korea, and a father in the United States. Both have lived and learned by experience. Both have had to provide for their families. It is not an unusual thing, but rather the usual thing, that the father has to provide for the child. Our great President has provided for his Nation, and he had to be firm in his beliefs, and firm in his courage, in order to obtain that objective.

Let me tell you just a few facts about this great and good man. He is a frail figure. He has an undying conception of the rights of man. He has a sublime belief in man's right to be free, and he has a limitless amount of courage. He has not been wrong and he will never be wrong. He is so right that if one follows his footsteps, that person cannot do wrong. He mystifies human beings yet, he possesses the qualities of the Saviour, and he has been for his country and his people. You follow him, either clear-eyed or otherwise, but you follow him.

Now, having talked about the man, may I talk about the land? Please do not misunderstand me if I refer to it as a part of the American homeland. It is and it will forever be in the souls of many, many American persons—mothers and fathers who have given us their sons.

My country is a very ancient land. As a matter of fact, when I was in Korea last November we commemorated our 4,288th birthday. Our nation has a recorded history of almost 43 centuries. Our nation was founded on the principle of peace, freedom, charity, and equality.

At very simple but impressive ceremonies marking our National Foundation Day the speakers recalled that since its birth as a nation, Korea has been a country of common race, common language, common customs, and common culture.

They also pointed out what is deep in the heart of every Korean—namely, to see that our country is reunited, the Red invaders driven out of the north, communism eradicated from every phase of our life so that we may, as a republic patterned after your own, progress and thus command the respectful attention and admiration not only of freeman in the Orient, but of freemen and women and nations all over the world.

You see, the division of Korea was not one of her own making. It was arbitrarily forced upon her. It was the result of big power politics. It stemmed from the Yalta Conference. Like any people, proud of its heritage, Koreans will never accept it. When disunity threatened the United States, you fought to preserve your Union. We Koreans are prepared to do the same. There can be no assurance of a lasting peace in Asia or the entire Far East for that matter, until Korea receives her just rights—and is again an undivided nation.

In this strange world where we live today, we, in our outpost of freedom, must maintain a large army. It happens to be the largest battle-tested, anti-Communist army today. We maintain this army largely through American help. But if we did not maintain it, our peninslua which is about the size of the State of Minnesota, would fall entirely under Communist control. Were this to happen Japan would be an

easy prey for the Reds. So, too, would be the Philippines, Formosa, what is left of Indochina, Thailand, the Malayan region, and the islands of Indonesia.

Our centuries-old principle of peace, freedom, charity, and equality would be the first victim of the Reds; even mighty America would be threatened, for conquest feeds upon conquest, and the Communists have not altered their philosophy in the slightest. Their aim is not only known, but confirmed by everyone in the Kremlin from the time of Lenin onward.

Now, it is a very difficult thing for any nation to maintain peaceful progress when the circumstances of the day demand adequate military preparation. It is especially difficult in Korea, which was virtually ruined by the war. It is difficult even in your great country. Your burden of taxes is a heavy one. But, because of your vast wealth and resources, your know-how, and above all your love of liberty, you are able to do this because the spirit of freedom is so deeply imbedded in you that should such a test ever come, you would willingly go out to fight to preserve the altars of your sires, as you have so many times in the past. You would fight to the limit to prevent any Communists from coming around your home, for you do not want a rap on your door in the middle of the night, and secret police seizing you or a member of your family, and take them away to torture or certain death. This has been done in many lands by the Communists, and they would not hesitate to do it to you, if they could but get a foothold on this land of yours.

You do not want the fear of this or other unnatural things intruding or encroaching upon what, with God's help, you have earned in this great country; namely, the right to live and let live.

May I at this point give you a quick bird's-eye view of Korea. It is, as I have said, a relatively small peninsula, jutting out from the mainland of Asia. Its geographical position has been against it from the very beginning. It is both a highroad to the continent, with all of its millions of human beings, and a highroad for continental conquest of the teeming islands of Japan. In the past it has been used for both purposes. The Manchus swept down upon us and the Japanese swept up upon us. In each instance, Korea was the innocent bystander, and had to suffer the consequences of alien invasion.

For ourselves, over our long, long time as a nation, we have never visited aggression or aggressive war upon a neighbor. We have, however, fought like wildcats when aggressive neighbors attempted to invade our territory and conquer us, and we will fight again if need be.

When we saw what the visitation of ancient invaders did to us, we tried isolationism, and it worked for nearly 500 years. And, in the period of our isolationism we developed our culture and made many contributions, which later found their way into European and Western life. Arabian seagoers, for example, got from us the great boon of the navigator—the magnetic compass. Our people also produced the oldest solar observatory in the Far East. Long before radio and television, we contrived an instantaneous "all is well" for the security of our government. From the Yalu River, our northern boundary, to the straits of Shimonoseki on the south, we utilized our mountain ridges for bonfires of good tidings. A signal fire atop a mountain would indicate that everything in the region was peaceful; the next succeeding mountain would have another signal fire, and so on. They would be lighted and expire to attest to the fact that there was no disorder throughout the land. We loved peace so much that instead of saying "hello" or "goodbye," our greetings and farewells were "come in peace," or "go in peace," or "sleep in peace."

Wherever I go all over the world, I find a Rotary Club. My trade is that of a diplomat. But wherever I find a Rotary Club, I find human kindness, understanding, and thoughtfulness about other persons. The last Rotary Club I found was in Seoul, Korea.

I thank you.

The Impact of Atomic Energy on the Oil and Gas Industry

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 2, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent speech entitled "The Impact of Atomic Energy on the Oil and Gas Industry," by the Honorable Gordon Dean, associate, Lehman Bros., of New York City, N. Y., formerly the Chairman of the Atomic Energy Commission.

It is a very important speech, dealing with the development of nuclear energy and its relationship to our present energy resources. Mr. Dean is one of the foremost authorities on the development of atomic energy, both for peacetime uses and for the purposes of nuclear weapons.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE IMPACT OF ATOMIC ENERGY ON THE OIL AND GAS INDUSTRY

(Remarks by Gordon Dean, associate, Lehman Bros., New York, N. Y., senior vice president, nuclear energy, General Dynamics Corp., New York, N. Y., delivered at eighth annual meeting of Pipe Line Contractors Association of America, Boca Raton Hotel and Club, Boca Raton, Fla., January 16, 1956)

I have been asked today to talk to you concerning the possible impact of atomic energy on the petroleum and natural-gas industry. As a group engaged in the construction of pipelines for these two fuels, you are naturally interested in whether the new fuel, uranium, is going to make a serious dent in your business.

Let me say at the outset that I do not think that the impact of atomic energy on the oil and gas industry is something to be feared. I visualize this new force as supplementing existing fuels, rather than replacing them, and I'd like explain to you why I think so.

First, let's examine what we are talking about when we speak of atomic energy. One of the things which distinguishes uranium is that only seven-tenths of 1 percent of it is really useful in the production of energy. In any given portion of uranium, there are 139 atoms of U–238 which are, for all intents and purposes, useless, and there is one atom of U–235 in which we are interested—for this is the atom which will fission, or, if you will, explode and produce heat.

When uranium metal is brought together in sufficient amount and in certain geometric arrangements, we get what is known as a chain reaction; that is, the U–235 atom fissions, releasing neutrons which hit other U–235 atoms which, in turn, split, and so on. The splitting, or fissioning, releases great quantities of heat, and that is why we speak of the gadget in which the uranium is placed as a reactor, or pile, or nuclear furnace. What we have accomplished by all this is simply to produce a new source of heat, and we produce it by a new kind of fuel—uranium.

To convert this into electricity, thus making it useful, we must still go through the same steps as any powerhouse—capture the heat, convert it to steam, take the steam to the turbines and to the generators, and finally to the transmission line. As you well know, in this process 80 percent of our energy is lost, but there is no way of getting electricity directly from fission.

Uranium faces the same heat loss problems as any other fuel. Now the problem is how competitive is this new source of heat with the heat which we get from oil, gas, wood and coal? This is important to the oil and the gas industry because whereas in 1918 oil and gas supplied 15 percent of the total energy of the country, today it supplies close to 60 percent, and a great industry has been built around it.

One of the first things that is quite clear is that the United States is going to be the last affected by the encroachment of the atom simply because we have, not unlimited, but very large, amounts of coil, oil, and gas. Other countries of the world, on the other hand, are less privileged, some having no fuel, and others, such as England, high-cost fuel. In England, the need for a power source, independent of coal, has led the British to build about a dozen rather large reactors, and Britain, by 1975, expects atomic energy to meet 40 percent of her power requirements.

A similar situation faces West Germany, and it is this very incentive to get cheap power which will probably bring Germany very fast among the leading atomic energy countries of the world, even with her slow start.

In the United States in the larger cities we can furnish power at 6 or 7 or 8 mills per kilowatt-hour. In parts of Australia and Japan, it will run from 18 to 30 mills per kilowatt-hour; in Belgium, about 12 to 15 mills per kilowatt-hour, and in some of the remote regions of the world, as high as 4 or 5 cents per kilowatt-hour. The incentive, therefore, to get the most out of the atom is much greater in other countries than it is in the United States. It is hard, and it is risky, to crystal ball, but I would probably not be far off to say that by 1975 in this country, only about 10 percent of our power needs will come from atomic energy, and much of that is not in competition with oil or gas, but rather with coal.

The place where atomic energy is most apt to be utilized is in electric power plants, and even when the day comes that it is substantially used for this purpose, it can have very little effect on the oil industry—for the total amount of residual fuel used for power generation in the United States in 1953 represented only 3.3 percent of the total volume of crude run. As Mr. Robert Wilson, Chairman of the Board of the Standard Oil Company of Indiana, observed, "Even if we lost our central power-plant business entirely during the next 25 years, we would hardly notice it; in fact, we might well lose it to coal long before that, and no tears would be shed."

Of course, natural gas is also used to make electricity, but the amount used represents only about 18 percent of the country's total fuel for electric power.

Just about the biggest single use for fuel oil today is for ships, including tankers. Is this market likely to be invaded by the atom? You are all aware of the fact that the *Nautilus* and the *Sea Wolf* submarines are propelled by an atomic-power plant. This is not to say, however, that the cost of the power in such a plant is competitive with the cost of other fuels. It is very far from it, but there was a special reason for putting an

atomic-power plant in a submarine. A submarine below the surface runs on batteries because a combustion engine requires oxygen for its operation; in order to survive, it must surface to recharge the batteries. When it surfaces it's a target for the enemy. But with an atomic-power plant it can remain submerged for an almost unlimited period. During the ship's shakedown cruise, in the spring of 1955, the *Nautilus* made a 1,300-mile run from New London, Conn., to San Juan, P. R., comletely submerged. It was the greatest distance, by a factor of 10, ever steamed, completely submerged, by any submarine, and it maintained, submerged, an average speed of 16 knots for the entire voyage. In short, the *Nautilus* is able to cruise around the world without refueling. For this, the Navy is willing to pay a price—a price far greater than that of a regular powerplant, simply because it gives to her a far more effective weapon. The likelihood is, therefore, that the Navy, in its new construction of submarines, aircraft carriers, and even escort vessels will go the nuclear route.

But does this mean that our merchant marine, our commercial ships, will do likewise? As of today, the atomic reactor, costwise, cannot beat oil. It may be that in a period of 15 years the oil industry will lose the fuel-oil business of some of the larger new ships. But, again, as Mr. Wilson says, "What of it?" The impact would be slight.

Another field in which atomic power has its attractions is in the field of nuclear propulsion of aircraft. This, today, is a military necessity. The primary advantage of such aircraft is, as in the case of the submarine, one of unlimited range. If we can develop a powerplant for a large bomber, and various groups are working on this in the United States today, there is no reason why it should ever face fuel limitations. There is no reason, for example, why it should not be able to fly nonstop around the world, or, if it made any sense, twice around the world. The weight of fuel is the serious limiting factor in all airplane designs, and a nuclear powerplant would solve the problem. One of these days, we will have it. There is nothing inherently impossible in the situation. I should point out, however, that it presents some serious problems, and these are the problems which arise from radiation. The crew must be carefully shielded from the radiation. Those on the ground at takeoff and landing must be shielded from the radiation. And the flight patterns of the plane must be carefully worked out so that in the event of a crash, dangerous radioactivity is not spread in a populated area. It is this very troublesome problem of radiation which, today, keeps one from thinking too optimistically about the incorporation of reactors into the commercial planes of the future. If all flights could be over water, this would not be too serious, if there were a real cost incentive. But I seriously doubt that any commercial airline will ever wish to equip its planes with reactor powerplants.

What of the railroads? Will we some day see nuclear propulsion of trains? There are some who think we will. I, for one, think we will not. I say this, not because there is any reason why a nuclear powerplant cannot be developed which will fit into an engine and pull a string of cars—if you can put one in a submarine, you can obviously put one on some kind of a mobile platform which will operate on rails—but, again, I think that the problem of radiation will come up to haunt us, as well as the problem of cost. There is no particular incentive to secure unlimited range in a railroad engine as there is in the case of the military submarine or the military aircraft. Trains must stop frequently and in populated areas. A railroad station is almost synonymous with a crowd, and an accident involving a nuclear-propelled engine would present extremely nasty contamination.

Turning to costs for a moment, the railroads would have to completely reequip their rights-of-way with special crews and heavily shielded facilities to load the reactors into the engines and unload the reactor cores containing the spent fuel elements. This would require very extensive facilities.

Again we come back to the question, "Why put one in an engine?" The chances are that it will cost considerably more than coal or oil, and that it will present so many radiation problems that the railroads would regret the day they ever entered the business.

And what of trucks and automobiles? Will they some day be propelled by nuclear powerplants? I, for one, think not. Present fuels are quite adequate for this purpose. Reactors are necessarily bulky. They require heavy shielding and they involve many dollars. They are not going to get down to the size of a gas tank, and as for the radiation problems which would be presented along our highways, I hate to contemplate them.

Another comforting thing to anyone in the oil and gas industry arises from the tremendous growth in the power demand in the years ahead. World population today is a little less than 2½ billion. By 1975, it will be approximately 3 billion, and by the end of the century, 3.7 billion. The demand for energy grows even faster than population. The energy demand in 1975 will be nearly double that of 1950. In fact, the President's Materials Policy Commission predicted that America's electrical energy output in 1975 would be more than triple that of 1950. That same commission predicted that by 1975 Americans would need 5 billion barrels of oil for every 2½ billions they consumed in 1950, and worldwide, one authority has estimated that we may need 40 million barrels a day in 1975, in contrast to 14 million a day in 1950. As R. G. Follis, chairman of the board of Standard of California, predicts: "To meet the energy demand, conventional fuel output will have to rise swiftly, and we will still need the help of the atom."

I have found no one in the oil industry today who fears the atom's encroachment. They look upon it, rather, as a necessary supplement to present-day fuels. Something could come along, of course, to change this picture. You read, this summer, accounts of the Geneva Conference on Atomic Energy, and the statements made there that within 20 years, it is possible that the scientists will master the control of the thermonuclear, or fusion, reaction, thus reproducing on earth the reactions which take place in the sun. This is a possibility. It is far from a probability. But even should it come, its impact on oil and gas would only be felt in that rather small percentage of your product which today goes for power generation. You are not going to have a thermonuclear powerplant on a ship or a plane, much less in the home and automobile.

I probably should make brief reference to the fact that the atom, as of today, is assisting the oil industry more than it is competing with it. Rather extensive research work is being carried on by several of the oil-refining companies into studying the effects of radiation on the molecules of petroleum. Out of this may come some significant changes in the refining process.

Oil well "logging" is helping greatly to take the guesswork and the risk out of oil production and exploration, and the applications of nuclear science are increasingly important to the well logger. Low levels of natural radioactivity provide a valuable means for identifying many of the strata in the earth's crust. From his gamma measurements, the logger determines the oil and water content and, hence, the porosity of oil-bearing strata.

You are all familiar with the use of radioisotopes in the study of flow problems, and the use which is today being made to tag liquids in pipelines by introducing isotopes into the pipes themselves. Virtually all of the large oil companies today have sizable technical teams studying the scientific relationship between oil and the atom. In engine test laboratories, the amount of wear for moving parts, such as piston rings, is now determined in a small fraction of the time formerly required. This is done by irradiating the parts to be studied, and measuring, only after a brief test run, the radioactivity of the lubricating oil in which the worn-off metal collects. Many other illustrations might be given of the atom's contribution, even today, to the oil industry. Certainly, one can summarize by saying it's helped more than it's hurt.

In summary, it would seem that the industry has little to fear from the atom—that in the field of central station power, perhaps 10 or 15 percent, at the most, will be supplied by atomic energy in 1975—that in the foreseeable future, in the field of transportation, nuclear power has its first appeal to the military—both at sea and in the air. It has some prospect of being useful in the commercial field for surface vessels although the costs presently seem to make this application commercially unwise. As for the railroads, the incentive for unlimited range is not present, and the dangers of radiation are great. And as for our highways, forget it.

In short, my advice would be to enjoy this Florida sunshine as long as you can, and look for bigger and better profits in 1956.

Postal Decentralization

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. JOHANSEN. Mr. Speaker, under permission to extend and revise my remarks, I include the following statement regarding decentralization of post-office administration and operations which I have sent to my colleagues on the House Committee on Post Office and Civil Service:

I wish to make a brief statement with respect to the report of the Subcommittee on Post Office and Postal Operations which the House Committee on Post Office and Civil Service today voted to make a House document.

In making this statement I speak for myself alone and entirely on my own initiative, and at the request or suggestion of no one else.

I do so with misgivings because of my great respect for the chairman and every member of the subcommittee, as well as for the two ex officio members of the subcommittee. In what I have to say, I would not knowingly transgress any rule of propriety or courtesy toward my colleagues. Particularly I do not want to appear to arrogate to myself knowledge or wisdom equal to that of the subcommittee in a field which has been the subcommittee's special area of investigation. My sole motive is to seek more information.

My comments are directed to the section of this subcommittee report dealing with postal reorganization and decentralization, covering pages 4 to 18, inclusive, of the committee print.

This section contains what appear to me to be very categorical findings and conclusions. I shall itemize the particular findings and conclusions with which I am concerned later in this statement. First of all, however, I

should like to make a few very brief comments about these findings and conclusions.

1. It is my understanding, and I state this simply as a matter of fact and not critically, that these findings and conclusions are not documented by any printed hearings and lack any detailed elaboration within the subcommittee report itself.

2. The scope and character of these findings and conclusions constitute, in my judgment, a definite and severe indictment either of the soundness and validity of much of the postal decentralization program or the soundness of its present administration and operation.

3. These findings and conclusions, and the publicity already given to them, seem to me to cast a shadow of concern and uncertainty over the Post Office Department, over the key personnel of the regional and district offices, and over the postmasters in relation to the decentralization program, which ought to be cleared up as speedily as possible in the interests of the postal service.

4. It seems to me that because of these considerations it is desirable that the Post Office Committee as a whole, or through this same subcommittee, further explore and disclose the full facts on which its findings and conclusions are based, to the end of either correcting any mistaken impressions or of recommending further constructive corrective procedures by the Post Office Department.

5. For the same reasons, it would seem to me that the Post Office Department should and would welcome further exploration of the matter, with a full opportunity for Department officials to present all relevant information and views they may have to offer on the matter. My feeling on this score is strengthened by the fact that simultaneously with the release of this subcommittee report, the Post Office Department prepared and issued to the committee members a mimeographed statement in the nature of an analysis and rebuttal of some of the subcommittee's findings and conclusions. Indeed, I believe the Department has an obligation to present in even greater detail its views with respect to the subcommittee's findings and conclusions.

6. Finally, I am deeply interested, as a member of this committee, in further clearing up the entire picture because the findings and conclusions of the subcommittee are, in so many particulars, completely opposite to the impression I have gained with respect to the decentralization program. My impressions, admittedly limited, are based on conversations with postmasters and other members of the postal service both within and outside my own district, and on my own most satisfactory experience with the services extended to my constituents and to me under the regional and district office setup.

Let me say, at this point, that I am not posing as a champion of the Post Office Department in this matter, beyond being concerned that full justice should be done the Department in view of the herculean efforts it has devoted to the decentralization program and in view of its vast importance, for good or ill, to the postal service.

Certainly I do not contend—and I am sure the Department would not contend—that the program is perfect, either as to plan or operation. Certainly I share the concern of the subcommittee that no topheavy or costly and unproductive bureaucracy be set up under this program. I do not wish any facts to be concealed for any imagined benefit to the Post Office Department or its present administration. On the contrary, I hope there will be an opportunity to secure more facts—many more facts. I am simply concerned that the findings and conclusions contained in the subcommittee report do not prove to be a verdict based on inadequate facts.

Now permit me to cite some of the specific findings and conclusions in this subcommittee report which are the basis of the concern I have expressed:

1. The statement (p. 14) that "analysis by the subcommittee of the organizational structure which has been placed in effect within the regions visited discloses information and evidence that the present provision for 91 district managers, with office staffs, is neither essential nor desirable to the efficient functioning of the regional organizations."

2. The statement (also p. 14) that "the interposition of this additional layer of supervision * * * will, it is believed, create a serious impediment to postmasters in the management of their offices which would not exist if the plan were revised to require that the postmasters report direct to the heads of the regional offices."

3. The statement (p. 15) that "the subcommittee found that there is no clear-cut definition of authority retained by the Department and that delegated to posmasters," and that "such a condition obviously tends to foster confusion and misunderstanding."

4. The statement (again on p. 15) that "the establishment of district managers to function between the regional organizations and the postmaster would seem to bring about conflict in authority and might eventually make the postmaster an impotent figurehead."

5. The further statement (p. 16) that "any increase in staff or authority for the district managers would cause further conflict in authority and eventually place the postmasters who, in 23,000 offices, are appointed by the President and confirmed by the Senate, in a rather unimportant position."

6. The statement (also on p. 16)—and one to which I must respectfully take exception both as to content and tone—that "it is not believed to be the intention of the Department to eliminate the position of postmaster and replace that official with a lower-salaried supervisor."

7. The statement (p. 15) that "Postmasters have been and should continue to be the local managers of the postal service." It had been my understanding that because of the necessity, prior to decentralization, for postmasters to clear so many details of authority and operation with Washington, they previously fell far short of any business concept of being true local managers. It has also been my understanding that by bringing the Department closer to the postmasters through decentralization, their role as local managers has been greatly improved.

8. The statement (again on p. 16) that "the subcommittee believes that in any reorganization of the Department's affairs a great deal more authority should be delegated to the postmaster"—which statement I cite particularly because of an impression I have gained that the postmasters feel that the present decentralization program has, in intent and in fact, actually served to enhance and strengthen the efficiency, authority, and prestige of the postmaster by providing him a more direct and prompt contact with the Post Office Department.

9. The statement (p. 17) that "if the Department considers it desirable to have field representatives in the areas where district offices have presently been established, these district managers could remain at their same locations, not in the capacity of supervisors of postmasters but in the capacity of service representatives of the regional operations manager or the regional director." I cite this statement particularly because I believe that any confusion (either in fact or in the subcommittee's mind) as to the supervisory versus service representative status of the district manager needs to be cleared up.

10. A final statement, appearing on page 8 of the report, that "Since the Department has undertaken this reorganization program, it is the judgment of the subcommittee that it should be accomplished expeditiously." I cite this statement because it seems to me to stand in absolute contradiction to the clearly critical and condemnatory content of so much of the report with respect to the decentralization program. If the program is as bad, and is fraught with as grave evils as much of the report seems to imply, the consistency of urging a speeding up of the completion of the program somehow escapes me.

In conclusion—In view of what seems to me to be the great importance of the findings and conclusions I have cited, and because I believe there should be further opportunity for the architects of this decentralization program to review that program with the subcommittee or the full committee, I feel I must reserve judgment on the subcommittee report and await more information. I hope this committee will, in its wisdom, be of like mind.

The Forced Resignation of Civil Aeronautics Administrator Lee

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, February 2, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in a recent edition of Flight magazine, which is an old and well established aviation magazine. The editorial is entitled "The Forced Resignation of Administrator Lee." The editorial deals with his firing and replacement by a purely Republican partisan appointee to this highly technical task of keeping our airlines safe and providing for adequate and safe means of traffic control and airport development.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FORCED RESIGNATION OF ADMINISTRATOR LEE

Recent issues of this magazine have pointed out the major factors responsible for the unfortunate return of the Civil Aeronautics Administration into the public arena as a political football. It all came to a head last month when Secretary of Commerce Sinclair Weeks forced the resignation of Mr. Fred Lee as CAA Administrator.

Boiled down to one simple statement of fact, the situation can be summed up as follows: The CAA has been placed in the untenable position of trying to carry on its constitutional responsibilities in the face of tremendous aviation growth without sufficient money to handle that growth, especially insofar as increased air traffic is concerned. Mr. Lee is simply the goat, the fall guy, of this impasse.

The people responsible for this hot seat are Under Secretary of Commerce Rothschild (and before him Under Secretary Robert Murray), Secretary Weeks, and the executive branch of the Government headed up by President Dwight D. Eisenhower. A portion of the blame for the untenable position of the CAA must be shouldered by the Congress, who found it too easy to take the recommendations of the Budget Bureau and the Department of Commerce planners when it came time to write and pass the appropriations. Mr. Lee's warnings and requests went unheard.

These columns predicted that the situation would get worse before it started to improve.

While we did not contemplate anything as drastic as the removal of Fred Lee as CAA Administrator, it was very clear that something had to give and actually Lee's forced resignation is more deplorable than it is surprising. We all might as well face the fact that there's a new aviation mess in Washington and the politicians are in the saddle.

The departure of Mr. Lee has brought CAA to its lowest morale level in recent history. It won't take long for the bad morale situation in Washington to spread out into the field. What hurts most is the realization that we need more, not less, technically trained CAA career men of experience as the many complex jobs right now and can ill afford the exodus of many fine men who can no longer stomach petty Department of Commerce interference with problems and matters Department officials simply don't comprehend.

There is very little consolation in the knowledge that Messrs. Weeks and Rothschild will inherit the mess they helped to create and that it could conceivably be their own political undoing and the end of Department of Commerce control of the Civil Aeronautics Administration, a proposal which has been threatened by Senator MIKE MONRONEY. He is fairly well up on his civil aviation and is generally conceded to be the natural replacement in the Senate for that stanch supporter of civil aviation and author of the Civil Aeronautics Act of 1938, Senator Pat McCarran, who passed to his final reward 2 years ago. At least four congressional committees have shown an interest in full investigation of the recent Department of Commerce manipulations to get a strangle hold on both the CAA and the CAB. With election year coming up there's a good chance that Messrs. Weeks et al. will inherit the hot seat unintentionally and end up with a White House request for their resignations, too. Usually there's not that much simple justice in Washington politics but any intelligent observer can not overlook the possibility.

While some sideliners see in all these recent developments certain nefarious schemes afoot to put ground transportation people in command of aviation, or read into Lee's forced resignation the multimillion dollar argument over Tacan versus VOR DME, we take the considered view that these are only minor actors and plots in a much larger drama in which basic United States aviation policy is again up for debate and basic improvement.

It is truly unfortunate that a man of Fred Lee's ability, character, and airmanship had to be scuttled after 33 months of intelligent CAA leadership under almost impossible budgetary and administrative conditions. Yet, if his forced resignation serves to focus the spotlight of public and industry attention on the near-fatal weaknesses in sound Government aviation policy, planning, and implementation and brings about a full-fledged congressional investigation with eventual independent status for the CAA, then Mr. Lee will not have been knifed in vain.

Statement on Israel and the Middle East

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. PELLY. Mr. Speaker, under permission to extend my remarks, I include the statement which I endorsed on the Middle East situation on October 10, 1955. Today, with the situation more tense, I stand on this statement even more strongly than I did previously.

STATEMENT ON ISRAEL AND THE MIDDLE EAST

Recent developments in the Middle East have reemphasized the necessity of establishing peace in that troubled area. Widespread sale of arms to Egypt and other Arab powers by the Communists countries is an ominous indication of the unwillingness of these States to maintain peace and is further proof of the instability of the Arab countries. Under these conditions, the United States should reassert its willingness to guarantee Arab-Israel borders through formal treaty obligations.

The declaration of such a plan by Secretary of State John Foster Dulles on August 26, 1955, encouraged those of us who believe that our own security and the prevention of Communist expansion is dependent upon a peaceful solution of Middle Eastern tension. Unless this Government takes such a strong position, border clashes and a tragic arms race will ensue. A conflict could only result in an increment to Communist strength and unnecessary harm to the democratic State of Israel, whose very existence under United Nations sponsorship is a responsibility shared by our Government.

Therefore, I urge that an additional assurance be given to Israel that it will be protected and that warnings be made to Egypt that aggression with Communist-supplied arms will be regarded by the United States in a most serious light.

The Dairy Industry

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an excellent statement on the dairy industry by Assistant Secretary Earl L. Butz, of the Department of Agriculture. I think it is an interesting and encouraging report on the great strides dairymen have made in solving their problems during the past 3 years.

THE EXPANDING AMERICAN MARKET

(Address by Earl L. Butz, Assistant Secretary of Agriculture, U. S. Department of Agriculture, at the annual convention of the Ohio Dairy Products Association, Columbus, Ohio, January 24, 1956)

During the past couple of years dairy farmers and the dairy industry have increasingly been merchandising their products and moving them into human consumption. The American dairy industry has been teaching a great and fundamental lesson in farm economics. It has demonstrated that effective pricing and aggressive merchandising, teamed together, can move dairy products into human stomachs rather than into Government warehouses.

During the last couple of year especially, the dairy industry has greatly increased its efforts in promoting and merchandising dairy products. We in the Department of Agriculture commend all of you for your splendid efforts in this direction.

In the past years, I believe, weak merchandising, complacency and resistance to change often have hampered the possibility of bringing about increased consumption of your products. We are therefore pleased to see the fine manner in which your industry has come forth with the vigor, boldness, and imagination it needs to meet the challenge of substitutes, imitations, and competition of other goods for the consumer's dollar.

A year and a half ago the dairy industry was faced with frightening surpluses. Government stocks of butter, cheese, and powdered milk were at an all-time high, and were increasing at alarming rates. This occurred under the price stimulus of 90 percent of parity supports. Under this stimulation, production increased rapidly while per capita consumption of nearly all dairy products decreased. Something had to be done.

You are all familiar with the story. The Department of Agriculture, recognizing that the country simply was not buying all the milk products produced at the high rigid price support level, adjusted dairy supports to 75 percent of parity. About the same time, the American Dairy Association, State associations, dairy-marketing organizations, and dairy-producer groups intensified their advertising and sales promotion activities.

Everyone is pleased with the results. Consumption of nearly all dairy products is up, both on a per capita basis and in total. Government price support purchases of dairy products dropped sharply. For example, dairy price support purchases of butter, cheese, and nonfat dry milk solids in 1955 were down 35 percent from purchases in 1954. Continued heavy disposals of dairy products through 1955 brought Commodity Credit Corporation inventories at the end of the year to the lowest point for butter and cheese since 1953, and for nonfat dry milk since 1951. Last December 31, the uncommitted holdings of CCC amounted to 47 million pounds of butter, 264 million pounds of cheese, and only 3.1 million pounds of nonfat dry milk solids. These figures compare with peak holdings of 466 million pounds of butter in July 1954, 436 million pounds of cheese in September 1954, and 599 million pounds of nonfat dry milk solids in April 1954. Butter purchases during 1955 were down 50 percent from 1954 butter purchases.

But the most heartening thing of all is that the average prices received by producers for milk in 1955 averaged above 1954, even under the lower price support levels. This reflects the increased proportion of milk going into higher level utilization.

What is happening in the dairy industry is a living demonstration that a flexible price support program, judiciously handled, can turn a great farm enterprise off the road toward financial ruin, and down the road of economic stability with increasing sales in nongovernmental markets.

The important lesson in sound farm economics the dairy industry is writing should be watched closely by other sectors of the American farm economy.

CONSUMPTION RATES ARE UP

The most heartening note in the dairy picture in recent months is the increase in per capita consumption of the principal dairy items. The annual rates of consumption of milk, butter, and cheese showed encouraging increases in 1954 over the previous year when the 90 percent of parity supports were still in effect for dairy products. 1955 showed still further increases.

It is particularly encouraging to note the higher rate of fluid milk consumption. Nearly half of the available production of milk is consumed as fluid milk and cream. For that reason even a small percentage increase in the use of milk in fluid form brings a substantial improvement in the supply-demand balance. Consumption information for a group of Federal order market areas indicates that in 1955 consumption of fluid whole milk ran about 4 percent above a year earlier. A part of this increase in milk sales in city markets must be attributed to

increased population. However, the general rate of population increase has been less than 2 percent per year. It therefore appears that per capita consumption has increased about 2 percent.

Per capita consumption of butter increased 6 percent during 1954 over the previous year, and increased another 2 percent in 1955.

This means that 166 million people in the United States are now eating butter at a rate of 9.2 pounds a year. Last year per capita consumption was 9 pounds. This is in contrast with 1953, when consumption was 8.5 pounds for each person, with high price supports holding butter off the market.

The consumption of American cheese per person rose 8 percent in 1954 over 1953, and continued up in 1955.

AGGRESSIVE MERCHANDISING IS STILL NEEDED

You have made a good start in publicizing your product and in moving it into consumption. You must not relax on your efforts to sell dairy products. The great American market is expanding rapidly both in numbers and purchasing power.

In total, about 121 billion pounds of milk was used for food products in 1955 compared with about 120 billion pounds in 1954. The Census Bureau indicates that if the present birth rate continues, our 1960 population will approximate 179 million. This is equivalent to adding a city about the size of Philadelphia each year to the dairy market, or a market for 2 billion additional pounds of milk.

Even though substantial progress has been made so far in increasing total consumption in the United States, the fact still remains that the per capita consumption of dairy products in this country ranks 13th among 15 countries for which information is available.

In 1955 our per capita consumption of milk and dairy products in terms of whole milk equivalent approximated 710 pounds, which was about half that of the 2 leaders, Ireland and New Zealand, where consumption per person is somewhat more than 1,400 pounds a year. It might also be pointed out that we rank 13th in butter consumption; 11th in cheese; 6th in fluid milk; 4th in dried milk; and lead in only 1 category, that of canned milk.

These figures indicate strongly that we have a long way to go if we are to realize fully the market potential of dairy products here in America.

Although most Americans today are well fed, dietary surveys show that many families still need to consume more milk if they are to have adequately balanced diets. I think that we can increase consumption among these families if we continue to educate the consumer sufficiently in the uses and advantages of our dairy products. In fact, it might be well if we tried to match the increase that took place over recent years in the meat industry. The consumption per person of red meat in the United States increased from approximately 143 pounds in 1949 to 161 pounds in 1955. During the past decade there has also been a significant increase in the utilization of the nonfat solids of milk. Such high quality food proteins should find a ready market in a diet-conscious America, which is steadily swinging away from some traditional starchy foods.

The goals mentioned here illustrate some of the incentives for industry efforts to develop broader markets for dairy products here at home. Such industry promotion is a necessary part of the overall program to reduce dairy surpluses by increasing consumption here at home and building a larger market for them abroad.

There is a potential market also in expanding our foreign outlets. The Federal Government, in disposing of its surpluses, has done much to acquaint foreign governments and other foreign purchasers with the quality of our dairy products. These foreign-disposal programs have been carried on with the same care as with our domestic-distribution programs to develop new demands for dairy products without displacing sales normally made by the dairy industry of the United States or of friendly foreign countries.

GOVERNMENT STOCKS REDUCED

The total quantity of dairy products moved out of Government warehouses in the marketing year ending March 1955 totaled 1.5 billion pounds. This was 3½ times the amount disposed of in the previous marketing year. Disposals in the 7-month period, April through October 1955, totaled 800 million pounds.

During the 1954–55 marketing year a total of 761 million pounds of dairy products from the inventories of the Commodity Credit Corporation were moved into consumer channels through donations to nonprofit school-lunch programs and to needy groups both here and overseas. This represented an increase of 431 million pounds over the previous year.

With the cooperation of school officials and the efforts of local dairy industry and citiben groups, a large market for milk has been developed among schoolchildren. There are now two important programs through which the Federal Government participates in promoting milk consumption by schoolchildren—the national school-lunch program and the special school-milk program.

In the 1953–54 school year, 10 million children in secondary and elementary schools out of a total enrollment of 34 million participated in the national school-lunch program. They consumed 1,600 million half pints of milk in this program. This was double the amount used by participating schools in the first year of operation under the National School Lunch Act, 1946–47. Last year participation in the school-lunch program increased to 11 million children and milk consumption rose to 1,765 million half pints.

The special school milk program which was started in 1954 has encouraged even more the consumption of milk by school children. During the 1954–55 school year a total of 8.7 million children in 41,400 schools participated in the special school milk program. The increased consumption under this program totaled 451 million half pints for the school year, an amount equivalent to the total milk produced during June 1955 in the State of Tennessee. Changes were made in this program for the 1955–56 school year to eliminate some operating problems that limited its full development the year earlier.

Secretary Benson has recommended to the Congress that authority for the special school milk program be increased from 50 million to 75 million annually. This will bring still more schools and additional pupils into the program next year.

Consumption of fluid milk by Army, Navy, and Marine personnel has also been increased by about 40 percent through a supplemental program authorized under the Agricultural Act of 1954. Under similar arrangements, the Veterans' Administration hospital patients increased their consumption of milk 1,187,000 pounds over a 4-month period. In addition to the fluid milk program, over 86 million pounds of butter, more than 3 million pounds of cheese, and 7 million pounds of nonfat dry milk were transferred by Commodity Credit Corporation to the Armed Services through the end of December 1955. Most of these supplies represent an addition to the normal market purchases of the military agencies. Commodity Credit Corporation has also transferred 3.6 million pounds of butter to the Veterans' Administration.

Under all these programs, the Department of Agriculture has aimed at increasing the consumption and at the same time has attempted to build a market for future sales to persons who have acquired the habit of consuming milk and dairy products.

In order to increase consumption further, all of us must do an even better job of marketing and merchandising. In doing this, we not only will reduce surpluses, but we will also shift emphasis away from price supports as the chief assurance of fair prices and reasonable incomes. Experience has shown that price supports cannot increase consumption. This can only be brought about by realistic pricing and more aggressive selling that will encourage increased consumer buying and expanding consumption.

The future for the dairy industry is hopeful. Consumer incomes are increasing at a rate in excess of $1 billion a month which means that the demand for dairy products in 1956 should be at least as strong or stronger than in 1955. Population continues to grow, and last but not least, the dairy industry shows no sign of diminishing its promotional efforts.

The lesson is clear that dairy farmers, processors, distributors, and Government, working together cooperatively and imaginatively, have accomplished in the short span of a couple of years a marked consumption increase, and an improved income situation which could never have been achieved with Government working alone on the high price-support route.

Our sincere congratulations go to the entire dairy industry for the splendid job it has done. The lesson it has taught American agriculture stands as a beacon light in this age of increasing clamor for governmental assistance.

Use of United States Ships in Disposal of Surplus Agricultural Products

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. PELLY. Mr. Speaker, the Merchant Marine and Fisheries Committee has been holding open hearings on the administration and operation under Public Law 664, 83d Congress, the so-called preference law. The committee has been particularly interested to ascertain the effect on disposal of surplus agricultural products of the 50–50 law which requires that at least 50 percent of the gross tonnage of Government-financed or owned cargoes be transported on private or United States flag commercial vessels, to the extent such vessels are available at fair and reasonable rates.

It was gratifying to me as a member of the committee to have Mr. Gwynn Garnett, Administrator of the Foreign Agricultural Service, in direct answer to my question, say that the disposal program has been successful. This morning a representative of the State Department agreed that the program has been successful also. It should me emphasized that this program has not cost the farmers of this country one cent. The cost to the Government has been very modest in relation to the benefits. Since there are certain foreign governments with merchant marines of their own which

have been pressing for the elimination of the cargo-preference clause, and the matter may come up for consideration, I have introduced H. R. 8997, a bill providing that 100 percent of these cargoes be transported in American vessels. In all fairness, I have thought that if consideration is going to be given to a change that it might well include a change that would help our national interest rather than one which would hurt it. I have advised the Merchant Marine and Fisheries Committee that I shall not ask for a hearing on this measure, unless the interests opposing the preference cargo become active.

Meanwhile, I do hope the Members of Congress who represent agricultural districts will recognize the advantage to agriculture of maintaining a merchant marine. Particularly, the interest to exporters should be stressed in having American ships on the sea routes and in shipping conferences in order to protect them against manipulation by foreign dominance of ocean freight structures. We are helpless in competing in world markets without the American merchant marine.

Secondly, it should be recognized that the entire program of disposing of surplus agricultural products may well be jeopardized if shortsighted efforts are made to eliminate the 50–50 preference cargoes.

Refuges Doomed?

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. SIKES. Mr. Speaker, under permission granted me to extend my remarks, I request that the attached article by Michael Hudoba entitled "Refuges Doomed?" which was carried in the February 1956 issue of Sports Afield, be inserted in the CONGRESSIONAL RECORD:

REFUGES DOOMED?—INTERIOR SECRETARY MCKAY OPENS NATIONAL WILDLIFE REFUGE SYSTEM TO OIL AND GAS EXPLOITATION

(By Michael Hudoba)

This is it. Sports Afield, alarmed over the immense power in the hands of the Secretary of the Interior, last June warned: One man can wipe out our wildlife refuges. Now it has happened. One man has proven that he has the power to defeat the very purpose of the entire refuge system.

With the plaudits of sportsmen still ringing in his ears for saving the 10,700 acres of the Wichita National Wildlife Refuge, Interior Secretary Douglas McKay has thrown the 17 million acres of national wildlife refuges wide open to exploitation.

Secretary McKay has made the lands of the national wildlife refuge system available to oil and gas leases. He has encouraged oil and gas drilling operations on these lands, reserved for wildlife restoration and vital to the future of our wildlife.

McKay has done what other Interior Secretaries have stoutly resisted over the years. He has reversed a long-standing policy to preserve the integrity of the wildlife refuges for wildlife conservation needs. He has put the Fish and Wildlife Service back on the sacrificial spot to try to defend every acre of national wildlife refuge lands against oil and gas exploitation.

In the past only several refuge areas acquired with public funds were potentially subject to oil and gas exploitation because the landowners who sold the lands to the Government reserved the mineral rights. McKay's action cancels the 2-year stop on any leasing of refuge lands and offers an invitation to exploit the refuge lands.

We can't charge an outright giveaway. While applications for oil and gas leases flooded the Fish and Wildlife Service the minute the gates were flung open, applicants will have to pay fees to the Government for the leases. Some 10 of the 272 refuges were exempted from leases. Among these were the ones conservationists defended with individual battles: Wichita, the Arkansas whooping crane refuge, the Red Rock Lakes trumpeter swan refuge. And the leasors may be required to spend some money to do some things to prevent undue damage to the refuge land and protected wildlife in the oil- and gas-drilling areas. They won't be allowed to pollute the waters of the refuge area. Theoretically, the land will still be reserved for wildlife conservation.

But the fact that these national wildlife refuges are now open to oil- and gas-leasing applications will force refuge personnel who should be allowed to continue devoting their time to improvement of refuge lands for wildlife restoration, to become oil and gas experts. They will have to match wits with the exploiters to try to suggest ways exploring and drilling operations may be carried on to ease expected damage to the wildlife refuge purposes.

McKay's order, which had the approval of Assistant Secretary D'Ewart's office, piously says that wildlife values will be given first consideration in making leases for oil and gas operations. We thought all along that the refuge purpose was for wildlife. The order also sets up a code that gives the Fish and Wildlife Service the right to require the oil and gas lessees to submit proposed plans for drilling and operations on refuge lands to soften the damage to wildlife of the refuge area.

On the face of it, this seemed enough for the Interior Department and the administration to do for the public's national wildlife refuge system. Secretary McKay and those who got him into this may feel he should be commended for making the Fish and Wildlife Service the agency to monitor the oil- and gas-lease program plans by the drillers and exploiters. No thinking conservationist will be kidded by this token sop of conscience salve, however.

In reality, this order, opening the refuge lands to exploitation for the highly profitable mineral leases and fortified by Government tax incentive to do a lot of drilling, defeats and nullifies the basic refuge purposes. The refuges can now be only partially managed for the primary reason for which they were established. The refuge managers who represent the public interest must now divide their work and wildlife programs to save and salvage wildlife values on the lands which were specifically set aside for the primary wildlife needs. The management of the refuges for the public interest is now prostituted.

While we appreciate the secretary's seeming concern to have wildlife values protected on the refuges, it is little comfort to have the order outline details for the Fish and Wildlife Service to examine proposed drilling and exploitation operations for refuge lands. The effect of McKay's order openly invites the leasing of every acre of refuge land with but several exceptions.

We dislike to point out that the powerful pressures which forced the Interior Department under this administration to open up the refuge system (and which coincidentally got into the choice oil leases real early), have other points in their favor which could so easily nullify the intent of the wildlife protection factors in the oil and gas order.

Sports Afield readers will recall our serious concern over one of the first actions of this administration in taking office. That was to take the directorship and assistant directorships of the Fish and Wildlife Service from under the protection of career civil service and making these subject to political appointment—with all the vulnerability that such appointments have to face, especially when concerned with protecting public interest values holding valuable resources in their programs.

In the face of the oil- and gas-leasing order, it would be almost too much to ask protection for national wildlife refuges by administrators who had the backing of civil service. Even at that, no human being should be required to try to insist on wildlife values in the refuge system while subject to all the torments that political pressure can apply—especially when big money is at stake, as it is in this oil- and gas-lease operations program.

With McKay's signature on the order, the Fish and Wildlife Service was almost immediately swamped with applications for oil and gas leases. The Service now has to prove the value of the wildlife and the wildlife restoration lands against each oil- and gas-lease application and against each proposed drilling operation.

Prior to Secretary McKay's order, it was the other way round. It has been a long-standing policy that the 17½ million acres of refuge land—those bought with sportsmen's duck-stamp dollars, those with appropriations by Congress for specific and primary wildlife conservation needs, and even those signed over from unwanted public lands—should be maintained as the last remnants of lands needed to hold hope for wildlife futures.

Where do we go from here?

Conservationists felt that Congress had taken steps to protect wildlife refuges when a last-ditch and last-minute effort brought amendments into the Atomic Energy and Mineral Leasing Acts during the last hours of the 83d Congress. These provided that any leases for national park, monument and wildlife land could be made only when the President, by Executive order, finds and declares that such action is necessary in the interest of national defense.

Is Secretary McKay's order legal in view of this intent of Congress?

Is there any integrity in the administration that can rise to defend the limited lands reserved for the public interest?

Is it too much to hope that Secretary McKay will see the damage he has wrought and take steps to repair it?

Was this done with President Eisenhower's approval and will the President take the necessary prompt steps to save the national wildlife refuge system?

We can only hope that Congress will take a hard look at this order, and that the sportsman-conservationists of the country will take a harder look—with articulate expression.

A Positive Program for Cancer Research

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. O'HARA of Illinois. Mr. Speaker, it has come to me as a shock the

knowledge that despite the horrifying ravages occasioned by cancer, very little is being spent in the basic research necessary to finding and remedying or the causes of cancer. Maurice Goldblatt, outstanding merchant in the city of Chicago, for years has been giving of his time and his money and his effort in this vital field. Mr. Goldblatt is the chairman of the University of Chicago Research Foundation.

I am extending my remarks to include an article by Mr. Goldblatt setting forth a positive program in cancer research that should reach the thoughtful reading of my colleagues and I trust will be followed promptly by legislative action promoting the program set forth in Mr. Goldblatts' article.

Mr. Goldblatt's article follows:

For many years I have had a deep interest in health problems, especially cancer. I have tried to persuade other private citizens to support medical research and have given help myself. Because of your deep interest in the problems of health, I want to bring the following information to your attention:

THE BOTTLENECK TO FINDING A CURE FOR CANCER

There is a lack of modern facilities and adequate numbers of thoroughly trained researchers devoted to finding a solution to the cancer problem.

There is too little money supporting cancer research.

This year almost a quarter of a million persons will die of cancer.

Today—as every day—cancer will kill approximately 650 individuals.

Unless something is done about it 50 million Americans now living will develop cancer. Half of them will die from it.

Cancer is a major public-health problem and we cannot afford to be complacent about it.

The American medical profession, American business and industry, the Federal Government, and the American public and the Congress are not taking full advantage of the opportunities available to them to help solve the riddles of cancer.

The medical profession is doing a splendid job in caring for the sick and applying new discoveries to the diagnosis and treatment of cancer but enough doctors are not being trained in the special problems of cancer and enough doctors and other scientists are not concentrating on research in this field.

American business and industry is well aware of the staggering economic loss due to cancer—the loss of millions of man-hours of work involving many more millions of dollars worth of products and skills and the resultant drain on the Nation's financial resources. Yet, American business and industry is not lending its support to the attack on this problem in the same vigorous fashion it is accustomed to eliminate other causes of waste and business inefficiency.

The Federal Government, the philanthropic foundation, the voluntary agencies have all stepped up their efforts to support cancer research in recent years, but are not doing enough to solve the problems of cancer. Compared with past decades there has been a great deal of cancer research in recent years. The $50 million spent by these agencies on cancer (partly for research) in 1955 is not an appropriate share of our gross national product of $390 billion in the same year.

To avert eventual socialized medicine the cooperation of both the Government and the medical profession in disbursing adequate funds for medical education, research projects, and research scientists is essential. Government support is now being given without control and could be increased without control.

The American public is not sufficiently aware of the tremendous need for additional research facilities and trained researchers in the cancer field. If they did know, they would write their Congressmen and Senators demanding that they take a greater interest in these problems.

In spite of the lack of manpower and facilities, many good proposals for cancer research had to be rejected because of insufficient funds.

To solve the deadly cancer riddle, more money is needed to supply more researchers with the most modern research equipment and facilities. Stating the problem simply, a researcher today must be truly a dedicated person. Not only that, but his family must be dedicated, too. They must be able to live on the inadequate salaries we pay our researchers today.

A young doctor entering research work after completing 3 to 4 years in college, 4 years in medical school, a year's intership, 3 years residency, and 2 years Army training will probably earn about $3,000 to $5,000 a year. The average salary of the full-time medical research doctor, many of whom have dedicated their lives to research and many more of whom have won the Nobel prize for their work, is $4,800 a year. Had they entered private practice, they could have commanded from $10,000 to $15,000 in their earliest years and much more than this after a few years.

A medical education is expensive. The cost per year for a medical student is about $2,350 for tuition, books, living expenses, etc. A medical education will cost about $10,000 for 4 years of medical school besides the cost of premedical education which consists of at least 3 to 4 years of undergraduate work. In spite of this cost, medical schools are losing an equal amount on each student.

How can we attract more intelligent young men into research work with a situation like this?

The entire salary structure of medical institutions must be improved. The chief obstacle of raising a new young doctor's salary is the salaries of the established older staff members of the institutions. In view of current cost of living, their salaries, too, are much too low. Many top men dedicated to their work are far less concerned with the monetary return than they are with the opportunity to carry out their research ideas, but they are increasingly worried by their inability to attract junior members to their research staffs at salaries they now are able to offer. The recent generous gifts of the Ford Foundation will relieve very little of the salary problem for teachers in our private medical schools.

Most of the teaching facilities of our medical schools are antiquated and old fashioned.

Many of our research laboratories are antiquated, too.

They just don't have the up-to-date equipment they need. Many have had no additions to their preclinical teaching space and research laboratories since early in the century. The deans have estimated that a one-half billion dollar program is needed just to bring facilities up to date. Because of inadequate funds, very few of the things which should be accomplished are actually being achieved.

For the 1955 fiscal year, Congress appropriated $8,160,000 to the National Cancer Institute for cancer research projects and gave the Atomic Energy Commission about $2,800,000 for this purpose. Grants from private sources in 1955 included $5,519,600 from the American Cancer Society, $909,522 from the Damon Runyon Memorial Fund, and $1,023,142 from private foundations.

Ten times that amount would be very little in comparison to the other expenditures, and the importance of the lives that could be saved as a result of research findings. Why doesn't the Government provide more funds? Why doesn't the American public provide more funds? Why doesn't American business and industry provide more funds?

The citizens committee, of which I am a member, is comprised of a handful of lay people as well as outstanding physicians and scientists. Each year we plead with the House and Senate Appropriations Committees to boost the appropriations for research projects. Each of us in our various capacities is also seeking funds from voluntary sources but, though we are proud of the support we have received, we all know that much more should be done.

Actually, there is no information as to how much more money is needed.

All that we do know is that amounts available are not getting the job done on a large enough scale and rapidly enough.

When I visited Marion B. Folsom, Secretary of Health, Education, and Welfare, last year, I told him that more research is needed and I recommended that he ask Congress to appoint a committee to survey medical research needs throughout the Nation. Since then the President has asked for a 46 percent increase in research grant funds for the Public Health Service program. He also asked that research fellowship training be stepped up by 49.1 percent.

As a solution I recommend the following:

1. The Congress should pass a bill appointing a board consisting of businessmen, doctors, and Congressmen to make a survey of existing problems and needs.

2. At the present time about $500 million is needed to bring existing facilities up to date. I recommend the Government provide $250 million and institutions should organize fund-raising programs to provide $250 million from private sources.

3. Our institutions should pay a living wage to research doctors, thus encouraging more graduating medical students to make research a career.

4. Funds should be provided for long-range research projects thus assuring the researcher continuity in his work.

5. The American people should be informed of research needs and they would demand the Government do more. Unless the steady climb of this dread disease is halted, 50 million Americans now living will become cancer victims. Half of them will die of it.

In this paper I have discussed cancer, but the same arguments apply to research in heart disease, mental disease, and other major causes of illness.

I hope that you will vote for the research and teaching construction support bills now before Congress and also for more generous support for medical research and research training. The proposals before Congress must have your full support.

Sincerely,

MAURICE GOLDBLATT.

Beastiality of Red China Communists Now Fully Exposed—Red China Must Not Be Admitted to United Nations—III

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, this is the third of a series of five articles by Mr. John Troan, of the Washington News, on the inhuman treatment by the Chinese Communists to American

prisoners. I trust that Members of the House are interested enough to read this article. It will not be long before the Chinese Reds will be demanding entrance into the United Nations.

The third article follows:

[From the Washington Daily News of February 1, 1956]

"THE COMMIE GESTAPO BREEZED IN ON US AND WE LANDED IN JAIL"

(NOTE.—"The Communists are just plain beasts," said Dr. Homer V. Bradshaw, who landed in a Red prison because he's an American. Dr. Bradshaw and his wife, Wilda, a dietitian, had been Presbyterian missionaries in southeast China since 1928. When the Communist storm clouds began to gather in 1949, the Bradshaws were "arrested" by the Reds, subjected to torture and bestiality, breaking Dr. Bradshow physically and Mrs. Bradshaw mentally.)

(By John Troan)

PITTSBURGH, February 1.—Dr. Homer V. Bradshaw and his wife, Wilda, were just getting ready to go to sleep at the tiny Presbyterian mission in southeast China which they had come to regard as their second home.

It was 10 p. m. on March 2, 1951.

Most of their belongings were packed because the Bradshaws had heard, via the Chinese grapevine, that they were going to be "kicked out" of the country in a couple of days.

But the Reds did a switch. Two days before the scheduled ouster, "the Communist Gestapo breezed in on us," said Dr. Bradshaw.

And instead of kicking the Pittsburgh missionary couple out of China, the Commies kicked them into jail.

"A couple of the Reds had pistols," Dr. Bradshaw continued, "and some of the 'home guard' carried automatic rifles. They demanded the keys to the house and ordered us to unpack everything and spread it on the floor.

Then they told us to get going to the mission hospital, where we'd be told what it was all about. That was just about 5 years ago and we still haven't been told."

THEY WERE USHERED INTO A SMALL ROOM

At the mission hospital the Bradshaws were ushered into a small room which had served as a chapel.

There they discovered the Communists also had rounded up Miss Sarah Perkins, the 58-year-old mission nurse from Georgia; and Mrs. David Lau, another American missionary from Pittsburgh who had married a Chinese Protestant clergyman.

Dr. Bradshaw says he sat in his hospital prison for 5 days before anyone came to question him.

"Then, on March 7," he relates, "I was questioned in Chinese for about an hour. It wasn't too bad. All they wanted was some general information about the mission.

Dr. Bradshaw then resumed his solitary confinement—until midnight March 18 "when the commies brought along an interpreter for the inquisition."

"They also brought along a sheet of paper for me to sign," said the doctor. "It contained a list of 6 or 8 things I was supposed to admit and they all added up to espionage."

Dr. Bradshaw says the Reds harped "mostly on my supposed refusal to fly the Communist flag at the mission school."

"I denied responsibility. After all, I wasn't in charge of the school. It was under a Chinese superintendent.

"I told them the truth. I told them when the question of flying a Communist flag came up, I referred it to the American authorities because the school was American property.

"I was advised to turn the whole problem over to the local Chinese authorities to let them decide. And that's what I did."

THIRD DEGREE FINALLY SIMMERS OUT

The third degree finally simmered out after 6 a. m. when Dr. Bradshaw wrote a statement of his own and gave it to the Commies. In it he admitted he had a movie camera and film.

Eleven days later the Red quiz artists were back in Dr. Bradshaw's prison room.

This time, the doctor says, the Communists wanted to know what had happened "to the guns in the compound."

"Actually, there were just two guns there," Dr. Bradshaw explains. "They were given to us to keep at the hospital to chase away bandits and petty thieves."

The doctor says the guns, plus "a couple hundred rounds of ammunition," never were used at all. No one even remembered them until some time after the Commies had occupied the place.

"I urged then that they be turned in, but my Chinese friends were afraid to take the guns over.

"Finally, my friends dismantled the guns and dumped them in the river."

Dr. Bradshaw says he told the Reds this but he doesn't know whether they believed him because "they can always twist things around."

INQUISITIONS AT HOSPITAL PRISON CEASED

In any event, the inquisitions at the Linhsien hospital prison ceased.

A little over a month later, on April 30, 1951, Dr. Bradshaw, Mrs. Bradshaw, Miss Perkins, and Mrs. Lau were placed aboard a bus—destination unknown.

The doctor had not been permitted to talk to his wife since their arrest though he caught glimpses of her in the hospital corridor.

Now, on the bus, silence was still the rule. Dr. Bradshaw was assigned a seat up front and Mrs. Bradshaw was taken to the back. Four armed guards were on hand to police the "no talking" rule.

For 8 hours they rumbled along in the bus in dead silence, wondering where the Communists were taking them.

Finally, at a town named Pingshek, Dr. Bradshaw says, they were ordered to climb out of the bus and board a train.

"On the train, Mrs. Bradshaw and I were placed in the same compartment so I finally got the chance to talk to her."

But the joy in Dr. Bradshaw's heart quickly died in shock.

"It was the first I knew she was mentally abnormal," he says. "Whatever the Communist bandits did to cause this, they did before we ever left Linhsien."

Farm Journal Reports Further on Question of "Who Made the Money on Hogs?"

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. GROSS. Mr. Speaker, following is an article in a recent issue of the Farm Journal:

Hog prices in 1955 skidded to the lowest level in 14 years, while the margin between farm hog prices and retail pork prices ballooned to the highest levels on record. Beef margins also widened. We now have better figures on who got the money.

Remember Who's Making the Money on Your Hogs? in the December Farm Journal? Dean Wolf reported that organized labor all along the line was doing considerably better, but he had trouble learning just how well packers and meat counters were doing.

This will help complete the picture now that six major packing companies have reported earnings to their stockholders (however, all their earnings aren't made on meat):

Swift & Co.: Sales tonnage reached a new high; net income topped $22 million, a 20 percent increase over 1954.

Armour & Co.: Net is $10.1 million, 5½ times more than in 1954.

Wilson & Co.: Declared its first dividend on common stock since 1952. Last year it cleared $3.1 million; is expected to clear more than $4 million for 1955.

Cudahy Packing Co.: Net earnings in 1955, $2.7 million, are the highest since 1950.

Geo. A. Hormel & Co.: Dollar sales hit a new record; net earnings reached $3.7 million, more than double a year earlier.

John Morrell & Co.: Sales up considerably; net reached $2.7 million, an increase of more than 4 times over last year.

"Some of the companies didn't do very well in 1954," reports an observer close to the scene, "but they did a great deal better in 1955."

It's still too early to know how the food chains did last year, but they'll be reporting earnings soon. Their meat counters account for about a fourth of their volume.

To the foregoing may be added figures obtained from the annual report of the Rath Packing Co. which show net earnings of $2,637,300 for 1955 compared with net earnings in 1954 of $1,411,860.

GOP Attacks Labor With One-Two Punch

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. METCALF. Mr. Speaker, I wish to call to the Members' attention the following article which appeared in the September 1955 issue of the Democratic Digest concerning the antilabor activities of the Eisenhower administration.

GOP ATTACKS LABOR WITH ONE-TWO PUNCH

After carefully and cautiously preparing the way, the long-time Republican objective of putting labor in its place is now emerging into the open.

The present move to throttle unions and undermine their effectiveness differs from previous GOP antiunion activities. It is more subtle and more indirect than the open attacks of recent years. But it is all the more dangerous for that very reason.

In 1947, after the Republicans gained control of Congress for the first time in many years, their pent-up feelings against organized labor were so violent that no effort was made to conceal them. They rammed through the antilabor Taft-Hartley Act.

But the Republicans' drive of 1955 is a very different matter, for they learned a lesson when the Taft-Hartley Act boomeranged in 1948 with the reelection of Harry Truman, who had vetoed the bill. Today, instead of concentrating their antilabor activities at the national level, under the spotlight of national publicity, Republicans are now embarked on a State-by-State campaign against the labor unions.

This new 1955 drive seems to spring mainly from labor's increasingly effective political

activity which, in some cases, provided part of the margin of victory for Democratic candidates supported by labor in the 1954 elections. Since those elections, the Republican Party has combined its efforts on the Federal level to hamper and weaken labor with a campaign in the State legislatures to curb political activities of union members, in a sort of one-two punch at labor unions.

Recent events in Michigan offer a perfect example in this one-two punch. Apparently aroused by Senator McNAMARA's surprise defeat of Republican Senator Ferguson in last fall's election, with labor's help, John Feikens, GOP State chairman, has launched a two-pronged campaign to curb labor's future political activities.

At the State level, he has been the driving force behind a bill to bar political contributions by unions. He succeeded in lining up every GOP State senator behind his bill so that, despite opposition by every Democratic senator, the bill cleared the Michigan Senate.

But Mr. Feikens did not stop there. Attacking on the national as well as the State level, Feikens journeyed to Washington to charge, before a Senate committee, that the CIO United Auto Workers had violated the Federal Corrupt Practices Act in sponsoring a radio program endorsing certain candidates.

That is where the Eisenhower administration stepped in to complete the one-two punch. Acting on the Feikens complaints, the Justice Department brought the case before a Federal grand jury and obtained an indictment against the UAW-CIO.

Emil Mazey, the union's treasurer, has charged that Attorney General Brownell issued the indictment on orders from the White House, and a UAW statement "deplores the fact that Republican politicians have been able to use the courts in their frantic efforts to save face."

Wisconsin offers another striking example of a GOP campaign to curb labor's political activities. When Democratic candidates scored victories in 1953 and 1954, with the help of labor, the Republican-dominated legislature lost no time in passing a law which imposes sweeping restrictions on the rights of unions and workers to engage in political activities. This law bears the stamp of Republican Party leadership in Wisconsin, in that it was sponsored by and bears the name of the Republican leader in the assembly, Speaker Mark Catlin, Jr. It has been denounced by the State Federation of Labor as the "worst in history."

In an historic 25-hour debate, the Democratic minority fought to defeat the measure and when the vote came up, every Democrat voted against it. Republican pressure, however, succeeded in marshaling the support of every Republican member and the bill was signed into law by Governor Kohler.

Public indignation in Ohio helped to kill an equally restrictive bill sponsored by Republican representative Elton Kyle. The Toledo Blade called it outrageous, and the Akron Beacon-Journal warned that if the political rights of a union member can be curtailed, the rights of the farmer or any other citizen are in danger.

That the Kyle bill had the official stamp of approval of the Republican Party was revealed when two GOP members of the House Elections Committee refused to go along with the bill until they were called to task by the Republican Speaker of the House. One of them emerged from the conference in favor of it, and cast the deciding vote that gained committee approval of the bill. Thus far the bill has not become law.

Failure to enact a similar bill in Indiana, sponsored by Republican State Senator Bontrager, has driven the GOP to a vocal antilabor campaign. A United Press dispatch on June 29 reports that Thomas Mahaffey, Jr., treasurer of the GOP State organization, is urging Republican nominees for mayor to sponsor meetings locally for businessmen to tell them of the viciousness of the CIO campaigning.

Back of all these efforts at restrictive State legislation aimed at American working men and women lies the Taft-Hartley Act, giving priority in certain respects to more stringent State laws over Federal laws. One result of Taft-Hartley, which labor unions are fighting is the so-called State right-to-work laws, which labor has denounced as the right-to-wreck laws. When Labor Secretary Mitchell denounced these laws last year, organized labor looked for a more friendly attitude on the part of the administration, but President Eisenhower promptly repudiated his own Secretary's statement.

The problem of inadequate State unemployment benefits is another instance where trade-union leaders feel that President Eisenhower has let them down. During the campaign last year the GOP made much of President Eisenhower's request to the States to raise their benefit levels, but his request has been largely ignored by Republican-controlled legislatures.

Ohio furnishes a good example of how GOP legislatures gave rough handling to the unemployment benefit issue. There, Democratic efforts to get adequate increases brought from Republican State Representative Horace Troop, chairman of the house industry and labor committee, a threat to kill the bill entirely.

It was in the Ohio Legislature, also, where the unanimous vote of the GOP State senators beat down a Democratic effort to tie the unemployment benefits in with the new guaranteed annual wage system agreed to by Ford and General Motors. But in Michigan a ruling by Democratic State Attorney General Thomas Kavanagh seems to mean that no legislative action will be needed to allow GAW to go into effect.

This 1955 drive against the unions in the State legislatures comes on the heels of 2 years of subtle but effective antilabor actions on the part of the Eisenhower administration. Top Republican strategists, recalling the political repercussions of the Taft-Hartley Act, have tried to give a more moderate tone to the administration's activities in the field of labor. The appointment of the AFL's Martin Durkin as Secretary of Labor was part of that effort, and his successor, James Mitchell, is generally regarded as a moderate man. But events have shown that the real power behind the administration's labor policies is not Mitchell but conservative Commerce Secretary Weeks, who openly favors a return to the pre-Hoover days when labor unions were subject to antitrust laws, and when the courts became the principal instrument for union busting.

Weeks' power in the labor field is illustrated by press reports which indicate that one of the most controversial Taft-Hartley amendments favored by President Eisenhower (requiring a vote of union members prior to any strike) was slipped into the President's message by Weeks just before it went to Congress. Labor Secretary Mitchell reportedly first learned of the proposal through the newspapers.

Although no Taft-Hartley amendments have been enacted since President Eisenhower took office, none were necessary to achieve Republican ends. Early in 1953 the GOP took advantage of the opportunity to appoint a majority of the members of the National Labor Relations Board, which administers and interprets Taft-Hartley. None of three men could be considered wholly disinterested—one had previously represented management in cases before the Board, another was discovered to have retained his pension rights with a California manufacturer; and the third was a protege of the late Senator Taft. The result: Taft-Hartley has been toughened up in practice through NLRB interpretations, even though the law itself remains unchanged. The AFL research division reports a series of NLRB decisions condoning discharge of employees for union activities.

Commented the business magazine, Fortune: "For the first time in the 19-year history of the NLRB, a majority of its members are Republican appointees. * * * Management is unquestionably getting a better break at NLRB than it has had in many years."

The pattern of antilabor appointees continues; both Boyd Leedom, President Eisenhower's most recent choice for the NLRB, and Theophile Kammholz, chosen for the powerful post of NLRB General Counsel, had taken management's side in previous labor-management cases. And to administer the minimum wage law the President named Newell Brown, who, according to the Textile Workers Union, "is opposed to the whole concept of the legislation he would administer. He has several times described the minimum wage law as unsound legislation.

Moreover, the Department of Labor has suffered from severe budget cuts dictated by the budget balancers of the Eisenhower administration. For example, although Secretary Mitchell has warned that the level of workers' skills has deteriorated dangerously, the Labor Department's section responsible for training apprentice workers has had to close 31 of its field offices because of budget cuts.

In contrast to his backdowns on many programs affecting working men and women (such as his acquiescence in Congress gutting of the public-housing program in 1953), President Eisenhower has stubbornly insisted on his 90-cent minimum-wage recommendation, even though rising living costs and increased labor efficiency justify the $1 enacted by Congress. Said the President in a July press conference: "I have not had any economic advice that I should change my position [on 90 cents]."

It is hardly to be expected that President Eisenhower would get such advice, surrounded as he is by such men as—

Defense Secretary Wilson, who believes that "What is good for General Motors is good for the country," and who prefers a bird dog over a kennel-fed dog because he'll "get out and hunt for food rather than sit on his fanny and yell."

Interior Secretary McKay, who said, "We are here in the saddle representing business and industry."

Treasury Secretary Humphrey, who considers 4 million unemployed a relatively low figure.

Commerce Secretary Weeks, who said, during the 1954 recession that unemployment is "coming along in a satisfactory manner."

On the eve of his election in 1952, General Eisenhower promised to defend the American workers "so that at the end of my service the workers of America can honestly say: He has been fair. He has been my friend."

In late July, at least a year before President Eisenhower's end of service, one labor leader had reached his own conclusion as to whether the President has been fair. Ray Mills, president of the Iowa Federation of Labor, and a lifelong Republican, switched his party affiliation and became a Democrat because, he said, the Republican Party had failed to go through with what it promised to labor people.

Those "Hayshakers"

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. GROSS. Mr. Speaker, there are reasons not readily apparent to some,

why a great many people prefer to live in the rural areas of America.

Patty Johnson, woman's page editor of the Waterloo (Iowa) Daily Courier, cogently states some of these reasons in one of her columns, which appears each Sunday in the Courier and other newspapers. The column follows:

People in Iowa get sick of being depicted as hayshakers. People in Vermont get tired of cracker barrels and chin whiskers.

People in Kentucky are fed up with old saws about revenuers and people in Georgia eat more crackers than they see.

The reason I know this is that people like me are purty durn nauseated at being considered hicks because we live in small towns and like it.

I like to fell in love with a city slicker oncet. But he kept trying to brush the sticks out of my hair. I like the sticks and I do not like traffic jams and carbon monoxide. Clover smells better.

This does not label me Maud Muller. I happen to think I got me enough git-up-and-git to earn a living where I want to. So far my dollar bills are legal tender anyplace.

I think I have country manners, too. Us hicks don't tolerate city ones. If a feller falls down on the street, we don't step around him. We see if we can help a little.

Out here in the sticks we manage to read a book or two and the newspaper. We like station wagons better than surreys and we figured out that it ain't necessary to trap a bear when winter comes. We can always wear mink.

Occasionally I pack my portmanteau and tie my cash in my corset and set off for the big city. Sometimes I meet a city feller, like the big butter-and-egg merchant who had a yen to play post office. He thought us Sunnybrook Farm girls didn't know about the birds and bees.

Out here in the wide open spaces I don't have to get a move on afore daybreak to get to work. I don't stand around in a subway because I part my car right outside my office. And every day I meet folks who know about Arnold Toynbee and the New Yorker magazine.

Sometimes my cheeks get windburned and sometimes my hands are chapped. In the summer I get freckles on my nose.

But in the sticks it's a doggone sight easier to remember that I'm my brother's keeper. The way I remember is easy.

He never forgets that he's mine.

Wilderness Society Ends Colorado River Project Opposition

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. RHODES of Arizona. Mr. Speaker, my colleagues, Hon. WILLIAM A. DAWSON, of Utah, and Hon. WAYNE ASPINALL, of Colorado, recently notified leading conservation organizations that an alternate site had been obtained for the Echo Park Dam in the upper Colorado River storage project. Echo Park Dam will not be part of this project. It has been deleted by agreement of Representatives and Senators in the upper basin States, and an amendment is being proposed to the project act to insure the integrity of the national park system.

Members of these national conservation organizations, of which the Wilderness Society is typical, are aware of the vital need of these four States to put their water resources to use. For the information of the Members of Congress, I am submitting herewith a letter to Representative DAWSON from Howard Zahniser, executive secretary of the Wilderness Society.

FEBRUARY 1, 1956.

The Honorable WILLIAM A. DAWSON,
United States House of Representatives,
Washington, D. C.

DEAR MR. DAWSON: I am glad to reply in behalf of the Wilderness Society to the January 26 letter in which you and Representative WAYNE N. ASPINALL report both the elimination of the proposed Echo Park Dam from the Colorado River project and the agreement to include in the bill authorizing this project the two amendments (1) providing protection for the Rainbow Bridge National Monument, and (2) declaring it is the intention of Congress that no dam or reservoir constructed under the authorization of this act shall be within any national park or monument.

You conclude your letter by asking: "Now that we have agreed upon these amendments protecting the national park and monument areas, may we have assurance to pass on to others that any opposition that you or your organization has heretofore had will now be withdrawn?"

I am deeply pleased to be able to reply: You most certainly do have this assurance.

You may recall that when I responded to the invitation of the Subcommittee on Irrigation and Reclamation of the Committee on Interior and Insular Affairs and submitted, on March 28, 1955, the statement that appears on pages 1086 to 1098 of the hearings on the Colorado River storage project, I pointed out at the beginning:

"I do not wish to be considered an opponent of the upper Colorado River storage project except as it does threaten areas dedicated for preservation. It is rather my purpose to urge that any bill reported out by this subcommittee be one from which all such threats have been carefully excluded and in which provision is made for the protection of national parks and monuments. It is my belief that such a bill can be prepared that will adequately meet the needs for a sound upper Colorado River storage project, and after 5 years of deep concern with the problems we are here discussing I can assure you that I should welcome such a bill with great eagerness."

Later in the course of the statement I said with further emphasis:

"I do wish, Mr. Chairman, to be understood as being interested in the welfare and prosperity of this great upper Colorado region of our country and its people. Just as I have come to value the privilege of visiting this region and breathing a little deeper in its outdoors, so also I have valued the privilege of knowing the people who live there. I value highly their hospitality and friendship. I share their aspirations, and wish accordingly to be understood as approaching this controversy with hope and confidence that it will be so resolved as not only to preserve the areas which have been set aside for preservation but also to provide for the wise development of the region."

And again, stressing the common interest of those in the Colorado region and those of us in other regions of the United States, I said:

"I recognize that our national welfare depends on the welfare of this region, and I feel that my own personal welfare is related to the personal welfare of fellow citizens in Utah and Colorado. I am interested in the national importance of the upper Colorado River program for the benefit of this region and its people. At the same time I would urge all of them to keep faith with all of us throughout the Nation, and with those of future generations, by cherishing these scenic wild canyons and helping to preserve them unimpaired."

In concluding this statement in behalf of the Wilderness Society, I said:

"I would, therefore, recommend, Mr. Chairman—

"(1) That the Echo Park Dam be deleted from any of the bills now under consideration which the subcommittee may consider for approval and that the Echo Park Dam be omitted from any authorization recommended for approval;

"(2) That any bill recommended for passage by Congress include a provision that the Glen Canyon project be so constructed that it shall not impair the Rainbow Bridge National Monument, a protection that we are assured by the Bureau of Reclamation and the Department of the Interior can be provided, but one that should be specified by Congress as a requirement; and

"(3) That any bill authorizing an upper Colorado River project should include a provision that no project constructed under the authorization of this act shall be built within, or impair any of the natural features within, any areas within the national park system.

"Thus, Mr. Chairman, not only does it seem possible to see authorized a sound project for the development and conservation of the water resources of the upper Colorado River region, but also, by reaffirming here in Congress the sanctity of the areas that the Nation has dedicated for preservation, we can resolve this long controversy in such a manner as to make more secure than ever our great American policy for preserving some areas of our land forever wild and unspoiled in their natural beauty and grandeur.

"It will be an achievement that I am sure will bring us the gratitude of American citizens during a long, long future, and accomplishment that all of us, I am sure, will be satisfied to share. As I said before, we cannot avoid setting precedents. We can only do our best to see that the precedents which we do set are sound."

This statement, I am glad to reassure you now, was presented in all earnestness and sincerity. And I am glad to say further that the way in which the proponents of the Colorado project have agreed to amend the bill that will authorize the project has fully met our recommendations and has indeed merited our commendations, and we are accordingly deeply pleased to give you these assurances.

I should like also to express to you personally, Mr. DAWSON, a special appreciation for the contribution that you have made in helping to resolve the controversy that arose over the proposed Echo Park Dam. It is often much easier to start and carry on a controversy than it is to settle one, and it has seemed to me that you have shown a special magnanimity in helping to resolve this one. Without your candor and confidence and your good will in seeking an agreement we might still be contending. As it is, I believe we have arrived at a significant understanding in the public interest and that we can now go forward the more confidently with resource-development projects that will serve the general welfare not only in themselves but as part of an over-all land and water conservation program which likewise includes the preservation of areas of wilderness and wildness. No region can better reveal the benefits of such a policy to its own citizens and to all of us throughout the Nation than can the Colorado region with its wealth of resources and its marvelous areas of wild beauty and splendor, and I look forward to seeing these expectations realized to our mutual satisfaction.

It has been both pleasant and reassuring to have been associated with you in dealing with these problems and prospects, and I thank you very much for the personal kindness you have shown me.

Sincerely yours,

HOWARD ZAHNISER,
Executive Secretary and Editor.

Those Who Came to Dinner

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. O'HARA of Illinois. Mr. Speaker, from Irwin E. Klass, the brilliant editor of the Federation News, published by the Chicago Federation of Labor, I have received an interesting letter calling my attention to the introduction of bills seeking to bar unions from contributing to political parties. Editor Klass correctly states that the Taft-Hartley Act effectively bars unions from making treasury contributions to political candidates; and that these funds are raised voluntarily by local unions.

In view of the constant harping about labor's political activity, Editor Klass in an editorial in the Federation News of January 28, 1956, shows how the large corporations go about filling up their political coffers directly from corporation funds which are deducted in income-tax returns. I think my colleagues will find the editorial, which follows, well worth their thoughtful reading:

THE MEN WHO CAME TO DINNER

At the International Amphitheater, the choice was roast beef or brook trout.

In New York's Madison Square Garden, they ate lobster.

That was the fare at the nationwide $100 a plate dinners labeled "Salute to Eisenhower." We haven't had any reports on the food, but at those prices, there should be no complaints. There were tuna and sardine sandwiches at $12.50 in the balconies.

And who do you think paid for these expensive morsels that added $5 million to various units of the Republican Party?

You, as a taxpayer, or consumer, or stockholder.

Remember how some Senators recently tossed political slush fund charges at unions because labor was going to endorse candidates for office?

And you'll recall that the editorials complained that corporations were barred by law from contributing to political campaigns.

Well—it seems that if a corporation wants to pay $100 for a plateful of roast beef or brook trout or lobster—that's its privilege. So, as many tables in the stockyards amphitheater were loaded with eager junior executives, the men who came to dinner could sip their after-dinner coffee with the knowledge that the profit-and-loss statement wasn't budgeted very much.

As entertainment, the $100-a-plate dinner is deductible when computing taxes.

These functions are becoming traditional ways of sweetening coffers of both parties. It seems that the Republicans have been far more successful in their fund-raising ventures.

There's a reason: this administration's been more than friendly with business, and that's where the money is, if you'll glance at the reports of profits and dividends in the financial columns of any local paper.

Chicago area promoters of the salute-to-Eisenhower dinner read like a directors' list of our town's largest corporations. It was headed up by the president of a railroad which is pushing a fight against the union shop.

On the list of the 73 Chicago sponsors are investment brokers, bank executives, advertising agency chiefs, steel makers, hog butchers, real estate operators who loathe public housing, publisher of a large non-union magazine, grain merchants, farm implement makers, former presidents of the Illinois Manufacturers' Associaiton, oil refiners, mail order house executives, etc.

There wasn't anyone on the list who could be accused of being a liberal or assoicated in any way with the labor movement. At the drop of a gavel, any guest could spout endlessly about the trend to socialism and the "right to work."

Now supposing you're a manufacturer of railroad equipment. In comes a letter asking you to buy a $1,000 table for the salute-to-Eisenhower dinner. You're in political agreement with the idea, and no one likes Ike more than you do. But $1,000 is a lot of money—and you hesitate.

You look at the letter head—and find the names of railroad presidents—men who help make decisions on where they buy their supplies. Out comes the company's checkbook. The $1,000 for the dinner is not a political contribution, which the law officially doesn't allow corporations to make. It's not too hard on the firm, since it's an expense and helps cut the tax bill. The $1,000 won't go to workers in the form of pay hikes or to stockholders as dividends.

So it's no wonder that 6,000 people attended the dinner at International Amphitheater. We're surprised they didn' use the stadium. That wouldn't have been practical. The man who owns the amphitheater was a member of the sponsoring committee, and in the business of politics and politics of business, one hand washes the other.

Anyone for baked beans? We'll treat—and give the difference between that hearty fare and a steak to labor's Committee on Political Education.

Observations on the Glen Canyon Dam and Reservoir

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DAWSON of Utah. Mr. Speaker, appended herewith is an unsolicited letter from a practicing geologist who has spent many years exploring the Colorado River Basin.

I am sure the Members will be interested in Mr. Hager's observations, particularly as it pertains to the Glen Canyon Dam and Reservoir—keystone unit of the upper Colorado River storage project.

SALT LAKE CITY, UTAH, *January 31, 1956.*
The Honorable WILLIAM A. DAWSON,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR SIR: I have seen the recent statements of the Californians regarding the Chinle shale. In the first place, anyone who knows anything about the thicknesses of the Chinle along the Colorado River on the Utah and on the upper Arizona side knows the Chinle is not 1,000 feet or more in thickness. It is more in the nature of 400 to 700 feet along the Colorado River, and in the Glen Canyon area particulary from 500 to 600 feet.

I have studied the Chinle beds through northeast Arizona and Utah, and, again, anyone who has studied the Chinle will find it consists of red shales and calcareous sandstones. The calcareous sandstone is tough and some very well cemented and resistant to water action. The beds do not yield to solution. Of course, some of the shale beds are softer than others, but on the whole the formation stands up well.

It seems to me the Californians are "tilting at a windmill." It would be easy to grab a few samples to get a solubility test. What must be done is to study the section as a whole. Granted, there might be some minor sluffing in some of the beds but I think the formation as a whole will be consistently resistant.

Ask the California geologists to make carefully measured sections and study the formation, foot by foot. I think then they will come to the same conclusion obtained by the reclamation engineers and by the geologists of Utah.

Keep up the good work.

Sincerely yours,

DORSEY HAGER.

Pilferage

EXTENSION OF REMARKS
OF
HON. JAMES G. DONOVAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. DONOVAN. Mr. Speaker, instead of making a whipping boy of the rugged longshoreman who now has to be fingerprinted and made to pass a character test for the poor privilege of taking his life in his hands everytime he goes in the hold of a ship to earn his daily bread, people should open their hearts and their eyes.

Harry Bridges is working for control of the waterfront in New York and on all the east coast right under our noses.

With this in mind I was pleased to read the following fair and dispassionate editorial of the New York Journal of Commerce in its issue of January 13, 1956:

PILFERAGE

The old story of extensive pilferage on the docks in the port of New York has been hitting the headlines again after a long period of neglect.

This subject is always good for a play when the flow of news is slow and doubtless convinces a lot of people who do not look beyond the printed word that looting on a grand scale still prevails along the New York waterfront.

That pilferage exists is certainly a fact, and every bottle of Scotch, carton of perfume or nylons, or watches that disappear represent a loss to someone, both in money and paperwork in adjusting claims and lading bills.

But, exactly how extensive is this pilferage? The only fair way to measure it is to stack the estimated value of goods which disappear against the value of goods which are available for those handling this merchandise to surreptitiously cart away.

We say "estimated" value of pilferage advisedly. Those concerned with this problem

say it is difficult to give an exact figure because when goods disappear it frequently is impossible to tell whether the actual removal was in a foreign port or while stowed aboard ship or while on the dock.

However, it was brought out in the Crime Commission hearings 2 years ago that the sticky-finger boys on the docks in New York were taking goods valued at $4 million each year.

This is no small item and it is not our purpose to dismiss it lightly. The question is whether it is a significant item and whether it represents such an unusual condition as to warrant the big play in print that frequently is seen.

Here are some facts that should be considered in trying to arrive at an answer to these questions. The actual value of export and import general cargo going through New York in 1954 (the latest figures available) was $6.4 billion. This eliminates bulk items, such as petroleum, which would be difficult to take away unnoticed.

When you match the value of these goods, available for thievery, against the value of merchandise actually stolen, you get $4 of pilferage for every $6,400 of property that moved through the port of New York. Reduced to simpler terms, it comes to $1 for each $1,600.

What is the score in other industries in the city of New York? An overall estimate made early last year placed the annual value of goods stolen, outside of actual burglaries, at approximately $100 million. The 10 largest department stores report annual losses through shoplifting at $10 million. New York's 400 hotels say their annual losses in property removed comes to $25 million. Even the subway gum and candy machines are not immune. They are tapped for $100,000 annually.

When you consider the confusion that exists on most piers when a ship is in port, the fact that some of the labor is casual and the fact that many others have not been reared with a high code of ethics, the actual amount of dockside stealing takes on a different look.

It is still a serious problem and is being constantly battled by management through its special agency, the Security Bureau. Losses are being steadily reduced through this vigilance. They have been cut between 10 and 20 percent in recent years, it is estimated.

Stealing never will be entirely eliminated. But it is getting to be more and more hazardous on the docks, for in addition to industry efforts to halt the practice there is the waterfront commission with the power to cancel a worker's registration.

These are some facts to keep in mind the next time someone breaks into print or is interviewed on TV concerning widespread pilferage on New York's waterfront.

These statements do the port of New York no good and they should be challenged every time they appear by those who are trying to restore this port to its proper position.

We will always have crooks, just as we always seem to have freewheelers with facts. Thank heaven, both are in the minority.

Hosmer Scores a Telling Argument

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial entitled "HOSMER Scores a Telling Argument," which appeared in the Press Telegram of Long Beach, Calif., on January 11, 1956:

HOSMER SCORES A TELLING ARGUMENT

Representative CRAIG HOSMER, of the 18th Congressional District (Long Beach-Lakewood), scored another telling argument this week in his battle to protect southern California water rights in the Colorado River.

Speaking of the controversial upper Colorado River Basin proposal, he stated: "The Bureau of Reclamation would have us believe that we must spend billions to develop projects like the upper Colorado in order to provide food and fiber for our growing population.

"That simply is not true. On the presently producing farmlands we are growing so much food and fiber that we cannot find adequate space to store it. Despite plans for reducing this output, we are faced again this year with enormous surpluses, in some products record yields."

And when you stop to think about it, it does seem contradictory to bring into production more than half a million acres in barren, remote areas of Wyoming, Colorado, Utah, and New Mexico and at the same time spend millions of dollars to buy up the surpluses from the land already in overproduction.

But assuming that it is necessary to bring into production new land, why build the upper basin project at a cost of $5,000 an acre when right now at least 20,937,153 acres of the best American cropland are unused for any purpose?

Historical Summary of Committee on Interstate and Foreign Commerce of the House of Representatives

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. WOLVERTON. Mr. Speaker, the Committee on Interstate and Foreign Commerce of the House of Representatives has had a long and outstanding service in the legislative work of the House since its creation as will be readily seen from the following summary of its activities:

ITS CREATION

Chronologically it was third in the order of creation of committees. It was created December 1, 1795, at the Committee on Commerce and Manufactures. In point of time only two committees, Elections—April 13, 1789—and Claims—November 13, 1794—preceded it.

JURISDICTION

In 1819—Annals, pages 708 and 709—the subjects of commerce and manufactures were separated. In early times the Committee on Commerce was sometimes in conflict with Ways and Means over the jurisdiction of subjects relating to duties—volumes 1 to 17, Annals, page 530. In the revision of the rules of 1880 the Committee on Rules reported in favor of restoring to the Appropriations Committee the river and harbor bill, which had more recently been reported from the Committee on Commerce, allowing the Committee on Commerce to frame the bill, but requiring it to be reported to the Committee on Appropriations—volumes 2–46, RECORD, page 200.

The House dissented from this plan, and after long debate agreed to a rule in this form:

To commence, life saving service, and lighthouses, other than appropriations for life-saving service and lighthouses; to the Committee on Commerce. And the Committee on Commerce shall have the same privileges in reporting bills making appropriations for the improvement of rivers and harbors as is accorded to the Committee on Appropriations in reporting general appropriation bills. (Vols. 2–46, RECORD, pp. 663, 1261).

On December 19, 1883, the Committee on Rivers and Harbors was established, and took the jurisdiction of the river and harbor bill, with its privileges—volumes 1–48, RECORD, pages 196, 214.

CHANGE OF TITLE TO INTERSTATE AND FOREIGN COMMERCE COMMITTEE

In 1892 the present name of Interstate and Foreign Commerce was adopted—volumes 1–52, RECORD, page 653.

This change of title was brought about as the result of a triangular contest for speakership of the 52d Congress. The candidates before the Democratic caucus were Charles F. Crisp, of Georgia; Roger Q. Mills, of Texas; and William M. Springer, of Illinois.

After 30 ballots were cast a majority was finally secured for Crisp. This was effected by the Springer following going over to Crisp, and in return Springer was rewarded by appointment by Crisp as chairman of the important Committee on Ways and Means. Those who supported Mills were highly indignant because they regarded Mills as the natural man to be appointed as chairman of Ways and Means, he having held that post when the Democrats controlled the previous Democratic House in the 50th Congress. He was author of the famous Mills tariff bill. In order, as it was supposed, to appease Mills and his following, Speaker Crisp appointed Mills as chairman of the Committee on Commerce, but instead of mollifying the angry Millsites they regarded this appointment as sop and a demotion of Mills.

Then, in order to further pacify them the Committee on Commerce was given the more high sounding title of "Interstate and Foreign Commerce." It was freely rumored that Mills would not accept nor serve as its chairman. Be that as it may, the matter was removed from further controversy by the election of Mills to the United States Senate resulting in George D. Wise, of Virginia, the ranking Democrat on the committee becoming its chairman.

JURISDICTION UNDER NEW TITLE

The jurisdiction of the Committee on Interstate and Foreign Commerce remained as formerly until 1935, when the committee was deprived of its jurisdiction over bills dealing with water transportation, Coast Guard, life saving service, lighthouses, lightships, ocean derelicts, Coast and Geodetic Survey, and the Panama Canal, and jurisdiction over those subjects was vested in the Committee on the Merchant Marine and

Fisheries—volumes 1–74, RECORD, page 2627.

JURISDICTION UNDER THE LEGISLATIVE REORGANIZATION ACT OF 1946

Pursuant to amendments of rule XI of the House of Representatives as covered by title I, part 2, section 121 (b) of the Legislative Reorganization Act of 1946—Public Law No. 601, 79th Congress—approved August 2, 1946, the jurisdiction of the committee was not changed from above except as follows:

Title V of the Legislative Reorganization Act—the General Bridge Act—was a general consent of Congress relating to construction, maintenance and operation of bridges over navigable waters, other than international bridges, thereby removing the necessity for individual bridge bills being considered by Congress. Under this act these requests go direct to the War Department.

The transfer to the Committee on Agriculture of legislation relating to the Rural Electrification Act.

The addition of legislation relating to the Bureau of Standards, standardization of weights and measures, and the metric system.

Clarifying committee jurisdiction to cover interstate and foreign transportation by water, except that not subject to the jurisdiction of the Interstate Commerce Commission.

Generally speaking, the present jurisdiction of the committee includes the following:

First. Interstate and foreign commerce in general;

Second. Interstate Commerce Commission, having jurisdiction over all forms of interstate transportation, such as railroads, motor vehicles and trucks, and inland waterways, and so forth;

Third. Civil Aeronautics Board and Civil Aeronautics Commission, including all forms of civil aviation, domestic and foreign;

Fourth. Federal Communications Commission, having jurisdiction over radio, television, telephones, telegraphs, and cables;

Fifth. Federal Power Commission, regulating interstate transmission of power;

Sixth. Securities and Exchange Commission, regulating stock exchanges and investment securities;

Seventh. Petroleum, natural gas pipelines, and interstate oil compacts;

Eighth. Public health, in all its phases;

Ninth. Food and drugs, to insure quality and safety;

Tenth. Alien property and claims;

Eleventh. Railroad Retirement, Unemployment and Mediation Service; and

Twelfth. Bureau of Standards, standardization of weights and measures, and Weather Bureau, Fair Trade Commission, investigation of newsprint shortage, and a few other incidentals.

Chairmen of Committee on Commerce

Congress	Year	
4	1795	Benjamin Goodhue, Massachusetts.
5	1797	John Swanwick, Pennsylvania.

School Integration in the District of Columbia

EXTENSION OF REMARKS
OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. ABERNETHY. Mr. Speaker, school integration in the District of Columbia is not what the country has been told. Quite often we hear and read statements glorifying the highly satisfactory manner in which school integration has been accepted and worked in the District. Most of these statements come from people who either hold public office or expect to hold it.

The facts are that integration has not been accepted and it has not worked satisfactorily in the District of Columbia. On the contrary, it has only been tolerated. There is quite a difference between acceptance and toleration. Special police details have been assigned to some schools to maintain order. Furthermore, it has been necessary for school authorities to frequently impose disciplinary action in order to maintain peace on the grounds and in the school buildings. The number of such instances and the extent of the violent differences seldom reach the papers. When they do, the reports are almost invariably hidden in the back pages under small headlines.

But integration's greatest failure lies in the fact that it has resulted in a severe drop in District school standards to accommodate the grade advancement of Negro children. White children are held back and deprived of educational opportunities because of the achievement lag of the minority group which, incidentally, has now become the majority by a very large margin. White children are being discriminated against in the District of Columbia. They are being forced to accept a second-rate education in order to accommodate the inability of colored students to keep up.

This might also be an appropriate time, Mr. Speaker, to again point out that integration has resulted in an exodus of people from the District of Columbia. They have moved out and are continuing to move out to neighborhoods removed from the District so as to get away from the intolerable school situation that exists here. Also, the demand

for entrance to private schools has been highly accelerated. Such schools are filled to capacities. Like some high in political circles of this Government, hundreds of just plain ordinary families are looking for all-white private schools in which to educate their children.

We were told by the integrationists that integration would result in more education at less cost. It was said that integration would result in fewer school plants, fewer teachers, a smaller executive personnel, and so on. Just the contrary has been the case. School officials are now pleading for more and more teachers. With these extra teachers they intend to give extra tutoring to the backward students with the hope that they can keep pace with the average, thereby removing the necessity of lowering educational standards in the District.

In connection with this deplorable situation, I am including as a part of my remarks a statement made on yesterday by David Lawrence, well known editor and columnist. I trust that it will be widely read so that the people of the country will know what the facts are when they read statements from the President and others expressing gratification over the "highly satisfactory" manner in which school integration has worked here. On the contrary, schools in the District of Columbia are on the downgrade at a fast clip, as anyone who is willing to impartially examine and speak on the facts will agree.

The article follows:

DISTRICT OF COLUMBIA INTEGRATION ANALYZED—PUPIL ACHIEVEMENT-LEVEL DROP MAY POSE NEW QUESTIONS FOR COURT

(By David Lawrence)

Right here in the National Capital, almost on the doorstep of the Supreme Court of the United States, some facts have been uncovered which may have a far-reaching influence on how segregation or integration works out in the schools of America.

For the tests conducted in the Washington schools show that, since Negro and white children were put in the same classes, the educational level has dropped below the national average. Previous tests in all-white schools in Washington showed that national averages had been generally maintained.

Citywide achievement tests—made after segregation was ended in the local schools—were given in the 3d, 6th, 9th, and 12th grades. In almost all these grades the results lagged behind the national averages.

Thus, out of 4,155 pupils in the 9th grade—tested in reading—only 1,583, or 38 percent, were at the 9th-grade level or above.

Also, out of 3,979 pupils in the 9th grade—tested in arithmetic—only 955 pupils, or 24 percent, were at the 9th-grade level or above.

As for the 6th grade here, 47 percent showed a reading level of 4th grade or lower. In arithmetic, 37 percent qualified at the 4th-grade level or below.

Both white and Negro teachers agree on these facts, but they also agree that it doesn't necessarily prove that the Negro children have any less intelligence. There is, for example, the suggestion that Negro children in the past have not been given satisfactory education in separate schools and that remedial instruction with special teachers hereafter will be necessary. More than 64 percent of the pupils in Washington schools now are Negroes. The Superintendent of Schools is asking for money to double the number of special teachers.

An additional reason for the drop-off is given by Dr. Irene C. Hypps, a Negro who is assistant superintendent of schools. She says:

"But, since the heart of the problem is the low economic level of many Negro families, the educational problem won't be solved until the economic problem is solved. I think that will take a great many years."

Meanwhile, what becomes of the doctrine unanimously enunciated by the Supreme Court of the United States on May 17, 1954, declaring that "even though the physical facilities and other 'tangible factors' may be equal," the children "of the minority group" are deprived of equal educational opportunities when there is segregation "solely on the basis of race." The question now will be asked whether the children of the majority group are not being deprived of educational opportunities because of the achievement lag of children in the minority group who are put in the same schools with them.

Already the problem is being tackled by attempting to put in subdivisions in the same classrooms, children of differing achievement levels. Where there is a sincere effort, as in Washington, to handle the matter so that bright children aren't held back by reason of the lag of the less-bright pupils, there probably will be no furor of complaint. But what about States, especially in the South, where there is no wholehearted interest in avoiding racial discrimination and where the school authorities may finally conclude that separate schools will have to be maintained solely on the basis of achievement or mental ability?

Under such circumstances, will the Supreme Court set up a system of measurement of the sincerity or efficiency of local school authorities? Will the Federal Government be compelled to create a department to police the States and see that they are applying the proper educational standards? That could mean complete control of education by the Federal Government.

The Supreme Court entered the realm of psychological knowledge in its decision and, in a sense, took jurisdiction over the scope of educational operations when it said:

"To separate them (Negroes) from others of similar age and qualifications solely because of their race generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone."

But if there is an achievement lag, as the educators call it, and the net effect in some school areas is to put a predominant number of white children in a class with an occasional sprinkling of Negroes, will this not create the same feeling of inferiority? Will parents of the Negro children concerned ever be satisfied that the separation is really due to educational qualifications and not solely because of race?

Irrespective of the merits of the dispute concerning the social effects of mixed schools, the legal questions appear to be growing more instead of less complicated. For, after what the tests in the Washington schools show, any form of segregation as between those at an advanced educational level and those lagging behind will be open to suspicion. The burden of proof in each case will be upon the school authorities to prove that it isn't racial discrimination.

This could introduce timidity among teachers and hesitation to classify pupils according to grades of achievement where the racial question is involved.

Likewise, the parents of white children may be petitioning the Federal courts some day with the argument that the phychological effects upon their children are adverse. It looks as if the Supreme Court will be plagued with the segregation issue for years to come.

Construction of an Adequate Great Lakes Merchant Marine

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. ASHLEY. Mr. Speaker, today, after considerable study and deliberation, I have introduced a resolution designed to encourage the construction and maintenance of a fleet of privately owned United States-flag Great Lakes vessels adequate to supply the demands of essential industries with the basic bulk commodities in time of peace and in time of national emergency. This resolution proposes that American shipowners be permitted to transfer existing Great Lakes vessels to the United States Government as they become obsolete in exchange for an allowance of credit to be applied upon the cost of new vessels constructed in the United States. This credit allowance would be based, at least in part, upon the inherent cost advantage which foreign-flag operators enjoy in constructing similar vessels abroad. Vessels turned over to the Government would be placed in the reserve fleet for use during periods of emergency.

The legislation I have introduced today is the result of lengthy discussions I have had with representatives of the Lake Carriers Association, with individual operators and with maritime labor officials. I have also discussed the matter in detail with my learned colleague, the Honorable A. D. BAUMHART, JR., of the 13th Ohio District, whose judgment we all respect. We are all in substantial agreement that foreign shipping competition is a matter of real concern to shipping interests on the Great Lakes—to American lake carriers, the inland shipbuilding industry, to labor, and to the vast and various industries which depend upon reliable water transportation facilities.

We cannot allow our national defense to be threatened, nor an important part of our national economy to be jeopardized. We all know that our American merchant marine is the fourth arm of our national defense, and this applies to our maritime activity on the Great Lakes as well as on the high seas.

In recent years, Mr. Speaker, two distinct trends have developed in Great Lakes commerce: First, international trade between the United States and Canada has increased; and second, the portion of such trade transported in United States-flag vessels has become less and less—from 76 percent in 1925 to 29 percent in 1955. The reason for this, Mr. Speaker, becomes clear when we consider that the ship construction costs abroad average only about 40 percent of present United States costs. Even our close neighbor, Canada, has construction costs approximately two-thirds of our own. Since United States-

Canadian commerce is open to vessels of all countries, completion of the St. Lawrence seaway will expose United States-flag vessels to even stronger competition from large, modern low-cost vessels of other countries.

Mr. Speaker, our American-flag fleet is growing old and obsolete while our foreign competitors are building modern bulk-cargo vessels which will soon be able to operate on the Great Lakes. Today, 343 United States-flag vessels operate on the Great Lakes, representing a total trip capacity of 3.38 million tons. But 103 of these, one-third of our United States Great Lakes vessels, Mr. Speaker, are 50 or more years old. By 1960, 201—about 60 percent—will be 50 or more years old, representing a total trip capacity of 1.9 million tons, or only enough to handle peacetime domestic commerce.

It is obvious to all, I believe, that in time of war, overseas sources of iron ore for our Nation's steel industry will be cut off, at least in part. It is equally apparent from the above figures that our aging Great Lakes fleet would be wholly inadequate to handle the accelerated demands of a war economy if such an economy were forced upon us.

It is for these reasons, Mr. Speaker, that I have introduced my resolution today.

I feel constrained to say, however, that there is another aspect to this general problem which continues to cause me considerable concern and certain misgivings. As a member of the House Committee on Merchant Marine and Fisheries, and as a member of the subcommittee appointed to hold hearings on labor-management problems in the maritime industry, I have come to the reluctant, but inescapable conclusion that the American merchant marine today does not meet the standards or possess the characteristics set forth in the Merchant Marine Act of 1936. In the last 10 years, American taxpayers have subsidized this industry to the extent of $625 million.

Last year alone, total subsidies amounted to over $100 million. Yet, the fact remains that today we have 600 or 700 fewer vessels in our active fleet than military authorities estimate are necessary for national defense purposes; the domestic and intercoastal trades have all but vanished from the seas; the tramp fleet, which is being subsidized almost entirely by the 50–50 law, and Government-aid cargoes, is doomed to obsolescence and eventual liquidation; the United States has dropped far down among the nations of the world in the number of ships being built; and the maritime unions have thousands of men on the beach. These are hardly the characteristics of a strong merchant marine. Speaking only as an individual member of the House Committee on Merchant Marine, I must say that I feel the responsibility for this deplorable situation to rest upon our Federal Government as well as upon management and labor. There simply is no other conclusion but that there has been an almost complete failure among those directly concerned to accept the increased responsibility which Federal subsidy to this industry should entail.

It is not my intention, Mr. Speaker, to introduce legislation which, if passed, would add to the deplorable record which has now become so clearly apparent to all.

On the contrary, it will be my intention to make certain, in every way I can, that real substance and meaning are given to the full title of the Merhant Marine Act of 1936, to insure that we are passing legislation "to further the development and maintenance of an adequate and well-balanced merchant marine, to promote the commerce of the United States, and to aid in the national defense."

School Savings in Brooklyn

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. KEOGH. Mr. Speaker, I would like to include the following article which appeared in the United States Investor, issue of January 7, 1956, on school savings which was initiated by the East New York Savings Bank of Brooklyn under the inspiring and able leadership of Judge Edward A. Richards, its president. It cannot be gainsaid but that the thrift practices of our country have aided immeasurably in its growth and development. Nothing is more important than inculcating those practices among the school children of our community. This Judge Richards, a pioneer in the mutual savings bank field, has developed beyond all reasonable expectations, and it will be forever a tribute to his wisdom and foresight.

Judge Richards was recently awarded the gold medal of the year for outstanding service to the Borough of Brooklyn by the Downtown Brooklyn Association, a tribute of considerable distinction but which in his case was most merited. The article follows:

CREDIT TO SCHOOL SAVINGS

In the Borough of Brooklyn, a portion of New York City which is of itself larger, populationwise, than any other borough, and would be among the very largest cities of the country if it were a separate municipality, is a mutual savings bank which has had an amazingly satisfactory experience with school savings. We thing our readers will be interested in the story of that bank because a good many savings bank people still turn thumbs down on any such department for their bank and a lot of other bankers are in agreement with them. Among the 529 mutual savings banks of this country, only 207 are offering savings opportunities to the pupils in the schools of their respective areas. The remaining banks are either indifferent to the idea or are convinced that it involves more trouble or more expense than it is worth. Here, however, is a bank which is increasingly enthusiastic over school savings and has been so for lo, these many years.

For the critic who declares that schoolteachers, themselves, are averse to this activity, this bank has a mass of teachers' letters testifying to quite contrary effect. For the critic who pronounces this activity as too expensive to operate, it has a convincing response taken stranght from its own books. And for all critics added together, including these two groups and all others, it points to its own really astonishing growth in resources and in number of depositors and attributes this result to its school-savings program. When we tell you that this institution—the East New York Savings Bank—had only about $6 million of resources in the early days of this school-savings program, that is, around 1919, that on July 1 of this year it had resources of over $481 million and that it can fairly expect to cross the half-billion-dollar figure ($500 million) very shortly, you get some conception of the story we are about to tell.

The bank was organized in 1868 when Brooklyn was a separate city and east New York not yet become just another closely settled section of the world's largest city. It was enough of a community, however, to give its savings bank a quiet, healthy growth, and at the end of 50 years, in 1918, it had accumulated something like $6 million of resources. There was nothing in its record up to that time to suggest that in this, its 87th year, it would be one of the fastest growing banks in the whole United States.

A CHANGE OF PACE

The change of pace began in 1919 when the present president, Edward A. Richards, became the head of the bank. Probably Judge Richards himself sensed from the beginning that the area all about his bank would become more and more thickly settled because of its nearness to New York and that city's ever-increasing commercial importance. Nevertheless, he began at once a policy of bringing his bank closer and closer to the people. Thus the growth which the bank's happy location on a main artery of travel to downtown Brooklyn would have given it has been multiplied many times by the bank's own alertness. Through school savings on a large scale it has made the name of the bank familiar in every home, certainly in every home where there are children.

We have no intention of wearying our readers with long arrays of statistics, but here are some figures which are not wearisome to anybody who is interested either in school savings or in savings banks. In 1921, the bank had 10,000 school savings accounts. For a bank of its then size—total resources on December 31, 1921, were $13,108,276—this was an interesting and promising activity. But note how this activity has steadily taken on greater size. In 1931 its school savings accounts numbered 53,000 and in 1941, numbered 83,000. In 20 years, you see, the number had increased by 730 percent. In 1951 the number of school savings accounts had become 107,000, and at present writing it is 121,607. Think what that means in contacts with the homes of Brooklyn. The president of the bank has a favorite expression. It is that this figure means that the East New York Savings Bank has 121,607 salesmen going into and out of the homes, telling to parents and to the young folks of their neighborhood as well, the story of the service which this bank has for them. It costs money to handle school savings on so ambitious a scale. The East New York Savings Bank spends about $100,000 a year on this one activity. But again quoting the president, the bank is getting its salesmen into the homes at less than $1 per salesman, and the results which the bank is getting speak well for the story which this army of salesmen is telling.

ADVERTISING IN HUMAN FORM

Let us make note at this point that in 1921, when school savings accounts numbered 10,000, the bank had total resources of $13,108,276. Twenty years later, in 1941, when

school savings accounts had become 83,000 in number, the total resources at the end of that year had become $97,835,966. Now, as of October 31, 1955, the resources are $488,371,904. The immediate goal of half a billion seems clearly to be in sight. The bank increases in size not only every year, but every month in every year, and one can almost say it grows with every day of every month. Those young salesfolk constitute in human form an exceedingly productive type of bank advertising. Obviously their homes are impressed and their parents and neighbors bring dollars for deposit to the place where the children bring pennies, dimes, and quarters.

Looking back to the bank's figures, for July 1, 1955, which for a bank growing as rapidly as this one is almost a dive into ancient history, the bank had 228,301 depositors with passbook accounts, 112,898 school savings accounts, and 24,851 with Christmas club accounts, or a total of 366,050 depositors of the three types. One is not surprised to discover that the bank has had to enlarge its modest home office building on Atlantic Avenue to six times its original size and that it now also has branches in attractive buildings of their own at Eastern Parkway and at Pitkin Avenue.

A common criticism of school savings is that it lays an unwelcome burden upon the schoolteachers. It would seem that the figures we have already quoted are sufficient to brush that complaint aside as having little warrant in the case of this bank. A system of activity within the schools that has not only persisted for so many decades but has grown immensely in volume would have made no such record if the teaching profession had found it a distasteful task. Probably whatever substance there is for this complaint at some banks is due to the system which it uses. The East New York Savings Bank serves 108 schoolbuildings and its system is simplicity itself.

A SIMPLE SYSTEM

At every school, 1 day of each week is bank day. The envelopes of the pupil depositors are placed by the teacher in a master envelope and then this is passed on to the one teacher of the building assigned by the principal to receive all the master envelopes. When the bank collector calls, she hands him the envelopes, he counts the number of master envelopes and gives her a receipt for the same and brings them to the bank. There is a minimum of effort. What do the teachers really think of the whole affair? The bank has a perfect mound of letters received from the teachers expressing their satisfaction with the system and speaking highly of the bank itself. It clearly is not an inherent feature of the school savings idea for teachers to endure it as a necessary evil and one of which they would be gladly rid. Give them the right system of operation, and this difficulty simply does not exist.

Before turning away from procedure at the school, we must not overlook a quite original feature which this bank carries on. It spends $10,000 a year of the $100,000 on an attractive newspaper, School Bank News. It distributes this through the schools to the pupils. This is an attractive publication, made up of good, fresh material, not canned news, and it is welcomed in the homes when the children bring it there. There are 10 issues of this publication each year. Thus the army of young salespeople is backed up by this newspaper.

When a bank has been an enthusiast over school savings for a good deal more than a generation, as this bank has, it has made some interesting discoveries. It has seen the pupils move on from grade to grade, and then off into the adult world. It must be serving thousands of children today whose parents were among the bank's early school savers. It is safe to say that among those 228,301 passbook depositors above mentioned are great numbers of people who began their relation with the bank through the envelopes which they handed in with their pennies, dimes, or quarters on school bank day. When their accounts grew sufficiently, they received passbooks and have held these and used them down through the years that have followed. A great many millions of dollars have been transferred, over the years, from school-savings accounts to straight passbook accounts.

A PLEASING BYPRODUCT

And there is a byproduct of all this which must be very satisfactory to President Richards and the officers and trustees of the bank and their associates. It is the effect which accounts originating in the public schools and becoming passbook accounts have on the average age of the bank's customers. Savings banks, as perhaps you know, are paying more and more attention, nowadays, to this subject. If a large fraction of any savings bank's depositors are elderly people, the time is coming when their passbooks will become inactive and then go into the hands of their heirs. The closing out of such accounts is not uncommon. We have known banks to experience very substantial declines in the number of their depositors from the aging of their people. In fact, we could provide our readers with some surprising figures along this line. It is worth the while of any bank to make a survey every few years of the average age of its depositors, just to see whether it needs to do something to keep the average age down. We should say that the East New York Savings Bank has made ample provision against an uncomfortable rise in the average age of its depositors by the flood of new accounts which it is constantly bringing on its books because of its widespread service at the schools.

Middle East's Crises

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. ADDONIZIO. Mr. Speaker, at this time when our Government and the British Government are negotiating on matters concerned with the Near East, I wish to call attention to the following timely editorial from the Newark News of February 1 entitled "Middle East's Crises." As the editorial states, it is essential that Israel and the Arab States reach a peaceful settlement of their differences. It is vital that our Government take the leadership in ending the threat of war, but in our eagerness for peace we must not yield the right of Israel to exist as a free and independent nation. To sacrifice the legitimate rights of this fine democratic nation will not lead to peace; rather, it is an overture to war.

The editorial reads:

MIDDLE EAST'S CRISES

Recent events in the Middle East should correct any impression that a conciliation or even an abatement of Arab-Israeli hostility would automatically dispose of the problem which that vital area presents to President Eisenhower and Prime Minister Eden.

Unquestionably, the imminent danger of war between Israel and its Arab neighbors puts that issue to the fore, but it cannot and should not obscure other sources of tension that require the attention of the United States and Britain.

Russia, for instance, cannot be expected to confine itself to supplying Egypt with arms. Soviet efforts at economic and political penetration will surely continue throughout the Middle East, whatever the outcome of the Arab-Israeli dispute.

Within the Arab League itself, Iraq's entry into the pro-Western Baghdad Alliance has brought into the open its long-standing power conflict with Egypt as well as the dynastic feud in which the ruling Hashemites of Iraq and Jordan have bene embroiled with the Saud monarchy of Saudi Arabia.

Even between the United States and Britain, latent rivalry over Middle Eastern oil seems to be figuring in the current flareup over the Buraimi Oasis in the southeast corner of the Arabian Peninsula.

Saudi Arabia, which claims the potentially oil-rich oasis, threatens to call United Nations attention to its forceful occupation by British-led forces acting for the Sheik of Abu Dhabi and the Sultan of Muscat, both of whom are under treaty protection of Britain.

In the background there are the oil prospecting crews of the British-owned Iraq Petroleum Co. (IPC) and the Arabian-American Oil Co. (Aramco), which operates under agreement with Saudi Arabia.

Furthermore, the British formally accuse Saudi Arabia of using its American oil revenues in other Arab nations, notably Jordan and Iraq, to stir up hostility to Britain and, by association, to the United States as well.

All of these problems have, of necessity, been subordinated to the more explosive situation in Palestine. Still they exist, which is all the more reason why the United States and Britain must act swiftly to damp down, if not extinguish, the fuse of war between the Arabs and Israel.

Anniversary of Independence of Ceylon

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. POWELL. Mr. Speaker, when I came back from the Asian-African Conference at Bandung, I said I would address from the floor of Congress each one of the participating countries, except the two Communist ones, Red China and North Vietnam, on the occasions of their independence celebrations.

I wish to extend to the people of Ceylon: His Excellency the Governor General of Ceylon, Sir Oliver Ernest Goonetilleke, G. C. M. G., K. C. V. O., K. B. E.; the Right Honorable Sir John Lionel Kotelawala, P. C., K. B. E., Prime Minister of Ceylon; and His Excellency Sir Senerap R. S. S. Gunewardene, K. P., Ambassador of Ceylon in the United States, sincere felicitations and best wishes on the occasion on their 8th anniversary of Independence Day, February 4, 1956.

Ceylon achieved nationhood in the postwar era. Although a small country, Ceylon is one of the important new states of Asia. Having broken the stranglehold of colonialism, the lifeline of imperialism, Ceylon has in her a young democ-

racy of great strength which can be turned to the lasting good of the entire nation. They have a treasure house of love and affection from people around them, which is a great asset to a young nation.

Colonialism left Ceylon with many problems which war-scarred Europe never had—the problem of underdevelopment, overpopulation, poverty, and a low standard of living. Such conditions contrive to force men to be driven by their stomachs rather than their heads.

For Ceylon, as other new states of south and southeast Asia, political independence did not bring with it economic emancipation. Development in this respect has been slow due to the lack of technical knowhow and the shortage of capital. The Prime Minister of Ceylon, the Right Honorable Sir John Kotelawala, in an address to the Ceylon Association in London on November 22, 1954, stated:

Political freedom means nothing unless it brings its people a general improvement in the standard of living and the benefits of economic freedom. * * * We have many problems confronting us. Some of them are most urgent and vital from the people's point of view, but yet remain to be tackled for the sole reason that we had necessarily to take first things first. We have yet a great deal of poverty in our land, besides landlessness, unemployment, an acute housing shortage, a very unsatisfactory dependence on other countries for our basic requirements of food, and an inability to develop our natural resources to the optimum extent for lack of capital.

Ceylon has forthrightly attacked these numerous challenging problems in many ways. Her capital was the scene of the signing of the Colombo plan for south and southeast Asia. Sixteen nations are members of the Colombo undertaking to improve the economies of the non-Communist lands of Asia. The Government of Ceylon reports that:

The Colombo plan is working smoothly and effectively today. It is a form of international cooperation not based on rules and procedure. It is as imprecisely defined as the institution of the commonwealth itself, which created it. It is a cooperation of peoples of different races, different religions, and different ways of life. The aid given by one country to another is not given in a spirit of charity or of patronage. There is no quid pro quo. The aid is given without any strings and does not imply the creation of any obligation. It simply implies the recognition of the fact that poverty anywhere is a danger to prosperity everywhere.

Resurgent Asia needs peace if she is to play her part in the affairs of the world. Peace is a religion. Either we believe in it, set our minds on it, work for it, or we do not. There is no halfway house in the matter. "If we are to end war we must forget war," opines the venerable Prime Minister of Ceylon, who is himself an ardent champion of peace, Speaking before the 10th session of the Economic Commission for Asia and the Far East, the Right Honorable Sir John Kotelawala averred:

I am a great believer in international cooperation, based on goodwill and understanding, as the surest means of achieving our individual aspirations. Ceylon has accordingly participated, readily and wholeheartedly, in the work that has been undertaken by the specialized agencies of the United Nations and the various other international bodies in bringing about a better world understanding and improving the lot of its peoples. I do not for a moment concede that only because we are a small nation we have no significant part to play in the solution of world problems. * * * I think the time has come when all nations must realize that, if the world is to be saved from a third catastrophe, the law of the jungle can have no place in international relations, that might is not necessarily right, and that every country, big or small, must regulate its conduct by moral principles and the rule of law.

Ceylon is an independent country which makes its own foreign policy and has earned its right to control its own affairs. The Right Honorable Sir John Kotelawala has distinguished himself by the independent stand he has taken in his relations with the big powers and with other Asian countries. He has refused to recognize any Communist nation. At the same time, he has declined to be the pawn or satellite of any other country.

Ceylon has attained her freedom; she has again the priceless possession, which, for several centuries had been taken away from her. The nation has emerged into a very complex world, where simple things are made intricate and the things that matter least seem to matter the most.

In wishing Ceylon life's choicest blessings as she embarks upon a new year of independence, let me implore her to continue her resolve of friendship, goodwill, and understanding in the truest sense of that often misunderstood word.

A Creed for Republicans

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. SHEEHAN. Mr. Speaker, the Chicago Tribune of January 29, 1956, carried as its lead an editorial entitled "A Creed for Republicans." The Chicago Tribune is known throughout the length and breadth of this land as a Republican newspaper, and it has fought for Republican principles since the party's inception in 1856. In my opinion the views set forth by the Chicago Tribune in this editorial are certainly most worthy of study.

The editorial is as follows:

A CREED FOR REPUBLICANS

At the Republican National Convention of 1880 John P. Douglass, of New York, sought to define the Republican Party. "The Republican Party," he said, "is the ship, all else is the sea." The metaphor was, and remains, impressive. But, as we suggested here a few days ago, the party vessel has shipped a lot of water in the years since then. It has been boarded on occasion by pirates, offering political ambiguities and even, sometimes, former Democrats, as its candidates. Its national program today has been borrowed without acknowledgement from the opposition party.

Why does a party do such things? Principally, we believe, because the desire to be elected is the controlling motive of politicians. The proper objects in governing are forgotten, or rendered subsidiary, because power and political perquisites are considered the goals of the chase.

But, even so, we do not think a party undergoes so radical a transformation as has the Republican Party in recent years purely as the result of accident. We cannot escape the feeling that some shrewdly malign agency has been at work. And the purpose of that agency, we are convinced, is to protect certain pet predilections in the formation of national policy by denying the people any real or effective choice between parties and doctrines.

When we see the domestic New Deal institutionalized under Republican auspices, we are pretty sure that that is the fact. And when we see the New Deal foreign policy of internationalism and interventionism maintained unchanged under Republican stewardship, we are more than ever certain that some manipulating force has planned it that way, to the end that the people can be played from both ends against the middle.

Therefore, the task of determining the characteristics of a Republican seems almost as extravagant as Diogenes' sallying forth with a lantern at midday to look for an honest man. Who embodies the principles that the party ought to cherish when its titular leadership for many years has disowned them or been ignorant of them?

Nevertheless, though politicians may wander, principles remain fixed. We believe that the character ordained for the Republican Party is that it be conservative. To conserve means to guard or protect a social order and political system which in turn guard and protect individual liberty. Variety and individuality are the fruits of a civilized society. They are not long preserved against the pressures of an all-power centralized state, whether that state is the product of personal or party despotism, as in Hitler's Germany or the Soviet Union, or whether it pretends to be democratic because it rests upon the tyranny of the majority.

A Republican, therefore, affirms the fact that the people must limit their power over themselves. For if they agree to unlimited power exercised in their name through Government, their political agents will seize it and exercise it as a personal prerogative, saying that they have had a mandate from the people.

Society, as Mill has remarked, does execute its own mandates. If it issues wrong mandates instead of right, or any mandates at all in things with which it ought not to meddle, it practices a soical tyranny more formidable than many kinds of political oppression, for the tyranny penetrates deeply into the details of life and leaves fewer means of escape.

So it should be the Republican determination to permit each citizen to frame the plan of his life to suit his own character, to do as he likes, subject to such consequences as may follow, without impediment from his fellow creatures. For when the State assumes to guide and direct every action, justifying its intervention by reference to the "general welfare" or some other ambiguous sanction, it interferes with the liberty of person. When it seeks to present the citizen with a readymade life, drafted to its own ordination, it defies the elementary fact that no two men are alike, in capacity, in outlook, or in taste. So all the State can offer is a Procrustean bed.

This being the general philosophy that should govern Republicans, it follows that the party must dedicate itself to government on the most limited scale, must avoid all interference with the economy and the social order, must turn from all unwarranted attempts at intrusion and regulation which

characterize systems such as socialism, collectivism, or the welfare state, and must accept a role of modesty rather than of arrogance and assumed infallibility. Given such a political dispensation, the people will rally to the party as their trusted champion of liberty.

The Powell Amendment

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to Mr. Walter Lippmann's column on the Powell amendment, which appears in the Washington Post and Times Herald for February 2, 1956. Mr. Lippmann states:

THE POWELL AMENDMENT

(By Walter Lippmann)

The Kelley bill to appropriate Federal money in aid of the construction of schools has run into the conflict—which is still unresolved in the Southern States—over the Supreme Court's decision on segregation. Representative ADAM C. POWELL, of New York, is proposing an amendment to the bill which would deny Federal funds to States or local school districts which continue to maintain segregated schools. The money which is denied them would be held in escrow and paid out whenever a local district complied with the decision of the Supreme Court.

The amendment, which has the support of Representative JOSEPH W. MARTIN, the Republican leader in the House, might well, if adopted, bring about the defeat of the bill and the hope of Federal aid for the schools. It would be expecting too much that the southern Senators and Congressmen would vote for the bill with this amendment in it. The southerners, plus many northerners who are really opposed to Federal aid on principle or on grounds of economy, would be a formidable opposition. But even if the bill could be passed over their opposition, it would complicate and obstruct, rather than assist and promote, the movement to end segregation in the schools.

"I think I shall vote for the Powell amendment," said Representative MARTIN the other day, "because of the position of the Supreme Court, I don't think you can do otherwise." Mr. MARTIN is entirely mistaken. The truth of the matter is that because of the position of the Supreme Court, Congress ought to reject the Powell amendment. For that amendment, far from upholding the Supreme Court's decision, would subvert it.

The position taken by the Supreme Court is that segregation in the public schools is unconstitutional, being a denial of the equal protection of the laws, and that the Court will pass upon the adequacy of any plans that State and school authorities may propose to effectuate a transition to a racially nondiscriminatory school system. During this period of transition, the courts will retain jurisdiction of these cases.

The Supreme Court, recognizing that the changeover from segregated schools is a difficult and complex matter, has refrained from demanding immediate and unconditional application of its ruling. It has recognized that there must be a period of transition—a period of persuasion and accommodation—and the Supreme Court has accepted the burden of presiding over this transition.

The Powell amendment runs counter to the letter and the spirit of the Supreme Court's decision. For the amendment proposes to have Congress take over from the Court the burden of getting the rule against segregation observed. It proposes to punish the localities which are slow about or opposed to complying, and to give to administrative officials, rather than to the Supreme Court, the power to determine whether the law is being observed. No one, I submit, who understands and believes in the Supreme Court's decision, can vote for the Powell amendment.

If the amendment is adopted and the school-aid bill is defeated, the cause of integration will suffer. Federal aid for school construction will be withheld from precisely those States and school districts where it is most needed. Integration, since it means that Negro children will have the same education as white children, requires much money. In the segregated school systems the Negro children are for the most part less well provided for. One of the necessary means to the integration of the schools is to build more schools. Otherwise, under integration the education of the white children will be pulled down toward the standards now prevailing for the Negro children.

Any true and understanding friend of integration in the Southern States should realize that when he proposes to starve the southern schools, he is making it more difficult to bring about integration. The South now has a dual school system, the white one better than the Negro. It will take money to bring about one school system at the level of the schools for white children. The worse the two systems are allowed to become, being deprived of money that is indispensable, the harder it will be in fact to integrate them. And the more acute will be the passions aroused.

Mr. POWELL is a Democrat and Mr. MARTIN is a Republican. They would do well not to play politics with the public schools.

Hon. Wilton E. Hall, South Carolina's Man of the South for 1955

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 2, 1956

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "South Carolina's Man of the South for 1955," appearing in the February 1956 issue of the South Carolina magazine.

Hon. Wilton E. Hall, who has been named man of the South for 1955, will be remembered by many as a former United States Senator from South Carolina.

He has been nominated and served many times as a Democrat elector in the presidential campaigns. Mr. Hall is the owner and publisher of two of the most progressive daily newspapers of the South, as well as owner and operator of radio and television stations. Many, many more achievements could be enumerated. However, this article bespeaks those achievements and the sentiments of all of us who know Wilton E. Hall best.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILTON EARLE HALL, SOUTH CAROLINA'S MAN OF THE SOUTH

(By Millwee Owens, radio executive of Augusta, Ga.)

Big doors swing on little hinges. Many of history's most important events have grown out of what appeared in the beginning to be trivial incidents.

It was not "trivial" to Wilton Earle Hall, at the age of 15, to suffer a ruptured appendix. But it was to shape his whole life and it in turn make in later years a deep imprint upon the political, social, and economic life of the great State of South Carolina, as well as those States that border upon it.

When Hall had to leave Furman University at 15 because of an unruly appendix, he gave up what his parents and many of his friends had hoped would be a distinguished law career. In spite of the lack of antibiotics in those days, the husky Hall boy overcame his bodily upset and upon his return to Starr in Hall Township, Anderson County, his birthplace, his ambitious and restless nature soon led him to the nearby city of Anderson to seek a job.

The boy had had no dreams of becoming a great journalist, or even a good newspaper reporter. And so when he went to work as a cub on the old Anderson Tribune, it was to him just a job—a job that paid $5 per week and enabled him to pay his own way.

In that year the Big Berthas of the Kaiser were shelling the outskirts of Paris and our daily newspapers told of increasingly bold attacks of German submarines upon our vessels on the high seas. Then came the sinking of the Lusitania and its accompanying frightful loss of life. President Woodrow Wilson could hesitate no longer. He asked the Congress to approve a declaration of war.

All of this greatly impressed young Hall. But he was too young to take part, and so he finally went back to Furman to study law.

But, as they say in the newsrooms, he had gotten newspaper ink upon his fingers and from then on out he would find this to be a harder virus to conquer than the scourge of peritonitis that had turned him around in his tracks a year or so before.

So at the age of 21 he forsook his law course and turned back to journalism. We now find him on the staff of the Greenville (S. C.) News as State news editor, a fancy title with small pay in those days.

Even at 21 Hall was not one to scare easily. It can be understood how he defied the Ku Klux Klan and the powerful CIO labor union in later years when one learns the story of how a sheeted ghost tried to scare the wits out of him while he worked with the News in Greenville.

A practical joker on the paper, noting Hall's youth and inexperience, decided to have some fun at the boy's expense. He began to leave notes for Hall on Hall's desk, setting out that he was the ghost of a young friend Hall had known in college. The ghost even reminded Hall that he owed Hall $5 and wanted to repay the loan. After a series of notes to bait the boy's interest, the practical joker wrote Hall to invite him to meet the ghost in the city cemetery at 2 a. m. on a Sunday morning, at which time the ghost would reveal his identity and repay Hall the $5.

Hall did not know the source of the plot, but he was not afraid to go through with it. Another young friend on the paper was persuaded by Hall to bedeck himself in his mother's best sheets and hide in the cemetery to watch the unfolding of the plot. Just as Hall appeared in the cemetery gate to meet his ghostly "friend", Hall's sheet-bedecked friend, leaped out into the moonlit scene and the plotters, with a wild shriek, fled in every direction.

This little story is told to illustrate the fact that Wilton Hall, as boy or man, has

never stepped back from a challenge. He loves a fight—that is, if it is a fight for the rights of the poor and oppressed, or for the public weal as a whole. He has never asked that any holds be barred.

Wilton Earle Hall, as recorded in Who's Who in America, was born in Hall Township, Anderson County, March 11, 1901. He is the son of Thomas Dean and Sarah Tucker Hall. His education was received in Starr at the high school and at Furman University in Greenville. He married Mary Elizabeth Lightsey, of Hampton, S. C., February 1, 1925. They have 4 children, 2 boys and 2 girls.

That is purely a statistical description of Wilton Hall. It does not, by any means, begin to describe the dynamic and brilliant Wilton Hall who, in 1924, just 1 year after he married the attractive Mary Lightsey, hied himself to the bank to borrow $2,000 with which to found the Anderson Independent.

Today he owns both the Independent and Daily Mail, morning and evening papers, respectively, in Anderson, not to mention radio station WAIM and television station WAIM–TV. His financial success is best portrayed by the fact that Dun & Bradstreet gives him the highest rating an individual can obtain.

Wilton Hall's newspapers have won more local, State, and national awards than Bobby Jones has won cups for golf excellence. Anderson County is noted in South Carolina and in the South, as well as throughout the Nation, for its many industries and its fine farms, but it is distinguished chiefly because of the excellence of the Hall newspapers and their rating as community builders.

Wilton Hall is one of those who, more than two decades ago, envisioned the Savannah River Valley as an industrial empire that would someday rate with Europe's Saar region or the Tennessee Valley.

Successful institutions, it has been said, are but the lengthened shadows of one man. Anderson newspapers are such institutions and the lengthened shadow is Wilton Hall.

Hall's newspapers attracted wide attention in the early days of his ownership, as well as in later years. Publisher Hall was awarded in 1941 the National Editorial Association's journalism silver plaque for having rendered the greatest community service in the United States. Three years later the award was again made to him, the first time in the association's history that it had been presented twice to the same publisher.

Unlike Topsy, the Anderson newspapers have not just "growed." They have grown because of the atomic force of one person behind them—Wilton Hall. Although, Mr. Hall, with characteristic modesty, says credit is due to his coworkers.

"We are just a team," he says. "I happen to be the captain."

Hall's newspapers outgrew all other such publications in the two Carolinas during the past decade. Percentagewise, the increase was 406 percent, although the immediate area has no military camps or other Federal installations.

One is amazed to learn that these newspapers, in a city no larger than Anderson, can boast of a paid circulation greater than 50,000.

The papers were awarded the Editor and Publisher blue ribbon for writing and publishing the best advertisement in the United States in 1941; in 1943 NEA awarded them the top honor for circulation promotion and carrier salesmen welfare. Through nationwide radio broadcasts, the newspapers gave publicity to the natural resources of South Carolina. This attracted wide attention.

One cannot write of Hall's career without interjecting statistical matter. It may make dry reading to some, but Anderson folk, and other thousands throughout South Carolina, delight in reading of the accomplishments of Wilton Hall and his newspapers.

President of the Anderson Chamber of Commerce, civic club president, chairman of the Democratic county convention, presidential elector, and last, but not least, United States Senator, tell in part the recognition that has come to this amazing newspaper man.

He is a former chairman of the South Carolina Planning Board, member Clemson College Board of Visitors, past president South Carolina Press Association, member National Press Club, South Carolina, chairman of the Navy League, and chairman of Anderson County War Finance Committee.

The adage that a man is not without honor save in his own land and among his own people does not apply to Wilton Hall. In his own city and county he was made Optimist of the year for civic leadership; the Jaycees elected him man of the year, and he served as chairman of the postwar planning survey for Anderson, which was described as model by CLINTON P. ANDERSON, who was then Secretary of Agriculture.

Others have been called Mr. Democrat, but the title really fits Wilton Hall, whose party loyalty, devotion, and service to the cause have been such as to attract national attention.

Some enterprising business or manufacturing journal could get an inspiring story of management-employee relations by studying Wilton Hall's policy in dealing with newspaper and radio workers.

First, he believes the purpose of a good newspaper or radio station is not solely to make money. It might be said that Hall makes money because of this policy, and not in spite of it.

No department head could hire an office boy and keep him for any length of time without the big boss knowing all about the boy, his home life, his capacity for work, and his ambitions. He calls his men and women coworkers. He knows their birthdays, and the high and the low each receive a birthday greeting with a $10 bill attached. Also, each gets a Christmas bonus check and hospital insurance, while department heads receive rent-free seashore apartments for summer vacations if wanted. The annual Christmas bonuses in 1955 were in excess of $25,000.

Hall's newspapers pay all insurance and retirement benefits for employes, and at this time insurance in the aggregate represents a coverage of $1 million. He encourages all of his coworkers to own their homes, and only for the purchase of a home will he endorse a note for them.

The very name Hall is synonymous with service—public service. He pioneered in both radio and television. His newspapers, as an illustration of service unmatched in the whole Nation, make their own deliveries on legal holidays along rural routes.

So valiantly did the Hall newspapers support the Democratic ticket in 1954, playing a conspicuous role in wresting control of Congress from the Republican Party, that the national party awarded him a special plaque for distinguished service in its behalf.

Wilton Hall is recognized as one of those largely responsible for the construction of the gigantic Clark Hill Dam on the Savannah River between Augusta and Anderson at a cost of $90 million. He now heads the committee promoting the Hartwell Dam, above Clark Hill, which is already being built, and which will ultimately cost close to $100 million.

Now comes the crowning achievement of a long and notable career. Dixie magazine, a publication of southwide importance, has through a popular poll among business and professional leaders, named Wilton Earle Hall as man of the South for 1955. This is a distinction that has come to but a handful of Southern leaders, among these being Robert Tyre Jones, of Atlanta, Ga., and James C. Self, of Greenwood, S. C.

In appreciation of this fine recognition of Wilton Hall, the Anderson Chamber of Commerce will give him a testimonial dinner at Clemson College on the evening of February 11, at which time the award will be made with proper ceremony. Many dignitaries from the South will attend.

There are those in western South Carolina and eastern Georgia who envision the Savannah River Valley as a vast industrial empire within the lifetime of most citizens now living. The valley has abundant water supply (something lacking in many sections of the country) and it has rich soil and abundant timberlands. It can, and surely will, become a valley of wealth and population unmatched in this part of the world, or even throughout the universe. Certainly it has all of the potentialities.

Like Abou Ben Adhem, Wilton Hall's name heads the list of those who have been a friend to their fellow man. Also, it heads the list of those who, for a quarter of a century, often at the neglect of their own personal affairs, have worked for and dreamed and prayed that this rich valley would someday become a veritable utopia.

Hold on to Your Hat, Mr. Benson, There's a Big Storm Coming

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. GROSS. Mr. Speaker, under the above heading the January 21, 1956, issue of the farm publication, Wallaces' Farmer and Iowa Homestead, carries the results of a poll it carried on among Iowa farm people on this question: "On the whole, what kind of a job do you think Ezra T. Benson is doing as Secretary of Agriculture?"

Following are the results and an article in connection therewith:

WHAT FARMERS THINK OF BENSON

For several years, the Wallace-Homestead poll has been asking Iowa farm people this question: "On the whole, what kind of a job do you think Ezra T. Benson is doing as Secretary of Agriculture?" Replies, by both men and women, follow. Note the shift from February 1955 to December 1955:

	July 1953	July 1954	February 1955	December 1955
	Percent	*Percent*	*Percent*	*Percent*
1. Good	17	18	15	7
2. Fair	46	44	43	28
3. Poor	25	26	27	48
4. Not sure	12	12	15	17

Almost half of Iowa's farm people think Secretary Benson is doing a poor job as Secretary of Agriculture. And only 7 percent think he is doing a good job.

That's what the latest Wallace-Homestead poll shows. Republican Congressmen in the Corn Belt, with ears to the ground, had already figured this out. That's why there is increasing pressure within the GOP to get rid of Benson before the campaign starts.

Most striking feature of the poll is Benson's decline from February 1955 to December 1955. Benson never was popular in Iowa. But in February 1955 only 27 percent of the farm people interviewed were willing to say he was doing a poor job. By De-

cember, this figure had gone up to 48 percent.

What kind of folks are against Benson? What kind are for him?

If we take farm people who favored MARTIN for Senator in 1954 as Republicans; and those who favored Gillette as Democrats, then the Benson vote looks like this:

1. Good, Republican, 13 percent; Democrat, 1 percent.
2. Fair, Republican, 34 percent; Democrat, 22 percent.
3. Poor, Republican, 47 percent; Democrat, 51 percent.
4. Not sure, Republican, 7 percent; Democrat, 26 percent.

Notice that the "poor" vote is practically the same for both Republicans and Democrats.

How do Farm Bureau members and nonmembers vote on this? About the same:

Good, Farm Bureau, 8 percent; nonmember, 5 percent.

Poor, Farm Bureau, 46 percent; nonmember, 50 percent.

The most striking differences show up in the vote among age groups. Older men dislike Benson much less than younger men.

In polls on production payments for hogs, younger farm men—those 20-34—show much greater approval than middle-aged and older men. But on Benson, the young group and the middle-aged group seem to unite against those 50 and over.

Even though older men are slightly less hostile to Benson than younger men, they still vote 39 percent for "poor" and only 14 percent vote Benson as "good."

Here is the record for men:

	Years		
	20 to 34	35 to 49	50 and up
	Percent	*Percent*	*Percent*
1. Good	2	3	14
2. Fair	32	29	30
3. Poor	52	53	39
4. Not sure	14	15	16

Most of the comments on Secretary Benson were bitter. A farm woman in Bremer County told the interviewer: "I could write a whole page on what I don't like about Benson." A Clay County farmer said: "No words can describe Benson. He's impossible."

But a supporter in Plymouth County declared: "Secretary Benson has a tough job. I'd hate being in his shoes. I'm sure he's trying.

"I hope President Eisenhower and Benson keep on seeing eye to eye and won't back down and give in to a few radicals."

A farmer in Muscatine County added: "I think Benson's doing as good as he can, considering the fact that farmers don't cooperate with him. He needs Congress' support, but doesn't get it."

However, more of the farmers interviewed were like the man in Decatur County. Speaking to a woman interviewer, he said: "Write him down 'poor.' It probably wouldn't do for me to tell you what I really think."

Agriculture in Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting letter I have received from Louis A. Webster, director, division of markets, department of agriculture, the Commonwealth of Massachusetts, containing some very worthy suggestions for our consideration and attention here in the Congress.

The letter follows:

THE COMMONWEALTH
OF MASSACHUSETTS,
DEPARTMENT OF AGRICULTURE,
Boston, January 31, 1956.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR TOM: In all my years of reading farm news, I have never heard so much clamor about the cost-price squeeze of the farmers, and, of course, there is no avoiding the fact that nearly every type of agriculture in recent months and years has been plagued by surpluses, whether food, fiber, or flowers. The third biggest income producer in agriculture in Massachusetts is flowers and nursery stock, with a gross farm value of about $22 million. Middlesex County is the fifth greatest producer of flowers and nursery stock among all the 3,000 counties in the country. There is little, if any, more greenhouse space in Massachusetts than there was a generation ago, but the flower market is frequently overloaded.

Once last summer an orchid grower gave me two big boxes of first-class, fresh, Cypripedium orchids consisting of 216 flowers to present to people in this office and the State House just as a public relations gesture rather than for them to be thrown away. Another time a rose grower took a panel truck and with my assistance we went around and presented a dozen roses to each of the food and fashion editors of the Boston newspapers and radio stations. We covered 16 different offices.

This department has been instrumental in furnishing native apples and decorations of native flowers to various conventions and banquets around Boston and has had the cooperation of several radio stations in putting on all-day promotional ventures for such delicious native items as asparagus, strawberries, and sweet corn.

Here in Massachusets, at least, there is a question of publicizing the surplus and eating it up. In fact, nationally, I believe, more can be done for farm surpluses along the lines of "Eat it up, wear it out, or use it up."

This Department, as I have mentioned in previous letters, has enjoyed the active cooperation of the Department of Commerce in promotion of native products, all of which have appeared to show substantial results, and the way the present budget is showing up, we will probably continue to do an increasing amount of agricultural promotion.

National farm programs have generally left Massachusetts at a disadvantage, and from a personal standpoint, it has always seemed to me that the 90-percent rigid farm supports have been particularly disadvantageous for Massachusetts farmers. Naturally, farm people, even here in Massachusetts, are not happy with decreasing prices when everybody else in the country seems to be enjoying increased prosperity. However, there are some Massachusetts farmers who have taken advantage of new and attractive methods of packaging, of retail sales, and economies in production, and are still making a profit.

I think most Massachusetts farmers would join me in saying that the thing that is going to help them most is better market facilities, more research in the use and sale of farm products, and a better understanding between farmers and city people, comparable to the national program of the Kiwanis Club last year of establishing a farm-city week.

For your information, I am including the most recent figures on agriculture in Massachusetts as published by the Federal Reserve Bank of Boston last September:

Massachusetts

Commodity	Value	Percent change from 1953	Percent of State total
	Thous.		
Poultry	$68,249	−15.7	36.2
Dairy:			
Milk and milk products	46,990	−1.2	24.9
Veal calves and cull cows	4,672	−9.5	2.5
Total diary	51,662	−2.0	27.4
Greenhouse and nursery	21,934	−0.3	11.6
Truck crops	13,158	−6.3	7.0
Tobacco	8,759	−0.5	4.6
Fruit	7,029	8.9	3.7
Cranberries	6,825	−31.5	3.6
Miscellaneous	4,542	4.4	2.4
Other meat animals	4,113	−21.3	2.2
Potatoes	2,466	15.7	1.3
Total	188,737	−8.7	100.0

Very truly yours,
LOUIS A. WEBSTER,
Director, Division of Markets.

Air Pollution

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, I am introducing today a joint resolution to authorize the Interstate Sanitation Commission of New York, New Jersey, and Connecticut to proceed with much-needed research on air pollution which has already been authorized by the States. New Jersey Congressman HUGH J. ADDONIZIO; PETER FRELINGHUYSEN, JR.; PETER W. RODINO, JR.; FRANK THOMPSON, JR.; T. JAMES TUMULTY, and I are joining with Congressman JOHN RAY, of New York, in sponsoring this resolution.

Congressional action is needed for the reasons outlined in the following statement, which was prepared for submission to the Committee on the Judiciary.

JOINT STATEMENT OF SIX NEW JERSEY CONGRESSMEN URGING THE CONGRESS TO ADOPT A RESOLUTION TO GRANT THE INTERSTATE SANITATION COMMISSION OF NEW YORK, NEW JERSEY, AND CONNECTICUT TO CONDUCT RESEARCH INTO AIR POLLUTION FOR SUBMISSION TO THE JUDICIARY COMMITTEE IN SUPPORT OF THEIR JOINTLY SPONSORED RESOLUTION

The New York metropolitan area, including large sections of northern New Jersey, has long been struggling with a serious air-pollution problem. This problem adversely affects the health of the people of the area, as well as possibilities for its economic growth and development. New York and New Jersey have enacted legislation which would permit the Interstate Sanitation Commission to make a study and in addition have appropriated money for this purpose. An act known as chapter 422 of the Laws of New York, 1955, became law in that State on April 18, 1955, and a similar act known as chapter 46 became law in New Jersey on June 6, 1955.

Obviously the Interstate Sanitation Commission, established by compact to deal with

water pollution in New York Harbor and adjacent areas, is the only interstate agency in the metropolitan area which can handle such a study with facility because of its regular duties in a related field. However, the problem has become complicated by the fact Connecticut, a party to the Interstate Sanitation Commission, is not interested in such a study at this time since there is no pressing air-pollution problem along the New York-Connecticut boundary. It was agreed that Connecticut would pass legislation consenting to the Interstate Sanitation Commisison making the study for New York and New Jersey. However, the act passed by Connecticut specified that the consent of Congress had to be obtained, while New York and New Jersey did not take this view.

Regardless of the merits of the legal argument, the fact is that the much-needed air pollution research has been blocked. In an effort to untangle this situation, we have joined with Congressman RAY, of New York, and others from the area in sponsoring this joint resolution which would extend necessary congressional authority for the study to proceed. We are happy to inform you that Gov. Robert B. Meyner has just written that in his view the legislation we propose would, if it prevails, permit the study to move ahead.

Clearly this need is most urgent. We hope the resolution will obtain congressional approval in the very near future.

HUGH J. ADDONIZIO.
PETER FRELINGHUYSEN, Jr.
PETER W. RODINO, Jr.
FRANK THOMPSON, Jr.
T. JAMES TUMULTY.
HARRISON A. WILLIAMS, Jr.

The "Dorchester"

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include the following article which was forwarded to me by Mr. Frank O. Braynard, director, Bureau of Information, American Merchant Marine Institute, Inc.:

THE "DORCHESTER," COASTAL LINER OF FOUR CHAPLAINS FAME

The custom of naming ships with standard suffixes or prefixes is common practice. One famed American coastwise company had a naming system we think must have been unique. It was their habit to have one ship's name begin with each letter of the alphabet. All were named after counties in States served. For example, in 1927 they had the *Alleghany, Berkshire, Chatham,* and *Dorchester* as the first four ships in their fleet. Since they had only 20 ships, they skipped a few letters, but the pattern was there.

The *Dorchester,* one of the three newest of the merchants and miners fleet, was destined to figure in one of the second war's sagas of heroism. She is the ship on which the four chaplains joined together as she was sinking, gave their lifebelts to others, and went to their death arm in arm. Two were Protestants, one Jewish, and the fourth Catholic.

The *Dorchester* was the newest ship built for the famous Boston to Baltimore service founded in 1852. She was similar to the "city" boats of the Savannah Line—large, comfortable, reasonably fast. French telephones were in every cabin. Felt-lined windows eliminated the "annoying rattle often experienced with windows on board ship," it was stated. A berth light, thermos bottle, and electric fan was in each room. All rooms had running hot and cold water, quite an innovation for 1926. Three rooms and the 4 suites had private tub baths, while 16 rooms had shower baths.

With virtually every other coastwise liner, the *Dorchester* was taken over for the war effort. Her identical sister the *Chatham* was the first American troopship sunk in the war, going down en route from Nova Scotia to Greenland with the loss of 27. The sinking of the *Dorchester,* February 3, 1943, was much more costly in human life. Of the 904 on board, 605 were drowned or froze to death before rescue came. The loss would have been even greater had not Coast Guard volunteers jumped into the icy waters in heavy rubber suits. Secured with lines from their ships, these heroes helped the survivors to safety, as many of them were too numbed to hold on to lines from rescue boats. Those of the *Dorchester's* naval guards who survived are convinced that their guns made the *U–456* pay dearly for her conquest.

Government indifference, competitive factors such as the truck and airplane and the trebled cost of shipbuilding when the war ended forced the *Dorchester's* owners to throw in the sponge. The line had no ships, could not afford new ones. It was liquidated along with so many other famous old American coastal concerns. Gone forever were the colorful houseflags of the Morgan Line, the Mallory Line, Clyde Line, Puerto Rico Line, Savannah Line, Eastern Steamship Lines, Colonial Line, Old Dominion Line, and the Merchants and Miners Transportation Co.

Today the *Dorchester* and her four heroic chaplains are remembered by a wide variety of memorials. A 3-cent postage stamp was issued in 1948 in their honor by the United States. A swimming pool in the Bronx is named for their memory. The beautiful Four Chaplain's Chapel in Philadelphia honors their deed. Congressman PETER RODINO, of New Jersey, is seeking to have Federal recognition of February 3, as *Dorchester* Day.

Our Mental Health Problem—Mental Illness Can Be Cured

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. ROGERS of Texas. Mr. Speaker, the care and cure of the mentally ill is a problem of national concern. There is a great deal of confusion and, too often, complete despair as to a proper solution of this problem. Concerned with the manner in which Texas has been meeting the needs of the mentally ill, two outstandinging newspaper women, Louise Evans and Mary Tom Rasco, writers for the Amarillo Globe-Times, did a tremendous job of research and study of the whole problem of the mentally ill. They have boiled down the facts they discovered in 10 articles which were printed in the Globe-Times.

While Miss Evans and Miss Rasco were primarily concerned with Texas, the problem in our State may be multiplied by 48 because the same situation confronts every section of the Nation. Because the facts brought out in these articles are of such importance to the whole Nation, I plan to insert them in the RECORD beginning with the first one which follows. I sincerely commend this series to all the Members of the House:

[From the Amarillo Globe-Times of January 4, 1956]

MENTAL ILLNESS CAN BE CURED—ONE OF EVERY 10 WILL NEED CARE

(By Louise Evans and Mary Tom Rasco, Globe-Times Staff Writers)

One billion dollars annually for the care of the American mentall ill—$2½ million daily; 54 percent of all hospital beds in the United States of America occupied by mentally ill; 1 out of 10 Americans at some time will be hospitalized for severe mental illness; 1 out of 4 families will have a member in a mental hospital. Of the 14½ million Americans who need psychiatric care, mental hospitals reasonably can hope to treat about 600,000. In the past 10 years the United States of America population has increased 20 percent; the number in mental hospitals has increased 44 percent. In some States, such as New York, one-third of the State budget is devoted to the cure of the mentally ill. Only 3 percent of medical research dollars is used on mental illness. The Veterans' Administration operates 40 mental hospitals with 62,000 beds, compared to only 45,000 in 1954.

Let us not be morbidly frustrated by this mass of statistics. None of it proves that, as a Nation, we are headed into the psychotic ward.

With typical American intensity we are winding up to throw a pitch into a problem, and when we wind up in this country, we really coil. Therefore, we build up a mass of frightening statistics on the mentally ill.

But it is fairly easy to lie with statistics. Comparative figures are more likely to tell the truth. These, in 1955, we do not have, because we cannot compare America of today with America of 50 years ago in matters of mental illness.

We are becoming an urban nation, and old Aunt Annie, who occupied the northwest room in a farmhouse for 50 years, is now a statistic, but she wasn't a generation ago. In fact, even the neighbors might not have known she was there. Mental illness must be diagnosed and treated in these days when families occupy apartments and 5-room houses. We are not necessarily having a larger percentage of mental illness; we simply are getting better diagnosis.

We are becoming an aging population. In 1900, a child could expect to live only 47 years. Today the average life span is over 68 years. So it is wise to consider the comparative statistics Massachusetts created after a study of its mental hospital population of today and 100 years ago. The population ratio of hospitalized cases for those between the ages of 20 and 50 years of age is the same.

The tremendous rise in State hospital population lies among those who have passed the age of 50. In 1855, few lived past 50 years, so there can be no comparative statistics to see whether the old are showing an increase in mental illness. Just as eyesight and hearing dim as we grow older, so do minds. Diseases that attack the brain, for instance, arteriosclerosis, increase in later years. But advances in geriatrics (the medical science dealing with the diseases and problems of the aged) may well forestall much of this mental illness in coming generations.

We have a large population of veterans from this century's wars, conflicts which did not provide the release of emotions that did the spirited hand-to-hand fighting of earlier ages. No more mentally unhealthy environment can be imagined than the trenches of

Flanders Field or the malarial jungles of New Guinea.

The casualties of World War II happily were below the statistical average of World War I, but by keeping bodies alive we increased the chances for those bodies to develop the mental breakdowns modern warfare brings. The 55 percent of Veterans' Administration beds that are occupied by mentally ill are an indictment of our inability to find a more peaceful way than war of settling conflicts, but they do not prove the average American is on a merry-go-round of madness.

Consider also that there is an awareness of mental illness never before possible in civilization. As medical science found the cause and treatment for thousands of physical diseases, the mental aberrations that might have been explained by physical illness a century ago came out into the open for exactly what they are.

As health diagnosis has improved, so has social diagnosis. What was once a "bad boy" is now a "sick boy." Youth and adults who would have gone to reform schools and prisons a generation ago are going to mental hospitals these days. But a clearing recognition of what is wrong basically with a personality does not mean that statistically the Americans are going mad at a faster rate than did their forefathers.

None of these reassurances will solve our present dilemma. We have overcrowded mental institutions. We have the back-breaking cost of mental illness on the economy. We need treatment programs for the mentally ill and preventive programs to forestall mental illness. We need to do something, and if we have to be frightened into believing that all of us are doomed to the psychotic ward before we will take action, let's be frightened and act.

Mental illness is no phenomenon of modern society. It is as old as mankind.

As usual, the Greeks had a word for it; they gave us the modern word for treatment—psychiatry; "psyche"—the soul, mind, emotion; and "iatrela"—the treating thereof. In fact, the Greeks had about the same types of treatment we have now—diet, baths, massage, exercise, drugs, electric eels for shock treatment, and even the psychoanalytical couch, with a philosopher as the analyst. There seems to be some evidence they practiced the group therapy that is now offering treatment and prevention of mental illness in many American cities.

In the great darkness that fell on Europe as the Roman Empire disintegrated, the knowledge from the scientific-minded Greeks disappeared. Mental illness because lunacy, supposed to be associated with changes in the moon (luna). By the 19th century, when some scientific interest in mental illness began to emerge, the insane had become wards of the State, prohibited of movement much as were criminals.

Keep in mind this silly superstition as you study the laws surrounding the care of the mentally ill and the responsibilities the States have today in such care. Maybe you will understand why we might as well have carved Abandon All Hope, Ye Who Enter Here above our State hospital doors. The theory inside was custody, not treatment.

However, it was the superintendents of these hospitals who took the first steps toward trying to overcome the hopelessness of their patients. In 1844, the Association of Medical Superintendents of American Institutions for the Insane was formed. It later became the American Psychiatric Association.

It was a group of European doctors working with the patients of French and Austrian hospitals that began to lay the techniques for modern treatment of mental illness. Americans tend to know the names of Freud, Jung, and Adler, but there were many dedicated observers before their time.

What furnished the spur for the heightened interest in the care of the mentally ill in America?

Wide-scale examinations of American youths in 1917 for the American Expeditionary Forces of World War I disclosed how many could not read and write and how many were suffering from physical ailments. Education and public health programs were accentuated after 1918 until the United States reached virtual 100 percent literacy and had a standard of general physical health never before known to mankind.

Of the 688,000 rejections from the 2,500,000 draftees of 1917–18, only 93,000 were refused for neuropsychiatric reasons. This did not bespeak much mental illness.

But between World War I and World War II, the Veterans' Administration spent well over a billion dollars on the care of the "shell-shocked" victims of World War I, and on those who entered the VA hosiptals for neuropsychiatric symptoms which could be traced to war service.

When the World War II draftees and enlistees marched before the medical authorities for their examinations, 1,600,000 of the more than 4,800,000 rejections were for neuropsychiatric reasons. Even with heavy rejection, the stresses of World War II crowded the service hospitals with so many servicemen that in April 1945 there were 49,315 hospitalized for neuropsychiatric reasons.

In 1943, the Surgeon General called Dr. William Menninger, of the Menninger Clinic, to Washington to formulate health programs for the 10 million Americans in Army service. Basing the action upon this war discovery of widespread mental illness, Congress passed the Mental Health Act of 1946 which provided Federal funds for research, training, and certain community facilities. In 1949, the National Institute of Mental Health took over the administration of the Federal program. Previously the Federal program had been the mental hygiene division of the Public Health Service.

The emphasis on mental health at last reached down into the States, traditionally responsible for the custody of the insane. By the late forties most of the States had worked out some reforms, spurred by the need for assigning to some State agency (or a newly created one) the responsibility for using the Federal funds which had to be matched with State dollars.

What causes mental illness and how should it be treated? Frankly no one knows the whole answer. Most of today's treatments have been devised on a trial-and-error basis. They work, but in many cases no one is prepared to say exactly why.

Treatment of mental disease until recently could be compared roughly to the time when doctors were putting leeches on the patient to bleed him as treatment for a great many diseases they couldn't diagnose. No one knew why it worked but sometimes it did.

Yet in the United States, only 3 cents of each dollar assigned to medical research is spent on mental illness.

The new branch of medicine called psychiatry (remember the Greeks) made up an elaborate table of names, most of them unpronounceable, for the various psychoses. Now comes Dr. Menninger with a statement:

"A few of us suspect that there is essentially only one kind of mental disease—the unsuccessful effort to maintain some measure of emotional equilibrium in the face of internal and external stress."

Certain so-called "insanities" of earlier generations have yielded to purely physical treatments. For instance, the terrible paresis of syphilis is disappearing under the use of penicillin to treat the parent disease. Pellagra, with its sure end-effect of mental illnes, yielded to vitamins. As little as 25 years ago involutional melancholia associated with menopause was considered hopeless; today electric-shock treatment has two-thirds of the patients out of the hospitals in less than a year.

So at last it has been recognized that mental illness is identical to physical illness, varying in its intensity, amenable to treatment and only in some percentage, fatal.

If this be true, then State hospitals truly must become hospitals, with no more plan for becoming a "human warehouse" than are hospitals for the cure of physical ailments, which, too, end with a certain percentage of cases which are incurable and must be given custodial care.

Then there is the preventive program of mental health. To use an example: To become aged does not necessarily mean to become senile. Yet senility must be pushed off even so early as the middle-aged years through use of basic physical and mental health programs. Another example: A child in a high state of emotional disturbance need not travel on to insanity. In fact, he need not necessarily reach that highly emotional disturbance, if parents, teachers and other adults about him correct the environmental factors which may create disturbance.

There will always be a percentage of insane just as there always will be a percentage of criminal—that is, in the foreseeable future. Heredity, accident, and certain physical diseases will continue to bring fatal mental illness just as the same factors bring fatal physical illness. The percentage can be reduced, and apparently the use of some new drugs can offer comfort to those who are incurable.

Just as calculated sanitation and preventive physical health programs have brought increasing good physical health to our Nation, so can a calculated mental health program reduce today's enormous expenditure of tax and personal funds on mental illness.

The Texas Research League gives a soberly realistic picture of what the State of Texas must spend by 1975 to house the mentally ill and senile—unless we change our ways: $235 million.

In the fiscal year of 1952–53, the staggering cost of annual operations for Texas was $20 million, and that didn't count cost of new construction. (Some special school operations and other State hospitals were included in the figure.) It's higher now.

The present 16,500 Texans in mental hospitals will increase to 28,000 by 1975 as population increases—and ages. Expect, therefore, operational costs to almost double—unless we change our ways.

Texas can do what other States are doing—rehabilitate the mentally ill, get them out of the "human warehouses," save money and human lives.

It can be done. The State of Kansas reduced its hospital population for 5 straight years—its number of patients decreased by 7 percent while that of the Nation rose by 15 percent.

Texas can do it, too.

TYPES OF ILLNESSES OF PATIENTS ADMITTED EACH YEAR TO STATE MENTAL HOSPITALS

Schizophrenic reaction (disturbance of thinking), 22 percent.

Psychosis of old age (senility, arteriosclerosis), 27 percent.

Manic-depressive reaction (disturbance of feeling), 6 percent.

Involuntary reaction (agitation-depression during menopause), 5 percent.

Alcoholic psychosis (delirium, delusions, imaginary images), 5 percent.

General paresis (syphilis of the brain), 4 percent.

Alcoholism without psychosis (problem drinking), 6 percent.

Psychoneurosis (only part of person is mentally ill or "dis-eased"), 4 percent.

Miscellaneous (variety of disorders, each less than 2 percent incidence), 21 percent.

(From the 1952 report of the National Association of Mental Health. Harry Milt, director of public relations for the association, told the Globe-Times last week that "research has established the fact that there has been little variation in the past 10 years on the types of patients admitted and the percentages for each diagnosis. The admissions for schizophrenia, for example, have been between 20 percent and 25 percent consistently. Possibly the only diagnoses for which there has been a rise during the past 10 years are cerebral arteriosclerosis and senile psychosis. These two diagnoses together probably account for between 30 percent and 35 percent of first admissions today, compared with some 28 percent or so 10 years ago.)

Why Free Enterprise Works Best

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. RADWAN. Mr. Speaker, recently, the Ford Foundation, an organization financed by gifts from the Ford family and pledged to a variety of good works, made a gift of $550 million to the Nation's private hospitals, colleges, and medical schools. It was the largest single charitable act in world history. Heartwarming as it was as a pure act of kindness, its real significance, in my opinion, is that it could not have been possible anywhere else in the world. Only our free democratic form of government and our system of free enterprise applied to our wealth of natural resources, could form the background for this amazing act of philanthropy.

Because of our climate of free enterprise, Henry Ford, who had a new idea and a good one, could pioneer it. He promoted the idea of mass-producing motorcars at a low unit cost, so that they were brought within the financial means of the average family. While he was helping the average family solve its transportation problem as it has been solved no place else in the world, he was furnishing more and more jobs to Americans, and here again he pioneered. He paid better than prevailing wage rates. In fact, wages which were unheard of at that time. He exploited no one. He benefited the public, and labor, and even his own competitors, by creating a vast market for cars. By earning a small profit on each of the millions of cars that he sold, he grew immensely wealthy in the process.

Because of his genius, the Ford family was able to produce far more wealth than it could personally consume. A great deal of this wealth was plowed back into research and design, modernization, and expansion to further benefit the consuming public and to create many more jobs, and it created even more wealth. But the consumption of wealth is very limited. A person can only wear one outfit of clothing at a time, and the body can consume but a limited amount of food each day. Beyond these basic needs, and even allowing for many luxuries, the wealth produced by private enterprise inevitably sifts its way back to the general welfare through taxation, through reinvestment in industry, new jobs, higher standards of living, and finally through gifts and legacies. No one can spend money without helping someone else. And while the system of free enterprise encourages better than all others the development of individual achievement and the production of wealth, ceiling unlimited, it also allows for the dissemination of that created wealth for the public good.

The above story is typical of many American success stories, and it proves once again why our system is far and away the best for individual man and for mankind as a whole. But the thing that started me off on this subject is that we all just received an extra dividend, the icing on the cake as it were, in the form of that amazing $550 million private gift. Just think what it means just right here in Buffalo. Our outstanding western New York colleges, which have had to scrounge around for funds to pay decent salaries to their staffs, get a cool $2,444,000. Think what that means to our community. And our hospitals, who have long struggled with their own charitable load in providing better service despite rising costs—they will receive right here in western New York $2,623,200.

Does it not make you proud to live in the good old U. S. A.?

Balanced Budget—If It Sticks

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks, I wish to have printed in the RECORD an editorial that appeared in the Lancaster Eagle-Gazette a few days ago. Lancaster is the largest city in my congressional district and the Lancaster Eagle-Gazette is a highly reputable newspaper with a wide circulation in that section of the State of Ohio, which I have the honor to represent as their Congressman. I think the facts set forth in this editorial are worthy of comment.

The editorial is as follows:

BALANCED BUDGET—IF IT STICKS

President Eisenhower has presented Congress with two rarities, two prospective balanced budgets. There is no magic in the fact, but there is an amazing amount of stable comfort reflected in its accomplishment.

As matters now stand, the Federal Government will be in the black by some $200 million on June 30, 1956. In the coming fiscal year, ending June 30, 1957, Uncle Sam expects to spend some $66 billion and hopes to collect about $400 million more. These figures are based upon estimates of continued prosperity in 1957.

Of our huge spending program 64 percent is earmarked for the protection of the Nation. Thirty-five and one-half billions are slated for military purposes directly. Our Atomic Energy Commission receives almost $7 billion. If we can manage to cut down on our national debt some day, we should be able to ease up the interest charges which now amount to $7 billion annually. This debt is now at $274 billion.

Under the circumstances, a balanced budget becomes something of a minor miracle. Two in a row will qualify the President for fiscal immortality.

The Oconomowoc Enterprise Deals With National Issues

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. DAVIS of Wisconsin. Mr. Speaker, the Oconomowoc Enterprise, published in my congressional district by Mr. C. W. Brown, is a weekly paper with an editorial page which would do credit to a daily newspaper supporting a sizable editorial staff.

In a recent issue Mr. Brown published two editorials which are typical. They indicate his willingness to deal with some of the major economic and political issues which confront the people of the United States. These, I might add, are in addition to his incisive editorials taking a clear-cut stand on issues of a local nature.

The two editorials referred to are set forth below:

IF THESE ARE ISSUES, THEN DEMOCRATS WILL HAVE TO DEFEND, RATHER THAN ATTACK

The Democratic National Committee has listed the 10 top issues for 1956. They are:

Falling farm income.
Tax favoritism for the rich.
The public power giveaway.
Favoritism to big business.
Misconduct in government.
The rising cost of living.
Small-business failures.
GOP antilabor policy.
The school crisis.
The growth of monopolies.

If these are the issues the Democrats will argue in the forthcoming election campaign, they will be in a position of defense rather than attack. Let's look at them.

Falling farm income: Farm income was falling steadily when the Republicans took office. The emergency Government buying program was cracking under its own weight. The last Democratic Congress did not change the program. The party as yet has not offered a solution, just criticisms.

Tax favoritism for the rich: Personal income taxes reach a top of 91 percent, leaving 9 percent for the individual.

The public power giveaway: Unnumbered millions have gone into TVA paid for by tax money and only token taxes paid by TVA have gone back to the Government. TVA put private industry out of business and is now not producing enough power to serve its going area. Its expansion has been denied funds by the votes of Democratic legislators.

"Favoritism in big business." Is the situation any different than when the so-called big business was the backbone of war material production? Without big business, America would not be what it is, with its highest standard of living. Big business, so-called, is

owned by millions of stockholders with their number rapidly increasing.

"Misconduct in Government." What misconduct? This administration or the previous one?

"The rising cost of living." Again, what rising cost? The stabilization against inflation has been one of the outstanding successes the past 2 to 3 years.

"Small-business failures." Should the Government subsidize business? The greatest cause of business failure has always been inadequate financing and poor management.

"GOP antilabor policy." Employment is at an all-time high for war or peace. Wages have continued to advance. The number involved in strikes has been relatively low.

"The school crisis." The Government is not in the baby business but President Eisenhower has a very active and large program for aid to education.

"The growth of monopolies." Name them.

INCREASED CONSUMPTION THE FINAL ANSWER

A solution to the agricultural prices and surpluses plaguing the farmer and giving the Government a man-sized headache in its effort to find a sound and permanent workable solution to stabilize this vital segment of American industry might be found in examining what is happening in newsprint.

One year ago, paper jobbers and the newsprint mills were taking on new customers and the market was adequately supplied. Approximately 6,500,000 tons were produced in 1955. Production was increased 7 percent. Consumption was increased 8 percent. This has resulted in many mills cutting newsprint deliveries from 7 percent to 13 percent in the first quarter of 1956. Newspapers are critically short of newsprint and as a result some are rationing space and others are importing foreign newsprint at premium prices. That 1 percent increase in consumption over production completely changed the supply-and-demand picture. Newsprint mills increased their price while reporting large profits, further squeezing the newspapers already faced with high production costs.

If a 1 percent difference between production and consumption in newsprint brings this result, isn't there a lesson there for agriculture, particularly dairying?

The experts tell us that if milk consumption were increased 1 glass per person a day or 1 pad of butter per meal, the dairy surplus would become a shortage. In other words, promotion of consumption holds the key to the answer.

Consider, too, that a great deal of dairying is in an area which grows trees. Wisconsin is carrying on an extensive program of replanting trees. The cooperative effort of private industry and the conservation department results in the planting of millions of trees annually, putting idle land back to use, taking other land out of other production, and, under the long-term program which in this case will take 40 to 50 years, will change the extreme shortage of pulp supply to a surplus.

The Government's new soil bank proposal may fit into this picture.

There must be a lesson to be learned in this example, that the law of supply and demand is a delicate balance and that increased consumption is vital in the final solution.

The land bank idea, that was promotion of consumption, makes far more sense than a program of making production of surpluses profitable.

Secretary McKay Misinformed by Subordinates on Chinle Shale Facts

---

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. HOSMER. Mr. Speaker, inasmuch as a copy of a letter to me, dated February 2, from the Secretary of the Interior will be found in the proceedings of the other body, I am availing myself of this extension granted on an earlier date to set forth some facts that should prove rather embarrassing to the Secretary. Had he not placed a copy of his letter to me in the hands of a Member of the other body before the letter itself was actually delivered to me, I would have taken a less peremptory and public means of remarking on this discourtesy.

The plain fact appears to be that the Secretary of the Interior is not getting facts from his subordinates, and, as a consequence, he is persisting with a recommendation that may force the American taxpayers to pay for a billion dollar mud puddle out in the wilds of southern Utah.

The following letter, together with its enclosures, which I have today directed to the Secretary, explains it all. I am only sorry that the picture mentioned in the letter cannot be reproduced here in the RECORD. It shows that in 5 short minutes the Chinle shale which his Bureau of Reclamation geologist told Congress was impermeable soaks up so much water it falls to pieces and becomes nothing but mud:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 2, 1956.

Re: The upper Colorado River storage project.

Hon. DOUGLAS MCKAY,
Secretary of the Interior,
Department of the Interior,
Washington, D. C.

DEAR SECRETARY MCKAY: Under date of January 27, 1956, I furnished you information that Glen Canyon Dam reservoir contained about 50 miles of exposed Chinle shale, which when touched by the reservoir's water could disintegrate and cause landslides of tremendous proportions. As you know Glen Canyon Dam is the key "cash register" unit of the upper Colorado River storage project, and if it is found to be unworkable because of geological difficulties the entire financial structure of the upper Colorado River proposal collapses and the taxpayers would in effect be buying a billion-dollar mud puddle instead of a good project.

I made public release of this information on January 30. On the evening of January 30 the Bureau of Reclamation phoned a press release to numerous papers and followed it up with a release in writing dated January 31. The release stated that the "Chinle shale would be touched by the reservoir waters in three separate stretches * * * aggregating about 15 miles of the reservoir's length."

In truth and in fact, the Chinle shale is exposed for approximately 47 miles. This figure is taken directly from a special topographic-geologic map prepared for me by the United States Geological Survey within the past few weeks. It is the only such map in existence. It reveals that the Chinle shale is exposed between mile 96 and 101 and miles 141 and 164 on the Colorado River where the reservoir would be located. On the San Juan River it is exposed between miles 8 and 14, miles 20 and 28, miles 36 and 38, and miles 47 and 40, this is the total of 47 miles.

This erroneous statement by the Bureau of Reclamation indicates that they do not know geologically of the area, and that any advice received by you from them should be checked by an independent source, possibly the United States Army engineers.

The above-mentioned press release further states that the Bureau's geologists have been completely aware of the existenec in the nature of Chinle shale formation for decades. I am attaching certain extracts from the hearings before the House irrigation and reclamation subcommittee during 1955, in which Commissioner of Reclamation Dexheimer, told the committee that it was impossible for him to say what the geology in the Glen Canyon Dam site is. Further, J. Neil Murdock, the Bureau's regional geologist in the Denver office, when asked by me if he had any figure for the Triassic formations in the area which includes the Chinle, said he had no laboratory figures but volunteered that the shale formations are recognized as impermeable I am attaching a photograph disclosing that rather than being impermeable the Chinle formation of the Triassic group is exceptionally absorbative and disintegrates when touched by water.

I point this out again, in order to emphasize the fact that the Bureau appears not actually to know the nature of the Chinle shale formation, and to again point out that any statements to you with regard to it should be reviewed with caution and checked by an independent source.

To further reinforce this view, I am enclosing extra extracts from two Geological Survey professional papers describing the Chinle formation and the tremendous landslides which can occur when other formations overlying it are undermined by disintegration of the Chinle. Although this information was prepared by an agency of the Department of the Interior, it apparently was not studied by the Bureau of Reclamation.

It is further respectfully requested that a press release be issued by the Bureau of Reclamation forthwith correcting the factual errors in the Januuary 31 release.

In closing let me reinforce my request that nothing be done by way of further legislative proceeding with the proposed upper Colorado River storage project until a complete geologic survey and invesigation can be completed in the Glen Canyon Dam site.

Since dictating the foregoing, your wholly unsatisfactory reply under date of February 2 to my January 27 letter has reached my office.

If, as you say, the Bureau of Reclamation has been cognizant of the shale since 1922, why was any mention of them not made during the committee's hearings?

What are these studies that you claim to have conducted via public and private agencies with respect to the site and the implication of Chinle shale? In the face of the information I have attached hereto, how can you say that your conclusion with respect to the reservoir's site was carefully considered? I am certain as you must be that the Bureau of Reclamation completely fell on its face with respect to this one and that the press

release it put out was either deliberately misleading or misleading because of ignorance. It seems to me time that some of these people in your Public Relations Department and the Bureau of Reclamation be fired and replaced by people who know their jobs.

Very truly yours,

CRAIG HOSMER,
Member of Congress, 18th District, California.

EXTRACTS FROM HEARINGS BEFORE IRRIGATION AND RECLAMATION SUBCOMMITTEE, HOUSE INTERIOR COMMITTEE, 1955

PART I—COLORADO RIVER STORAGE PROJECT

Page 246:

Mr. HOSMER: Have you done any work upstream from this site? (Glen Canyon dam site.)

Mr. DEXHEIMER (Commissioner of Reclamation). Nothing but geological exploration, of course, sir.

Mr. HOSMER. What is that—surface exploration?

Mr. DEXHEIMER. Largely.

Mr. HOSMER. And how far back up the stream from the proposed dam site would the reservoir extend?

Mr. LARSON. 186 miles up the Colorado and 71 miles up the San Juan. I mentioned it in my statement.

Mr. HOSMER. Then you have taken visual surface geology in those extensive areas only?

Mr. DEXHEIMER. Yes. I am sure that our geologists have covered that reservoir area.

Mr. HOSMER. Well, surface geology?

Mr. DEXHEIMER. Yes.

Mr. HOSMER. You were in the office 6 years. Do you know of any of the results of that work?

Mr. DEXHEIMER. It has been some time since I went over the geologist's reports, and I am not familiar enough now to say that I remember just what they were. But those reports, of course, were fundamental to the selection of this site and the reservoir area.

Mr. HOSMER. You cannot tell us what is in them at the present time?

Mr. DEXHEIMER. No, I cannot.

Page 362:

Mr. HOSMER. Now, I believe the proposed lake would extend about 190 miles up the Colorado River?

Mr. MURDOCK (J. Neil Murdock, regional geologist, Bureau of Reclamation). Approximately that. River miles.

Mr. HOSMER. And how far us the other river?

Mr. MURDOCK. 61 miles, approximately.

Mr. HOSMER. Is that the San Juan River?

Mr. MURDOCK. The San Juan River.

Mr. HOSMER. During all this time, are you in the Navaho sandstone formation?

Mr. MURDOCK. No, sir.

Mr. HOSMER. What else do you get into?

Mr MURDOCK. Well, you go up the Colorado River and you get into the older shales, Triassic shales, and into the limestones.

Mr. HOSMER. Is that the Kayenta formation?

Mr. MURDOCK. Yes; you get into the Keyenta formation and the Triassic formations, too.

Mr. HOSMER. What is the Kayenta formation?

Mr MURDOCK. It is a shale and sandstone.

Mr. HOSMER. It is more permeable than the Navaho sandstone; is it?

Mr. MURDOCK. No. All the formations are more permeable in that area than the Navaho.

Mr. HOSMER. It is a less homogeneous formation than the Navaho; is it not?

Mr. MURDOCK. That is right.

Mr. HOSMER. It contains some sand and some gravel?

Mr MURDOCK. Well, shale and sandstone.

Mr HOSMER. What is the permeability of this formation?

Mr. MURDOCK. Very low. We did not make any tests on it. But it is very tight.

Mr. HOSMER. Do you have any figures whatsoever?

Mr MURDOCK. No.

Mr. HOSMER. Do you have any figures for the Triassic, which includes Chinle?

Mr. MURDOCK. No laboratory figures, but shale formations are recognized as impermeable.

Mr. HOSMER. That is not altogether true, is it, Mr. Murdock?

Mr. MURDOCK. Well, you might find exceptions, but in the oil business they utilize this, because the shales are impermeable and they trap the oil in the sands.

Mr. HOSMER. That is true with a subsurface formation, but I am talking about a formation that is fairly close to the surface.

Mr. MURDOCK. Surface formation has nothing to do with the permeability of the shale. It breaks down into a clay, which again is impermeable.

Mr. HOSMER. Depending upon its extent of saturation at the time you measured it; is that correct?

Mr. MURDOCK. No; I don't think saturation has anything to do with permeability.

[Extracts from U. S. Geological Survey publication Describing Chinle]

THE KAIPAROWITS REGION

(U. S. Department of the Interior Geological Survey Professional Paper 164 (1931) by Herbert E. Gregory and Raymond C. Moore)

The Chinle formation includes the group of shales, "marls," thin soft sandstones, and limestone conglomerates lying between the Shinarump conglomerate and the Wingate sandstone.

Records show that the Chinle is thickest in northeastern Arizona and southwestern Utah—320 to 393 feet in upper Glen Canyon, and 830 feet in the San Juan Canyon (p. 53).

A fragment of fresh rock immersed in water swells to nearly twice its bulk, and after drying is nothing more than a pile of disconnected, irregular grains; alternate drying and wetting produces a substance part of which passes through filter paper. Under the microscope most of the material appears to be colloidal (p. 57).

When the Chinle "marls" and shales on steep slopes are saturated they seem to move by their own weight, carrying their broken strata and talus blocks to lower levels. At the south base of the Paria Plateau slides in the Chinle have spilled over the Shinarump conglomerate and down the Moenkopi cliffs to the Kaibab below, and at a place about 14 miles south of the Burr trail the Chinle beds have lost their hold and have slid, accompanied by huge fragments, over the upturned beds of Navaho sandstone, down the west side of the Halls Creek Valley in a jumbled mass that is roughly three-fourths of a mile wide, 1½ miles long, and 80 feet deep (p. 145).

As viewed from the rim of the Kaiparowits Plateau at Fiftymile Point the landslides are impressive. The slopes below the capping Cretaceous sandstone constitute a field about 2 miles wide and 10 miles long, everywhere strewn with boulders, the largest of which are square blocks of sandstone 40 feet thick. Successive slides have banked the materials in huge ridges like a series of terminal and lateral moraines.

Except in areas of Chinle and Tropic shales, landslides were not observed. The steep slopes of other formations are bare or coated with only ribbons and scattered patches of debris (p. 146).

THE SAN JUAN REGION

(U. S. Department of the Interior Geological Survey, professional paper 188 (1938) by Herbert E. Gregory)

The position of the relatively soft Chinle between two cliff makers accounts for its preservation in a region where erosion is vigorous (p. 49).

In the Chinle formation the conditions for producing slides are exceptionally favorable. The thin sandstone beds readily break into talus fragments and the "marl" beds when saturated seem to move by their own weight. Instability is further shown by mud flows that after heavy rainfall issue from the base of slides. In places recurrent movement is indicated by the arrangement of material in parallel ridges on Chinle slopes and by unconformities in the piles of debris successively pushed over cliffs (p. 102).

New England Wants Insurance Against Flood Losses

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

NEW ENGLAND WANTS INSURANCE AGAINST FLOOD LOSSES

(Statement of Hon. THOMAS J. LANE, of Massachusetts, before the House Committee on Banking and Currency on Disaster Insurance Legislation, February 2, 1956)

Mr. Chairman, the best way to insure against flood losses is to prevent them, by flood-control projects that work. Paper plans, without construction, protect no one.

Of course, New England needs flood insurance, because we have suffered loss of lives and devastating damage on several occasions during this generation due to the failure of the Federal Government to provide dams, reservoirs, and insurance.

As your committee, through these hearings, is helped in its responsibility of developing a practical plan of disaster insurance, I am sure it will also recognize the need for flood-control works to minimize the effects of future floods.

The element of risk must be reduced to keep any insurance plan solvent.

Therefore, the proposed legislation should include emphasis on the need of more flood-control projects in the areas where such disasters have caused the heaviest losses, in order to provide the greatest measure of real protection, which will in turn, reduce the carrying charges of the insurance.

New England is noted for its independence, but sometimes its waterways carry this to excess, with an anarchy that is fearful to behold.

Last year alone, as a result of two disastrous floods, hundreds of millions of dollars worth of homes, industries, and public facilities weer damaged or destroyed. This was not a partial loss, retrieved or compensated for, by insurance. The washout was complete. The discouraged victims had to rebuild all over again from zero.

Since 1927, Congress has spent $4.5 billion on flood control for the whole country. Only $53 million of that total was appropriated to protect the 6 New England States.

In the face of inadequate defenses against rampaging waters, and the lack of indemnities that would enable us to recoup our losses, we have suffered severely.

The realization that we must be covered by some form of disaster insurance, has widespread support. For who knows, in view of our mercurial weather, where the next deluge will send swollen waters over their banks?

On January 3, 1956, I introduced a bill, H. R. 7923, to be known as the National Flood Insurance Act of 1956.

Similar bills have been introduced by other Members.

The President has recommended that we initiate such legislation on an experimental basis with a reasonable limit on the amount of insurance for any individual or firm, and on the basis of coinsurance, under which individuals would assume part of the loss, in order to hold down premium rates.

In his budget message for the fiscal year 1957, the President proposed $100 million of new authority for an indemnity and reinsurance program under which costs of flood damage would be carried by the individuals protected, the States, and the Federal Government.

Private insurance companies would participate to the fullest extent possible.

Among the various proposals suggested, I am sure that there will be a meeting of the minds on the common denominators necessary to make such legislation practical and effective.

There is no argument as to why we must have flood insurance. The only questions concern "how?" and "when?"

What Our President Has Done To Bring Freedom to the Peoples of the World

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks, I wish to include the text of a speech which I delivered last evening entitled "What Our President Has Done To Bring Freedom to the Peoples of the World." The occasion for my remarks was the celebration of National Freedom Day at the Department of Labor, and the National Freedom Day Association presented President Eisenhower with a citation for his contribution toward abolishing second-class citizenship in this country as well as his contribution toward the freeing of the peoples of the world:

REMARKS OF HON. ALVIN M. BENTLEY, OF MICHIGAN, IN CONNECTION WITH FREEDOM DAY CELEBRATION, WASHINGTON, D. C., FEBRUARY 1, 1956

I am honored and delighted to meet with you this evening in connection with the celebration of National Freedom Day, the anniversary of the signing of the 13th amendment by Abraham Lincoln. I understand that this particular anniversary is also for the purpose of honoring President Eisenhower for his contribution toward freeing the nations of the world from fear and tyranny as well as his abolishing second-class citizenship in this country. It is for his work in the international sphere, both as a soldier and as President of this country, that I wish to speak for a few moments this evening.

One of Abraham Lincoln's greatest remarks was the famous quotation to the effect that this country could not endure, half slave and half free. The truth of this statement is likewise applicable to the world in which we live, that it too cannot endure, half slave and half free. No one has recognized this better and with more perception than has our great President.

His accomplishments as a soldier in the freeing of millions of people from Nazi and Fascist tyranny during World War II are so well known that I shall touch on them only briefly. But it must be emphasized that Dwight Eisenhower, more than any other one man, was responsible for the final triumph of the forces of democracy that culminated in 1945. No matter how hard the Soviet Communists try to rewrite the history of that great struggle, it was due chiefly to the military genius and leadership of our commander in chief that victory in the European theater was eventually ours.

Take the action which was perhaps the turning point of the entire war—the landing in Normandy. This opening of a second front on the European Continent—an event unparalleled in military history—decisively broke the back of Nazi Germany. While Hitler was able to concentrate his forces in Russia and in Italy, victory, or, at least, a stalemate, was yet within his grasp. But the establishment and the expansion of the beachhead in France marked a decisive reversal of the Axis fortunes of war. From that day onward theirs was a losing cause, and the end was inevitable.

The decision, the timnig of this landing—that belonged to Eisenhower. In the face of adverse weather warnings, he gave the order to proceed according to the planned schedule. If the landing had been delayed, if the enemy had been given more time to prepare his defense, to concentrate his forces, who knows what the result might have been? This one decision alone would be enough to mark Dwight Eisenhower as a champion of freedom, even if his other contributions as a general and a statesman were forgotten. The millions of people who were freed from totalitarian rule as a result—the French, Dutch, Belgians, Italians, Poles, Czechs, Russians, the German people themselves—all have full and sufficient reason to honor our great President as their true liberator in 1945. As a soldier and a leader of our great Allied armies, his service to the cause of freedom will go down in history.

But the Allied victory in World War II did not, unfortunately, mean the end of tyranny and oppression in the world. Instead, it replaced one ruthless form of totalitarianism with another that is even more brutal and terrible. Communist slavery replaced the Nazi and Fascist version and extended itself, in Europe and elsewhere, until today more than 800 million souls lie behind the Iron and Bamboo Curtains in bondage.

It is perhaps appropriate that I should be speaking of such things on this anniversary due to my own experiences which are unique for a Member of Congress. Before entering the political field, I served our State Department abroad for 9 years, two of which were spent behind the Iron Curtain in eastern Europe. I had the opportunity to witness in two countries, Hungary and Czechoslovakia, the Communist take-over and the complete loss of all freedom which ensued. Ever since that time, I have attempted to be in the front rank of those who wish to see liberty restored in that part of the world.

My own experiences behind the Iron Curtain led me to realize how ardently and passionately the people living under Communist tyranny desire once again to be free. There is, frankly, little that we can do for them in the way of material, concrete assistance but there is one thing which can and must be done and that is to let them know that we have not forgotten them in their plight and that we will never agree to the domination and the tyranny under which they live today.

President Eisenhower recognized this from the very beginning. Listen to this part of his inaugural address delivered at the Capitol here in Washington on January 20, 1953:

"Realizing that common sense and common decency alike dictate the futility of appeasement, we shall never try to placate an aggressor by the false and wicked bargain of trading honor for security. Americans, indeed all free men, remember that in the final choice a soldier's pack is not so heavy a burden as a prisoner's chains."

You can well imagine what hope those brave words stirred in the minds of the enslaved peoples whose only previous experience with the foreign policy of this Government had been thorough the shameful betrayals at Teheran, Yalta and Potsdam. This hope and the faith in President Eisenhower's promises was renewed a month later when the President asked the Congress to go on record as rejecting any interpretations or applications of any wartime agreements or understandings which had been perverted to bring about the subjugation of free peoples. The request was also made to the Congress to join in proclaiming the hope that the peoples who had been subjected to the captivity of Soviet depotism would again enjoy the right of self-determination within a framework which would sustain the peace; that they would again have the right to choose the form of government under which they would live; and that sovereign rights of self-government would be restored to them all in accordance with the pledge of the Atlantic Charter.

The President also recognized from the start that this country could not continue to act as the champion of freemen everywhere unless it acquired and maintained that position of strength which would give weight and meaning to its words. With the incomparable background of his own military experience, he personally saw to it that the defensive posture of this country was kept at a peak which would permit assurances of the defense of our own freedom and also allow us to move in the field of international relations with the respect that comes from such strength.

One of the great reasons that the American people accept so willingly the leadership of freemen in a free world is because the history of our own country is closely interwoven with the cause of freedom from its earliest days. As the President said in his Christmas message in 1953:

"More precisely than in any other way, prayer places freedom and communism in opposition, one to another. The Communist can find no reserve of strength in prayer because his doctrine of materialism and statism denies the dignity of man and consequently the existence of God. But in America, George Washington long ago rejected exclusive dependence upon mere materialistic values. In the bitter and critical winter at Valley Forge, when the cause of liberty was so near defeat, his recourse was sincere and earnest prayer. From it he received new hope and new strength of purpose, out of which grew the freedom in which we celebrate this Christmas season.

"As religious faith is the foundation of free government, so is prayer an indispensable part of that faith.

"Tonight, richly endowed in the good things of the earth, in the fellowship of our neighbors and the love of our families, would it not be fitting for each of us to speak in prayer to the Father of all men and women on this earth, of whatever nation, and of every race and creed, to ask that he help us and teach us and strengthen us and receive our thanks.

"Should we not pray that he help us? Help us to remember that the founders of this, our country, came first to these shores in search of freedom, freedom of man to walk in dignity; to live without fear; beyond the yoke of tyranny; ever to progress. Help us to cherish freedom, for each of us and for all nations."

This is a powerful and a moving message, uttered by a man who is passionately and sincerely devoted to the cause of freedom, for this great country and for the entire

world. His prayer to the Almighty to help us recall this precious heritage, his devotion and belief in the power of prayer itself is of particular appeal to me who had occasion only 2 short years ago, here in Washington, to be a living example of the power of prayer itself.

The fact that among all the blessings which this country of ours enjoys today the greatest one is that of freedom and liberty for our people, the most divine blessing of all, is a fact that we have long accepted. And if we accept that this is the most precious blessing that the good Lord could bestow upon us, have we not a sacred obligation, by our conduct at home and abroad, to see that the same blessing reaches as many of our fellowmen throughout the world as possible. If we regard freedom as something peculiarly American, as a commodity not for export, are we not in effect saying that we achieved it by our own efforts and not through the Almighty? But if, on the other hand, we do admit that this blessing is Heaven-sent, have we a right to try and restrict it to our own shores? No, freedom is an international, not a national, word and our most sacred traditions demand that we, who have received this blessing from above, do all in our power to see that its effects are felt throughout the four corners of the earth. As the President said in April of 1954: "The flame of liberty symbolizes the determination of America always to remain free to remain a haven of the oppressed and a ready acknowledgment that all men in the attainment of human aspirations and worthy aspirations are dependent upon an Almighty." And listen to his remarks a few months later before the American Legion Convention here in Washington: "* * * We must preach, demonstrate, and tirelessly sell the vitality and value of freedom in the world. Nothing is more dangerous to our cause than to expect America's message to be heard if we don't bother to tell it.

"We must reaffirm to the oppressed masses of the earth the great truth that the God who gave life to humanity, at the same time gave the right of liberty to man. And in our own interest we must apply both our own intelligence and the necessary material means to assist other peoples to realize for themselves the blessings of freedom and of self-government."

It is just about impossible to speak words that come from the heart with more dignity than those.

There are many, of course, who say that mere expressions are not enough, that deeds are required as well as words. Very well, let us look at the world and see how the cause of freedom has progressed during the Eisenhower administration.

While Korea remains a divided country, a peace treaty was concluded which maintained freedom for the people of South Korea. We did not agree to the partition of Vietnam but we are helping the people of South Vietnam, the free part, to maintain their independence. We have promised our protection to Formosa against those who would annex that island to Communist slavery. We are helping the people of Iran to maintain their independence after nearly losing it. We have urged that self-determination, at least in a limited sense, be granted the people of Cyprus. We signed a peace treaty which gave freedom to the Austrian people for the first time in 18 years. In our own hemisphere, we rejoiced that the people of Guatemala and Argentina, by their own efforts, regained their freedom from totalitarian rule and we are likewise assisting them. Wherever free peoples stand up for the cause of independence throughout the world, we encourage them in that fight and help them to preserve their liberty insofar as it lies within our power.

I want to say a word or two here about the Geneva Conference of last summer when the President went to Switzerland to meet with the heads of government from Great Britain, France, and the Soviet Union. There were persons, who, playing on the memories of the agreements at Yalta and Potsdam, alleged or hinted that the President planned to conclude another such agreement that would confirm the status of the captive peoples living today under Soviet tyranny. Let me set the record straight on that issue.

When the President broadcast from the White House on July 15 last, just before leaving for Geneva, he mentioned some of the problems which did then and which still do plague the world today. Among those he mentioned: "The problem of the captive states, once proud people that are not allowed their own form of government, freely chosen by themselves and under individuals freely elected by themselves." Does this sound like the words of a man who was planning to sell the captive peoples "down the river"?

On July 18, the President issued a statement from his offices at Geneva. It included this paragraph: "On a broader plane, this is the problem of respecting the right of peoples to choose the form of government under which they will live; and of restoring sovereign rights and self-government to those who have been deprived of them. The American people feel strongly that certain peoples of Eastern Europe, many with a long and proud record of national existence, have not yet been given the benefit of this pledge of our United Nations wartime declaration, reinforced by other wartime agreements."

And, finally, when the President returned from Geneva, he stated on July 25 that the pursuit of peace, the reason why he went to Geneva in the first instance, involved, among other questions, freedom and security for all nations, great and small. He added that, in conversations which he and Secretary Dulles had held with other delegations and specifically the Soviet delegation, the matter of the satellites of Eastern Europe had been brought up more than once and that it had been made crystal clear what American beliefs about this matter were.

As convincing proof that, no matter how great his desire for peace, the President would never attempt to trade peace for our people in exchange for slavery for others, listen to this paragraph from his speech to the American Bar Association last August:

"Eagerness to avoid war—if we think no deeper than this single desire—can produce outright or implicit agreement that injustices and wrongs of the present shall be perpetuated in the future. We must not participate in any such false agreement. Thereby, we would outrage our own conscience. In the eyes of those who suffer injustice, we would become partners with their oppressors. In the judgment of history, we would have sold out the freedom of man for the pottage of a false peace. Moreover, we would assure future conflict."

This determination of President Eisenhower not to purchase peace at the risk of honor and not to traffic with the freedom of other peoples is as strong with him today as it has always been. When he broadcast over radio free Europe to the captive peoples at Christmastime a message of hope and encouragement from the American people, the Soviet leaders protested that "this is not in accord with the spirit of Geneva." On behalf of the President, Mr. Hagerty replied that it had been made abundantly clear at Geneva to the Soviet rulers that the spirit of Geneva could not and did not involve any relaxing of the peaceful purpose of the United States to achieve liberty and justice for the oppressed peoples of the world. He added, "The peaceful liberation of the captive peoples has been, and is, and until success is achieved, will continue to be a major goal of United States foreign policy." Even in the most recent example, the exchange of correspondence which took place between the President and Soviet Premier Bulganin only a few days ago, Mr. Eisenhower referred to "our wartime pledge to respect the right of peoples to choose the form of government under which they will live."

And, finally, in his state of the Union message to Congress on January 5, the President referred to grave injustices throughout the world including the oppressive division of the German people and the bondage of millions elsewhere. I might say, at this point, that I have introduced a resolution which would put the House of Representatives on record as supporting the President in his efforts to right these wrongs.

I have quoted at considerable length this evening from the President's public statements over the last 3 years. I have done so because it is in such messages of hope and encouragement to the enslaved peoples that I feel President Eisenhower has made his greatest contribution toward freeing the world from tyranny. His sincere and earnest desire for peace, repeated on so many occasions, has done a great deal toward relieving international dread of an atomic war. But peace must yield to freedom if the two conflict and the inspiration that the words of the President have given to free men everywhere is, to me, one of his greatest accomplishments during the last 3 years of his administration.

We do not know how long the Kremlin will continue to exercise its domination over millions of once-free people. But we do know that, as long as this unhappy situation continues, the American people will continue to express their dissatisfaction and their hope that freedom will one day reign over the entire earth. In speaking as he has done for his fellow countrymen, the President has at least equaled, if not surpassed, the military contribution he made during World War II which was also in behalf of liberty and independence for oppressed peoples. That is why it is such a great pleasure to join you here tonight on this memorable anniversary to pay tribute to that great champion of freedom, Dwight D. Eisenhower.

Thank you.

Gracious and Patriotic

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include herein an article which appeared in the February 1, 1956, issue of the Newark Star-Ledger entitled "Gracious and Patriotic":

GRACIOUS AND PATRIOTIC

Former President Truman has performed a gracious, but what is far more important, a patriotic act of enormous value in lauding President Eisenhower's answer to Russian Premier Bulganin as the finest act of this administration.

This, coming after somewhat similar statements by Adlai Stevenson and Senator ESTES KEFAUVER, contenders for the Democratic nomination for President, should show the Communists and the world that the United States is truly united on the basic principles of foreign policy.

The President's reply stressed that Russia would have to prove its peaceful intentions by positive acts, and could not fool the world

by substituting propaganda words. The President called for freedom for the peoples of the satellite countries, a lifting of the Iron Curtain, and unification of Germany, among other major steps required of Russia.

The Truman endorsement, coming on the eve of the election season, which will inevitably produce noisy and bitter-sounding debate, is especially valuable for its timing.

National Debt and Our Changed World

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a column apearing on Wednesday, February 1, in the New York Journal American by George E. Sokolsky, one of America's most respected and widely read commentators:

NATIONAL DEBT AND OUR CHANGED WORLD

(By George E. Sokolsky)

Nobody can ever actually see the ball and chain of $280 billion that we call our public debt. But then there are so many realities in life that we do not see, or feel, or touch, or smell. The public debt is an imponderable that affects the value of our currency, the stability of Government, the credit of Government. And as we are all part of the Government, it affects us all.

One of the things one learns in a hospital is that there is literally no use crying over spilt milk. It is like trying to find out why a heart muscle has rusted away. You can get a thousand different explanations and one will make you more unhappy than the other. The fact is that it happened and you lie about waiting for it to heal, if it can.

VALUES ARE DIFFERENT

The same thing is true of all the battles we conservatives lost during the past 20 years or more. They are lost. Already a new world has come into existence, not a better world nor a more satisfactory world but a different one. The emphasis on values is different. For instance, when I was a young man at college, the goal was great achievement—possibly great money achievement, to be somebody like Andrew Carnegie or John D. Rockefeller, or to head some corporation or institution.

Today, a young man's goal is security—he wants to be sure that he will not be without a pay envelope. Even the modest among us planned to write books or plays that would put them on easy street; today, the best one can hope for is that the income tax can be spread over a period of years. The fellow whose goal is achievement is a risk-taker; the fellow whose goal is security can become a coward. He has too much to preserve to risk even a little. He conforms to the current pattern.

Maybe he is just as happy. He works 40 hours a week, grows roses in the spring, listens to good music at night and reads papercovered books on his way to sleep. But his productive outlook is nothing to get excited about. The Russians, who are in the upbuilding stage, are now like we used to be. They offer all kinds of bonuses and incentives as though they were capitalists and nobody thinks of only working 40 hours a week because such limited productivity is practically sabotage. They are pushing as we pushed in the 1890's and the results are showing.

BUREAUCRATIC ATTITUDE

The question with them as with us is, what does the individual get out of it? When taxes and the high cost of living consume so great a share of a man's earnings that he can leave little for his family beyond living up to the Joneses, the incentive is not enough and many fall into the normal attitude of bureaucrats which is to do what one has to do and no more. The job is written up and that is it; to do more is to impinge on somebody else's job. Such people are even disliked personalities, although they are the only kind of human beings who make the wheels of life or industry go round.

And that brings us back to our national debt and a great many mistakes that were made over the past 20 years by a bureaucracy that really governed us for the first time in our history. We accepted their rule because it is more convenient to obey than to be a dissenter. Besides dissenters have bad names; they are not pleasant people. So we as a Nation let a flock of bureaucrats take hold of us and govern us. They told us what to do.

Now we need to straighten things out and we cannot, because historic errors, once made, move so rapidly and fix themselves so rigidly that only wars or revolutions can change them. So, we shall have to live in this new world or not live at all.

Ground Hog Day Every Day

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following:

We have listened to an account of the origin and meaning of Groundhog Day. It is my earnest wish that the health-giving food staple—ground hog—be on the American dining table. I wish it were there, not for just 1 day out of the year, but rather, for every day in the year.

Ground Iowa hog is an all-American dish.

The farmers who raise these hogs should get—and by right, ought to receive—a fair price for the product which has given, is giving, and will give such vast inner satisfaction to their fellow countrymen.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Dedicatory Prayer Breakfast

EXTENSION OF REMARKS
OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, February 3, 1956

Mr. CARLSON. Mr. President, yesterday morning 800 persons, including the President, members of the Cabinet, the courts, Members of the Senate, Members of the House of Representatives, Government officials, delegates to the conference, and representatives of the Council of Christian Leadership Groups attended the Presidential prayer breakfast at the Mayflower Hotel in Washington, D. C. Conrad Hilton was host on the occasion.

I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the program and transcript of the proceedings of this service.

In my opinion, this prayer breakfast, attended by outstanding leaders in every field, will add much to the religious life of our Nation.

There being no objection, the program and transcript of proceedings were ordered to be printed in the RECORD, as follows:

PROGRAM FOR PRESIDENTIAL BREAKFAST, THURSDAY, FEBRUARY 2, 1956, 8 A. M., MAYFLOWER HOTEL

Presiding: Hon. FRANK CARLSON, United States Senate, president, International Council for Christian Leadership.

Invocation: Hon. JAMES B. UTT, Member of Congress.

Message from the Old Testament: The Honorable Sherman Adams, Assistant to the President (Psalm 24).

Message from the New Testament: Senator PRICE DANIEL (Texas) (Colossians 1: 12–20).

Breakfast.

Message of welcome: Senator FRANK CARLSON.

Greetings: Mr. Conrad Hilton.

The President of the United States.

Solo: Mr. Fague Springman.

Greetings from the Senate breakfast group: Senator JOHN STENNIS (Mississippi).

Greetings from the House of Representatives breakfast group: Hon. D. R. MATTHEWS (Florida).

Address, The Call To Advance: Mr. Howard E. Butt, Jr., Corpus Christi, Tex.

Prayer of dedication: Abraham Vereide.

Group singing (first verse and chorus of Battle Hymn of the Republic).

(The fourth annual prayer breakfast was opened by Senator FRANK CARLSON, president, International Council for Christian Leadership.)

Senator CARLSON. We will have the opening prayer this morning by Congressman UTT, of California.

Mr. UTT. Almighty and eternal God, we ask Thy grace upon this convocation of Thy servants. Help us to be thankful for Thy manifold blessings, those seen and those unseen. Help us to seek knowledge, wisdom, understanding and truth. Help us to work for the salvation of this Republic and the salvation of this world.

Help us to main our own self-respect and to respect the rights and dignities of our fellow men. Help us to search for that inner peace among men through which all the world will be at peace.

Bless this food to our use for the Lord, His good—with mercy everlasting which endureth through all generations.

In the name of the Father and of the Son and of the Holy Spirit, Amen.

Senator CARLSON. We would like very much at this time to have two portions of the Scripture read before we proceed with the breakfast. The first portion of the Old Testament will be read by Gov. Sherman Adams and the second portion by Senator Price Daniel.

The Scripture read was the 24th Psalm and Colossians 1: 12 to 20.

Senator CARLSON. First I want to express my sincere appreciation for the very fine response that we have had this morning to the invitation of our host, from whom you will hear later.

We meet this morning at a breakfast of prayer and devotion. In order that we may be in keeping with the reverence and the dignity of this occasion, I am going to ask that you withhold your applause during this entire period. I know there are going to be times when you will want to applaud, but kindly do not do so.

We have two people at the head table this morning who will not participate in the program, but I want to present them at this time. First, Lt. Gen. William S. Paul, president of the International Christian Leadership of the United States.

Secondly, the Honorable BROOKS HAYS, Congressman from Arkansas and vice president of the International Council of Christian Leadership.

This morning is the first session of the International Council for Christian Leadership. We deeply appreciate the presence of the President of the United States, who by precept and deed is setting an example that worship of our Creator should be a part of our everyday life.

The theme of this meeting will be Worldwide Christian Action. In my opinion, in Christian leadership we must find ways and means of awakening people to a spiritual understanding. If we cannot do this, human personalities and personal freedom as we know them in this Nation are in danger of being lost to the other nations of the world. Somehow, some way, we must discover and bring about a collective strength of spiritual fellowship.

Increasingly the leaders of the world are expressing their conviction that the only hope for mankind lies in a renaissance—spiritual revival. When men cry to God in utter helplessness, His heart goes out to them.

This morning you are the guests of a Christian layman with whom I have had the privilege of working in the last few years. He is a most generous host who has not hesitated to give of his time and the use of his means in advancing Christian programs. It is a distinct hnor to present one of the outstanding businessmen of the Nation who has done so much and will do much more in the interests of this cause—Mr. Conrad Hilton.

Mr. HILTON. Mr. Chairman, Mr. President, distinguished guests, ladies and gentlemen, the most effective story or picture of prayer in action that I know is 2,000 years old and was told by the greatest storyteller of all time. As I recall it, a man was going down from Jerusalem to Jericho and fell among robbers. They beat him, robbed him, and left him dying by the side of the road.

A number of people passed by, looked, and went on. I suppose they were very busy people. Finally, a man came along on a donkey and stopped, cared for the injured man's wounds, put him on his animal, and took him to an inn—incidentally, one of the first hotels mentioned in history. There he found him a room and left the injured man in good hands. That is what I call prayer in action.

The good samaritan showed great compassion and great thoughtfulness. He must have been a prayerful man, inasmuch as one does not and cannot act in this religious fashion unless he is warmed by the friendship of God in prayer.

This great short story, one of the finest in any language, seems to be applicable today in a number of ways. It can be applied within our families, in our neighborhoods, our cities and States, in fact, it could be an illustration of our national ideal.

More than that, since so many modern nations are lying by the side of the road, injured economically, politically or culturally that it might very well be our obligation, our privilege, to pick them up and take them along with us to greater assurance of security, peace and happiness.

We in America have been born very rich indeed, as individuals and as a Nation. We have inherited great wealth economically, culturally and spiritually. I think it is our obligation to share it.

Some of these nations, large and small, have fallen among robbers and there is great danger of more of them falling among the same robbers. There are bands of them now crawling in the Near East, the Middle East, the Far East. Others are in Africa and Latin America. I think we will be showing ourselves internationally prayerful men and an internationally prayerful Nation if we show a willingness to stop on the road along the broad highway of political and economic prosperity long enough to assist these nations. In fact, I would say that what this world needs more than anything else today is an awareness of its own unity, and admission of the fact that not only men but also nations are brothers, that we have a right to expect another nation to assist us if we fall among robbers.

The alarming fact is that almost half the world today is being taught to put its hope in the robbers.

This is not the time nor the place to discuss political implications of this international fact, but this much I will say: prayer is not sufficient. We must, as a gentleman told me some time ago, pray as if it all depended upon God and act as if it all depended on ourselves. When we have done this on an international level, we shall indeed be good samaritans, indeed men of prayer, indeed religious men. I think a thousand years from now men will speak of our goodness as a nation just as we recall today the goodness of the man who helped another man on the road from Jerusalem to Jericho.

Speaking of prayer, one of the most inspiring prayers I ever heard was offered by President Eisenhower during his inauguration.

When I learned that this prayer was written in the presidential suite of the Statler Hotel the morning of the inauguration, I had it inscribed on a silver plaque.

I would like to present this plaque, together with the desk and the chair, to you, Mr. President, with our best wishes for your continued good health and happiness.

President Eisenhower. I am afraid the applause of you kind people doesn't speak well for Senator CARLSON's discipline over you.

Mr. Chairman and Mr. Hilton and my friends, this is a touching thing which Mr. Hilton has done in presenting to me this plaque and the desk and the chair from which I wrote the little prayer that I used at the inauguration some 3 years ago.

That incident brought to me a great message. It seemed to me a perfectly natural thing to do. I was seeking some way to impress upon the audience at that moment that all of us realized a new chief executive would be inaugurated over a nation that was founded on a religious faith. Our founding documents so state in explaining our Government and what we intended to do.

In the Declaration of Independence are found references to the Creator which gave us certain rights in our Government, and it was set up to sustain them. That seemed to me a perfectly natural thing to do as a method of showing that I also believed.

It was with some astonishment that I began to see this response. Literally thousands of messages came in, some of them from people who did not particularly think I was the man to occupy that place. They still applauded that act.

Here is the lesson, as I see it. I know very few men, very few people, who tell me they are atheists or agnostics. But we find among the laity a curious diffidence in merely stating the fact that they believe that there is a God and He is more powerful than they and they depend upon him.

That is what the prayer was for. It was because a layman did do so, and of course in such a position, that this response came in.

I think that prayer is somewhat related to these prayer breakfasts. We can pray in our quarters, but we can also come to gatherings occasionally—and I understand this whole meeting is a week long—announcing to the world that we come as laymen and meet, making the same acknowledgment that was made in that prayer and doing exactly the same thing. We are telling people that this Nation is still a Nation under God. This is terrifically important today.

There has been too much of the world that believes the United States to be completely materialistic, boastful, proud, and arrogant. It makes no difference how they have achieved that understanding or how they have been misinformed in order to achieve such a belief. Traveler after traveler has reported the same thing.

It is meetings such as this, continual, repeated, that has helped to dispel this very great illusion. It still is a nation that is founded on a religious faith with great concern for the sentiments and compassion and mercy that Mr. Hilton so elegantly spoke about. That is what we want others to think about when they think of the United States.

People have talked about the spirit of Geneva. The thing that the spirit of Geneva did accomplish and that so far has not been destroyed is that people in watching that conference gained the belief that the United States was truly trying to follow the footsteps and the principles of religion and to establish a just peace for the world. That is a tremendous gain in this day of fear, hysteria, and a sometimes too great reliance on force.

I believe, if I am not misquoting, that even the Bible says when a strong man is armed he keepeth his palace. We intend to remain strong, but let us always do it with the certainty that anyone who comes in integrity, observing the moral values that we know are imbedded in this great religious faith, will be received as a friend and taken with us down the road to future happiness.

I had no intention of making a speech. As a matter of fact, I was promised I didn't have to, and I don't know how I got started.

Senator CARLSON. Thank you, Mr. President. We appreciate not only your presence but your statements this morning.

We will now be favored with a solo by Mr. Fague Springman.

(Solo.)

Senator CARLSON. Thank you, Mr. Springman, for that beautiful solo.

Over this Nation there are a number of prayer breakfast groups that meet weekly in many cities, held by businessmen, industrial leaders, Government officials, and professional people.

At the United States Capitol every week we have 2 prayer groups that meet, 1 in the United States Senate and 1 in the House of Representatives. This morning we are going to have short greetings from representatives of these two groups, from the Senate group the distinguished Senator from Mississippi, Mr. STENNIS, and from the House group, the Congresman from the State of Florida, Mr. MATTHEWS.

Senator STENNIS. Mr. President, Mr. Chairman, Mr. Hilton, and distinguished guests, it is my special privilege to bring you greetings from the Senate breakfast group which, as Senator CARLSON has said, meets in the Senate restaurant on Wednesday morning of each week where from 12 to 20 Members of the Senate meet for a brief social period around the breakfast table and then for a few minutes of prayer and the exchange of spiritual experiences.

Let me commend the idea to this great council at its present meeting, to your leadership in forming more of these groups.

I came here a few years ago, as everyone else, at first overwhelmed by invitations to come to breakfast, to lunch, to dinner, to this and that, and I was tired of all of it. And finally someone said, "Come to breakfast next Wednesday morning and we will discuss spiritual matters." I had already determined to refuse until that last clause but came on the strength of it.

I found a great source of strength from week to week and year to year, where men meet together under the responsibilities and burdens of making decisions for many millions of people without party lines or sectionalism or partisanship or denominationalism. Their exchange of ideas all proves to be a great source of spiritual and also moral strength. I think that applies with equal force to business leaders, professional men and women, groups everywhere throughout this great land.

I am personally grateful, as we all are, for your fine leadership in this great work so far. I commend it most highly to your dedicated services throughout this great land in giving us more groups that gain strength from each other, wisdom and power, and pass it on to others.

Mr. MATTHEWS. Mr. President and friends. I would like to bring you greetings from our House breakfast group. I would like to say that it is perhaps the most perfect example of nonpartisan activity in Congress. The only inevitable rule of organization that we have is that if the president be a Republican the vice president must be a Democrat. I cannot indulge my political preference before such a wonderful group, but let me say that next year the president will be a distinguished Republican.

I would like, in telling you a little about our particular group, to give you several statements that I have heard made by my colleagues, some forty, who come every Thursday morning, some hundred who come irregularly.

One of my colleagues said in a wonderful talk one day that too much has been said about what has been said about what Jesus said and not enough has been said about what He said.

Then on another occasion a colleague said that Christ never went to Rome to get a law passed, that he realized that only as you change the hearts of men can this world be saved.

On another occasion a distinguished colleague said, "I try to make as a daily part of my life the practice of praying for the people that I pass in the streets. I see those who are troubled and weary, and instead of thinking about my own burdens I pray for them."

Then I think another colleague summed it up so wonderfully when he said that of all the experiences he had had in the Congress—and he has had a distinguished career—he has felt that the experiences of our House breakfast group have been those that have meant the most to him.

I think these experiences mean so much to us because they do resolve tensions. We do have the spirit of spiritual fellowship. We do, I think, become more confirmed with the fact that although in this day of ours we are faced with Golgotha we also stand at Kadesch. The good Lord says to you and to me, "Come, look, and see this land which I have prepared for you."

Finally, I think we are confirmed as we meet together humbly, craving unanimity as we do, because we recognize the personal intimacy of man's relationship with his God, we realize that in this weary world of ours we can gain strength through prayer and fellowship to rise to those occasions which will make us superior to our embodiment. After all, that is the real promise of the spiritual life.

Senator CARLSON. Thank you.

We are now going to be favored with a personal testimony of one of our outstanding Christian laymen who is devoting much of his time to the work of God. He is a successful businessman. I now present to you Mr. Howard E. Butt, Jr., of Texas.

Mr. BUTT, Mr. President, Senator CARLSON, ladies and gentlemen, last Saturday night H. L. Mencken died in his Baltimore home. He was a great scholar, a scintillating writer, known as the magnificent dissenter. He was famed for his caustic wit and his biting cynicism.

Mr. Mencken regarded faith in God as a pious but unsupported sentimentality. He called faith the illogical belief in improbable occurrences. To many, in a sense, H. L. Mencken's death will be regarded as a fresh signification of the end of an era, for the intellectual climate of H. L. Mencken's day was a climate of skepticism and unbelief. Doubt was popular and a sure sign of culture and enlightenment was the sophisticated scholar.

You recall the story of the American soldiers in France on leave who made a tour of one of those magnificent French cathedrals. The priests showed them a sacred shrine, a niche of that great cathedral, and showed them a candle burning there. He gestured and then in tones of hushed reverence and awe he said, "There has been a candle burning in this shrine continuously for over 300 years."

The American GI nudged his buddy and said, "There has been a candle burning there for over 300 years continuously" and he blew it out. He said, "It is out now." And somehow that characterized that age in American life, a generation of candle blowers who felt it smart to snuff out sacred flames of faith, faith in God, faith in old truths, old principles, the old Book.

But in our day that has changed. The climate is different, perhaps not totally but certainly obviously and basically the climate is changed for the climate of our day is one

of searching and praying and finding. It is an atmosphere of faith.

What produced that? World War II with its consequences militarily and scientifically that have been evolved.

You recall when a British lord stood at the close of the First World War before the British House of Lords and spoke of the bright optimism and quoting from Shelley he said, "The world's great age begins anew, the golden years return."

He was wrong. Those words have a sardonic ring now for the golden years did not return. The bloody years returned. Why? Because we had been deceived into thinking the optimism of Coue, that every day in every way we were getting better and better and we had neglected those basic truths that the Bible so clearly enunciates about human nature.

We came up short to realize that once we encounter what God has revealed about human nature we know that there is something basically wrong with the human race and that the problem of the world is the problem of the human spirit. When we realize that our problems are spiritual, that they demand a spiritual solution, suddenly it dawns freshly on our generation that the way out is the way up, and consequently in these last 10 years there has been a great sweeping wave of spiritual interest.

The signs have been magnificently hopeful. The churches are crowded. They grow with marvelous rapidity. Great preachers have captured the attention of the American people. Our best selling books are religious books. A nostalgia for God has somehow gripped countless millions, a search for some sure haven of rest for the soul in the midst of a stormy day; and for that we give our humble thanks.

But the peril lies precisely here, that the people of God in America, that the people who name the name of Jesus Christ in this land, will regard what has happened thus far as a victory rather than an opportunity. This spiritual awareness is a preliminary victory, but basically it is a golden opportunity and if we relax in some sort of self-congratulation or if we pause right on the ramparts of conquest in half-heartedness and ease, then we pass our opportunity to make this America's greatest spiritual renaissance.

Someone has said that on the plains of hesitation leach the bones of countless millions who on the dawn of victory sat down to rest, and resting, died.

Our opportunity is the opportunity to dedicate ourselves regardless of the personal cost to the principles we know to be right for the Lord that we know to be God.

Three years ago President Eisenhower stood at his inauguration, his finger resting on those sacred words from the scripture that speak to us freshly today with sure promise but with strong demand, "If My people who are called by My name will humble themselves and pray and seek My face and turn from their wicked ways, then I will hear from heaven and forgive their sins and heal their land."

Some years ago someone said of the Polish nation that two forces strive for control of Poland, communism and Christianity, that whichever one becomes a flame of fire will capture Poland. And communism had its flame of fire and Christianity had no flame. The passion, the dedication, the sacrifice, and the consecration of these who are dedicated to atheistic materialism calls us afresh to say that we must commit ourselves in a devotion that is fresh and new and complete to Jesus Christ and his righteousness.

The statement of one of our great religious movements is, "It is better to light a candle than to curse the darkness." It is not enough that we are no longer candle blowers; it is essential that within our lives individually and collectively we light a flame, that we strike that match of the flame of faith in our own hearts by individual repentance from sin and commitment to Jesus Christ.

We dedicate ourselves to a premise of the word of God, that only Jesus Christ can transform human nature. We consecrate ourselves. We dedicate ourselves afresh today to Him who is our hope for personal peace and for the peace of our world, and somehow as we light that flame of faith the torch of liberty will burn more brightly in this land than it has ever burned before.

Our great heritage will be rekindled again for our generation, even more brightly than before. "Long may our land be bright with freedom's holy light. Protect us by Thy might, great God our King."

Senator CARLSON. Thank you, Mr. Butt.

I just wish to state that for the next 2 or 3 days this conference of the International Council for Christian Leadership is going to hear messages by clergymen and laymen from all over the country and the world.

We are going to close with a prayer by the executive secretary of the international council, Mr. Abraham Vereide.

Mr. VEREIDE. O God, our Father, we thank Thee for this hour together. We humbly thank Thee for our President, his Cabinet, our Congress, the courts, and the officials of the departments and agencies of this Government. We present them now to Thee, O God of infinite mercy, justice, and truth. Grant unto them the spirit of wisdom and power for every hour.

We thank Thee for these representatives of the International Council for Christian Leadership with their many groups throughout this land and other countries.

We thank Thee for this country, a haven of refuge, a place of opportunity for people from every land.

God grant that we may increasingly learn how to live together according to Thy plan in mutuality and concord. For the nations of the earth and leadership everywhere, especially those assembled before Thee, we pray.

Forgive, O God, our sins, and save us, for Jesus' sake. Cleanse us from headiness and pretense, pride, and all unreality, and so invade us by Thy spirit that we may in true dedication and implicit faith and love be an inspiration to our people and a blessing to mankind and an honor to Thy holy name. To this, O merciful Father, we now dedicate ourselves to Thee. By Thy grace may we arise to every difficulty and go forward courageously in Thy victory.

(This was followed by the Lord's Prayer in unison.)

The Arrogance of Mr. Dulles

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, February 3, 1956

Mr. HUMPHREY. Mr. President, as a part of the continuing discussion of Mr. Dulles' controversial article in Life magazine, a thoughtful and provocative editorial appears in the New Republic for January 23, 1956.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ARROGANCE OF MR. DULLES

At long last the Eisenhower administration has officially conceded that on 3 occasions during the last 3 years it has as a matter of deliberate policy brought the United States and the world to the verge of nuclear war. "Of course we were brought to the verge of war," Secretary Dulles is quoted as saying in words that he acknowledges are his own: "The ability to get to the verge without getting into war is the necessary art." In defense of his policy of avoiding war by threatening war, Mr. Dulles adds: "On the question of enlarging the Korean war, on the question of getting into the Indochina war, on the question of Formosa, we walked to the brink of war and looked it in the face."

These phrases are published in the January 11 issue of Life in an article which the editors first described as "an exclusive interview" with Secretary Dulles. The material is presented for political reasons, for the author, James Shepley notes, "Dulles' direction of United States foreign affairs is under attack these days as the presidential year gets underway." The information, in Life's opinion, "bulwarks the substantial case to be made for Dulles." Mr. Dulles seems to share this opinion. Most Americans may disagree.

The news that Dulles advocated and Eisenhower authorized the bombardment with nuclear weapons of nations with whom we were at peace is startling to voters led by Mr. Dulles' Republican associates to identify wars exclusively with Democratic administrations.

In some alarm, Republican politicians as belligerent as Senator WILLIAM KNOWLAND are insisting that the dispute aroused by the Life article is a sham battle over words, "a tempest in a teapot" according according to Vice President NIXON. But this argument is not reassuring. Mr. Dulles has set forth frankly the spirit which has governed the conduct of the United States overseas under Eisenhower, and which still governs today. There are frantic boasts in the Life article, unfounded claims and distortions of history calculated to increase Mr. Dulles' domestic prestige while overseas the friendly governments, well aware of the truth, are weakened and deeply offended. These distortions wil be brought to light if the Senate Foreign Relations Committee sets the record straight by publishing Mr. Dulles' own past testimony, given in executive session. Why, for example, should Mr. Dulles claim today that the Indochina settlement is a diplomatic triumph for his diplomacy, when at the time he described it to the Senate as a tragic advance for world communism? And how can he insist that his threats of atomic bombardment transmitted to Peking by the unwitting Mr. Nehru brought the Chinese Communists to heel within 2 weeks when Nehru himself maintains that he never passed the Dulles threats along?

But past concerns are secondary in importance. For the brilliant victories which Mr. Dulles claims to have won by threatening war are far from secured. On the Chinese coastal islands, if not in the two other areas of conflict, Mr. Dulles may, within 3 months, lead the United States back to the verge of war—and beyond the verge when the Chinese Communists decline to be deterred by his threats of atomic bombardment.

For this reason it is necessary to treat the Life article in terms of the policy that stands until it is repudiated by President Eisenhower. The first characteristic of this policy, in our opinion, is that it is formulated and carried out by Mr. Dulles in a personal, almost autocratic way. Thus the title of Life's article is in itself revealing. It is: Three Times at the Brink of War: How Dulles Gambled and Won. This title, so appalling in its implications, is amply justified by the article itself which Mr. Dulles or

his chosen representative read in advance of publication and approved.

It was Dulles, according to Life, who radically revised the containment policy of the Truman administration; Dulles who altered drastically the basic concept of the job of Secretary of State. It was Dulles, who, loyal to his new concept, conceived of the idea of employing the threat of war as a deterrent, although the fervor of his righteous wrath can hardly be imagined, were the Russians to use the same tactics. It was Dulles who three times proposed walking to the brink; Dulles who drafted the resolution which Congress obediently adopted, giving President Eisenhower a free hand to go to war against 500 million Chinese. These feats, according to Life, amount of the greatest display of personal diplomacy since the great days of the Franklin-Adams-Jefferson triumvirate in the Europe of the 1780's.

It may be that even Life magazine cannot insure that in future generations the name of John Foster Dulles will take its place beside those of Benjamin Franklin, John Adams, and Thomas Jefferson. But, in this, Life is right: Dulles in his gambles has wielded personal power that those modest men would have trembled in approaching. Life fails only to identify the new and terrifying ingredient in Mr. Dulles' personal power—his ability, subject only to the veto of Mr. Eisenhower, to order human destruction by means of atomic bombs.

It was Eisenhower according to the Life interview who decided on the tactical use of atomic arms in Korea if the Communists tried to continue keeping the U. N. command and the United States bogged down in stalemate. It was Dulles who characteristically put this decision to the service of his personal diplomacy.

Again Life tells us, when colonial France seemed close to ruin in Indochina, it was Dulles in a new display of personal diplomacy who sent bombers armed with atomic weapons to the South China Sea in a classic show of force. Thus, Life informs us, instead of negotiating from the extreme and undisguised weakness of the French position, Mendés-France and Eden found themselves able to bargain from Dulles' strength.

Once again, Life tells us, "Dulles faced war" in 1954 and 1955 when Communist China attempted to regain the coastal islands of Quemoy and Matsu. Again we are left to conclude it was Dulles' personal diplomacy in brandishing atomic weapons that caused the Chinese Communists to desist. These claims, in the opinion of many informed men, are utterly unfounded. More important, however, is the fact that without doubt Dulles himself believes them and seems certain to employ the same methods again, in further displays of personal atomic diplomacy—that is, unless he is checked.

Among the nations of the world the United States alone has employed atomic power in the indiscriminate destruction of human life. We acted thus twice in wartime against a powerful and undefeated foe. Justified as our action seemed at the time, it has been one of the strongest of influences in swinging millions of people overseas away from the United States in spite of our pretensions of morality. Mr. Dulles, a leading Christian layman, apparently finds nothing wrong in employing atomic weapons in behalf of objectives that are neither vital to our existence nor well supported by our allies, nor sustained by the United Nations, nor firmly grounded in international law. He finds nothing wrong in arrogating to himself the power to use these weapons in the display of personal diplomacy. For that, most certainly, is what he has done, and promises to do again.

Our allies, the Life interview confirms, were informed only at the last minute of Mr. Dulles' plan to threaten atomic bombardment of Viet-Minh; on Korea and Formosa Life fails to indicate that they were consulted at all. Congress, in a similar matter, was not told of Mr. Dulles' secret intentions and, if Life's newest version of the Dulles years is accurate, was misinformed.

On the matter of the Chinese coastal islands Congress and the Nation were kept wholly in the dark as to whether a Chinese attack upon Quemoy and Matsu would or would not be interpreted as an attack upon Formosa, thereby involving the United States in a war with China. Now Mr. Dulles acknowledges as accurate Life's statement that he never doubted that Eisenhower would have regarded an attack on Quemoy and the Matsus as an attack on Formosa. In other words we are now to praise Mr. Dulles and the President because they concealed from the Nation their intention to use the power that Congress so rashly granted them to enlarge a minor effort by China to recover its own territories, into a probable world war.

The power to involve the world in war is the most fearsome power that any man may hold. Mr. Dulles may claim it for himself: the world will not easily acquiesce. Because the penalties of error are so enormous the American people have in the past raised formidable barriers against involving us in war. In turn the alliances of other nations with the United States have been predicated on the knowledge that under our system of government it has not been possible for one man to gamble as Mr. Dulles now boasts he has gambled. So far, certainly, the precarious peace has been preserved. But if Mr. Dulles had lost, and world war, fought with nuclear weapons had followed, would Americans or their allies have concluded that they had been accorded the choice that is the right of free men?

"You have to take chances for peace," Life quotes Mr. Dulles as affirming. That goes without saying. The task of diplomacy, above all in a time of nuclear weapons, is to take no chances that are not necessary and, when they are necessary, to make certain that they are evaluated and accepted by the American people and their allies. But Mr. Dulles apparently has an addiction to gambling; and a predilection for close-to-the-chest poker. The corrected draft of the Life article that was first distributed to the press records that when the Secretary journeyed to India to induce Nehru to relay Dulles' threat of atomic bombardment to Peking he went "under the cover of the first good will visit of the new United States Secretary of State." The point is deliberately obscured in the published article, but the point remains.

If there is an open way and an undercover way of attaining the same objective, Dulles' whole instinct directs him to the second course. Concealment, maneuver, even deception are all ingredients of what Mr. Dulles calls the necessary art. It is the art of Machiavelli, and for all his lifelong training and his legal skill Mr. Dulles forgets one thing—that Machiavelli died in chains.

No man, we repeat, should assume the power that Mr. Dulles boasts of employing in his gambles, least of all one who prefers the devious to the direct. An alert and active President is the one sure check upon his errors: Mr. Eisenhower is no such check today, nor is he likely to be again. Despite the untold damage it has done the United States abroad, the Life article serves a purpose if it alerts this Nation to the danger that has commanded scarely a glance until now. Adlai Stevenson was harsh but essentially accurate in declaring that Dulles has been playing Russian roulette with the lives of every one of us. How many more times will we hear the trigger click?

Tribute to Woodrow Wilson

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. ROBERTSON. Mr. President, a great Virginian, a great American, and a great humanitarian, was honored today when a representative of the Woodrow Wilson Centennial Celebration Commission placed a wreath on the tomb of the late President Wilson in the National Cathedral. This act was performed, most appropriately, by another distinguished Virginian, who, like the late President, is a native of Staunton, and who is serving as chairman of the executive committee of the celebration commission.

Maj. Gen. E. Walton Opie has added to a courageous and distinguished record of military service an outstanding performance as editor and manager of the two Staunton daily newspapers, and as a leader in civic enterprises. He is an editorial writer whose analyses of current problems I have followed with deep respect and admiration.

At the cathedral exercises today he compressed into a few words the ideals and achievements of Woodrow Wilson which are significant for our day and generation. I therefore ask unanimous consent to have General Opie's remarks printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The following is a tribute to Woodrow Wilson at services in the National Cathedral commemorating the anniversary of his birth, by Maj. Gen. E. Walton Opie (retired), upon placing wreath on the Wilson Tomb, February 3, 1956. General Opie is chairman of the United States Woodrow Wilson Centennial Celebration Commission:

"It is with humbleness that we enter today the radiant light of the tomb where rests one of the noblest leaders of mankind. The spirit which once dwelt in the mortal shell enshrined in this sacred edifice lives on to inspire new generations.

"A new birth has been given to Woodrow Wilson's aspirations for peace, world order, and brotherhood. The time will come when his full vision, the march toward which was slowed only by the blindness and fears of others, becomes a reality. Right and justice will yet rule the world, and wars will be no more.

"Such were the goals of Wilson. He climbed toward them with steps which never faltered, though at last the body proved unequal to the demands of the spirit.

"We know that this man drew his inspiration from God, of whom he learned at his mother's knee and whose will and ways his reverend father taught him. He lived close to God throughout his days, and found in him the faith, the courage, and the wisdom which won him place among the world's immortals.

"As we observe the centennial of Woodrow Wilson's birth, and today the anniversary of his passing, it is well to think of how thoroughly he prepared himself for the tasks destiny set him. It is well to recall his unfailing adherence to principles, though compromising when need be as to methods.

We should ponder, too, his love for mankind, his selflessness, and the achievements which flowed from these attributes—laws which blessed this country with new freedom and better government; the successful prosecution of what was then the most all-embracing war in history; the crystallization of all people's longing for freedom, self-government, and peace; the launching of the "parliament of man," which, until Wilson, was but the figment of imagination.

"Yes, we stand in a brilliant light today in what some would call the shadows of a tomb. Millions of Americans will become better acquainted this centennial year with the greatness and nobility that were Wilson's. Thus they will be better Christian citizens—some of them leaders strong in the spirit of this son of Virginia.

"St. Paul said: 'Death is swallowed up in victory.' Those words were never truer than they are of Woodrow Wilson, whose victory is of both the world and the spirit."

The Al Sarena Case

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the RECORD, two editorials and a letter which recently were published in certain Oregon newspapers.

There being no objection, the editorials and letter were ordered to be printed the RECORD, as follow:

[From the Capital Journal of January 27, 1956]

WHY SARENA PATENT WAS ISSUED

If there is anyone around Doug McKay's hometown who still takes seriously the attempt to make him appear dishonest in the southern Oregon Sarena mining claim case we hope he reads the résumé of a statement by Clarence A. Davis, Under Secretary of the Interior, to a congressional subcommittee on the front page of yesterday's Capital Journal.

Davis said the case went through routine channels in the Department as do thousands of others in such an enormous agency and that McKay did not know about it until after the decision had been made. Davis took full responsibility for the decision.

Davis pointed out that the law, passed back in the 1870's, provides that a patent must be issued upon application to one who has proved to be a valid discoverer of minerals, upon which he has staked a claim and has done $500 worth of work. The Sarena claims date back to 1897 and far more than that amount of work has been done on them.

The abuse is in the law. When it was originally passed timber was not considered a factor because it had little value. Nobody took out patents then because of the timber. When the timber became valuable—it became very valuable about 1940—the law should have been changed. The New Deal-Fair Deal administrations controlled the Government for many years after that. Their attention repeatedly called to the loophole that permitted valuable timber to be lost to the Government. But the mining interests objected and nothing was done. The real blame rests on Congress, not upon officials who are bound by the laws Congress passes.

The Eisenhower administration has closed this loophole, but the change in the law could not be made retroactive. There are probably a number of other Sarena cases if anyone wants to go through the records, for where loopholes are left someone is sure to crawl through them.

[From the Portland Sunday Oregonian of January 29, 1956]

AL SARENA SHOWDOWN

When the Department of Interior finally got around to making its case in defense of shotgun accusations of give-away in the Al Sarena mining-timber case, the controversy was narrowed to this single question:

Was there, or was there not, sufficient mineralization of the 15 disputed claims to justify the issuing of patents to the applicants, the McDonald family?

And this is a question, of course, which cannot be answered unless the case is reopened and new assays taken in which all parties to the controversy may impose full confidence. Even then, the disputants might not agree. What constitutes sufficient mineralization to authorize prudent investment in mining will always be a matter of varied opinion.

The testimony before the Senate committee of Clarence A. Davis, former Solicitor and now Under Secretary of Interior, was that he alone made the decision to grant the patents, and that the mining law as it then existed was complied with. It was that law, and not the patents themselves, to which the Oregonian objected when Al Sarena first became news. The law subsequently has been changed to give the Government the opportunity to harvest valuable timber on mining claims not needed for construction in the mining.

The weak point in the entire case is the fact that the patents were granted on the basis of assays made by a firm selected by the patent applicants and accepted by the Bureau of Mines, without other substantiating assays. As for political pressure, both Republican and Democrat Members of Congress are on record as urging the Department of Interior to clear up a case which had been pending under the Truman administration for 5 years.

Certain Democrats have made a vigorous effort to convert the Al Sarena case into a scandal reflecting against Secretary McKay and the Eisenhower administration. This has gone to the point of planting a story in the receptive Drew Pearson column of Presidential intervention which the White House denounces as a "scurrilous falsehood."

But the essential fact is that if the claims showed enough mineral promise the Government had no other choice than to issue patents under the law. If there is still controversy, it can only be ended by taking new samples and getting new assays.

[From the Portland Oregonian of January 28, 1956]

AL SARENA TESTIMONY

To the EDITOR:

The Oregonian contained a New York Times report on the Al Sarena inquiry which requires clarification in the interest of accuracy.

First, the story indicated the committee held "many more hours" of hearings in Oregon on Al Sarena. That is false. The issue was raised in Portland just before the committee decamped and there was no opportunity for rebuttal testimony. Witnesses who desired to testify were advised they could do so in Washington, D. C.

Second, the report indicated that GOP strategy is confined largely to shouting that the probe is politically inspired. A reading of the committee testimony and the statements made by Republican members of the committee would prove the allegation false.

At the Portland hearing, Congressman HOFFMAN entered into the record a series of six articles and an editorial on the Al Sarena question published in the nationally respected Eugene Register-Guard. The articles showed that the Department of Interior under Secretary McKay had acted in accordance with laws enacted by Congress. The editorial summed up the six articles and disproved the irresponsible charges raised by certain political partisans.

When the hearing reopened in Washington, Congressman HOFFMAN reviewed the charges and quoted facts and figures to disprove them. Most Oregon papers received copies of the three-page, single-spaced statement of the Congressman.

The overwhelming bulk of his statement dealt with the factual aspects of the question; only a small portion contained any reference to the poltical aspect.

Republicans should not be blamed if the press reports give more space to the charges than the rebuttal offered by GOP members of the committee. To settle the issue, the committee should hear testimony from the owners of Al Sarena (most of whom are Democrats), former Interior Secretary Chapman, Senator KEFAUVER (who interceded for the applicants) and the Democrat leader who offered to handle the Al Sarena application for a $10,000 fee.

WENDELL WYATT,
Chairman, Republican State Central Committee of Oregon.

The Midwest and West

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. MCCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD part II of an article entitled "A Time for Praise," written by Dr. George S. Reuter, Jr., part II being entitled "The Midwest and West."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A TIME FOR PRAISE

(By Dr. George S. Reuter, Jr.)

PART II. THE MIDWEST AND WEST

1. First Baptist Church, Tucson, and Dr. Richard Sidney Beal

This great congregation at Tucson, Ariz., was organized on April 7, 1881, under the direction of Dr. Uriah Gregory. The original deacons were called trustees, and were Dr. Gregory, C. M. K. Paulison, Ben Goodrich, Ed S. Dodge, and Charles D. Poston (known as the father of Arizona). The charter members were Dr. Gregory, Mrs. Alice L. Gregory, Edwin S. Dodge, Lelia Dodge, Alice Samuel, and Briggs Goodrich. The name of the church has never changed.

The pastors have been Dr. Uriah Gregory (1881–88), M. M. Hitchcock (1888), C. A. Buchanan (1890), H. M. Bell (1895–97), H. P. Aulick (1897–98), J. B. Thomas (1899–1903), D. Carl Williams (1903–08), E. H. Hicks (1909), Thomas C. James (1909), J. P. Burroughs (1909–12), R. L. Sproles (1912–16), Dr. J. H. Clifford (1916–17), and Dr. R. S. Beal since February 24, 1918. During the years 1890 to 1895, there was no paster, but Rochester Ford, a St. Louis lawyer, maintained services. Reverend Hicks and Reverend James died in office, and Reverend Williams is the only living former pastor, and he resides in San Francisco, Calif.

When Dr. Beal arrived at the First Baptist Church, it was very small; now it has 3,361 members. There were more than 200 converts last year, with 99 baptisms. The current budget is $168,339.55. There are 11 paid employees. During Dr. Beal's tenure 184 youth entered the ministry and mission field. The buildings have been built under his leadership, and the property is valued at $1,500,000.

During his pastorate, the church has established 19 missions. Eleven of these have become separate and independent churches, and the 12th is in the process of taking this step. The church has published 10 volumes of the pastor's sermons under the general heading of Rivers in the Desert. Each volume contains 52 sermons, and they have had worldwide circulation. Dr. Beal has also written many articles that have appeared in Christian publications here and abroad.

No Christian would doubt that Dr. Beal is listed in Who's Who in America. He has an outstanding family too. Not only does he have a wonderful Missouri wife, but he has the following children who are all godly: Dr. R. E. Beal, Jr., professor of theology in the Conservative Baptist Theological Seminary, Denver, Colo., who is also an authority in the field of entomology; Mrs. Robert B. Thieme, Jr., wife of Reverend Thieme, pastor, Barachah Bible Church, Houston, Tex.; Dr. Charles B. Beal, a Harvard-trained physician who, with his wife, are missionaries to the Ivory Coast of French West Africa, under the Conservative Baptist Foreign Mission Society; Rev. David P. Beal, who was educated at Wheaton College and Northern Baptist Theological Seminary, pastor, First Baptist Church, Nogales, Ariz.; and Mrs. Ridgely O. Ryan, whose husband is Lieutenant Colonal Ryan, a Baptist preacher who plans to enter the Baptist ministry when he is released from the Air Force. He is not a chaplain, but he preaches each Sunday. All of the children are sound in the faith and have never given their parents one anxious moment.

The church has a fine church staff, missionaries, and evangelists. One of the deacons, Frank Dawson, gives Dr. Beal a new Dodge each year. The University Baptist Student Center is owned and supported by the church.

Thank you Lord for Dr. Richard S. Beal and the First Baptist Church of Tucson.

2. Beth Eden Baptist Church and Dr. Sam Bradford

This congregation was organized as the Homer Avenue Baptist Church and dedicated on December 8, 1892. It was composed of 27 charter memebrs. It was actually organized on January 13, 1893. It was admitted into the Rocky Mountain Association during November 1893. The name was later changed to the Beth-Eden Centenary Baptist Church.

The pastors have been: Charles H. Walker, Arthur De V. Carpenter, John L. Beyl, J. W. Cabeen, William S. Callaway, Adrian D. Berry, W. A. Daniel, Francis W. Starring, E. B. Hart, and Sam Bradford since December 1936.

Dr. Bradford was born on February 14, 1903, in a log cabin deep in the Ozark Mountains of Missouri. When he was 1 month old, his mother dedicated him to the gospel ministry. He was ordained on October 30, 1930. He professed Christ when he was 11, and was baptized into the membership of the Pinecreek Baptist Church. His call to the ministry came in 1922, but he resisted God for 8 years. His first pastorate was at Casa Granda, Ariz. Later he was called to Douglas, Ariz.

The new church budget is $105,890. The last report (1954–55) for a single year gave the following: 93 baptisms, 90 other gains, 1,794 membership, 766 average Sunday school attendance, and $24,011.29 for missions. The church is a member of the Conservative Baptist Association of Colorado.

Thank you, Lord, for Dr. Sam Bradford and the Beth Eden Baptist Church of Denver, Colo.

3. Bales Baptist Church and Dr. Alvin George Hause

This Kansas City, Mo., congregation was organized on April 5, 1891, under the name of Bales Chapel. The following 25 people were charter members: Samuel E. Sandys, Charles W. Wright, Mrs. Susan Wright, Mrs. N. A. White, Miss Mina White, John H. Tinker, Mrs. J. H. Tinker, Miss Lizzie Tinker, Thomas B. Dale, Miss Mollie Given, Rufus Elliott, Frank M. Sutton, A. P. Johnson, Mrs. Eliza Jones, Mrs. M. J. Perry, R. E. Perry, A. D. Perry, Mrs. A. D. Perry, Miss Laura Perry, Mrs. Margaret Perry, Charles R. Huntington, Mrs. Laura Elliott, Miss May Elliott, Miss Nana Elliott, and Bryant Elliott.

The original deacons were: A. D. Perry, L. A. Howard, Joseph Elliott, George Zimmerman, and Samuel E. Sandys.

The pastors have been: William J. Williamson (1891–1901), Fred D. Hale (1901–02), Edwin B. Pratt (1903–04), H. H. Hulton (1904–05), Horace W. Cole (1907–15), Dr. W. T. Richardson (1915–16), O. P. Bishop (1917–23), Dr. D. L. Gross (1924), Dr. John W. Bradbury (1925–28), C. C. Cunningham (1929–32), and Dr. A. G. Hause since 1933. The name of the church was changed to the present title in 1909.

The present membership is 1,125, which is very selective. A person to remain as a member must remain active, hence no deadwood. There were 189 additions last year, with 76 baptized.

There are at the present time 60 deacons. The city is divided into 48 districts with a deacon over each district, contacting the members of their group every 3 months. The total church budget is $89,000, with one-half of this amount going to missions and benevolences. There are 6 full-time and 2 part-time employees.

Reverend Hause is one of the greatest ministers in Missouri and the Southern Baptist Convention. He is extremely sound in doctrine. His son, Dr. David Hause, has made a name for himself as his father's assistant, as pastor of the Maywood Baptist Church, and now as a leading minister in Oklahoma.

Thank you, Lord, for Dr. A. G. Hause and Bales Baptist Church.

4. Trinity Methodist Church and Dr. Robert P. (Fighting Bob) Shuler

This Los Angeles, Calif., congregation was organized in 1869, by the Reverend Abram Adams. The first building was erected in 1875, while Rev. A. M. Campbell was pastor. The church was moved to a new building in 1884, while Rev. W. B. Stradley was pastor. Rev. A. C. Bane, as pastor, led in another move. While Rev. R. P. Howell was pastor, in 1912, the old building was removed and a new one built. The present building was purchased in 1919, while Dr. C. C. Selecman was pastor. Dr. R. P. Shuler became pastor in 1920 and remained until 1953. He retired then, because of a law of the church as to age.

There are about 1,800 members. The church budget is about $104,000. There are 10 employees, exclusive of the quartet. Four others receive small monthly amounts.

Dr. Shuler was born in Grayson County, Va. (Blue Ridge Mountains), August 4, 1880. He was educated at Emory and Henry (A. B. and D. D.), Asbury College (D. D.), and John Brown University (LL. D.). He married Nelle Reeves, of Johnson City, Tenn., on October 4, 1905. Their children are William Reeves, Dorothy, Robert Pierce, Jack Cornett, Nelle, Richard Clifton (deceased), Edward Hooper, and Phil Ross. Dr. Jack Shuler has greatly appealed to the writer as an evangelist.

Dr. Bob Shuler was ordained as a minister of the Methodist Episcopal Church, South, in 1904. He has been successively a pastor at Pocahontas, Norton, and Cumberland Gap, Va.; Elizabethtown and LaFollette, Tenn.; Grandview, Temple, Austin, and Paris, Tex.; and Los Angeles, Calif. At his final church, he was pastor of the largest Methodist Church west of the Mississippi River.

Dr. Shuler has been a successful author of articles and books. He was editor of Bob Shuler's Magazine, from March 1922 to June 1933, and he is now editor of the Methodist Challenge in Los Angeles.

Thank you, Lord, for Dr. Bob Shuler, Dr. Jack Shuler, and Trinity Methodist Church.

Thank you, Lord, for other Midwestern and Western religious leaders, among whom are Dr. and Mrs. Charles E. Fuller; the late Dr. W. B. Riley, of the First Baptist Church, Minneapolis, and founder of Northwestern Schools (now Northwestern College); Dr. Billy Graham, once president of Northwestern Schools and now a world evangelist; Dr. T. W. Medearis; Dr. Earl Harding; Dr. Richard V. Clearwaters; Dr. M. R. DeHaan; Dr. Merv Rosell; Dr. Louis T. Talbot; Dr. William P. Whitemore; and Dr. Cedric Peterson.

United States Shipping

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, February 3, 1956

Mr. BUTLER. Mr. President, in the present-day endeavor to inform the American people of facts bearing upon the subject of our merchant marine, it is refreshing to note that such a well-informed authority as President Francis T. Greene, of the American Merchant Marine Institute, has just stated his views in an article in the current issue of Marine News. Among other pertinent observations expressed in the article is a forthright explanation of the Butler-Tollefson Act, which I had the privilege of sponsoring in the 83d Congress. In order that this presentation of views might be available to the general public, I ask unanimous consent that the article be reprinted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES SHIPPING, 1955–56

(By Francis T. Greene, president, American Merchant Marine Institute)

During 1955 the American merchant marine took the most concrete and ambitious steps since the war to insure its future vitality and efficiency—steps tending especially to replacing and upgrading present fleets, and to reinstating the coastwise and intercoastal trades. These steps raised some of the brightest hopes the industry has seen in recent years, but few of them had progressed beyond the status of plans and projects by the year's end.

Conversely, it was a year during which tonnage and trade figures continued to decline, though somewhat more slowly; when shipbuilding, though it had managed to claw off the rocks on which it was nearly wrecked, stayed much too close in for comfort; and when all marine activities under the United States flag continued to be haunted by old difficulties and new dangers.

At least one of the latter threatened its very survival, and still does at this writing.

Statistically, the privately owned merchant marine continued to shrink, though less rapidly than in 1954. As against the 101 oceangoing ships of 1,010,000 deadweight tons lost to the fleet in that 12-month period, the first 10 months of 1955 witnessed a net removal, for all causes, of only 48 vessels of 559,000 deadweight tons—leaving 1,087 ships of 13,695,779 deadweight tons on November 1. In contrast to the previous year's attrition, which consisted chiefly of dry-cargo and cargo-passenger ships, this year's was composed mainly of tankers, a category in which we had 34 fewer hulls on November 1 than on January 1. This decline was, however, partly illusory. Ten of the tankers involved were not real losses, since they were turned over to the Maritime Administration under trade-in-and-build agreements, whereby the owners are to build modern ships and receive allowances from the Government toward construction costs. Apart from these, 36 ships of all types were transferred or sold foreign, 6 scrapped, 6 forfeited to the Government, and 2 otherwise removed.

Of 12 ships added to the private fleet during the same period, 9 were *Mariner*-type freighters. These went into major fleet-improvement programs for 3 West Coast companies: Pacific Far East Lines, which took 3 from new construction; American President Lines, which purchased 4 from the Government and converted them for its round-the-world cargo service; and the Oceanic Steamship Company, which bought 2 for conversion to passenger liners for service to Australia. Two supertankers and one small oil carrier, all newly launched, completed the additions.

Besides the Oceanic conversions, due to be completed in 1956, a substantial number of passenger liner-building projects took tentative or final shape. Most definite of these were the 2 included in Moore-McCormack Lines' very extensive ship-replacement agreement with the Maritime Administration. Destined to replace the veteran "good neighbor ships" *Argentina* and *Brazil* on the run to the South American east coast, these 18,000-ton sisterships were under construction by the end of the year. Almost as well along were two 15,000-ton ships planned by the Grace Line to replace their *Santa Paula* and *Santa Rosa*. Early orders are also expected for 4 passenger-cargo ships which stand at the head of APL's fleet replacement plans. At least 4 other additions may be made to the passenger section of the Merchant Marine from Government sources in 1956. Congress has authorized the sale of the P2-type *LaGuardia* to the Hawaiian Steamship Co. and of the prewar Pacific liner *Monterey* to Matson, both to augment service to Hawaii. Arnold Bernstein, successful prewar Atlantic operator, has undertaken to purchase and convert a Mariner, if his pending subsidy application is granted. And APL, late in the year, applied for permission to charter the MSTS transport *General Daniel I. Sultan*, to supplement the trans-Pacific service of her sisterships *President Cleveland* and *President Wilson*.

This good news in the passenger field comes none too soon. The shockingly low state, quantitatively, of the American-flag liner fleet—40 active and 5 inactive ships at the start of 1955, as against 151 in September 1939—worsened steadily as the year advanced. By scrapping, or transferring to foreign flags, vessels which although overage were still capable of giving good service, we cut the active passenger fleet to 39, and no inactive vessels in the fleet, making a loss of 6 ships. In this process, the last vestiges of our large prewar fleet of deepwater costal liners were liquidated.

Throughout the year the issue of MSTS competition with privately owned American shipping occupied the attention of official agencies and commercial groups. The basic questions were as to the military validity of Defense Department determinations of nucleus fleet requirements, the economic consequences of having a large number of merchant-type vessels handling passengers and freight which in any previous peacetime period would necessarily have been commercially transported, and the political sense of maintaining this Government-owned fleet while at the same time financial aid to private shipping was deemed necessary and vessels owned by another arm of the Government, the Maritime Administration, were forbidden by law to compete with the private fleet.

Early in the year, the Hoover Commission task force dealing with Government transportation agencies sounded a keynote when it reported that the United States in effect had two competing merchant marines, and could not afford to do so. It recommended that the nucleus fleet be held at a realistic minimum and that maximum use of private facilities be made for Government transportation business.

Following this cue, committees of both Houses of Congress gave renewed attention to the problem. Some MSTS vessels were placed in inactive status and it was hoped that the goals set by the Hoover Commission would soon be achieved. However, in October, the situation was such as to evoke criticism from two national organizations actively concerned with shipping problems, the Propeller Club of the United States, and the American Legion.

Answering these criticisms, an MSTS spokesman asserted that its operations had been curtailed to the point where the naval agency was no longer a competitor of private shipping but its best customer. As supporting evidence, he gave current strength figures on the MSTS fleet, which showed that it had in active use 16 dry-cargo freighters, 33 tankers, and 47 transports, besides 91 specialized vessels of various types. In most categories these totals did bear a small ratio to commercial ships of comparable type. However, the enumeration called attention to two striking facts. One was the very large number of passenger-type vessels being operated by this governmental agency at a time when the privately owned American passenger fleet was at its lowest numerical level in history. The other was that, almost a year and a half after Congress enacted the MSTS tanker law, with the aim of providing a substantial amount of privately owned tonnage for long-term charter to the Government, no significant progress had been made toward effectuating this legislation. Yet, the 15 large, speedy tankers which it envisaged could probably, if built, have taken the place of well over half of the present MSTS-owned tankers.

But the foremost problems for the American shipping industry have arisen in connection with the Butler-Tollefson, or 50–50, Act (Public Law 664). This legislation has been persistently attacked in those foreign countries which have substantial merchant marines in competition with ours. Shrewdly and plausibly, the attackers have couched their arguments in such terms as to appeal to the one segment of the American electorate which, if convinced, would be most influential in securing the law's modification or repeal. That is, of course, the farm segment, and the theme of the propaganda addressed to it has been that the 50–50 law clashes with another measure in which it has a special interest, the Agricultural Trade Development and Assistance Act (Public Law 480).

In brief, the provisions of these acts follow: Public Law 664 amended the Merchant Marine Act to include the 50–50 rule in permanent maritime legislation. It requires at least half the cargo resulting from government-financed transactions — purchases, gifts, foreign economic assistance—to be carried in privately-owned American-flag ships, if they are available at reasonable rates. Its sole purpose is to assure that a reasonable part of our taxpayer-backed cargoes help support our merchant fleet. Since 1948 such cargoes have constituted almost half of the exports carried in United States-flag dry-cargo ships. Yet, of all our overseas exports, commercial as well as governmental, the percentage carried in American bottoms dropped from 71 in 1946 to 23 in 1954. This happened even though the governmental exports were subject to the 50–50 rule.

In Public Law 480, Congress embodied a method which it had found especially successful, in the earlier Mutual Security Acts, for coping with the post-Korean accumulations of surplus farm commodities This was the sale of surplus stocks for foreign currencies. The 50–50 provision has been applied to these disposal shipments, as it was to those under the Mutual Security Acts.

Foreign and domestic critics often acquiesce in the cargo-sharing principle as applied to aid but object to it as applied to the transactions under Public Law 480, which they call commercial. Actually, it is hard to see why these are not foreign aid transactions quite as much as the almost identical dealings under the Mutual Security Acts. Whatever aid of the commercial they possess arises from the ill-advised legislative use of the word "sales," the employment of commercial trade channels, and the acceptance by our Government of foreign currencies.

The elements of commercial sale are in fact entirely lacking. No profit is involved. Sales are governmentally negotiated and prices are deliberately set to avoid disturbing market levels. Acceptance of nonconvertible local currencies is only one of a number of inducements which no commercial seller would or could offer. Most of the "sales" involve losses, borne by the taxpayer. And it is our Government's standing policy to distribute foreign aid through commercial trade channels.

The most significant fact, however, is that the United States does not retain the bulk of the foreign-currency payments. About 65 percent of them are being given or loaned back to buyer countries, or otherwise applied in the interest of foreign beneficiaries. Except for a percentage difference, this is exactly how previous assistance programs have been conducted.

Americans—especially inland Americans—are being told that foreign countries are so set against 50–50 that they will retaliate by refusing commodity agreements under Public Law 480, thereby defeating the purpose of the latter statute. To date, Denmark's is the only clear instance of this, and there is some doubt as to her candor in laying the refusal to 50–50. Last year she purchased under mutual security (which, remember, is also subject to 50–50) $4 million-worth of agricultural surplus. Since this matched her full requirements of American grain for the 2 previous years, it may have cost her no particular hardship to reject an additional agreement. In the same connection, it may be noted that, of 9 European countries which formally protested Public Law 664 while it was before Congress, all but one concluded agreements under mutual security between July 1, 1953, and June 30, 1955, to a total value of $314 million.

The facts that, during the first third of the statutory life of Public Law 480, two-thirds of its initial allocation of $700 million was covered by disposal agreements with 17 countries, and that Congress, on the strength of that showing, has since raised the ceiling to $1.5 billion, are persuasive evidence that

foreign opposition to 50–50 has not materially impeded the program to date.

Apart from the dread of boycott, some farm quarters have feared that 50–50 may limit disposals by raising transportation costs to foreign purchasers. This is impossible. Public Law 580 requires buyers to pay ocean freights in their own currency, at current freight rates prevailing in the world market. The United States makes up the difference, if any, between such rates and those actually paid.

It is, however, not generally understood outside shipping circles that in a majority of cases no difference will exist. The rates charged by both American and foreign-flag berth lines (which carry the bulk, by value, of all agricultural shipments) are identical in virtually every case. Only in the realm of tramp shipping does a significant rate differential exist, and it is not nearly as wide as the gap between American and foreign trampship operating costs. Only on tramp shipments, therefore, does our Government normally have to make up any difference in rates, and the record to date shows that these payments run well below 1 cent to the dollar of program costs.

This tiny percentage is, in practice, the only expense to anyone, buyer or seller, farmer or taxpayer-at-large, which is entailed by applying the 50–50 rule to Public Law 480 transactions. This is in startling contrast to the 15 to 20 percent of total expenditures which go to those other segments of the American economy with which the Government deals in administering any agricultural program; bankers, packers, brokers, domestic transportation, and others. In contrast to all these, American-flag shipping is the only industry in which our costly high living standards collide directly with foreign competition. Yet there have been numerous public statements in 1955 (and more are to be expected when Congress reconvenes in 1956) which would deny this perilously exposed first line of our commerce even its fraction of 1 percent.

In the same breath it has been, and will be, argued that defense needs are the only real justification for governmental aid to the merchant marine in any form. The policy statement of the Merchant Marine Act, reiterated in every major piece of maritime legislation since 1936, refutes this. Military emergencies are a leading factor in shaping our country's shipping policy, of course; but there are commercial emergencies as well, and it is not less important that they be prevented from tying off our foreign-trade arteries. We were not at war in 1914; but, because Europe was, we found ourselves without the foreign shipping on which we then placed a 91 percent dependence. In 1926, the general strike in Great Britain suddenly immobilized many of the ships on which we had again come to rely. In both cases, goods in transit were stalled, cargoes spoiled, markets were lost, and freight rates skyrocketed.

Not until Korea were 20th-century Americans able to meet a transport crisis with enough ships. Ocean shipping-space requirements were abruptly multiplied to cope with vastly increased shipments of agricultural and bulk commodities. Freight rates began to boom as suicidally as in the First World War. But cargo ships were broken out of the reserve fleet, to be operated by private companies. They moved the cargo, and freight rates were held at reasonable levels. The Foreign Operations Administration estimated that in 1952 about $245 million was saved in freight on Government-financed shipments.

As 1955 drew to an end, it was clear that the often-won legislative battle over 50–50 would have to be fought again in the new congressional session. Yet American agriculture was by no means unanimously in agreement with its purported spokesmen in Washington who were sponsoring legislation to dilute or destroy 50–50. Both the National Grange and the Mississippi Valley Association have spoken out emphatically for the merchant marine and the existing legislative forms of assistance, specifically including Public Law 664. Numerous other national groups—industrial, commercial, veteran, and military—have taken parallel stands.

It is no function of this article to forecast the action Congress will take on the bill to alter the Butler-Tollefson Act. The foregoing summary of American shipping in 1955, however, suggests what the consequences of such alteration are likely to be. It also indicates the principal reasons why Congress has always so far found it in the national interest to support the merchant marine, both by subsidies and by statutory apportionment of Government-financed cargoes. Subsidies by themselves are not sufficient. They cannot take the place of cargo, the fleet must have work to do. The 50–50 law is the most practical means Congress has yet found to achieve this object. Its repeal or serious abridgment would be a disaster for our shipping, admittedly; but not for our shipping alone. Because of the damage it would do to one of the chief arms of our defense, and the precarious basis on which it would place our export-import flow, it would be, in the long run, no less a misfortune for the American farmer, the American manufacturer, and indeed the whole American economy.

Federal Power and Reclamation Projects

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, February 3, 1956

Mr. MAGNUSON. Mr. President, those of us from the west coast—and those far-sighted southern and eastern leaders who have noted the ever-increasing volume and value of our gross national product—have long pointed out the value and wisdom of Congress' decision to lend money to build low-cost power and reclamation projects in the Western Untied States.

California floods and an evermore pressing need for more electricity in the Pacific Northwest are constant reminders that this program of development has proceeded neither as fast nor as well as was possible.

Many entries in the CONGRESSIONAL RECORD testify to the soundness of the loan program. One is the statement by Commissioner Dexheimer that the dollars loaned to the Pacific Northwest are being repaid and that that loan repayment is more than $65 million ahead of schedule to this point.

Where many have been crying that a power shortage is imminent, a newspaper editorial in the Columbia Basin News, of Pasco, Wash., Tuesday, January 24, 1956, points out emphatically that the power shortage is not around the corner—it is upon us now. I would like unanimous consent to have the editorial of that date entered into the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POWER SHORTAGE?—IT'S HERE

The Bonneville Power Administration, in its annual advance program, indulges in that pleasant fiction—that a power shortage is just around the corner.

"At present nearly 3 million kilowatts are under construction by the Federal Government for the United States Columbia River power system," BPA's advance program points out, "including McNary, The Dalles, Chief Joseph, Ice Harbor, and smaller plants, and almost 1 million kilowatts are under construction or have been scheduled by other utilities in the Northwest Power Pool area.

"Yet even these substantial additions will not be enough to avoid a power shortage in the 1960's * * * unless additional new starts are made soon."

We had better get on the ball, BPA seems to be saying, or there isn't going to be enough power to go around.

Apparently Dr. William Pearl, BPA Administrator, defines power shortage differently than we do. To us, a power shortage would seem to exist when there is more demand for power than there is power generated.

And, by this definition, the power shortage is not something that will happen in the 1960's—it already has happened. It is here and now.

The multiplicity of schemes for importing power from Canada prove this. So do blunt assertions of spokesmen for the light metals industries, who say they can't expand because they can't get power with which to do so.

Perhaps Dr. Pearl has a different definition. Presumably, he refers to the day when those industries already in the Pacific Northwest will have to curtail their operations because power won't be available with which to operate.

This point of view, we submit, is not proper to the Bonneville Power Administration. BPA is charged with delivering power produced by Federal generating units in the Pacific Northwest. When BPA has customers who can't get all the power they want, it has a power shortage.

Several pages farther on in the advance program, BPA says this:

"Our historical analysis shows that in the past decade the Pacific Northwest has barely kept pace with the minimum power requirements of its expanding economy. Under the impetus of the administration's partnership policy, local utilities—both publicly and privately owned—are planning to develop additional supplies to meet a high level of load growth."

Here we have a somewhat different picture. Dr. Pearl and his associates seem to be saying that we have almost had a power shortage, but not quite.

Perhaps, if the advance program were 160 pages long instead of only 60, BPA would have got around eventually to admitting what BPA people will tell you in private—that a shortage of cheap hydroelectric power has crippled industrial expansion of the Pacific Northwest.

Each year for the past 10 we have had warnings that something had better be done fast about developing new generation. Always the bugaboo has been a power shortage, right around the corner.

For most of those 10 years much, but not nearly enough, was done to build new generation plants. In the past 3 years very little has been done. And the power shortage, as result, is not something that will happen if we don't hurry.

It is something already upon us.

Needed now is not quick action to avoid a dread situation—but action quicker than quick, to alleviate as much as possible as quickly as possible a situation which already exists.

Objectivity in the Editor's Chair

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Objectivity in the Editor's Chair," published in the Chicago Daily Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OBJECTIVITY IN THE EDITOR'S CHAIR

A procession of suckers who got trimmed of $10,800 by a confidence man named Paul H. Hughes, who represented himself as a renegade operative from Senator McCARTHY's former investigating committee, and persuaded these gulls that he could blacken McCARTHY's reputation, has been parading to the witness stand in New York.

Among those who have given a delightful display of their own credulity are Joseph L. Rauh, Jr., national chairman of Americans for Democratic Action; Clayton Fritchey, deputy chairman of the Democratic National Committee; Alfred Friendly, managing editor of the Washington Post and Times Herald; and other professional McCARTHY haters.

If the Pulitzer committee awards a booby prize for journalism, we suggest that Mr. Friendly is the inevitable choice. This genius of the news desk commissioned a series of articles based on Hughes' fabricated "disclosures" without ever investigating the credibility or good faith of his informant. By a lucky fluke, the Post and Times Herald was saved by the bell from its editor's folly when Hughes was exposed as a phony.

On the witness stand, Friendly freely admitted that, even before his initial meeting with Hughes, he was prepared to believe that Senator McCARTHY was a rascal, a scoundrel, and possibly a criminal. He conceded, by inference, that he was so predisposed as to be unwilling to believe Senator McCARTHY even if he swore on a stack of Bibles.

Now, Friendly, as managing editor, supervises the treatment of news in the news columns of the Washington Post and Times Herald. He is not supposed to write editorials, deal in comment or opinion, or color the facts. Yet he admits that he has an a priori disposition to approach any news involving Senator McCARTHY with a jaundiced and hostile attitude.

Some of the holier brethren of the press are fond of trumpeting their self-righteousness from their editorial pulpits in season and out. For example, the Louisville Courier-Journal, which has the same liberal coloration as the Post and Times Herald, set out some little time ago to distort one of our editorials in order to validate its preconceived prejudice that "the Tribune management's editorial opinions * * * constantly seep into the news columns.

M. Stanton Evans, of the weekly National Review, analyzing the Courier-Journal's attempted deception, said that the most charitable interpretation is that the Courier-Journal has someone writing editorials who can't read. This is always a possibility, we suppose.

But, it seems to us, if the Courier-Journal really wants to go out and document its charge that there are men on newspapers who would set themselves up as censors of political news on the basis of their personal predilections, it need not seek any further than its own friends, Mr. Friendly and the Washington Post and Times-Herald. For here is an editor who frankly states under oath that, at any time and in any circumstance, he is prepared to treat any news referring to a United States Senator on the assumption that the Senator is a rascal, a scoundrel, probably a criminal, and someone not to be believed under oath.

Award to Miss Verna Hornbeck for Essay in the 1955 Soil Conservation Contest

EXTENSION OF REMARKS
OF
HON. EARLE C. CLEMENTS
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. CLEMENTS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the winning essay in the 1955 soil conservation essay contest in Kentucky. The winner in that contest, Miss Verna Hornbeck, of Jackson, Ky., is a 12-year old student in the eighth grade in the Jackson City school. Her essay was judged best from among the 22,941 papers submitted from 116 Kentucky soil conservation districts, and is, I think, a fine presentation of her understanding of the benefits to be derived by her community from the soil conservation program.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

HOW FOREST CONSERVATION CAN BENEFIT MY COMMUNITY

My home is in Jackson, Ky., in Breathitt County. Our county is in the foothills of the Appalachian Mountains. The Hazard coalfield comes into the eastern part of the county. Two large railroad mines and several small truck mines employ many men. Ten or more sawmills operate part time. There are no factories in the county. Most of the people farm and work in the woods for a living. Farm income is low because this area is very hilly and good cropland is scarce. Most of the farmers get their cash income from raising livestock and tobacco. Many of our farmers work part time in other cities and States. Forest conservation can help bring into our county industries which use wood.

The early settlers had very large farms. They didn't clear any more land than they needed because tools were scarce and expensive. They didn't take good care of their fields, partly because they didn't know how and because they believed that they could clear new fields as they were needed.

The population grew. The large farms were divided among children. Soil erosion became common because the heavy rains would wash the good topsoil from the steep fields. Some of the topsoil would settle in the stream channels and cause them to overflow more easily. Sometimes the streams would overflow into the fields in the bottoms. The swift water would wash away the fertile topsoil and leave sand and gravel.

Before the railroad was built through the county, not much timber was cut. There were not very many forest fires and they didn't do much damage to the big trees. The floods were not as big as now and didn't do as much damage.

The railroad brought sawmills into the county. Most of the big trees were cut. There were more fires and they did much more damage because they had more fuel to burn in the tops of trees on the ground. The fires burned all of the leaves on the ground and the humus and the fertility out of the soil. The heavy rains, which followed the fires, washed the unprotected soil from the hillsides down into the streams. The floods got larger and did more damage. The trees which were left had poorer soil in which to grow and couldn't grow as fast.

Conditions are better now. We have had a countywide fire control system for about 5 years. Our soil conservationist and county agent help people to take better care of their farms and grow better crops. The forester helps them with their woods and to learn about forest conservation.

Forest conservation is the wise use of forest lands to conserve and use the soil, water, and timber resources for the greatest good of all of the people. It means that forest lands must be properly managed to grow good timber. The trees must be harvested when they are ready in order to keep the forests thrifty and healthy.

Good forests help to prevent erosion on forest lands. They have enough trees of all sizes to use all of the growing space. The treetops shade the ground and keep it cool. The fallen leaves protect the soil from beating rains. They decay and make spongy fertile soil which makes the trees grow faster. The spongy soil soaks up most of the rain and keeps it from running off into the streams quickly. The undecayed leaves form a blanket to keep the water from evaporating from the soil. Also, the tree roots help prevent erosion by holding the soil in place.

Only a small part of heavy rains runs off the surface of the ground into the streams. The rest soaks into the ground and seeps out later at springs. This helps to keep the streams from flooding. The rain falls in the leaves and they keep the water from moving rapidly on top of the ground. When water moves slowly it can't pick up and carry silt, sand, and gravel into the streams. There is less silting of stream channels and ponds.

Forests catch and hold water for our use. Part of the water which soaks down into the good forest soils follows the layers of rock to where they come out on the hillsides. This makes springs. The water is always clear and pure. Springs keep the streams flowing steadily during dry spells. This is the water we depend on between rains for our use on our farms and in our homes.

I am convinced that forest conservation can benefit my community by helping to protect it from floods and by furnishing a steady supply of clean water. It can help to prevent soil erosion. Good forests furnish more food and shelter for game animals and more different kinds of fish can live in the clear streams. More people could hunt, fish, and picnic near their homes. They would be healthier and happier. The forests would grow better timber faster. The timber owners could cut and sell more timber to increase their incomes. A steady supply of good timber would make it worthwhile for a wood-using industry to operate here. New industries would furnish more work for more people. Then it would be possible to have better homes, schools, and churches. Our community would be a better place in which to live.

The Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Facts About Fulbright Natural Gas Bill," written by Bob Siegrist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FACTS ABOUT FULBRIGHT NATURAL GAS BILL
(By Bob Siegrist)

The United States Senate next week will vote on the Fulbright bill which would, in a measure, free natural-gas production from Federal controls. Wisconsin's officials have pretty well crystallized their positions. Senator MCCARTHY favors the bill. Senator WILEY opposes, as do Governor Kohler, Attorney General Thomson, Mayor Zeidler, and others.

Last year, the House of Representatives passed a companion measure, the Harris bill, with Wisconsin's Congressmen VAN PELT and WITHROW voting with the majority. Our purpose here is not to argue the merits at this late date. However the Senate vote may go, and it will cut across party lines, we believe a few fundamental facts should not be overlooked:

The natural gas industry has three divisions: Producers, who obtain the fuel at the wells and who operate mainly in six Southern and Southwestern States; interstate pipelines, which transport natural gas to consumer markets, the bulk of which are situated in 33 large importing States, like Wisconsin; and, finally, there are the local gas companies.

Since pipelines and local gas companies, by essential nature, operate as monopolies, they are subject to governmental regulation. The local companies, like Milwaukee Gas Light, are regulated by State laws as public utilities. The Federal Government has no jurisdiction in this field.

To further protect the public, however, Congress passed the Natural Gas Act in 1933, giving the Federal Power Commission authority over pipeline companies engaged in interstate commerce. It is important to note that this act specifically exempted producers at the well from Federal regulation.

In June 1954, the United States Supreme Court ruled, via split decision, that producers were also subject to Federal control if any part of their production was sold across State lines. In sum, the Court held that a law passed by Congress contained something which Congress apparently had not put into that law.

That's way the Harris-Fulbright bills were introduced in the Congress—to rescind that ruling. Now, with the Harris bill having passed the House, its Fullbright companion is endeavoring to do the same thing in the Senate.

The basic issue, obscured by the political huff and puff, is that legislative powers under the Federal Constitution belong solely to Congress and may not be usurped by either the executive or judicial branch.

Obviously, if the Federal Government has power to regulate the production of natural gas, then, as Senator BRIDGES warns, "We must also extend Government control to the production of coal, lead, zinc, copper, and all other mining." Fulbright bill opponents claim natural gas production is a monopoly from which the public must be protected by Federal intervention.

It is true that 197 companies produce 90 percent of the natural gas supply. Of these 197 companies competing with each other, however, none controls 5 percent of the total production.

Moreover, in this highly competitive industry there are actually 8,000 producers operating 71,000 gas wells in 28 States. That is hardly a monopoly.

There are some 25 million residential natural gas consumers, mostly in the large cities, like Milwaukee. The millions who read Hearst newspapers are among them. Naturally, we are on their side; always have been and always will be.

Currently, the average Milwaukee area consumer who cooks and heats his home with natural gas, pays approximately $1.10 per 1,000 cubic feet, exclusive of his service charge.

Of this approximate $1.10, Milwaukee Gas Light gets 77 cents, and the Michigan-Wisconsin Pipe Line Co. gets 23 cents, leaving 10 cents for the producer. The 77 cents received by the gas company must go toward the overall operation, including plant, labor and taxes. That 77 cents still does not permit Milwaukee Gas Light to realize the 6 percent return on its investment permitted under Wisconsin law.

The Fulbright bill's opponents claim Federal regulation, as decreed by the Supreme Court, will increase the market supply of natural gas and reduce consumer prices. Market statistics indicate exactly the opposite effects, because expanding potential markets demand expanding supplies.

Actually, the interstate supply is diminishing, since Federal regulation at the wellheads has prompted many independent producers to sell their product only within their own States to avoid Federal control. Likewise, the bringing in of new wells is declining because control discourages risk. The real, long-range result of Federal control, then, must be a future market shortage and high consumer prices.

Is the regulation of natural-gas production another stride down the road to socialism?

Ninety-fifth Birthday Anniversary of the State of Kansas

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. CARLSON. Mr. President, on January 29 Kansas celebrated its 95th birthday anniversary.

Kansas is a State that is rich in history, and its entrance into the Union was exemplified by its motto, Ad Astra per Aspera—to the Stars Through Difficulty.

Those of us who are privileged to enjoy the rich heritage with which we were endowed by those who pioneered this great State have much to be thankful for. We of this generation must preserve this great heritage for future generations.

A very fine poem was written for the 95th birthday of our State by Frank Madson, Jr., a photographer for the Wichita Beacon, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

A KANSAS DAY POEM FOR 95TH BIRTHDAY
(By Frank Madson, Jr.)

What is Kansas?
That's a tough question, until you ask,
What is a Kansan?
Answer that one and the first is easy.
For history is but the story of people,
And the people of Kansas
Have made exciting history.
They have made Kansas great.

What is Kansas?
It is more than just another State
More than just a big rectangle of earth
Four hundred miles long
Two hundred miles across
With an area over eighty two thousand square miles.
More than just statistics
Kansas is a state of mind
A psychological outlook
A philosophy of living
Based on the traditions and dreams of her pioneers.
Who crossed mountains, rivers, and prairies
To reach her spacious plains
And founded their homesteads in her tough sod.
The first emigrants were from New England
"Bleeding Kansas" meant just that in those 1850 days and later
Later the "brother's war" came the veterans.
Both the blue and the grey
Took homesteads in Kansas.

What is Kansas?
Maybe it's beyond analysis or definition.
You might say of a Kansan
"He's the gamest sport in the world."
The Kansas farmer bets his corn will make
Despite drought, deluge or damnation
And if the corn loses
He banks on the kaffir, the rye, or the sorghum.
A Kansan is something of a gambler.

What is Kansas?
Kansas is a kind of barometer of the Nation.
Bill White, the Emporia editor used to say:
When anything is going to happen in the country it happens first in Kansas.
Abolition, prohibition, populism, the Bull Moose movement, the exit of the roller towel, the appearance of the bank guarantee, the blue sky law,
These all first popped up in Kansas.

What is Kansas?
Kansas was and is people.
All manner of people—
John Brown, Jim Lane, Charles Robinson, John J. Ingalls, who called Kansas the navel of the Nation;
Sockless Jerry Simpson, Boston Corbett, Carrie Nation, Arthur Capper, John Brinkley, Charley Curtis, Mary Elizabeth Lease, who advised Kansans to raise more hell and less corn.
Ed Howe, the sage of potato hill, Damon Runyon, Osa and Martin Johnson, Clyde Cessna, who gave Kansas wings, William Allen White of Emporia, the small town editor who became great by staying in the small town and writing with such wit and wisdom rulers and presidents sought his opinions.
And Ike Eisenhower of Abilene who captured the hearts of his countrymen as no man had since Washington.

What is Kansas?
Above all the people—
The people who came in the beginning and stuck thru thick and thin when the going was really tough, for better or worse, for richer or poorer.
And the newcomers who have followed in their footsteps who have taken up the torch of vision and ideals of liberty entrusted to them by their forebears and carried it onward and upward "to the stars thru difficulties."

The Public Power Issue

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in the February 4 issue of the Saturday Evening Post magazine. It is entitled "Who Says the People Want Public Power?" I believe this editorial is worthy of examination on the part of all Members of the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHO SAYS THE PEOPLE WANT PUBLIC POWER?

One issue which the Democrats had relied on for 1956 took a turn for the worse last November when Stevens County, Wash., voted by about 7 to 3 to keep a private-enterprise power company in business rather than see it sold out to the competing public-utility district. It has long been suspected that the public-ownership lobby and its journalistic allies had less popular support than they pretended to believe, and the victory of the Washington Water Power Co., in an area which was supposed to be overwhelmingly in favor of public power, confirms that suspicion. Furthermore, the Stevens Co. result ought to convince President Eisenhower and his Cabinet that the administration's effort to retreat from socialism has plenty of mass support.

Electric power is one of very few items in the cost-of-living index which have remained steady, and in some places even declined, in an area of explosive inflation. Nevertheless, the private-power industry has been the target of continuous virulent assault. Why? Couldn't the answer be that the power business is more easily socialized than most other types of industry? That, at any rate, is the view of Kinsey M. Robinson, president of Washington Water Power. Mr. Robinson also believes that "the American people anywhere will vote in favor of free enterprise if they are given the opportunity to do so."

Unfortunately they seldom have this opportunity. Although public power has doubtless provided healthy competition in some areas for the private industry, the issue is usually fogged with irrelevancies and alleged scandals designed to divert attention from the central issue—socialism or free enterprise. The current smoke screen is the Dixon-Yates issue. This is presented as some sort of blot on the escutcheon of the Eisenhower administration, but it is really only an elaborate and complicated façade to conceal the expansionist ambitions of TVA and public power everywhere.

The chatter in the newspaper columns and from TVA Senators over the part played by Mr. Adolphe Wenzell, of the First Boston Corp., in the negotiations, or the alleged failure of the Atomic Energy Commission to tell President Eisenhower what was up, is strictly for confusion. Mr. Wenzell's assignment—without fee, incidentaly—was mainly to assist the parties in determining a reasonable interest rate on the money needed to construct the new plant. There was some bungling on the public-relations side. But the real crime in the Dixon-Yates deal was that it threatened to curtail the effort to socialize electric power in the United States.

The Dixon-Yates contract was for the construction of a steam plant contiguous to the TVA domain, thereby making it even less likely than it is now that Congress would appropriate money for new TVA steam plants. President Eisenhower rightly pointed out in 1953 that, if the National Government must undertake to provide the TVA area with all the power it needs, "generated by any means whatever," then it has a similar responsibility "with respect to every other area and region and corner of the United States." Although most people think of TVA as based on waterpower, the fact is that more than 60 percent of TVA electric energy is produced by steam plants. Its future expansion depends on the building of more steam plants. A privately operated steam plant at the edge of the TVA empire was not to be tolerated.

Therefore, the Dixon-Yates contract had to be killed, and a hundred smears poured upon men whose offense was an enthusiasm for the Eisenhower administration's effort to check the gallop toward socialism. Unfortunately, there is no simple method like that employed in Stevens County, Wash., to determine the views of the whole population on this issue, but the Washington experience ought at least to have a reassuring effect upon defenders of private enterprise in the electric-power field. The public-power bloc will do its best to make Dixon-Yates look like a synthetic Teapot Dome, but that is a tough assignment. Few appear to be listening.

Inflation

EXTENSION OF REMARKS
OF
HON. EARLE C. CLEMENTS
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. CLEMENTS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Richard Rutter which appeared in the financial section of the New York Times on Sunday, January 29, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NO INFLATION, BUT PRICES ARE HIGHER—INDEXES REGISTER STABILITY ONLY BY VIRTUE OF SLUMP IN FARM PRODUCTS—INDUSTRIAL GOODS RISE—OVERALL BALANCE THUS HIDES AN INTERNAL IMBALANCE THAT MAY CAUSE TROUBLE

(By Richard Rutter)

"This may not be inflation we're having, but it's a pretty good facsimile."

That view was expressed the other day by a leading economist. His remark was in direct challenge to a key passage in the President's Economic Report, submitted to Congress on Tuesday. That message stressed that the record boom had been accomplished without the accompanying specter of inflation.

But had it?

Almost daily for the past few months news columns have carried reports of significant price increases. These have occurred mainly in basic industrial commodities, but some consumer items have been affected. Consider this sampling of price increases so far this month:

United States Steel raised charges for extras, or special handling charges, applying to carbon plates, sheets, and strip. The adjustment amounted to a 3- to 5-percent price increase.

The American Viscose Corp., the Nation's largest rayon producer, increased prices of high-tenacity yarns by 3 to 5 cents a pound. The material is used for tire cords. Three days earlier American Enka Corp. had posted similar rises.

Zinc was raised half a cent a pound to 13½ cents, quoted at East St. Louis. The increase followed two recent half-cent increases for lead, the companion metal.

Standard Oil Co. (Ohio) raised heating and diesel fuels 0.3 cent a gallon. Esso Standard Oil Co. marked up marine diesel fuel by 13 cents a barrel, with upward adjustments in other grades.

Prices of Douglas fir lumber jumped $5 to $6 a thousand board-feet.

Price rises of 2 cents a pound were put into effect by major producers of titanium dioxide.

Dow Chemical Co. added 1.5 cents a pound to the price of magnesium alloy.

BUYERS VERSUS INDEXES

Few executives are more on top of the price picture than the members of the National Association of Purchasing Agents. Buying of materials is their daily concern. Each month the trade group quizzes its members on the latest economic trend. And each month since September 1954 the purchasing agents have reported higher prices.

How does this jibe with the Government's price indexes, which indicate the cost line has remained stable?

To put it bluntly, these statistics are—not intentionally—misleading. They depict only the surface picture.

Most familiar to the average person is the consumer price index, compiled by the Bureau of Labor Statistics. It is usually regarded as the cost-of-living barometer. In the past 18 months this key figure has actually declined from 115.2 in July 1954 to 114.7 in December 1955 (1947–49 equals 100). Food, of course, is a major part of the family budget; it constitutes almost 30 percent of the budget used in the consumer price index.

It will come as no new tidings to learn that the average retail prices of farm products have declined some 10 percent in the last 18 months. Every other major item in the cost-of-living yardstick—apparel, housing, gas and electricity, medical care, transportation, services, and the like—has risen substantially. So the apparent stability in the cost of living has been due entirely to a decline in food costs.

The businessman, however, is far more concerned with the wholesale price index. This also is compiled by the Labor Department and it keeps tabs on the host of materials on which industry depends.

What has happened to this important barometer over the last 18 months? The answer, again: apparent stability. Between July 1954 and December 1955 the wholesale price index has moved up just barely, from 110.4 to 111.3 (with 1947–49 equaling 100).

But here, too, the drop in farm prices has kept the overall index in line. Wholesale farm prices dipped some 13 percent during this period. Meanwhile, metals, rubber, lumber, and other products far removed from the agricultural have gone up steadily and in some cases spectacularly in the past year and a half.

A breakdown of the wholesale price index tells the behind-the-scenes story.

Since July 1954 basic industrial materials have gone up in price as follows:

	Percent rise
Nonferrous metals	25.9
Rubber and products	19.7
Metals and products	13.2
Iron and steel	11.6
Lumber	9.4
Construction equipment	8.7
Petroleum and products	6.8
Gas	5.1
Paper	5.1
Coal	4.3

Another way to measure the price rise of basic materials is to compare the quotations in the spot or cash markets. Comparing

mid-July 1954 with mid-January 1956 this is the gap:

	July 1954	January 1956
Iron, No. 2 grade, at Philadelphia (a ton)	$60.16	$62.66
Steel billets, Pittsburgh (a ton)	64.00	68.50
Steel scrap, No. 1 heavy at Pittsburgh (a gross ton)	32.00	57.00
Copper, electric domestic (a pound)	.30	.43
Aluminum, ingots (a pound)	.21½	.24½
Lead (a pound)	.14	.16
Zinc, East St. Louis (a pound)	.11	.13½
Tin (a pound)	.96¾	1.02⅞
Rubber, No. 1 smoked sheets (a pound)	.23⅞	.40
Gasoline (a gallon)	.15	.16

What does it all add up to? A major price movement—upward. If not actual inflation (how high is up?), this shapes up as an alarming forerunner. It is a symptom—if not a tipoff—that as of now 1956 is an economic question mark. Strong forces are in effect that may well spell serious trouble.

Stassen's Reports to the President

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Paul Harvey.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PAUL HARVEY SAYS: STASSEN'S REPORTS TO IKE WERE ENCOURAGING AND WERE MISLEADING

It was Harold Stassen who was most certain the Russians meant well.

As long ago as the spring of 1954 and as recently as the autumn of 1955 he was assuring President Eisenhower that they would accept his "open-skies inspection" and "exchange of military blueprints" proposals as a prelude for disarmament.

Mr. Stassen and Mr. Dulles were pulling the President in opposite directions at the time of Mr. Eisenhower's dramatic proposal at Geneva.

President Eisenhower chose Harold Stassen's optimism to John Dulles' realism.

Nobody can know to what extent the disillusionment and disappointment which followed contributed to the September heart attack.

The Soviet rebuff which followed that first Geneva meeting was felt very keenly by the President.

Mr. Stassen was so sure that the Soviets since Stalin, had changed for the better, his reports to the President on his contacts with the Soviets at the U. N. were all highly encouraging and misleading.

White House confidence in the counsel of Mr. Stassen has since been considerably curtailed.

The political debt, if such there was resulting from Mr. Stassen's withdrawal gesture in favor of Mr. Eisenhower at the 1952 convention has been repaid with interest.

At the Camp David Security Council meetings immediately following the President's return from the hospital, Mr. Stassen was conspiciously silent.

In the several official deliberations since, at Key West and in Washington, when Mr. Eisenhower was phrasing his messages to the new Congress, Mr. Stassen was not consulted at all.

On October 23, 1955 (between the summit conference at Geneva and the subsequent disillusioning one), Mr. Stassen made a speech in New York. He reiterated that he was convinced Russia would accept the Eisenhower plan for exchanging military buleprints and inspecting installations from the air.

The President's disarmament advisor said that talks on reducing arms were then being conducted on an optimistic note. He said, "All delegates recognize that disarmament can no longer be treated as an idle dream or a springboard for propaganda."

Subsequent events in the U. N. and at Geneva were a diametric contradiction to his prognostication.

Thus it is that Mr. Stassen with these public declarations has furnished ammunition to those who would thwart his perennial personal political ambitions for the White House.

And through confidential counsel of a similar nature, Mr. Stassen has similarly discredited himself with its present occupant.

Thirty-eighth Anniversary of the Independence of the Ukraine

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Friday, February 3, 1956

Mr. BRICKER. Mr. President, the 38th anniversary of the independence of the Ukraine was observed on January 22, 1956. I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD a statement made on this occasion which was sent to me by Mr. O. E. Miles, president, United Ukranian Organizations of Cleveland, Ohio.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The centuries-old struggle for freedom and independence on the part of the Ukrainian nation constitutes an impressive chapter in the annals of human history. This indomitable will for national freedom clearly crystallized itself in the old Ukrainian Kievan State from the 9th to the 14th century, in the Ukrainian Kozak State from 1648 to 1783, and more recently in the Ukrainian National Republic from 1917 to 1920. As one of the first victims of Soviet imperialism, Ukraine, since the very inception of alien Bolshevik tyranny, has proved to be the Achilles Heel of the Soviet Union. The destruction of its national churches, the horrible man-made famine of 1932–33, the mass murder at Vinnitsia in 1937–39, and the vast purges and deportations decreed by Moscow have failed to exterminate the spiritual and moral resources for national freedom in Ukraine. The historic capital of Kiev, with centuries of rich tradition and culture conserved in its vaults, still symbolizes today the indestructible hope and passion of a nation destined to be sovereign, free, and independent.

During the Second World War millions of Ukrainian patriots seized the short-lived opportunity of the German invasion to realize once again this hope, only to be frustrated in their valiant efforts by the scourge of another imperialism. But this unbending will continues to be strong and powerful in the epic struggle of the Ukrainian insurgent army (UPA) against the evil forces of Soviet imperialism, and in the resistance of the Ukrainian people.

As a nation of over 40 million people—the largest non-Russian nation behind the European Iron Curtain—Ukraine stands as one of our most important and natural allies in the eventual defeat of Soviet imperialism. Its historic claim to national freedom and independence cannot be ignored. Its place as a sovereign and equal partner in the mutual construction of the free Europe of tomorrow must be assured, if the foundation of permanent peace among freedom-loving nations is to be impregnable.

The Jet Age

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under permission to extend my remarks in the RECORD, I present to you a very excellent speech by an able Chief of Staff, Gen. Nathan F. Twining, of the Air Force. The address delivered to a conference of the Air Force Association in Washington was well received and presents in a billiant manner a complete discussion of the question of noise abatement in this jet age.

The address is as follows:

ADDRESS BY GEN. NATHAN F. TWINING, CHIEF OF STAFF, UNITED STATES AIR FORCE BEFORE THE JET AGE CONFERENCE OF THE AIR FORCE ASSOCIATION, SHERATON-PARK HOTEL, WASHINGTON, D. C., FRIDAY, FEBRUARY 3, 1956

Mr. Toastmaster, President Gill Robb Wilson, General Doolittle, and distinguished guests, your conference topic—the jet age—is very broad. This is good, for it puts few if any limits on your speakers and discussions. Flying itself is limitless—and so should be any discussion about flying.

Unlimited as this discussion is, it is already apparent that this conference will focus itself on 2 or 3 central issues. I thought I would have a pretty clear field when I was asked to talk about operational problems of the future. Then I learned of Gill Robb Wilson's topics and the comprehensive report General Partridge gave you this morning. Between them, they stole all my thunder.

All I can say about the future is that the difficulties General Partridge described are going to get worse.

To put it another way—many of you are familiar with the inscription on the National Archives Building here in Washington.

It says, "The past is prologue."

According to one Washington taxidriver, this means, "You ain't seen nothing yet."

So if we think we face problems now, let me say that "We ain't seen nothing yet."

And to introduce the first problem facing us, I might add that, "We ain't heard nothing yet."

This business of noise has been mentioned in just about every speech so far today. This afternoon you will hold a noise abatement forum. I would guess that you will hear this subject discussed at least three more times tomorrow.

All of the concern has generated from a relatively few number of complaints. Do you realize that of 6,000 airports in the United States, only about 250, or about 4

percent, are Air Force bases? If we add the airfields of the other services, we can say that 5 or 6 percent of all our airfields are military bases. Many of these bases do not have jet operations, and only a handful support supersonic operation.

The trouble we have had is nothing, compared to the trouble we could have, because aviation is tending toward more noise, not less. Long ago we foresaw this problem. We started noise studies, and noise-abatement programs. Yet the complaints already received indicate the future magnitude of the problem.

Theoretically, we could move Air Force bases away from cities. Actually, we are trying to do this, but it will never be a complete remedy. We cannot even get enough base money to properly prepare existing bases to accommodate our modern, high performance aircraft. You can imagine how much it would cost to build all new bases away from population centers.

As General Partridge mentioned, our criteria for future bases requires them to be located at least 15 miles from the local community.

But this does very little good. Wherever you plunk down a multi-million-dollar air base with a several million dollar payroll, local construction and service contracts, and local civilian employment, you will be surrounded by a rapidly growing community, practically before you even get an airplane off the ground. An air base is a big business. It makes the nearby cities bigger and it automatically generates communities where none existed before.

There are unlimited examples of this. Tinker, for instance, was originally several miles from Oklahoma City. Now Midwest City, a suburb of Oklahoma City, practically surrounds Tinker Field.

An example closer to home is Andrews. When it was built during World War II, it was comparatively isolated. Now Washington and its suburbs have grown completely out to Andrews.

Even if it were possible to build isolated bases and keep them isolated there would have to be two big exceptions.

Part of our air defense is necessarily based to protect population centers. To provide maximum range, 360° protection to a metropolitan area, the interceptors must be based very close to that city. Any other policy would be like putting the city fire department out in the country.

The second exception is our Reserve and National Guard bases. We could not expect effective Reserve participation, if our Reservists had to use most of their limited time just trying to get to their bases. The major proportion of our Reservists and Air National Guardsmen live in or near populous areas. It is common sense that their bases be located nearby.

I might add that we are under constant presure to give these Reserve components first-line equipment. We want them to have first-line equipment, because they would be of little use if they did not have it. But as we give these units first-line equipment, the noise of their operation gets louder.

Nevertheless, let me assure everyone that insofar as it is financially possible and tactically sound, we will continue to try to get our bases away from population centers.

There are other measures we can and are taking which offer better immediate and local help. Here are some of them.

You know the technical developments now underway. Several of these are projects initiated by industry. For ground runups there have been developed a whole gamut of Rube Goldberg devices to reduce the sound level.

Our research and development command and our aircraft industries are spending lots of time and money to develop silencers or mufflers for jet engines. Unfortunately, many of the gadgets developed so far, degrade performance. These are unacceptable since our margin of security depends on ever-increasing performance of combat aircraft. In flight, we have adopted time-consuming fuel-wasting, and tactically inefficient traffic patterns both for take-offs and landings.

Community relations efforts to explain and keep the people informed really pay off. They do not reduce noise, but they at least make the reason for noise a little more understandable.

Our commanders, for instance, have had much success with what we call preconditioning communities. Before a combat wing moves into a new area, we explain to the local people what to expect and why our air operations are necessary.

The way these communities have reacted and accepted the minor inconveniences of better defense is a tribute to the understanding of the American people.

All of our present difficulties have been generated by the noise of jet engines of 4 to 8 thousand pounds thrust. The noise of these comparatively small engines have already become a nuisance in some localities.

Now, let's look at the future.

Questions like these face all of us:

What will the effect be of jet noise from engines of 12, 16, 20, 25 thousand pounds of thrust?

What will be the effect of hundreds of jet airlines operating in and out of population centers?

What will be the effect when increasing numbers of light planes become jets?

As civil airplanes become jet propelled, military aviation will no longer receive sole blame for jet noise. But that is no consolation, even to us. This noise problem will become one the whole Nation will face, and I think you civil operators will find your choices of action even more limited than we are finding them in the Air Force.

For one thing, airliners will find it more difficult to play with traffic patterns. Air Force planes, even bombers, can and do execute sharp turns, steep pull-ups, and so on, to avoid flying over communities near bases. I do not know what would happen if you put a load of paying customers through even a mild 2-G turn, but I'll bet the outcry would drown out the jet noise.

Also, airliners operate on tight cost margins. You will not want to fly large, time-consuming, money-consuming traffic patterns.

Even more important, your business is carrying people and cargo. You can't find many customers in isolated areas. Your business takes you, and your noise to the cities. For passenger convenience, the closer you are to the city, the better.

So what is the solution?

As I said before, this is becoming a national problem. Military and civil aviation must work together to do everything possible consistent with security and progress.

We should expend every effort to reduce disturbance to communities by routing, flying techniques, and mechanical silencers.

But I am afraid that these solutions will not be enough.

The big job is to get our Nation to recognize this as a largely unavoidable consequence of progress. Gill Robb Wilson pointed out that every technological advance has had undesirable side effects—and opponents of those side effects always try to stop our progress. Their efforts to halt progress always succeed in slowing it down, but they have never succeeded in stopping progress.

Noise is just something we are going to have to live with. The American people will eventually understand this. We must do all we can to speed this understanding.

In 50 years we have learned to live with the stench, noise, expense, death, and destruction of the automobile. I doubt that noise will cause the destruction in a hundred years that the automobile does in one.

While there is a frightening death toll on the highways, there is not a one of us who does not value the automobile. We may not like its byproducts, but we have learned to live with them.

I foresee the same acceptance of the undesirable side effects of flying. It is conceivable that the airplane will affect our way of life just as has the automobile. Homes may be designed soundproof—bombproof. Communities may grow away from centers of air activity.

Now, as far as the Air Force is concerned, let us look a little further into the future. We are getting into the field of short take-off and landing planes. We are developing Zero launchers to get aircraft airborne, and mats and barriers for landing. We are getting boundary layer control and reverse thrust. The vertical take-off aircraft is coming. All of these will alleviate the noise problem because they will get us up and down faster, and make it easier to stay away from communities. Like all new developments, they will probably bring on new problems we haven't even imagined yet.

Looking even further into the future—we are getting more and more into the missile business. Eventually, a great proportion of our defense and offense will be in place, poised—ready to fire—missiles. Let me add parenthetically, that this won't happen until missiles are as dependable and efficient as pilots. This time is coming but it's not here yet. Now these missiles won't make a bit of noise until we need them—and at that time we'll have other things to worry about.

To sum up my remarks on noise—it's a growing problem. It will be handled partially by our noise suppressing measures. The end answer is acceptance. We must not only precondition communities, we must precondition the Nation.

I wish our jet noise were our only problem. To me the echoes of Communist H-bomb tests obliterate the noise that comes from our building a defense against them.

So far the public has objected to noise primarily because it is a nuisance, not a hazard. I believe we will be able to keep it from being considered hazardous.

Other jet-age problems will be the result of public concern over danger. There are several of these. Problem areas include air-traffic control, congestion at and near airports, and heavy landing and take-off traffic over populated areas with the increased potential for tragic accidents.

Most of these are problems shared by civil and military aviation. One, however, is peculiar to military aviation. I speak of the weapons carried in aircraft.

It is only commonsense that whatever weapons our Air Force uses must be readily available. Instant readiness means survival.

The Air Force has been in the nuclear-bomb business for over 10 years now and you may be sure that full attention has been given to every detail of design and methods of handling required to eliminate the possibility of an accidental nuclear detonation of the weapon, either in the aircraft or on the ground. You may readily appreciate that an aircraft crew would be hesitant to fly a vehicle unless the hazard to them of an accidental detonation was essentially nonexistent. With this built-in safety, the worse condition to be expected would be the hazard associated with conventional high explosive weapons. These safety features have been, and will continue to be, tested realistically, to assure that the chance of an accidential nuclear detonation is so remote as to be incalculable.

Even though our weapons have an extremely high degree of built-in safety, our handling of any kind of weapon is super-

cautious. Machineguns, for instance, are not charged until the aircraft is in an area where they can be safely fired.

External rocket connections are not hooked up until the aircraft is in take-off position—pointed away from all populated areas. It is standard procedure for aircraft carrying any kind of ordnance, even small-practice bombs, to fly many miles out of their way to give a wide berth to all towns or villages.

The point is that handling and carrying ordnance, from bullets to A-bombs, is potentially less dangerous than many other operations. It is not, and will not be, a major problem to conduct these actions in safety.

The last topic I wish to include in my discussion of future operations is the nuclear-powered aircraft. I want to allay any fears there may be about hazards in operating this type plane. A nuclear engine will be merely a new form of propulsive power. Our sister service, the Navy, has been operating a nuclear powerplant in its submarine, the *Nautilus*, with safety and dependability. The controls built into a nuclear engine will make it no more dangerous than any other engine.

By no means let anyone be confused. Nuclear weapons and nuclear airplanes are not synonymous.

Actually, our hopes for peace and progress rest to a large extent on this big difference between a nuclear bomb and a nuclear reactor. The bomb could in many ways darken the world. The reactor could eventually light the world.

The nuclear-powered aircraft will not be solely an instrument of war. It would be developed even if the threat of war were buried forever. It is a step of progress that is as inevitable as the nuclear powerplants that generate electricity, or nuclear-powered ships.

There will, of course, be new problems associated with the operation of nuclear powerplants. A great deal of our research in developing nuclear powerplants is devoted to finding out what these problems will be.

You have read of the airborne nuclear reactor now being tested in an Air Force B–36 based in Texas. These are the first flights of an actually operating reactor. The reactor presently provides no propulsive power. It is running simply so we can test its effects upon the components of aircraft in flight.

This is one of the means by which we are determining the potential problems of nuclear flight in order to be able to whip them before they ever become real problems.

These flights will also enable us to design safety procedures for nuclear flights.

Actually, there are many ways in which nuclear flight could be much safer and even less hazardous than conventional flight. Theoretically, nuclear engines can be the most dependable engines ever made. Engine failure in flight, and during takeoff or landing should be almost nonexistent.

Even a greater safety advantage is the nuclear plane's boundless range and flying time. These days, bad weather combines with definite limitations on aircraft range and endurance, to become a major cause of accidents. Imagine the day when a pilot can have an unlimited choice of alternate airfields, or an unlimited time to circle and wait for the weather to improve.

These same qualities will help to solve another problem that is being discussed in this conference. That is air-traffic control. Everyone agrees that the high speed and high-fuel consumption of jet airplanes is completely incompatible with our present air-traffic control system. Planes with unlimited range and endurance will certainly be welcome in any system of control, and will never be a problem.

I will close this by reminding all of us that our main problem overshadows all the difficulties I have discussed here today. Our biggest problem of the future will be the same as it is now. That is, to keep American airpower able to do its job. Solving the difficulties we are discussing here will certainly enable us to do our job better.

I think the Air Force Association is to be congratulated for its foresightedness in organizing conferences like this. These meetings of civil and military aviation leaders will certainly point the way to keeping our airpower superior.

It has been a pleasure for me to be here today. Thank you for asking me.

Hungry Horse Dam

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. METCALF. Mr. Speaker, more than 3 years after it was dedicated, and long after it has proved itself, Hungry Horse Dam in northwestern Montana is still under attack by those who would turn back the clock 50 years.

I offer in evidence the following editorial, entitled "Down With Hungry Horse Dam," from the January 27, 1956, issue of the Hungry Horse News, published at Columbia Falls, Mont., near this multipurpose project.

The author of the editorial, and defender of Hungry Horse, is Mel Ruder, an editor who knows his subject. In May of 1954, I called the attention of my colleagues to another editorial by Mr. Ruder. In that one, he told a tale of two rivers in the Northwest. One, the Kootenai, was uncontrolled and flooding, destroying property in Libby and threatening the city of Bonners Ferry, Idaho. The other was the Flathead, under control because Hungry Horse was holding back the one-third of the river's flow which comes from the stream's south fork.

Mr. Ruder's most recent editorial follows:

DOWN WITH HUNGRY HORSE DAM

During first years of the Hungry Horse News our editorial dander used to rise as we refuted charges against the Hungry Horse project. We're not of great consequence, but we'd rise to the occasion.

Hungry Horse Dam seemed to spell out its own success, and we've practically forgotten that the project was bitterly opposed at its start.

Our good friend, Homer Murphy, publisher of the Flathead Courier at Polson, doesn't quite let us forget it. He had an article in his Chit Chat column January 12 in the old Hungry Horse "unfeasible" style, which Dan Whetstone reprinted in the January 19 Cut Bank Pioneer Press, one of Montana's best newspapers. Neither publisher has had an ounce of regard for Hungry Horse Dam through the years, but we thought the completed project and coming of the aluminum plant might have impressed them sufficiently to cause a change of opinion.

First of all we'd like to present Homer Murphy's ideas on Hungry Horse, and then our long answer. Pictures would tell our story better.

From Flathead Courier, Polson, January 12:

"A large headline last week announced that Hungry Horse Dam cost about $7 million less than estimates. That is a good story, but why not tell the other side. The costs of hydroelectric plants are based on installed capacity, or potential. Hungry Horse cost more per kilowatt than any other dam of comparable size or output. The four generators at the plant total 285,000 kilowatts. The project allegedly cost $101 million. The majority of the generators are not running on a firm power basis since the south fork does not have an outflow large enough to supply them full time. The American people have come to expect Government projects to cost more than private, but why not add the tax loss into the cost of Government-owned and operated plants. That would give the construction cost plus the tax loss, which each year increases the cost. Fewer generators would be as efficient at Hungry Horse, but to cover up the first mistake of four units, promoters are now thumping the tub for a dam on the middle fork of the Flathead, and a diversion tunnel from there to the Hungry Horse reservoir to keep it full so the generators can be run a little more often. Lake County would profit from a taxpaying dam or two built below the Kerr plant. Not just a few would profit from this type of enterprise, but the entire population."

Hungry Horse News view:

Our thought is that Hungry Horse has done an excellent selling job for itself. The big structure at the time it started was to cost $108,800,000, and the total cost figure now is down to $101,500,000.

In addition that seemingly little river piled its floodwaters behind Hungry Horse and the reservoir has been full to overflowing through the summer and fall months.

Then came the new Anaconda Aluminum Co. plant with its 500 jobs created by snow stored, a dam and generating plant, extension of the Bonneville Power Administration grid, American and a bit of French technocracy, plus capital, labor, and all good things, American.

Hungry Horse stores snow waters that in former years surged down rivers to the sea unused in May and June. Now this water is released in December, January, February and into the spring. Kerr Dam at Polson assured of a more even runoff pattern to provide added months of water for its turbines, installed a second and third generator. Water that made these new installations practical comes from Hungry Horse.

In fact we wonder if Cabinet Gorge and even the new Noxon Rapids Dam downstream would have been built without Hungry Horse first coming in to hold back upstream waters that formerly flowed unused to the sea. Upstream storage is an essential factor, and is assisting the whole region's economy, a fine thing.

We recall that Cabinet Gorge's whole reservoir holds that amount of water which Hungry Horse releases in a week of full power production.

Hungry Horse with its 285,000 kilowatt generator capacity by itself is not a practical project anymore than are Cabinet Gorge or Noxon Rapids by themselves. Hungry Horse costs in terms of benefits do not balance for the one dam itself. But take Hungry Horse and its downstream benefits—that was the principal reason for the project—and there is a beautiful economic picture.

We have one chart that shows: "Increase in Columbia River system prime power due to Hungry Horse—563,000 kilowatts." These figures are outdated, present benefits are more.

Now we are talking again about the proposed Middle Fork diversion, which incidentally seems to lack support in the Flathead.

Today there is not a single extra kilowatt or electricity in the Flathead for more industry. The Middle Fork diversion through a dam and tunnel would take unused flood waters into Hungry Horse Reservoir to be used

for power generation here, and for that matter also boost the water to turn turbines and generators at Kerr Dam, Cabinet Gorge, Noxon and Grand Coulee. Our downstream neighbors, it would seem, would favor such development.

Polson's situation, however, seems something like that of Redding, Calif., with Shasta Dam. At Shasta and Redding we found local residents pointing out that they were lighted, but that Shasta power was exported to turn the wheels of industry in the San Francisco Bay area.

Kerr Dam is a sizable factor to well-lighted Lake County and Polson school district tax base, and important to major industry especially in Butte and Anaconda.

People tend to take developments for granted. Fortunately Hungry Horse legislation provided safeguards so that power output would be reserved for Montana and a favorable rate brought job-providing industry right here near the dam. Montana and the Flathead has no reason for regrets.

Bastiality of Red China Communists Now Fully Exposed—Red China Must Not Be Admitted to United Nations—IV

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including the fourth article in the series appearing daily in the Washington Daily News on the inhuman treatment suffered by Dr. Homer V. Bradshaw and his wife at the hands of the Chinese Communists.

The article follows at this point:

[From the Washington Daily News of February 2, 1956]

"THE BIBLE OFFERED SPIRITUAL STRENGTH THROUGH PRISON ORDEAL"

(Fourth of a series)

(By John Troan)

PITTSBURGH, February 2.—As a physician, Dr. Homer V. Bradshaw deal with drugs. But he'll tell you the Bible is very good medicine, too. For 264 days—the time he spent in a Communist prison in Kukong, China—it was the Bible, more than anything else, which gave him the spiritual strength to stand up to the Red torture.

Failing to extract a phony confession after several marathon talkfests, the Commies switched to the silent treatment.

They stuck him in a cell, all by himself, never asked him questions, never gave him answers.

"Have you ever tried to do nothing, day after day?" Dr. Bradshaw asks. "Believe me, it's awfully hard."

"You start thinking: 'Why? Why am I here? Why did they do this? How long will it last?'

"It's not good for you.

"Fortunately, I had memorized a lot of verses of Scripture. I would say them over and over to keep other things off my mind, and the Scriptures comforted me."

Dr. Bradshaw turned up at the Kukong prison May 1, 1951. This was almost 2 months after he and his wife had been seized at his Presbyterian mission in Linhsien, 250 miles above Canton.

"BUMPED OFF"

On that day he was told that he was to be "bumped off."

Under the inspiration and direction of Communist hotheads, students at the Linhsien school, which the Reds had taken over, were to storm the nearby hospital, where Dr. Bradshaw was imprisoned, and murder him.

"But," said Dr. Bradshaw, "the Almighty had other ideas."

The day before Dr. Bradshaw, his wife, and two other American prisoners were put on a bus, then shifted to a train at a railroad point named Pingshek.

It was on the train that the doctor first realized Mrs. Bradshaw, with whom he hadn't been permitted to talk since their arrest, had suffered a mental breakdown.

"But even she knew the Communists were lying when they finally told us on the train that we were being taken to Canton to be released," said Dr. Bradshaw.

"She said to one of the guards: 'You're lying. We're being taken to another point for further punishment.'"

ORDERED OFF TRAIN

Canton is an overnight train ride from Pingshek. Yet just 4 hours after they had switched from the bus, the train stopped and they were ordered off.

"This was Kukong," he says. "This was a real jail." Surprisingly, Dr. Bradshaw found the treatment at Kukong fairly decent.

"Our food was better," he said. "There was meat occasionally, pork or beef. Sometimes fish, eggs. And a little better vegetables."

The Communists, however, managed to get their pound of flesh. Dr. Bradshaw discovered this diet improvement was being subsidized by the mission funds the Reds had impounded when he was seized.

"They said they were taking care of the money for us," the doctor said with a laugh.

He had about 7 million in Chinese currency when the Commies jailed him, about $350 in American money.

Though the money helped buy better food for the American prisoners, "we still got only two meals a day, never any lunch," Dr. Bradshaw adds.

MENTAL TORTURE

The torture at Kukong was mental. A silent cell. Faceless guards. A vacuum of information.

Of course, the doctor and his wife were separated again, as soon as they were taken off the train at Kukong. And the doctor could never find out how she was coming along. But—

Sometimes the guards would slip up and I would get to see her at a distance while we were both out for exercise walking on a basketball court.

This assured the doctor his wife still could walk. But he was concerned about her mental condition. He wondered whether she had snapped back. Of course he couldn't tell, from a distance, and the Communists refused to tell him.

"Not once in the 264 days I was there was I questioned," the doctor says.

Nor did he see the other Americans the Communists had imprisoned.

SAME WASHBASIN

"But all of us used the same enamel washbasin. When I was finished, they'd take the washbasin to the others. Each day, they'd have to bring it back and shuttle it around.

"As long as I knew somebody else was using the washbasin, I knew somebody else was still alive, too."

Then, after nearly 9 months at Kukong, Dr. Bradshaw was put on another train. Mrs. Bradshaw also was placed aboard.

"I could tell her physical condition was fairly good because she was able to walk unaided," said the doctor. "But otherwise things were about the same as before."

Two other Americans seized by the Reds also were on the train—Miss Sarah Perkins, of Georgia, a nurse, and Miss Dorothy Middleton, of Cicero, Ill., a missionary teacher who had been working among the Chinese hill people about 8 miles from Dr. Bradshaw's mission, under auspices of a small Protestant sect in the Midwest.

"They let us talk on the way down to Canton," the doctor says, "but we didn't talk much. It was a night trip and most of the time we just dozed. Of course, we didn't say much in English because some of the Chinese probably knew English."

Did he think of a possible escape?

"No," says Dr. Bradshaw, "there was never any thought of any escape. There wouldn't have been a ghost of a chance."

Los Angeles Port Tonnage Soars

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. McDONOUGH. Mr. Speaker, I would like to include in my remarks the following report on the great progress that has been made in the development and expansion of Los Angeles Harbor.

This great harbor is unique among the great harbors of world commerce because it is a manmade harbor built and dredged out of the mud flats on Los Angeles County's shoreline years ago.

LOS ANGELES PORT TONNAGE SOARS—LOS ANGELES PORT PACES SOUTHLAND INDUSTRIAL DEVELOPMENT WITH 4,361,852 TONS OF DRY CARGO SHIPPED IN 1 YEAR

Los Angeles Harbor's spectacular rise in world commerce is keeping pace with Los Angeles' industrial development and building activity. For the second consecutive year, dry cargo, the real barometer of business in any port, has reflected the booming southland changeover from agriculture to industry.

Dry-cargo shipments and receipts handled across the nearly 120 improved docks of this $150 million man made harbor were greater by 489,787 tons than during the previous 12-month period. They showed an impressive increase of over 13 percent for the year, and were one of the highest since 1855, when the first cargo records were noted in the infant port.

Total dry-cargo shipments of 4,361,852 tons flowed across the 6 million square feet of wharves in Los Angeles Harbor last year, compared to 3,692,065 tons in 1953–54.

While shipments of general cargo, fresh fish, and softwood lumber showed heavy increases, bulk oil movement throught the port dipped sharply, dropping to 20,637,985 tons, compared to 22,821,933 tons for the previous 12 months. Bunker fuel taken by ships visiting the port also showed a decline to 3,166,161 tons from 3,735,969 tons.

Ship arrivals at Los Angeles Harbor terminals were down 479, or a decrease of 15 percent, 4,228 craft utilizing port facilities, compared to 4,707 ships the year previously.

So while over-all tonnage totals for Los Angeles Harbor revealed a decline for the fiscal year, mostly in bulk oil movement, higher revenue-producing cargoes kept the port's financial balance sheet on a fairly even keel with a total gross income for 1955 of $5,593,320, only $87,864 less than last year.

Major change in Los Angeles Harbor's oil shipping picture came about as a result of

general world conditions. Development of economic recovery plants in Europe created demands for oil which resulted in diversion of crude oils formerly coming here from foreign ports. The same factor also resulted in heavy oil shipments from east coast ports to Europe which in turn rebounded to create a practically new market for local fuel oil shipments, which amounted to nearly 11,000,000 barrels during the later part of the year while only 378,000 barrels were shipped to Atlantic domestic markets a year ago.

Development of new shipping facilities and refineries at Annacortes and at Ferndale on the Pacific Coast is expected to cut into Los Angeles' oil shipments during the coming year, with those facilities capable of handling some 26,000 barrels per day formerly handled through the local harbor.

United States Department of Commerce figures reveal that although the value of exports arriving at Los Angeles in the first 8 months of 1955 was approximately the same as for the same period in 1954, imports showed a spectacular $34,156,157 (19 percent) increase, amounting to $211,066,732 for the 8-month period this year, compared to $176,-910,575 for the same period last year.

PORT REFLECTS INDUSTRY BOOM

Coastwise trade through Los Angeles Harbor showed lumber movements totaling 775,-153 tons compared to 608,140 tons a year previous; petroleum movement dropping to 11,310,417 tons compared to 13,241,114 tons, and general cargo increasing to 395,733 compared to 54 commodities from 28 nations the preceding year. Value of the 2,021 tons received in the zone was $1,106,882 while shipments totaled 2,535 tons valued at $1,301,113. These figures compared to receipts of 5,191 tons valued at $3,691,502 and shipments of 7,731 tons valued at $5,051,234, handled through the zone the previous year. Total income of the zone last year was $32,185 with expenses of $123,767 for a total net loss of $91,581 compared to a net loss of $77,906 during the previous year. Total loss sustained by the harbor department in operation of the zone since its inception is $445,608.

Suspension of the Foreign Trade Zone and operation of the area as a bonded and domestic warehouse would serve and retain nearly all business carried on at the zone and steps have been taken to effectuate the suspension and closing of the zone.

Future development of the West's largest and most modern port under a cooperative program with approxmiately 50 steamship companies and agents who hold preferential assignments to berths has aided the overall $30 million post-World-War-II construction program. Harmonious shifts of operation have increased in efficiency. First step in the port's huge building program was completion of the $6 million American President Lines terminal facilities at berths 153–155 and a second great step was the harbor department's construction of a $10 million terminal for Matson Line operations at berths 195–198.

Arrangements were made during the year for the berthing of Japanese flagships of the rapidly growing Mitsui Line at berth 145.

A shift of the Luckenbach Steamship Line operations, largest intercoastal carrier in the port, to berths 229 and 230–A in addition to berths 228–D and 228–E, with the latter two widened to provide 40,000 square feet of additional dockside transit shed space, is typical of harmonious changes effected in the interests of efficient port operations.

While petroleum products still lead in cargo categories in Los Angeles Harbor, agricultural products have always been a substantial part of the export cargo. Los Angeles is a natural outlet for southern California citrus and thousands of boxes of oranges, lemons, and grapefruit flow through the port annually, some ships taking as many as 280,000 crates of citrus on a single voyage. Nearly 70 percent of California's huge cotton crop is handled through the West's great gateway to world markets.

Lumber movements, which reached peak proportions in the 1920's and were sharply curtailed after World War II, have increased to rival all-time high marks. While lumber schooners of the old type have virtually disappeared, highly specialized package-type lumber carriers and barges have grown in number and handle more lumber faster and more efficiently. A total of 828,666 tons of lumber moved into the harbor last year compared to 657,747 tons in 1953–54.

Cargo volume in intercoastal traffic has declined steadily. From a prewar fleet of some 150 vessels, the intercoastal traffic dropped to 65 in 1948 and to less than 40 today. Reported plans of American-Hawaiian Steamship Co., according to press dispatches, are for a $115 million fleet of roll-on, roll-off, 13,170-ton cargo liners capable of carrying 570 truck trailers each. This might rejuvenate the lagging intercoastal shipping trade. Advices from Washington indicate that a second intercoastal carrier is also interested in this type of operation.

Most spectacular change in commerce has been the booming in export trade exclusive of petroleum products. This export traffic has shown an increase of more than 800 percent during the past 30 years and during recent months growth ratio of exports in the general cargo category has increased above the rate of population gain and industrial development in southern California, both of which are far above the national average.

Phenomenal increase in export of manufactured articles coupled with an equally surprising gain in imports of raw and semi-raw materials has resulted in a balance between imports and exports in comparison to prewar periods when imports represented two-thirds of the foreign trade through the port.

Goods bearing the "Made in California" label now go all over the world, returning profits to all the southland.

Our primary objective is to provide accommodations for ships to enable vessels from all over the world to transport passengers and goods, effectively, speedily, and economically. Los Angeles Harbor is moving to meet these needs and constantly striving to become a better port.

Development of new underground storage tanks for the handling of latex, liquid rubber, is an outstanding example of Los Angeles Harbor's program to keep in step with Southland development. Demands for liquid rubber in furniture, bedding, and automobile manufacture in the Southland led to the installation last fiscal year of 14 huge underground tanks capable of holding the equivalent of 1,500,000 pounds of dry rubber.

It is a new facility to meet a new demand of industry. That is the way Los Angeles Harbor grows and serves the needs of the southland.

Bestiality of Red China Communists Now Fully Exposed—Red China Must Not Be Admitted to United Nations—V

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including the fifth and final article in the series by Mr. John Troan, Scripps-Howard staff writer, which have been appearing in the Washington Daily News. Mr. Troan prepared these articles after personal interviews with Dr. Bradshaw.

There is no reason for the cruel and inhuman treatment the Bradshaws suffered at the hands of the Chinese Communists and their story illustrates well the moral reasons why Red China must not be admitted to the United Nations.

The fifth and final article follows at this point in the RECORD:

[From the Washington Daily News of February 3, 1956]

"THERE WERE TWO ARMED GUARDS AT MY SIDE DURING LONG TRIAL"

(Last of a series)

(By John Troan)

PITTSBURGH, February 3.—After Dr. Homer V. Bradshaw had served 4 years, 7 months, and 24 days in 3 Chinese Communist prisons, the Reds finally told him they'd give him a trial.

"I was informed of the charges at the same time—October 26, 1955," said the Pittsburgh medical missionary.

"There was a long list of charges—operating a clandestine radio, taking pictures, interfering with anti-American propaganda. Stuff like that.

"All summed up, it meant espionage."

Since they had seized Dr. Bradshaw and his wife, Wilda, at their Presbyterian mission in Linhsien, 250 miles above Canton, on March 2, 1951, this was the first time the commies had spelled out their charges.

During these 4 years and 7 months, this gentle aging couple had served 10½ months at a makeshift prison in Linhsien, then more time in a real jail in Kukong and now were in separate confinement at Prison No. 1 in Canton.

SEPARATED AGAIN

The Bradshaws had arrived at the Canton jail January 20, 1952. There they were separated again. "I didn't see Mrs. Bradshaw again until last December 8, when the Communists asked me to talk to her to see if I could get her to eat something because they thought she would die," said Dr. Bradshaw.

By this time, Mrs. Bradshaw was in a severe mental depression, and she could no longer even walk.

"I have no way of knowing, right now, what she went through," said Dr. Bradshaw.

The doctor himself was placed in a cell "with just boards on the floor." His bed was on this floor—"a heavy quilt for a mattress, plus two blankets and a mosquito netting."

No matches and no cigarettes.

CELLMATES

Unlike Kukong, where he was in solitary confinement, Dr. Bradshaw had cellmates at Canton. Anywhere from 1 to 3 other prisoners shared the small cubicle with him.

"They were all Chinese prisoners," said the doctor. "Some apparently were legitimate military prisoners. Some were political prisoners, some criminals."

Dr. Bradshaw is convinced now that two of the many cellmates he had were commie plants, placed there to "draw me out," to get him to say something which the Reds could distort against him.

Fourteen times at the Canton prison, Dr. Bradshaw was questioned by the Reds. They kept trying to get him to sign a confession that he was a spy for the United States and Wall Street.

In the midst of these inquisitions, Dr. Bradshaw relates, the prison was flooded with Chinese newspapers claiming that American fliers captured in Korea had confessed to germ warfare.

Immediately, the doctor's Chinese cellmates began venting their wrath.

"They called me everything under the sun. You'd think I had personally carried out the alleged bug-bombing," he said.

PAPERS

On February 24, 1953, the doctor recalls, the commie quiz masters came loaded with papers.

"They had me read them all in Chinese. They translated the papers into English, too, so I was forced to read them again in English.

"They told of one American flier confessing to germ warfare, saying Wall Street forced him to drop the bombs. Obviously they wanted some such confession from me."

Two days later the Reds returned to question him about a short-wave radio set which a former member of Dr. Bradshaw's mission—the Rev. M. Halstead Gates, of Minnesota—had brought to Linhsien in 1949, before the commies were even there.

Dr. Bradshaw told the Reds it was common knowledge in the village that Mr. Gates was a "ham" enthusiast. He went on to say that Mr. Gates never did set up his equipment because he returned to the United States in April 1949, taking all his equipment with him.

HANDCUFFS

But the Reds insisted Dr. Bradshaw sign a phony confession that he owned "broadcasting stuff." When the doctor stood his ground, they handcuffed him.

"They kept the handcuffs on for 48 hours," Dr. Bradshaw says. "That did it. From then on, the Communists didn't have to plant anyone in my cell to draw me into conversation on anything.

"I made no bones about how I felt. I told them I hadn't been arrested; I had been kidnaped. When they asked what I meant, I proceeded to give them a good American definition of kidnaping."

There were no more inquisitions. But Dr. Bradshaw began to get concerned about his health.

"My weight dropped from 175 to 132—officially," he said, but I had to cut two extra notches in my belt after that so I don't know how low I went.

"I tried to keep the belt for a souvenir but the Communists wouldn't let me."

BREAKDOWN

Last May Dr. Bradshaw suffered "a physical breakdown, from the last stages of malnutrition." He could feel it coming on 2 or 3 days before and "I forced myself to eat the rice they'd bring me. But I couldn't keep anything down, not even water."

After he collapsed, said Dr. Bradshaw, "Communist doctors came in and started giving me injections—probably vitamins.

"I also started getting 3 meals a day and better food. And on July 26 I began receiving Red Cross packages.

"I got 14 in all before I was released. But, you know, those Communists stole the cigarets in the parcels.

By October 26, when the Reds finally advised Dr. Bradshaw he would receive a trial, he was back on his feet.

"I asked to have the British consul represent me at my trial," said Dr. Bradshaw, "but this was refused. Instead, on October 28, the Reds sent some man over to pose as a friend and be my lawyer.

"I imagine they wanted to sound me out, but I just told him I'd defend myself. Two hours later, the party was on.

"There was a prosecutor with his staff, a judge with 2 assistants—and 2 armed guards at my sides.

"I spoke for a half hour. I told them it was all a pack of lies. I dared them to prove their accusations in a legitimate court. I called them all bandits.

"They interrupted me only once. Told me not to be disrespectful of the court.

"Then they handed down their decision. They said I was guilty of being a counter-revolutionist and sentenced me to 5 years in prison, dating from the day of my arrest."

This meant the doctor would have to stay in jail until March 2, 1956.

But last December 16, after the commies had broadcast to the world they were releasing "an American criminal" named Mrs. Wilda Bradshaw and after he had already read of it in the Red newspapers in his own cell, the Communists told the doctor his wife was being released.

Two days later, they told him he was going to be freed. But Dr. Bradshaw didn't believe it until he crossed over into Hong Kong with his wife December 20.

Today they're both recuperating at Pittsburgh's Presbyterian Hospital. The doctor has added more than 10 pounds and looks surprisingly well after his 5-year ordeal.

Mrs. Bradshaw? "She's coming along as well as you can expect," says the doctor. "She recognizes all of our friends and is making satisfactory progress. But it's a slow road and a long road back, you know."

Nationalism in a Collectivist World

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. FEIGHAN. Mr. Speaker, on Sunday, January 22, 1956, it was my privilege to appear on the Georgetown University Forum of the Air, including a telecast which was carried over the Dumont network. The subject of the forum was Nationalism in a Collectivist World. The other participants in this forum were the Honorable PATRICK J. HILLINGS, Member of Congress from California, and the Honorable Charles J. Kersten, former Congressman from Wisconsin, and now a White House consultant on global problems of the cold war.

The subject selected for forum discussion, in a very special way, crystallizes the struggle of the cold war which now grips the entire world. I believe Members of Congress who did not hear or see this program, will find it of interest, particularly the manner in which state collectivism and colonialism are brought into focus as identical evils and oppressors of the spirit of mankind.

Under leave previously obtained, I include the transcript of the Georgetown University Forum Nationalism in a Collectivist World:

Mr. WARREN. "Nationalism in a Collectivist World," is the topic for the 479th consecutive broadcast of the Georgetown University Radio Forum, another in a series of educational and informative programs from Washington. The Georgetown University Forum was founded in 1946.

This is Matthew Warren speaking by transcription from the Raymond Reiss Studio, on the campus of Georgetown University, historic Jesuit seat of learning in the Nation's capital.

Today's discussion will be Nationalism in a Collectivist World. The participants are the Hon. Michael A. Feighan, Member of Congress from Ohio; the Hon. Patrick J. Hillings, Member of Congress from California; Charles J. Kersten, formerly Congressman from Wisconsin, now White House consultant.

The spirit of nationalism is one of the major forces of the 20th century. It is the spirit of peoples and nations seeking and fighting for natural opportunity to determine themselves free. In its enlightened form it means love of God and country, patriotism, national independence, and sovereignty.

Secretary of State Dulles gave fitting expression to this spirit recently when he declared, "We do not believe that nations and peoples who want to be independent should be forced into unwelcome dominance by others merely to produce monolithic power."

Our panel today comprises three members of the former Select House Committee on Communist Aggression; Congressman FEIGHAN is a well-known authority on the non-Russian nations in the U. S. S. R.; Congressman HILLINGS visited the collectivist world last summer and has studied closely the problem of Red imperialism and colonialism; Mr. Kersten is world renowned for his fight in behalf of all enslaved and captive nations in the Russian Communist empire.

Congressman FEIGHAN, to open today's discussion, would you give us perhaps a more complete definition of nationalism?

Mr. FEIGHAN. You gave a good definition, but I think it is important that we make certain what we mean and what we do not mean by nationalism. Nationalism has been equated with imperialism and superracism and supranationalism. As an example, nazism and fascism were often called nationalism. But they really are misguided internationalist terms. As an example, the concept of the Rising Sun of Japan was not nationalism. It also was misguided internationalism.

The term "nationalism" is derived from and related to the term "nation." Nation is best defined as a people having a common and distinctive heritage, culture, tradition, folk lore, and language which is supported by geographical continuity. The Declaration of Independence sets forth very clearly the principle of nationalism. Historians will agree that nationalism in World War I brought about the breakup of the Czarist Russian Empire, the Austro-Hungarian Empire, and the Ottoman empire.

Nationalism, as you say, is patriotism such as we have in the United States. It is pride in our national independence and our national sovereignty. We have a right to these, as do all other nations have the same right. It was after World War I that there was a rebirth and birth of nations because of that nationalistic spirit.

Mr. WARREN. Congressman HILLINGS, do you note from your trip overseas a fear of nationalism?

Mr. HILLINGS Well, Mr. Warren, at the outset let me say that I agree with the definition which you have advanced, and also that which has been advanced by my distinguished colleague and good friend, Congressman FEIGHAN, of Ohio.

Yes, on my trip to the Soviet Union and five of the satellite nations this summer and fall, I found that seems to be the one major aspect with which the Russians are terribly frightened and concerned, that plus the military strength of the West. But I found that in the satellite nations you could see constant attempts by the Soviet masters to destroy the nationalistic spirit which exists, for instance, in Hungary, Czechoslovakia, Poland, and the other countries that are there.

In Warsaw, which was a city which suffered something like 85 percent or more destruction in World War II, you find the rebuilding is being done along Moscow lines, every effort being made to erase the Warsaw which was typical of the time in the old days of the Polish Republic, and the other eras of Polish history. Everywhere you go in the satellite countries today you see constant evidence of the fact that those areas

are being rebuilt and reconstructed along Soviet lines, every effort being made to destroy the basic nationalistic fervor which exists in those captive nations.

Mr. WARREN. Thank you. Congressman Kersten, would you agree with what we have said up to this point on nationalism?

Mr. KERSTEN. Yes, I certainly would. I was glad to hear Congressman FEIGHAN distinguish between true nationalism and the abuses that nations have through history accomplished by extending their national efforts beyond their own nation and to try to subdue other nations.

I was very glad to hear the example of that described by Congressman HILLINGS in his recent trip, the way Moscow has extended its influence over into Warsaw, a distinct and different nation. You have the two examples right there.

I certainly agree with this concept, that the force of nationalism, the natural aspirations of human beings living in one area, it is a kind of family concept, where everybody has the same custom and tradition. It is a distinctive thing located to that area, and they have the natural right to self determine themselves, people that have the same culture, the same tradition, the same language. This is what we are talking about, and what this means to the world, what its destruction means to the world, and what its maintenance means to our security.

Mr. WARREN. Our topic for discussion, of course, is Nationalism in a Collectivist World. Would you say that collectivism is just the opposite of nationalism?

Mr. KERSTEN. Mr. Warren, I believe it definitely is. Collectivism is a mowing down of all the natural, human forces and traditions that each nation has, and makes for a common absence of all of these national characteristics. I think it is one of the most terrible forces that has been unloosed in modern times, this destructive force, the destruction of the nations behind the Iron Curtain.

Mr. WARREN. Congressman FEIGHAN, I have heard nationalism described as an 18th century development. Isn't it older than that?

Mr. FEIGHAN. The historians usually refer to the 19th century as the century of nationalism. We Americans should be mindful of the fact that nationalism was really born with the birth of our Nation.

Mr. KERSTEN. Nationalism is really an outgrowth of colonialism and colonial exploitation.

Mr. HILLINGS. Where the people rose up against the colonial masters and established their individual countries, and which led to the basic ground of nationalism, as characterized in the American Revolution.

Mr. FEIGHAN. Congressman HILLINGS, you had the firsthand knowledge of not only the Soviet Union, but you went down to Guatemala a little over a year ago, and you saw some firsthand efforts of the attempted extension of foreign influence right here in the American Hemisphere, of the destruction of a nation down there; is that correct?

Mr. HILLINGS. That is right. I happened to be in Guatemala just before the revolution took place which threw out the Communists. Then I went back a few months after the new anti-Communist government had taken over. There was firsthand evidence of how the Communists had tried to impose their will on a little nation in the Western Hemisphere and completely destroy its nationalistic feeling and its heritage.

I am convinced that there, one of the first nations, incidentally, that has succeeded in overthrowing the Communists, that in that little country it was the desire for nationalism, and the right to govern themselves, and at least have the type of government that they basically wanted, and their belief in their background and their history and their traditions which caused the overwhelming majority of the people to have the courage to rise up against the imposition of a foreign ideology.

I believe, frankly, that this spirit of nationalism may in the final analysis be the greatest hope the free world has to eventually overthrow the cloak of Communist slavery which has now enveloped some 800 million people in the world.

Mr. WARREN. Congressman FEIGHAN, what is the situation, to bring us up to date now, in southeast Asia?

Mr. FEIGHAN. I was there last fall, and that situation is another example of nationalism being rampant. Many people are confused by the Russians, who try to make believe that they are responsible for the nationalistic spirit in southeast Asia.

As an example, I will take Ho Chi Minh, who is the Red Communist agent in North Vietnam, but the Russians try to set him up as a patriot. He is not. Unfortunately, the nations in southeast Asia were under colonial rule by the Europeans, but now that they see the opportunity for national independence and self-determination, that is what they are fighting for, and that is what we in this country should support. Our whole foreign policy has been the support of independence for nations. I believe that we should do everything in our power to let the entire world know that we are opposed to colonialism or imperialism in any form.

The Congress by unanimous vote passed the McCormack resolution, which sets forth our policy as being absolutely opposed to colonialism or imperialism in any form. I think we should tell the world exactly that we stand against colonialism and we will support the efforts of all nations to regain or gain their national independence and self-government.

Mr. WARREN. Mr. Kersten, you are well known, as I said earlier, in your fight for the enslaved and captive nations in the Russian Communist empire. How are you carrying forth this fight now?

Mr. KERSTEN. Mr. Warren, I have been a consultant at the White House for the past 6 months. Of course, I wouldn't want to talk about any of my activities specifically, publicly, but I can say from the basis of the experience that I had as a Member of Congress, and the investigation of the House Committee on Communist Aggression, that one of the things that I think we are all interested in is to understand what is going on behind the Iron Curtain insofar as these nations are concerned.

The reports that we turned out in our committee showed the takeover of these nations and the processes of destruction that have been going on with regard to all of them. I think one of the things that we as Americans must be concerned about is what is going to be the end result of the destruction of these nations, if the Communists are permitted to communize nearly a billion people. If these nations are destroyed, if that happens, we will be bequeathing to our children the most terrible problem, probably the most terrible war that mankind has ever experienced. The prospect of a communized Marxist world facing a future generation of Americans, generations of Marxists, without any idea of God, that is, believers in atheism, such as they are teaching their children there now, devoid of any national characteristics, devoid of such things as the ordinary relationship in a family.

I have here in my hand, for example, Mr. Warren, a textbook that is being used in the Soviet Union today. This textbook contains a story glorifying the young man who gladly sent his father to the gallows. This is typical of the destruction of something that arises out of the concept of nations, the love of one's own family. If they are able to communize the Soviet orbit and destroy these human values that are planted in and rooted in the national idea, then God help our children.

Mr. WARREN. Is this an example of the exhibits that you discovered during your official report to Congress?

Mr. KERSTEN. Yes, it is, Mr. Warren.

Mr. WARREN. You have numerous examples of this?

Mr. KERSTEN. We have numerous examples of this, and numerous examples of what happens to this kind of philosophy. To me, there are two symbols to the world devoid of any national characteristics: The one symbol is a cadavar, with wrists wired behind the back, and a bullet in the back of the head; and the other symbol is this young man raised to the emanated, who would turn his parents over to the executioner. That is what is being built behind the Iron Curtain.

Mr. WARREN. Congressman HILLINGS, would it be possible to encourage nationalism within the Iron Curtain without being accused of fomenting or fostering war?

Mr. HILLINGS. Mr. Warren, in direct answer to that question, I say "Yes," it is possible.

Now, there are people in this country and in the countries of our friends abroad who have a basic misunderstanding of the international Communist conspiracy. There are people who say, "Well, the Communist Party is a political party," and they fail to recognize that the Communist Party in all the various countries of the free world today is an international conspiracy directed and controlled by the men in the Kremlin. It is not an independent political party. It is not a nationalist party, say, in regard to the Communist Party in France, or in the other countries. It is a Russian-directed international conspiracy.

So, when some of our friends say now we must not interfere in the internal affairs of other countries, by sending in our broadcasts and getting literature and material in, or sending delegations, because if we do that, we are in a sense adopting Communist tactics, I think they are being terribly unrealistic. This is a war. Fortunately, it is not being fought at the present time with bullets. We hope that day will not come. But certainly it is a war that is going on for the control of the minds of men.

I believe that we must use every means at our disposal, short of war, in an effort to try to get the word to these captive nations and to the other peoples of the Soviet Union.

Let me say this in regard to that general question, and also in commenting on my good friend, CHARLIE KERSTEN'S statement, with which I agree, I believe there is hope. I am convinced that the spirit of nationalism is still strong, and burning behind the Iron Curtain. It is true that every effort is being made to atheize the people and do everything else to destroy their belief in nationalism, and their belief in the principles of human freedom, which we cherish. But that hope is still there despite all the Communists have done.

I believe there are ways and means by which we can capitalize on it, things we can do to keep the spirit burning behind the curtain. We will talk more about that, I am sure, before this program is concluded.

Mr. FEIGHAN. On that, I would like to say that what we should do is to have as our basic point in our foreign policy the eradication of colonialism from the face of the earth. We will succeed because 90 percent of the people of the world are in favor of eradicating colonialism. The only people who are opposed to it are a handful of tyrants of the Russian Communist stripe.

If we are to prevent war, we have to eliminate the collectivist strength which gives them an opportunity and the strength to wage war. The surest way to break up that collectivist strength to prevent war is to crusade for the national independence of the many nations enslaved. In addition, we should take action, political action, diplomatic moves, and proper use of our economic

strength. In that way we can eradicate colonialism, and this colonialistic strength is the only strength that would enable the Russian Communists to engage in a war.

So, as I say, by encouraging nationalism, and standing against the colonial tactics of the Russian Communists, is the only way to prevent war.

Mr. WARREN. You would make this the strongest spoke in our wheel of foreign policy?

Mr. FEIGHAN. One of the very strongest, and it will be one of the most effective in any effort to prevent world war III.

Mr. KERSTEN. I would like to comment on the statements of Congressman HILLINGS and Congressman FEIGHAN. I certainly agree with them that this idea that appealing to the basic, or appealing in behalf of the basic human rights of the people behind the Iron Curtain, the idea that that would provoke war simply fails to recognize the situation as it is. Actually, it is one of the best ways to deter war, because in order for the Communists to launch a war against the rest of the world, they have to have basic support among the people behind the Iron Curtain. They can't send their forces out behind the Iron Curtain in any great numbers with the threats of uprisings at home, with the threat of having their lines of communication cut.

If we were to let the Communists, if we were to give them time and a free hand to beat down all resistance in the next 10 or 15 or 20 years, then that would be the best way, that would be the most terrible path for us to follow, that would be the greatest provocation to war.

Actually, a deterrent to war is to encourage the basic human rights, to appeal on their behalf and do everything we can to restore true human values behind the Iron Curtain.

I think in that regard, referring to what Congressman FEIGHAN said, one of the best things we can do is to have our delegation in the United Nations bring up the basic charge against the Soviet Union of Red colonialism. There is plenty of ammunition and facts in which the war might be conducted, ideologically, in the U. N. against the Soviet Union, and to arouse world opinion against the Soviet Union as being the greatest colonizer in all history.

Mr. HILLINGS. I was going to agree to this extent, too, to add that I think there is a great deal that the United Nations could be doing which is not being done at the present time to take the stand that you mentioned. I think a lot of us in the United Nations have been a little fearful to take a stronger stand against Red colonialism might result in some further internal dissension within the U. N.

Let me add to that what would probably be considered a dangerous statement, and I make it advisedly, having seen a little bit of what life is like in the other side of this Iron Curtain area: I am convinced that we have consistently overestimated Russian strength, both militarily, economically and psychologically. I believe we have tended to believe that the Russians are actually more powerful and stronger than they are. It is dangerous to make a statement like that, because if we should dare to underestimate them we could find ourselves in trouble. Of course, the real problem is to try to estimate them exactly. I believe that we are closer to that situation today than perhaps we have been for some time. We have had the courage to stand up to them time after time in recent months. For example, by standing up to them strongly we have succeeded in bringing back another part of the world to freedom, and that is Austria, and now the Red Army of the Soviet Union has been pushed back beyond the borders of Austria, which is a great gain, and a fact and event which undoubtedly has given great hope and encouragement to peoples behind the Iron Curtain.

I am convinced on the basis of what I saw in my recent trip into the Soviet world that we are stronger than we think we are, and the Russians are not as strong as we have been inclined to think in these various categories that I mentioned. If we can continue to follow the principles of courage and stand up to them time after time, I think the Russians are going to find it far more difficult to convince the peoples behind the Iron Curtain that they should bow in obeisance and give in as the constant pressure of the Soviet continues.

Mr. FEIGHAN. I believe you are so right on that, Mr. Hillings. I think we must recognize from the reports of the Kersten Committee of over 335 witnesses and documentary testimony, we have to recognize the biggest enemy of Russian communism is the upswing of nationalism in all the non-Russian nations throughout their entire empire.

You take the Ukraine, for example, which is the largest nation in Europe outside of Germany. They celebrated their 38th anniversary of their independence, which they gained in 1918, but unfortunately lost within 3 years because of the aggression and occupation takeover by the Russian Communists. But in addition to that, you have the resistance in Georgia, Armenia, Turkistan, the Baltic States, Latvia, Lithuania, and Estonia. I think the most dynamic force of nationalism seeks to bust up this U. S. S. R. These people are striving for their independence. It is a real rip tide. That is the real ally of the United States. So long as that upsurge of nationalism is in existence, the U. S. S. R. will not be in any position to start a war. And eventually we will have a breakup of the empire and an opportunity for peaceful existence among peaceful nations in the world.

Mr. KERSTEN. A very good example to prove Congressman FEIGHAN's point is the news story that appeared in the paper yesterday. In the small nation of Lithuania, one of the Baltic States, and there the Russians, the Communists have sought in the last 10 or more years to wipe out that nation. They have deported hundreds of thousands from the Baltic nations. They have moved in Russians. They have repressed religion completely, and destroyed, attempted to destroy all basic human rights. And yet the resistance there is still causing the Communists a great deal of trouble. I think it is all bound up in the concept expressed by President Eisenhower at Philadelphia last August, when he said that our way of life recognizes man as made in the image of God, and behind the Iron Curtain they want to plant in the hearts of their youth the idea of atheism. That is the basic issue and it is an issue on which we have taken a stand.

Mr. WARREN. Congressman HILLINGS, what does this mean to our listeners? What can they do about it?

Mr. HILLINGS. First of all, I believe that every listener who is interested in government, and that should include every American, who is listening to us at the present time, should recognize that we must have men in public office who are in a position to do something about this problem, who recognize that we must not abandon the peoples of the satellite countries and even the peoples of Russia itself.

We must do everything we can to encourage our Government and our leaders to increase the contact between the West and the East. To take the necessary steps to let the people there know they must not abandon their hopes, that we are still thinking about them and working for the day when they will be able to be free again and have their own nationalistic government.

Mr. WARREN. Are we getting through now?

Mr. HILLINGS. Unfortunately, our Voice of America is jammed in all the major cities of Russia and the satellite countries. It is practically impossible to get an American newspaper or magazine anywhere. But I hope that many of our listeners, Mr. Warren, will go to the Soviet Union, as Mr. FEIGHAN has done in the past and I did recently, not because they are going to have a nice trip like they would if they went to my State of California, but because they will have a chance to come in contact with individual Russians, and the more the Russians see us and hear us, the more the people in the satellite countries hear us and see us, will help.

Let me add one final point on my part, and I don't want to inject controversy into this discussion from a political standpoint, but I believe a recent article in Life magazine by Secretary of State Dulles, because he took a courageous stand in the situation facing us today, that article if it could be widely distributed around the Iron Curtain areas could be of great help.

Mr. WARREN. Congressman FEIGHAN, what would you say we could do about this program?

Mr. FEIGHAN. First, I think we must take an unequivocal stand against colonialism. We must identify the colonial power, which is Russian communism, and call them what they really are, and not to use any abstractions in doing so.

I think we should use every media of expression that is available and all scientific advancements to let the world know that we are opposed to colonialism, and we are willing to assist these nations in their fight for national independence.

The President requested an expanded United States information program. I think we should get behind that and expose all the lies of the Kremlin, and in addition use political, diplomatic and economic action along with that to implement our work in behalf of nationalism for all nations.

Mr. WARREN. Thank you very much, gentlemen. I am sorry but our time is up for further discussion of today's program, Nationalism in a Collectivist World. Our thanks to you, Congressman Michael A. Feighan, Congressman Patrick J. Hillings, Mr. Charles J. Kersten.

Next week you will hear discussed, American Military Policy: 1956. Our panel at that time will consist of Dr. Eugene H. Bacon, instructor in American history, Georgetown University, coauthor of the book, American Military Policy; Dr. Henry Kissinger, professor of international relations, Harvard University; Dr. James D. Atkinson, associate professor of government, Georgetown University.

This program has been presented in the interest of public education by Georgetown University. Your moderator: Matthew Warren.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

St. Elizabeths: Pace Setter for Mental Hospitals

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PURTELL
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, February 6, 1956

Mr. PURTELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD selected excerpts from an article entitled "St. Elizabeths: Pace Setter for Mental Hospitals," which was published in the January 1956 issue of Harper's Magazine. I invite the attention of my colleagues to this interesting and informative article about St. Elizabeths, which is starting its second century as an outstanding Federal institution.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ST. ELIZABETHS: PACE SETTER FOR MENTAL HOSPITALS

(By Natalie Davis Spingarn)

As a taxpayer, you own and support one of the world's best centers for treating mental illness—a pioneer for the last 100 years.

Since more than half of this country's hospital patients—upward of 700,000 people—are mentally ill, one might expect the mental hospital to enjoy as much public confidence as the special centers for cancer or heart disease. As everybody knows, this is far from the case. People frequently choose suicide rather than commitment—especially to any of the almost 98 percent of the hospitals which are publicly run. The average citizen regards "asylums" with horror and shrinks from the idea of sending a member of his family to one, even on doctor's orders.

Some of the dread may be justified; the "shame of the States" has surely received its share of publicity. But far too little attention has been paid to the other side of the picture.

There is, for instance, St. Elizabeths, the Federal Government's huge mental hospital in the District of Columbia. It is not typical of the Nation's mental institutions; on its 100th anniversary last year, the head of the World Health Organization's mental health section described it as one of the three hospitals in the world which have consistely practiced humanistic psychiatry. But as a pace setter in its field, it offers a glowing example of how a mental hospital can be run.

It is even more interesting because it cares for residents of the District of Columbia—which, incidentally, has one of the highest mental hospitalization rates in the country; about 879 per 100,000 as compared to New York's 586. These rates are always highest in densely populated areas where erratic behavior is not easily tolerated. And in any national capital there are also many uprooted people who have neither family nor State to be responsible for them if they are taken ill. Among St. Elizabeths' patients are employees of the Government; such Federal wards as certain veterans, Indians, and prisoners judged unfit to stand trial; and those individuals—dubbed "White House cases" by the hospital staff—who come to Washington with intricate plans for saving the Republic from plots and conspiracies, who take potshots at Congressmen, or who harry the Patent Office for recognition of their genius. These often show up at the hospital in short order; Capital police and Secret Service men have learned to recognize the glassy eye and the heroic stance.

THE WALLED CITY

St. Elizabeths consists, somewhat unexpectedly, of clusters of old red brick buildings, loosely Victorian in architecture, set high on a promontory where the Potomac and Anacostia Rivers come together. Even on the hottest of the Capital's infamous summer days, breezes blow over its carefully tended grounds, lightly touching the 200 species of trees and shrubs, the elegant flower borders, and, in accordance with therapeutic practices that have prevailed as long as the recognition of insanity, the minds of the patients with healing peace.

One can enter casually through any of the three gates in the high brick walls that enclose the grounds, usually with only a nod to the uniformed guards on duty. Inside, one finds patients with ground privileges and employees—the two groups are almost indistinguishable—going about their business on the trim sidewalks. At first only the bunches of keys at the waists of doctors, nurses, and attendants, the tight screening on the porches, the grillwork at almost every window, and the occasional shouts from behind some of them, identify the visitor's whereabouts. St. Elizabeths' wide lawns, hilltop setting, and spectacular view of the Capital's major landmarks have led many people to compare it to a campus. This it is not.

It is, in fact, a 364-acre walled city whose citizens are some 7,500 patients and 2,500 staff members, including 1,700 professionally trained psychiatrics, psychologists, psychiatric aids, nurses, social workers, occupational therapists, vocational rehabilitation counselors, chaplains, and recreational workers. On its $13 million annual budget the hospital supports its own police and fire departments, a 400-acre farm in nearby Maryland, a shoe factory, laundry, bakery, and private railroad. Since it is a Federal institution, its superintendent is responsible to both the Secretary of Health, Education, and Welfare and the 535 Members of Congress whose sympathetic interest it is his duty to maintain. He must therefore be able to traverse political hazards with agility, and without being labeled a politician.

These are not qualifications that a psychiatrist is always called upon to offer. According to one member of the profession, there are only a handful in the country who could run St. Elizabeths. The man who has been running it with signal success for 18 years now is a gracious, highly articulate, nonneurotic doctor from Massachusetts named Winfred Overholser. Nothing about him suggests the popular conception of a psychiatrist. Beardless, with thick gray hair, merry hazel eyes behind glasses, and a New England twang in his speech, he could easily pass for a Senator or the head of a large corporation. Merely the sight of his tall, portly, self-assured figure striding slowly across the grounds inspires confidence. * * *

No vital decision—from the use of a new drug to the drafting of a warm letter to new patients, the consideration of whether a fantasy like "Harvey" would be disturbing for the patients, or the handling of a habeas corpus writ—is made without Dr. Overholser's consent. And because he believes that St. Elizabeths should play a major role in the general battle against mental illness and in educating the public, he is (unlike many psychiatrists) always available to the press and almost always willing to comment on the intricacies of human behavior.

THE PIONEERS

This history of St. Elizabeths parallels the great developments in psychiatric treatment over the past 100 years; and in many cases the hospital itself was the instigator of progress. In a corner of Dr. Overholser's study stands the small mahogany schoolhouse desk on which, in 1855, Dorothea Lynde Dix drafted an act of Congress beginning:

"The title of the institution shall be the Government Hospital for the Insane and its objects shall be the most humane care and enlightened curative treatment of the insane of the Army and Navy of the United States and the District of Columbia."

In 1855 there was little to do for madness except to make the patients' surroundings as pleasant as possible. So, from its earliest days, St. Elizabeths has put strong emphasis on flowers, trees, shady walks, and on keeping its patients occupied with music, dancing, and various kinds of recreation. The first superintendent, Dr. Charles H. Nichols, believed in using as little restraint as possible—muffs and mittens existed at the hospital but were seldom used—and in choosing his staff with care.

(Today Dr. Overholser tells new employees, "If you can't take any kind of abuse from a patient, you shouldn't work here. If a patient can't act crazy in this hospital, where can he make a comeback?")

Dr. W. W. Godding, who became superintendent in 1877, started a school of nursing, an innovation in an insane asylum, and employed the first full-time pathologist in any mental hospital in the United States, Dr. I. W. Blackburn, a pioneer in neuropathology. The third superintendent, Dr. A. B. Richardson, died after only 4 years' incumbency, to be succeeded by Dr. William Alanson White, who played an intimate part in the development of modern psychiatry.

So important was Dr. White's contribution that the William Alanson White Psychiatric Foundation, sponsor of the Washington School of Psychiatry, which stresses the interpersonal aspects of this branch of medicine, was established in the Capital during his own lifetime, thanks largely to the efforts of a gifted, idiosyncratic disciple of his who came to St. Elizabeths as a young Veterans' Bureau doctor after World War I, Harry Stack Sullivan.

When the theories of Sigmund Freud, translated into English in 1908, met with resistance, to put it mildly, it was Dr. White who brilliantly defended them at a meeting of the Medico-Psychological Association, now the American Psychiatric Association. And under his direction, St. Elizabeths became one of the first public mental hospitals to have a clinical psychiatrist on its staff who devoted his full time to psychoanalytically oriented psychotherapy.

Dr. White set up one of the first psychological testing laboratories in the United States at St. Elizabeths, began an extended occupational-therapy program, developed the school of nursing, and established the first medical and surgical department in an American mental hospital. (It is still the only one in a public mental hospital which the American Medical Association recognizes for the training of interns in general medicine.) In this department, for the first time in the Western Hemisphere, malaria was given therapeutically to a patient with general paresis.

Himself an innovator, Dr. White encouraged his staff to do original research and publish their findings, and helped to start scientific journals to give them a forum. From St. Elizabeths grew what some experts consider the two most valuable textbooks on psychiatry in the English language: White's Outlines of Psychiatry and Dr. Arthur P. Noyes' Modern Clinical Psychiatry.

"Is Ezra Pound still there?" is the inevitable question whenever the name of the hospital is mentioned. The poet, accused of treason in Italy during World War II, was committed as a Federal prisoner after a psychiatric panel, which included Dr. Overholser, judged him unfit to stand trial. Last year, when Ernest Hemingway complained to a Time reporter that Pound should be free to go and write poems, Dr. Overholser was annoyed.

"Many of Pound's literary friends have visited him at St. Elizabeths," he observed. "T. S. Eliot and H. L. Mencken have been here, but never Hemingway. I know Hemingway is an eminent literary man, but I've never heard he was a prominent psychiatrist. Maybe if he visited Pound he wouldn't be so quick to pontificate."

Pound lives quietly at St. Elizabeths, visited daily by his wife but refusing to see many other would-be visitors, having little use for the staff, and not participating in the hospital's intellectual life. He is, of course, free to write poetry.

By a curious twist of fate Pound is spending his postwar days close to a brain he is alleged to have greatly admired. In a bottle of formaldehyde in the superintendent's locked safe is a small gray portion of the brain which once was part of Benito Mussolini. It was obtained by Dr. Overholser through the Army for study, but post mortem changes made satisfactory examination impossible. So it rests in its bottle.

FINDING THE BEST TREATMENTS

Both admission and dismissal rates are high at St. Elizabeths: during any given period the number of patients dismissed is approximately 65 percent of the number admitted. But, since there are many patients who have been hospitalized for long periods, including one who has lived 70 of her 99 years at the hospital ("a triumph for preventive medicine," says Dr. Overholser, "a failure for psychiatry"), staff members disclaim enthusiastic news stories giving the impression that they can pass miracles overnight. Wonderful as the advances in public health and medicine over the past two decades have been, they have also brought St. Elizabeths, in common with all mental hospitals, its most pressing current problem: what to do about elderly patients with the degenerative disorders of old age.

About 40 percent of the women and 30 percent of the men admitted to St. Elizabeths each year now are 60 or over, and a new 500-bed geriatric building, provided with all the latest equipment, has been built to house them. It can house them, but it cannot cure most of them. Yet to cure and restore to normal life is the primary job of the modern mental hospital. Many of St. Elizabeths' staff, like hospital administrators elsewhere, are beginning to feel that some special provision—like the British "halfway houses" which combine the functions of a hospital and a nursing home—must be made for these elderly people whom modern medicine has kept alive but cannot keep in touch with reality. Then the psychiatric hospitals can get on faster with the business of curing.

Throughout its hundred years, the St. Elizabeths approach to this business has been an eclectic one. It has always been willing to try new or to revive discarded treatments, if they seemed to be worth investigating.

It has had great success with psychodrama, spontaneous dramatizations by patients of life situations. Last spring, as part of the centennial celebration, the patients prepared and presented "Cry of Humanity," a pageant about Dorothea Lynde Dix and her crusade for more enlightened treatment of the insane. Later, audiences throughout the country saw the play on the first dramatized television program in which mental patients ever appeared, unashamed, without the overprinted masks the public has come to expect in photographs of them.

PSYCHIATRY AND RELIGION

The wide respect in the profession for treatment methods at St. Elizabeths has made the hospital a training ground for students in all medical and allied professions. The American Medical Association has approved it for residency training in psychiatry and surgery, as well as for rotating internships; and it offers qualified field training to clinical psychologists, social workers, occupational therapists, practical and affiliate student nurses, and chaplains. As a result, it is one of the few mental hospitals that can be highly selective about its staff of trainees; it is usually flooded with applications.

The chaplains' branch, organized in 1946, is the newest weapon in St. Elizabeths therapeutic arsenal. The kinship between psychiatry and religion, now popularized by numerous "peace of mind" books, is comparatively new. For years many psychiatrists felt, with Freud, that the future of religion might be little more than an illusion. Dr. Overholser, who was once moderater of the American Unitarian Association, the highest position a layman can hold in that church, has always felt otherwise.

Today 2 full-time Protestant ministers, 1 full-time and 1 part-time Roman Catholic priests, and a rabbi (who serves only part time because St. Elizabeths has only 250 Jewish patients) conduct an active religious program, including the training of theological students and ministers.

In its 100 years of operation, St. Elizabeths has had only 5 superintendents. What State governor does not sigh for an institution with the same record? (St. Elizabeths' staff get plenty of other offers. In 1 week last year, the hospital's assistant superintendent, Dr. Addison Duval, was approached about the mental health commissionerships of 3 separate States. He preferred to remain where he was.)

It is not merely that St. Elizabeths pays good salaries by civil-service standards, either. The superintendent, for example, gets better than $14,000 a year plus some maintenance benefits, but even this is far less than its physicians could net in private practice. There is something more about the hospital that appeals to first-rate men—partly its tradition, equipment, and enlightened policy, partly the extraordinary efficiency with which it is run.

Although he makes it his business to know everything that is going on in the hospital, Dr. Overholser has delegated responsibility so that he is freed of a great load of administrative detail. His assistant, Dr. Duval, an administrative expert who has spent his whole professional lifetime at St. Elizabeths, performs all the management jobs done on a ship by the executive officer. First assistant physician, Dr. Jay L. Hoffman—a soft-spoken, contemplative man who a recent visitor described as the psychiatrist he'd most like to be analyzed by—is in charge of the actual therapeutic treatment. The executive assistant, M. Keller Madden, supervises the business management. This leaves Dr. Overholser time to make the hospital's policy and to handle its all-important relations with the outside world.

Overholser is willing to go to any honorable length for St. Elizabeths. Consequently both his staff and his patients tend to think that he can accomplish anything, whether it is raising money for a psychodrama project, or a research study of suicide, or the enactment of a special bill to permit a foreign-born doctor to stay in the United States.

"I don't know whether it's due to Dr. O. or not," says a young resident in surgery, "but this is a wonderful hospital. You feel it as soon as you arrive. The reason is simple: it will help you in any possible way to cure your patient."

A patient who has been in four other mental hospitals agrees. Now he is well on his way to recovery. When he was admitted to Howard Hall, the walled maximum-security building for the criminally insane, he expected cells, rifles, side arms, perhaps clubs and blackjacks. Instead he was escorted to his ward by a fellow patient, introduced around, and given a tour of the building. He saw patients working in a shop (one of them taking a correspondence course to learn how to be a radio mechanic), editing a newspaper, playing softball and badminton, even pitching horseshoes; he heard a patient orchestra practicing; he was told that there was patient self-government in Howard Hall, and almost no attempts at escape.

"This hospital," he says, "offers a patient every opportunity for recovery, if he can—or will—take advantage of it."

Bulganin's Proposal

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. HENDERSON. Mr. Speaker, there is virtual unanimity of opinion in our Nation today that the latest proposals by Russian Premier Bulganin to establish peace and security in the world are more crude and transparent maneuvers to achieve aggressive designs by another route. While there is no controversy here that this is Russia's purpose, the Bulganin proposals play cruelly on the hopes and aspirations of some other peoples who yearn for a quick solution to the present international tensions so that the world may enjoy the blessings of peace. But for the millions of peoples who have lost their national independence and now live under the iron boot of Red domination, the single hope for liberation lies in the opposition which is expressed in the policies of free nations.

The following editorial from the Zanesville (Ohio) Signal for February 2, 1956, presents the reasons why it would be morally unconscionable to condone past Russian aggression to achieve only more false promises for future good behavior:

BULGANIN'S PROPOSAL

The United States cannot now or ever be a party to any plan of world settlement which calls for dividing the globe into Communist and non-Communist spheres of influence. Our moral position before the world demands that at all times we speak and act for freedom.

That is perhaps the chief reason why President Eisenhower could do not other than reject Russian Premier Bulganin's offer of a treaty of friendship between the United States and the Soviet Union.

Bulganin's proposal, set forth in his letter to the President, is basically a program for gaining American acceptance of Russian conquests to date. We would be asked, in effect, to enter upon a new era of "Soviet-American friendship" in which we would do nothing at all to disturb Russian rule over millions of enslaved peoples.

It is one thing to recognize as we do, the existence of a military stalemate in the world today. It is quite another to extend formal recognition, to condone, Soviet conquests in Europe during and after World War II.

The only hope the enslaved have is America's moral support, its dedication to the cause of their freedom. To abandon them would be unthinkable, even though it is thoroughly plain we cannot now do anything concrete about restoring their liberty. Furthermore, we have no assurance whatsoever that a treaty of friendship with Russia would be worth a ruble. Russia's path is strewn with broken treaties of this sort. They are maintained only so long as they are thought convenient and useful to the Kremlin.

In this specific instance, too, it seems fair to conclude the Russian leaders imagined their offer might drive a wedge between us and Britain on the occasion of the Eisenhower-Eden conversations. The attempt was crude, and Britain already has pronounced it futile. The British understand no less than we that a stroke of the Soviet pen will not bring peace, will not wipe away the many problems in the world's trouble spots.

As Mr. Eisenhower observed in his written reply to Bulganin, America is ready now as always to negotiate sincerely for world peace.

But to us the spirit of Geneva, if it has had any meaning, does not signify simply the discarding of belligerent posture in return for a mutually approved carving up of the world. It means active, sincere effort to solve the critical problems that are true peril to peace.

Russia has so far shown no effort of that kind. Its price for friendship, indeed for peace, is the West's endorsement of all the evil it has wrought.

Even in the world of nuclear force, free men need not thus court the friendship of tyrants. We need not yield to their smiling blackmail. By keeping strong and united we can block their resort to violence, halt further conquest, and one day lift the yoke from the conquered.

Size of the Co-Ops

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

SIZE OF THE CO-OPS

The rising volume of business done by cooperatives in the Midsouth is little more than a shadow of the size this method of business has attained elsewhere, we learn from new Department of Agriculture statistics.

Businessmen of this region, because of this rise, are interested in the bill of Representative CLIFFORD DAVIS (Democrat, Tennessee), to alter taxation of the co-ops, but their interest is mild compared to what it would be if the co-ops had attained full size here.

These figures are restricted to farmer co-ops. Their business is sale of such things as cotton and milk and purchase of such things as feed, fertilizer, and seed. In 1954 the farmer co-ops did a business of $166 million in Mississippi, $92 million in Arkansas, and $66 million in Tennessee.

The 3-State total is $325 million. But the farmer co-ops of Illinois alone did twice that much business—$652 million. And it was in second place to California, where the cooperative method was used for $793 million of business.

For all we know every business in Illinois and California that calls itself a cooperative is a legitimate organization of profit-sharing farmers, with little to fear from the DAVIS attempt to end unfair tax advantages claimed by some other organizations using the co-op name. We simply call attention to the amount of business done by co-ops in regions where they are more popular than in the tri-States.

Address by Former President Truman at Jefferson-Jackson Day Dinner, Boston, Mass., February 4, 1956

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I include therein an address made in Boston, Mass., February 4, 1956, at the annual Jefferson-Jackson dinner, by former President Harry S Truman.

In his address President Truman paid a glowing and deserved tribute to our distinguished majority leader. Those who know JOHN MCCORMACK and who have served with him in the Congress of the United States recognize the important part he has played in the history of this era. From the beginning of his service in the House of Representatives through the days of the great depression, during our country's struggle against the infamous Hitler and the menace of world communism, JOHN MCCORMACK has always stood and fought for a firm policy for our country in world affairs. He recognized that strength on our part is the medium through which our foreign policies would lead us to victory against foreign ideologies. His speeches in the House of Representatives through the last 20 years have been the best evidence of his wisdom and foresight. He has been remarkably consistent, and remarkably right.

The people of Massachusetts are deeply indebted to President Truman for the warm tribute he has paid to this distinguished son of Massachusetts.

President Truman's address follows:

Whenever I come to Boston, you treat me so well I just don't know what to say.

If I were 10 years younger, it might give me some foolish notions about running for political office.

However, there is an old lady called "Anno Domini" who has a way of catching up with us, and she has been catching up with me. There are a number of men younger and more vigorous than I—and smarter, too—who are well qualified to lead our party to victory next November. And that is exactly what is going to happen.

The Presidency of the United States is the greatest office in the history of the world—and one of the most strenuous. No one knows better than I do the burdens of that office.

There is a lot of talk today about lightening the President's load. I know something about that subject, and I know that no matter how many reorganization plans are adopted, and no matter how much you tinker with the mechanics of government, the load is not much changed.

This is because the President's burden lies in the inescapable responsibility of making great decisions. If the Republicans, with all their schemes for lightening the President's load, are really trying to dissolve his responsibility for making decisions, then they are proposing a fundamental change in the way our Government operates.

They would be proposing to make the President a mere presiding magistrate, which would leave the country weak and leaderless, as it was in the years of drift from 1781 to 1789 before the Constitution was adopted and from 1845 to 1861 before the Civil War.

I hope this will not happen. I sincerely hope the power and integrity of the Presidential office will be preserved.

And, of course, I derive great comfort from the prospect that the Presidential office will soon be occupied again by a Democrat.

I have been greatly heartened by the last 3 years. To my mind, they show that the Republican victory in 1952 was a fluke and that the country is really Democratic and is returning to its basic political faith.

Not only did the Democrats regain control of the Congress in 1954—they have also been enjoying an unprecedented series of successes in local and State elections and special congressional elections as well.

The latest one was last week, when a Democrat was elected in Pennsylvania to fill a congressional vacancy—and by a majority of more than 3 to 1.

SAYS DEMOCRATS DRIFT BACK TO FOLD

That is only a sample of what has been going on across the country. Nine new governors, dozens of mayors, hundreds of State legislators, and city and county officials by the score, have all been added to the Democratic rolls.

There is a Democratic surge from the grassroots upward.

There must be a reason for this—and there is a very good reason. It is the simple and historical fact that the Democratic Party is the party of all the people and the Republican Party is the party of special privilege.

This is what we have been saying all the time—but during 20 years of national Democratic administrations—and constant attack and misrepresentation by the Republicans—many people were taken in by Republican propaganda and lost sight of this fundamental difference between the two parties.

Many of the people who voted Republican in 1952 are now ready to return to the fold. The Republican Party by its actions during these last 3 years has been making converts for the Democrats faster than we ever could.

Now, what do we mean when we say the Democratic Party is the party of all the people and the Republican Party is the party of the special interests?

First, as to the Democratic Party. We mean that it includes men and women from all groups in our population, and that men and women from all of these groups have an

important voice in forming Democratic policies.

The result is a balanced program, a program that is fair to all the people and that takes the interest of everyone into account.

DEMOCRATS FAVOR BUSINESS—BIG, SMALL

I must confess that we pay special attention to the problems and the needs of the less fortunate. If that is a sin—let those who will make the most of it. Someone has to speak up for the underprivileged and the minority groups, as well as the great body of working men and women. These are the people who can't afford to keep high-salaried lobbyists and advertising agents in Washington. As I used to say—the President ought to be the lobbyist for 150 million people.

The Democratic Party has nothing against business—large or small. Indeed, we know that the prosperity of business is essential to the prosperity of all.

But we strongly believe that business should take its place at the table along with everyone else, and should not be allowed to run the whole show for its own selfish benefit.

The Republicans, on the other hand, are the party of big business. Their party is controlled by big business and is run primarily to serve the interests of big business. They believe that if big business is making big profits it will carry the rest of the country along with it.

This is what we call the trickle-down theory of economics, in contrast with the Democratic belief that prosperity must have a broad base in consumer purchasing power spread among all the people.

We have seen many evidences of this big business philosophy in the Eisenhower administration. It began with the appointment of a Cabinet of millionaires—men representing the big business interests of the country.

These men, with their big business backgrounds, laid down the policies for the Eisenhower administration.

It is not surprising that their first act was a lopsided tax cut—a $7 billion tax cut they put across in 1953.

HAILS M'CORMACK AS FIGHTER FOR PEOPLE

And where did the benefits of that tax cut go? Not to the average, run-of-the-mill taxpayer. Oh, no.

Corporations and people with incomes over $5,000 a year got 91 percent of the cut, and all the millions of taxpayers with incomes of less than $5,000 a year got only 9 percent of the cut.

This is a classic case where the big business administration was looking after its own and taking care of its campaign contributors.

Big business—the big corporations—have had special consideration from this administration in the award of Government contracts and in other dealings with the Government.

Your own Congressman JOHN MCCORMACK has been looking into this matter of special favors to big business, and I am sure you are going to hear more from him on the subject.

JOHN MCCORMACK is one of the finest men and one of the best Congressmen I have ever known. His brilliant service as Democratic leader in the House of Representatives has not only been of great value to the country, it was also a great personal help to me when I was President—and one for which I shall be forever grateful.

You can be sure that whenever the people need a friend to fight their battles in Congress, JOHN MCCORMACK is there on the job. And he can cite chapter and verse for you on the way big business runs the Republican Party.

They are even running the Department of Agriculture for the benefit of business instead of the benefit of the farmer.

BLAMES FARM PLIGHT ON REPUBLICAN PLANS

Some months ago, Secretary Benson started a program for buying pork, claiming that it would help the price of hogs, which was distressingly low. But he did not buy from the farmers, he bought from the processors.

And what have the results been?

The price of pork kept right on going down, but the profits of the processors zoomed upward. I have heard it said the processors' profits during this period have actually doubled.

The latest Government reports show that the farmer is now getting only 38 cents of the consumers' food dollar, the lowest figure since the 1930's. At the end of 1955, farmers' share of the retail price of a pound of pork was 30 percent less than it was at the beginning of the year.

The rest of the money is going to processors and middlemen.

Shortly before I left the White House, I directed the Federal Trade Commission to make an investigation of this whole subject, and to find out why there was such a great spread between the prices farmers got for food and the prices consumers pay for it.

But before the study could be made, the Republican 83d Congress came along and passed a law to prevent it. They didn't want the people to find out the truth.

Last year, the situation had become so much worse, and there was such a hue and cry about it, that Secretary Benson had a so-called study made in the Department of Agriculture.

And do you know the answer he came up with? He put the blame on the working man.

He said that most of the increase in the spread had been taken up by wage increases, and that processors' profits had increased very little, if at all. You can believe that if you want to, but I am very skeptical about it.

The Eisenhower administration has placed too many men from the processing industries—from big business—in the top jobs of the Agriculture Department for me to have much confidence in their objectivity and impartiality about such matters.

ATTACKS MRS. HOBBY'S ROLE IN ADMINISTRATION

The influence of big business in the Eisenhower administration has also held back the wheels of progress in the fields of health, welfare, and education.

The Republicans at first put Mrs. Hobby at the head of the Department of Health, Education, and Welfare. But she was apparently more interested in the balance sheet than she was in helping people in trouble and distress.

She opposed lowering the age at which women can retire under Social Security. She opposed disability insurance. She opposed Federal aid to education. And the mess she made of handling the antipolio vaccine program has never been equaled.

The administration arranged a very touching scene for her exit, but you will never make me believe that they were not extremely happy to see her go—as they had good reason to be.

This year, the administration is taking a somewhat more humane position in its recommendations to Congress on these matters. It may be because they have a new Secretary of Health, Education, and Welfare—or it may be that this is just the kind of deathbed repentance that comes to them in an election year. And I might say that when they contemplate this election, I think it is appropriate for them to think in terms of deathbed repentance.

There are some other places wher the Republicans in Washington are showing some signs of repentance—and I welcome it—if there's anything to it.

They say now they are in favor of government insurance against floods. I recommended that in a special message to Congress several years ago. But they paid no attention then. They had to wait until after the terrible floods that did so much damage last year. I hope they have learned their lesson at last and will really do something about this instead of just giving lip service.

DEPRESSIONS ARE BORN ON THE FARM BUT—

I also hope they will do something to control and prevent these floods up here in New England. Your rivers here could be developed for flood control and power generation just like the Tennessee Valley.

But the private power companies have been against it—and the Republicans have danced to the tune played by the power companies.

The moral of this story is that if you want something done to control these terrible floods in New England and to provide cheaper power for New England industry, you had better vote for a Democratic President and a Democratic national administration.

In short, my friends, big business domination of the Eisenhower administration has resulted in injury to the welfare of the country.

Special favors have been given, necessary jobs have been left undone, social progress has been held back. The Republicans hope to be able to cover all this by talking about prosperity. Well, I rejoice in prosperity, but the Republican party didn't invent it or begin it.

The country was in a very prosperous condition when they took office—and they haven't managed to ruin it yet. But their policies have created many weak spots in the economy.

Small business concerns have been having a tough time and failures have increased. While the net profits after taxes for big business have gone up 46 percent, the net profits after taxes for small business have gone down 66 percent.

There are still large pockets of unemployment. The farmers have suffered a terrible loss in income, and the depressing effects of this are fanning out now further and further through the economy.

Remember this: Depressions are born on the farm, but when they grow up, everybody suffers.

We need a national administration that will make sure that all groups and regions share fairly in our prosperity, because that is the only way to make sure that prosperity will continue.

ATTACKS CUTRATE DEFENSE POLICIES

Poor as the Republican record is on these important matters here at home, I am much more deeply concerned about what the Eisenhower administration has been doing to our national defense and our foreign policy.

As I pointed out in New York Thursday night, they have really made a mockery of bipartisanship in foreign policy. They have put politics first and the national interests second.

The result has been to dismay our friends, comfort the enemies, weaken the position of the free world, and drive other nations closer to the Communist bloc.

In the face of the growing military strength of the Communist nations, the Eisenhower administration has actually been cutting down on the size of our Armed Forces.

They have been putting economy ahead of national security.

A few voices have been raised against this. I made a speech myself last September in which I pointed out—as one who had learned from hard experience—that we had to keep up our defenses against the Communists at all costs.

I pointed out then that the Eisenhower administration was playing politics with national defense. Nobody paid much attention to me, of course. They said he's just a retired politician himself. But now some-

one who is not a politician has come to confirm my statements.

This is Gen. Matthew Ridgway, a professional soldier of the highest type. In his experience as Chief of Staff of the Army, he found out that the Eisenhower administration was taking a political approach to matters of the most vital national importance.

He has said so, right out in public, and I suppose the Republican press will revile him and persecute him for it, but he has been doing his patriotic duty. Our ground forces are too small and inadequately prepared to perform the great missions imposed upon them.

This points up, as few things could, the overriding importance of a Democratic victory in the presidential election next fall. It is important for domestic reasons, yes.

We all want a Government that gives the little fellow an even break—and the economic welfare of our country cannot be made secure unless we have it.

But it is even more important to have a Government that will restore integrity to the conduct of our foreign affairs—and will build up our defenses more strongly against the Communist threat.

My friends, for the sake of our preservation as a free and independent nation, we must have an administration that puts national security ahead of partisan politics.

And that means we must elect a Democratic President next November.

Decision in History

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Boston Herald of Thursday, February 2, 1956:

DECISION IN HISTORY

"I could devoutly wish that there were some method by which the American people could, under the circumstances, point out the path of true duty. But it appears that this is a question that first I alone must answer." (President Eisenhower, January 20, 1956.)

No. This is not so. In some way the people must speak. For this decision on a second term is too personal, too crucial, too weighted with historic impact, to be taken solely in the lonely eminence of the Presidency. A humble man, a man loath to assume even the suggestion of indispensability, cannot by himself completely measure his duty.

This is an issue that calls for the advice and consent of the Nation.

The problem is a calculation of risk. It is simply this: whether a man who recognized the physical erosion of the Presidency even before his illness, who acknowledges his health can never be fully restored, who senses the necessity for zip and zest in the discharge of his responsibilities, who appreciates the unsettlement from unexpected changes of government—whether such a man remains essential to the Nation because of overriding capacities, tested experience, and the trust and confidence of this and other countries.

The physical Dwight Eisenhower must be weighed against the Eisenhower of those complex imponderables that fit him especially for the job.

The people can have no voice in the appraisal of the first factor, the President's physical condition. That is for him and his physicians to determine.

But of the latter only the people can finally judge. It is not given to any man to measure his own place in the scheme of things.

If the people could be made articulate at this moment, they would present a far more imposing list of qualifications than the President himself would, in native modesty, draw up. And these must be half the essence of the decision.

What are they?

1. The Presidency is a responsibility demanding an on-the-job training without parallel in any other position in which men are ever called to serve. There is no substitute for the actual burden of the office.

Mr. Eisenhower has completed his apprenticeship. He has the comprehension of the requirements of the post, his faculties are habituated to its demands, he has the "feel" of it. This is a priceless virtue we would lose if another man took over in January.

2. Mr. Eisenhower has laid the groundwork for a steady and consistent foreign policy, now becoming so well recognized that he could answer the recent letter of Premier Bulganin with a simple but devastating restatement of the American position. Without appeasement, he has still impressed the world with this country's peaceful intentions.

Another President might or might not carry these projects on. There is a continuing bipartisan foreign policy. But the interruption of a change in the White House, with its attendant uncertainties, the difficulties of making new contacts with chiefs of other states, would inevitably work against our interest at this perilously delicate stage of our foreign relations.

It was perhaps no accident that the deepening of the cold war came at the time the President was stricken, and that the Kremlin again made conciliatory talk when the President took up his full duties.

3. Mr. Eisenhower has made for the country an economic climate of confidence that has meant, for the first time in this century, a period of rising personal income without rising prices. What this confidence means was shown by the stock-market decline at the time of his illness.

There is little doubt that a change in administration, no matter who took over, would mean a temporary break. It is true that we will have to face it in 1960 if we do not face it now, but there should be no unnecessary interruption.

4. The President's faculty for bringing quarreling elements together has brought the country nearer a coherent unity than it has had in many years. This is not to overlook the serious divisive forces still present—there are many; but no other man in the United States stands as clearly as the respected mediator of all factions. The oneness of the country today is peculiarly his. We are enjoying an era of good feeling rarely matched in history.

Another might serve that cause as well. But can we be sure?

5. The President's moderate policies, themselves unifying, also seem to meet the deep, social urgencies of the Nation at this time. We could not be sure of a successor able to match that quality.

6. There is the danger that always exists in a campaign between two new candidates that the issues will be obscured and perverted. If Mr. Eisenhower runs, his record will be the unequivocal issue on one side. If another runs as the Republican candidate the new personality will inevitably introduce new and less precise factors.

7. Last, and of ultimate importance, is the great "X," the unknown quantity who would be the next President if Mr. Eisenhower did not run. There are those in the field today who would carry on the philosophy of government we have had in the last 3 years. But there are others, no less likely of election, who would bring back the very policies and practices which stirred General Eisenhower to lay down his command and enter politics. The fight might be lost before it was fully won.

Such are the compelling reasons that weigh against some uncertain degree of physical disability or risk.

If Dr. White and his consultants find on February 10 that the President has stood the pace of the past few weeks with mended heart, then there should be a heavy balance on the side of a second term.

It is the President's decision, but not in solitude. The people who stand in deep respect at his shoulder, say:

"If you can, we want you."

Fairbanks, Morse Imperiled

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. SCRIVNER. Mr. Speaker, in my home town of Kansas City, Kans., we have a new industry of which we are quite proud. It is Fairbanks, Morse & Co., a name known in nearly every American household, a name seen on products of high standard.

I own no stock in this corporation, which has been soundly financed, and which through good products and good management has built up assets and some surpluses.

Sharing the concern of our community, I have read, that like so many other concerns, of which we all have common knowledge, Fairbanks, Morse & Co. is being "blitzed" by outsiders seeking control, and access to the distributable—but needed—surplus.

Therefore, I was sorry to read of the raid on this fine concern as disclosed in the excerpts from an article which appeared in the New York Journal-American of January 5, 1956, by Leslie Gould, financial editor, which follows, and which gives much of the firm's background:

SILBERSTEIN GROUP BUYING FAIRBANKS, MORSE STOCK

(By Leslie Gould)

A group headed by Leopold D. Silberstein of the Penn-Texas Corp. is buying stock in the $100 million Fairbanks, Morse & Co., indicating a proxy fight for the March 28 annual meeting.

This was learned exclusively today.

The group is understood to have acquired in Street or brokers' names around 15 percent of the outstanding shares.

The operation is similar to the unsuccessful move more than a year ago in Montgomery, Ward & Co. by Louis E. Wolfson, who, like Silberstein, has made a business of grabbing control of old-line business concerns.

Fairbanks, Morse is one of the oldest and best known industrial enterprises in the country, dating back to 1830.

MAKES DIESEL ENGINES

The company is one of the leading manufacturers of industrial equipment, including diesel locomotives, electric motors and generators, diesel stationary and marine engines, pumps, farm and household pumping equipment, light plants and a number of consumer items and scales. The shares, traded on the New York Stock Exchange, ranged in the last year between $24.12½ and $41.50. They are currently selling around their high.

The domestic operations are nationwide, with plants at Beloit, Wis., East Moline and Freeport, Ill., Kansas City, Kan., St. Louis, Pomona, Calif., St. Johnsbury, Vt., Stuttgart, Ark., and Three Rivers, Mich. It has a Mexican plant and the Canadian subsidiary has a plant at Kingston, Ont.

Except for 3 years in the depth of the depression, the company has an unbroken dividend record dating back to 1900. The earnings record is favorable, with sales well in excess of $100 million.

BOOK VALUE INCREASED

The book value for the shares has gone from $24.21 in 1944 to currently around $46.

The management is headed by the third and fourth generation. The grandfather of the present chairman and general manager. Robert H. Morse, bought out in 1865 the interests of the E. and T. Fairbanks, who had founded the business in 1830. Robert H. Morse, Jr., is president.

The Morse family owns around 30 percent of the voting stock, which will complicate efforts at a takeover by a business raiding group. In Montgomery Ward, the management held only a relatively small percentage of the shares.

BUILT UP EMPIRE

Like Wolfson, Silberstein in 8 years has built up a small industrial and mining empire, centered around the old Pennsylvania Coal & Coke Corp., the name of which has since been changed to Penn-Texas.

He is 51, coming here in 1947, after fleeing first Germany and then Holland from Hitler. He went from Holland to England and from there to Australia and China, where he was interned during the war for several years. He had been in the investment business in Berlin and Amsterdam.

He obtained control of Pennsylvania Coal in a market coup and has used it as the vehicle for his expansion into other companies, most of it done on borrowed money or through an exchange of stock.

ACTIVITIES VARIED

Some of the companies he has taken over include Industrial Brownhoist of Bay City, Mich., Quick-Way Truck Shovel, Crescent Co., maker of insulated wire, Niles-Bimment-Pond, leading New England toolmaker; Colt's Manufacturing Co.; Bayway Terminal Corp., of New Jersey; Liberty Products Corp., Long Island aircraft parts company; Elyria Foundry, of Ohio; and Hallicrafters Co., Chicago radio and electronics firm.

The company also controls three freighters, a uranium-mining company, Penn-Uranium, and three small oil companies, Pennco Oil, Tex-Penn Oil & Gas and P-T Corp.

* * * * *

Silberstein has headed Penn-Texas since 1951, and the stock which had a range that year of $12.12½ to $15.50 is currently quoted around $18.50. He is chairman and president.

More on Fairbanks, Morse

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. SCRIVNER. Mr. Speaker, in a previous extension, I referred to a drive to acquire control of Fairbanks, Morse & Co.

A subsequent article, appearing January 9, 1956, in the New York Journal-American, shows the need for some changes in the laws relating to Securities Exchange Commission, not only as it relates to Fairbanks, Morse & Co., but other successful concerns as well. This article also by Leslie Gould, the Journal-American Financial Editor, follows:

SEC'S FULL DISCLOSURE—GREAT HELP AFTER DEAL IS DONE

(By Leslie Gould)

This Fairbanks, Morse & Co. situation—where somebody has accumulated 15 percent of the stock with the idea of moving in on the management of this fine, old-line company—shows the weakness in the SEC's purported full disclosure policy.

There just isn't such disclosure until after the fact in the case of one of these raids. There is no disclosure as to the individual or individuals attempting the take over.

Under the law there is supposed to be disclosure of any shareowner holding 10 percent or more of a company's stock. It should apply in these takeover attempts, whether one or more individuals are involved, for they act as one.

The somebody in the Fairbanks, Morse stock buying is either Leopold D. Silberstein, head of Penn-Texas or individuals close to him and his operations. Silberstein is one of the more aggressive operators in the field of business takeovers, having brought into his Penn-Texas a long list of companies, including such enterprises as Niles-Bement-Pond, Industrial Brownhoist, Colt's Patent Firearms, Hallicrafters, and Quick-Way Truck Shovel.

Silberstein, denies he or Penn-Texas has acquired any Fairbanks, Morse stock, but he admits a block of 10 to 15 percent has been offered to Penn-Texas for investment. Also, he admits the stock may wind up there.

REQUIRE PROMPT REPORTING

If the SEC were really on the job and sincere in this full disclosure business, it would require prompt public reporting by any individual or group acquiring 10 percent or more of a company's shares.

The dodge now is to have the purchases made in a number of names, some of which are no more than nominees or dummies. The facilities of the stock exchange and its member firms are so used. In fact, some of the exchang firms allow customers men or partners to work up such deals in stock exchange listed companies.

It makes no difference how many individuals are involved when, they act in concert the effect is the same as one buyer. There should be disclosure, and promptly, not a month or 40 days late.

SEC WAS NO HELP

Only through aggressive newspaper reporting are these operations and the individuals involved revealed. This column first broke the news that Louis E. Wolfson, the Floridian, was buying into Montgomery Ward with the object of grabbing control of the management. He was unsuccessful, but through no fault of the SEC—for the staff and the commissioners—some of them, anyway—were far from impartial.

The same in Follansbee Steel, if the SEC had had its way, that little steel mill would have been dismantled and around 1,000 workers made jobless.

President Benjamin Harrison and Our Country's Flag

EXTENSION OF REMARKS

OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. ADAIR. Mr. Speaker, Indiana has produced many leaders in the national scene. One of these was Gen. Benjamin Harrison, the 23d President of the United States.

An interesting article on President Harrison's contributions to patriotism by Rev. Harry J. Sievers, S. J., presently of Georgetown University, was published in 1953 by the Fort Wayne and Allen County Public Library, which is in my district.

A foreword, prepared by the staff of the library, accompanies the article. Under leave to extend my remarks, I quote the full texts:

PRESIDENT BENJAMIN HARRISON AND OUR COUNTRY'S FLAG

(By Harry J. Sievers, S. J.)

FOREWORD

(The following article reveals a warm and patriotic aspect of the character of our Hoosier President, who was known to some of his contemporaries as a cold, forbidding figure.

(Born and educated in Ohio, Benjamin Harrison moved to Indianapolis with his bride in 1854 and began the practice of law. His active interest in politics soon brought him recognition as a respected member of the Republican Party. He assumed the duties and responsibilities of the Presidency in 1889, but his high moral standards prevented his attaining wide popularity. His contribution to American patriotism is visible in every school in the Nation.

(Reprinted with the permission of the editors of the Daughters of the American Revolution magazine, the article first appeared in November 1952. Now professor of history at West Baden College, West Baden Springs, Ind., the author first became interested in Harrison while studying for his doctorate at Georgetown University. The recent publication of the first volume of his definitive biography, Benjamin Harrison: Hoosier Warrior, is the result of many years of research. Volume 2, now in preparation, will narrate Harrison's career as President and public servant.)

When Gen. Benjamin Harrison, 23d President of the United States (1889–93), retired from office, he was, as he wrote to a colleague, "very thoroughly worn out with the care of my public life and the sorrows of my personal life."

Still smitten by the death of his wife, Carrie Scott Harrison, the weary ex-President drew some consolation by confiding to a friend: "I did try to make the administration thoroughly American and hope that something was done to develop an increased love of the flag at home and an increased respect for it abroad."

Three generations later our country knows that his hope was not in vain. Old Glory flying daily from atop our public institutions and our schools, bears testimony to the gallant spirit who first requested that the flag should take its place with the Bible in every American home and public institution. It was, perhaps, only natural that a patriotic instinct should have inspired Benjamin Harrison to make a request so typically American.

Descendant of an important family that had always played a significant role in the making of America, President Harrison was ever conscious of the fact that he should live up to the great traditions that had been established. His great-grandfather, also a Benjamin Harrison, came from a long line of Virginia burgesses, and his fame was secure when he signed the Declaration of Independence. His grandfather, William Henry Harrison, hero of Tippecanoe, left his mark on America, though his term as ninth President was short-lived. This Benjamin, however, was wise enough to realize that ancestry itself did not make the man, and he

claimed no credit on that score. He struck out on his own and rapidly grew large with the knowledge of America's past and the bright promise of its future.

Successfully he compiled a record of steady achievement. As a young lawyer he became one of the leaders of the Indiana bar through untiring industry, unusual intellectual ability, and a constant adherence to the best legal traditions of his State. In the Union Army, with no previous military experience, he displayed an aptitude for leadership that won for him a brigadier general's commission. It was during the torrid battles of the Civil War that he first showed a personal magnetism that made men follow him without question and that transformed his regiment into one of the best disciplined units in the armies of the West.

Preceding this progress was an earlier record of academic excellence. At Miami University Harrison had revealed intellectual gifts far above the average, and his assiduous study of law while residing in Cincinnati provided him with the background for a legal career. He married early and was particularly fortunate in winning Carrie L. Scott, a wife who fulfilled all the requirements of an ideal helpmate. Together they rose to prominence in the land they loved.

From a briefless barrister in 1854, Harrison grew rapidly. Perhaps the most singular thing about him was his capacity for improvement. In 1889 he entered the White House. As "America's March King," John Philip Sousa, has remarked, "few intellectual giants have graced the presidency, but Ben Harrison was one of them."

Carrie Harrison grew also, but she never left behind the charm and grace cultivated in her coed days at Oxford, Ohio. In 1889, as wife, mother, and housekeeper, she assumed most graciously her responsibilities as first lady of the land. In this position also she became the seventh charter member in the National Society of the Daughters of the American Revolution and was unanimously elected first president general.

Benjamin Harrison, as Centennial President, and Caroline Harrison, as first lady, made their tremendous but as yet little-known contribution to American patriotism. Together they planted the flag of the United States in the hearts of their countrymen. First by Presidential order, Old Glory waved high above the executive departments and over the White House; then by suggestion and appeal, our country's banner was lifted over every public school and educational institution throughout the land.

The story behind the inauguration of this patriotic custom is as compelling as it is interesting. It authenticity is as certain as the flags that wave today. It is the story which began with an impromptu address by President Harrison on April 30, 1889, the Nations 100th birthday.

Thoroughly imbued with the spiritual significiance of the occasion, Harrison by a brief address won the hearts of his hearers. This centennial celebration of the inauguration of George Washington as President of the United States began actually on April 29, 1889, in New York, and the attending demonstration was both grand and magnificent. The events of the day were as far as possible similar to those witnessed 100 years before when Washington came from Elizabethport to New York to take the oath of allegiance on the Constitution and assume the responsibilities of Chief Executive.

President Benjamin Harrison reenacted Washington's role in every way. He came from Elizabethport to New York, as did Washington, was rowed to the foot of Wall Street by representatives of the Marine Society which performed the same service for Washington, was welcomed to the city as was Washington, and participated in ballroom festivities the same as Washington did.

Nine years after this momentous celebration of April 30, 1889, in response to a letter from Jessie Benton Frémont, wife of John Charles Frémont, first Republican candidate for the Presidency in 1856, ex-President Harrison revealed the inside story "of the lifting of the flag over the schoolhouse." "Perhaps," Harrison wrote to Mrs. Frémont, "you would be interested to know how I came to connect the flag and the schoolhouse?"

Then followed the ex-President's own version:

"During the celebration of the Centennial of Washington's inauguration at New York I was landed from a Government vessel at the Battery and rode up Broadway to Madison Square. All the store signs and all the show windows were covered with the flag. There was not a suggestion of commerce upon the whole route. The thought occurred to me what should be done with these flags when the parade is over; and at the banquet at the Metropolitan Opera House I made the suggestion that they should be taken to the schoolhouses.

"I think the children should be taught and we should all remember that the flag is not simply a war sign but an emblem of government."

As the former President wrote those lines, he had before him the well-merited tribute of Mrs. Fremont: "Perhaps you do not realize how great a part in patriotism you had in ordering our flag to go up on all public schools. The daily impression on young receptive minds makes this a precious habit—the Nation's daily prayer—and you are seeing some of the results. Long after they are grown—and we have passed away, your thoughts will continue its silent teachings."

Mrs. Fremont, then living through the Spanish-American War, could write to Harrison: "It (the flag) gladdens me every time I see it against the sky—

"Many an eye has danced to see
"That meteor in the sky.

"And it has many meanings already to these young people. They put it half-mast for the *Maine* and ran it up high for Dewey. But it is theirs—in ill or good fortune to be lifted or waved in happy triumph—always their own, belonging to their early days of glad enthusiasm. One sometimes doubts himself. No doubt can cloud this beautiful act of yours."

On that momentous occasion of his address to the centennial crowd in New York neither doubt nor hesitation crossed Harrison's mind. To other speakers he left the pleasant task of reviewing the wonderful physical expansion. For himself, in keeping with his deeply religious nature, he chose to speak on the moral import of the moment. To the toast, "The United States of America," came his easy, spontaneous reply.

Substituting "Our country" for the longer title, he passed over in silence the material welfare of 42 States and 7 Territories, a growing population, and an amazing record of expansion. Rather, this President, who began each day of his life on his knees, addressed himself immediately to those lofty sentiments and moral principles which for him concretized the life of Washington and the lives of every patriotic son of Washington.

"It is," began Harrision, "a spiritual thought that is in our minds. I have great pleasure in believing that love of country has been intensified in many hearts here, not only to you who might be called, and some of whom have been called to witness your love for the flag upon battlefields by sea and land, and in these homes among these fair women who look down upon us tonight, and chiidren who mingled their biting cries with the hoarse acclaims of men as we moved along your streets today."

An editorial write for the Independent, a New York newspaper, captured Harrison's deep joy at the fact that during 3 days of celebration "the insignia of trade had been covered with the stars and stripes; that great thoroughfare of trade had been closed to business, because something higher than business was in our hearts; and that the flag had been carried into the very heart of Wall Street." To Harrison this was a signal that "the love of country had been intensified" and that "patriotism was blown into a holier flame in many hearts."

With his eye turned to an everlasting tomorrow, Harrison reiterated his wish—a wish that has long since become a national custom.

"The bunting with which you have covered your walls, these patriotic inscriptions, must go down and the wagework and trade be resumed here.

"May I not ask you to carry those inscriptions that now hang on the walls into your homes, into the schools of your city, into all your great institutions where children attend, and teach them that the eyes of the young and old may look upon the flag as one of the familiar objects of every American."

In his plea to make the flag a familiar adornment of the American home, Harrison asked: "Have we not learned that not stocks or bonds or stately houses or lands or the produce of the mill is our country? It is the spiritual thought that is in our minds. It is the flag and what it stands for."

"And what does it stand for?" The President assured his audience that it stands for "its glorious history; its firesides and homes; the high thoughts that are in the heart, born of the inspiration which comes by the story of the fathers, the martyrs to liberty; the graveyards into which our careful country has gathered the unconscious dust of those who have died; the virtues not of war only but still more of peace."

Then Harrison concluded his impromptu remarks by recounting the lofty aspirations of patriotism symbolized by the Stars and Stripes, namely, "to elevate the morals of our people; to hold up the law as that sacred thing which, like the ark of God of old, might not be touched by irreverent hands; to frown upon every attempt to displace its supremacy; to unite our people in all that makes home pure and honorable; as well as to give our energies in the direction of our material advancement—these services we may render, and out of this great demonstration do we not all feel like reconsecrating ourselves to the love and service of our country?"

The memories of the New York celebration had not grown cold before President Harrison gave another public demonstration of his deep devotion to the flag. In Baltimore on September 9, 1889, there was a wonderful parade held in connection with the celebration of the 75th anniversary of the bombardment of Fort McHenry and the writing of the Star-Spangled Banner. In the company of two Cabinet members Harrison was escorted from Washington to Baltimore. Having arrived at the reviewing platform, the President stood on his feet for 4 solid hours. It was a demonstration of endurance dictated by the love of the flag and the flag-covered floats which passed the stand incessantly. He gave proof through the day that his heart had been in every word of his memorable address at New York.

From April 14 to May 15, 1891, President Harrison made a famous trip through the South and West. By train he journeyed from Washington through the South, thence west to the coast, thence north to Seattle, and thence back through the Prairie States, the Middle West, and so to Washington again, visiting en route States just admitted to the Union and Territories soon to be admitted, speaking everywhere to large enthusiastic crowds, and seeing everywhere evidence of the enormous growth and expansion of the United States. Rapidity of travel illustrated strikingly how much America had changed; but even more gratifying to Harrison was the undeniable fact that from coast to coast

America had become one Nation united under the flag of the Union. He rose to the occasion as his patriotism, wisdom, and truly remarkable abilities were clearly revealed in an unprecedented series of speeches—142 in all, most of them impromptu, and no two alike—which he delivered to all sorts of crowds and on all sorts of occasions during his month's journey.

Highlighting almost every address, lengthy or brief, was his appeal for unlimited devotion to the flag. To the people of Tennessee he could say: "I am glad that by the common consent of all our people, without any regard to past differences, we have once and forever struck hands upon the proposition that from the Lakes to the Gulf, from the St. Lawrence to the Bay of California, there shall be 1 flag and 1 Constitution. [Great cheering.] * * * I rejoice to see in the hands of the children here that banner of glory which is the symbol of our greatness and the promise of our security * * * the story that it brings to us from the time of its adoption as our national emblem is one in which we may all find instruction and inspiration. It is the flag of the free." This message was repeated in different words throughout Virginia, Georgia, Alabama, Arkansas, Texas, New Mexico, and Arizona.

To Californians he was no less direct and forceful when speaking about the American influence. "The American sentiment and feeling were never more controlling than now; and I do not use this term in the narrow sense of native American, but to embrace all loyal citizens, whether nativeborn or adopted, who have the love of the flag in their hearts." To the people of San Francisco he was candid: "You, in California, full of pride and satisfaction with the greatness of your State, will always set above it the greater glory and the greater citizenship which our flag symbolizes."

At Grant's Pass, Medford, Oreg., General Harrison spoke most cordially to comrades and veterans of the Civil War. "I am glad to see that the old flag you took to the field and brought home in honor is still held in honor among you. It is a beautiful emblem of a great Government. We ought to teach our children to love it and regard it as a sacred thing, a thing for which men have died and for which men will die. * * * It is this flag that represents us on the sea and in foreign countries; it is under this flag that our navies sail and our armies march. * * *"

During the twilight of Harrison's administration his crusade for our country's flag met with success. In Boston, Francis Bellamy, an editor of the Youth's Companion, wrote the original pledge of allegiance: "I pledge allegiance to my flag and for the Republic for which it stands; one Nation indivisible, with liberty and justice for all." That draft was written in August, 1892. Soon the pledge was changed to read "the Flag of the United States," with the subsequent addition of "of America." Harrison rejoiced to note that it was first repeated at exercises in connection with the celebration of Columbus Day, 1892.

That same October, Mrs. Harrison died in the White House, and a few months later the President retired to private life, reechoing the motto of his tenure in the White House: "I did try to make the administration thoroughly American and hope that something was done to develop an increased love of the flag at home and increased respect for it abroad." Could he help but rejoice today? As one authority on the flag has phrased it: "* * * perhaps the greatest evidence of the solemn significance of the flag to the rank and file of America is found in the very simplicity of the oath of allegiance that is repeated daily by millions assembled in schools, conventions, luncheon gatherings, in short, wherever true Americans congregate."

If it is true that "a thoughtful mind when it sees a nation's flag, sees not the flag, but the nation itself," how great must be the pride of every true American today. When we see our flag today, we instinctively see it as Washington and Harrison saw it—a symbol of liberty and freedom to all who live beneath it. Therefore to Washington and to Harrison, his centennial successor, this Nation owes unending gratitude for the love and the patriotism, symbolized by our flag, that burn in free American hearts today. Harrison raised the flag over the sschoolhouse, but he also planted it in the schoolboy's heart.

Walk His Ways Under the Guidance of the Gospel

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. AVERY. Mr. Speaker, under leave to extend my remarks in the Appendix, I wish to make a statement concerning a special issue on Christianity published December 26, 1955, by Life magazine.

As we all know, Christianity is the bulwark of this Nation. Indeed, this Nation was first settled by persons who voluntarily relinquished traditional home ties at great personal sacrifice that they might have freedom of worship. The Founding Fathers of our Government recognized this spirit of religious freedom and while formulating the basic law of our land, the Constitution, included a measure to safeguard forever this precious right.

Much has been said and written in recent months about the rebirth of Christianity and the religious renaissance. I believe religion has always been a vital part of our communal existence and that it is no more so now than at other times in the past. However, it pleases me greatly that the various media of communication is giving such worldwide attention to Christianity in this era of international tension. The special issue of Life magazine, to which I have referred, is an excellent example of the public service interests to which the majority of the Nation's press organizations are dedicated. I commend them for their attitude.

Among Life magazine's beautifully illustrated articles on religion was one entitled, "A Cloistered Life of Devotion," photographed by Gordon Parks. This article told the modern, yet age-old, story of daily devotion at St. Benedict's Abbey in Atchison, Kans.

The text which accompanied the many illustrations is as follows:

WALK HIS WAYS UNDER THE GUIDANCE OF THE GOSPEL

Living in the shadow of a rotting Roman Empire, his religion but a few centuries old, St. Benedict turned his thoughts to how a Christian might best "do battle for Christ the Lord" and "walk His ways under the guidance of the Gospel." His conclusions set down in the holy rule prescribed a life devoted to prayer, study, and labor which has characterized the Benedictine order for 14 centuries. In America, Benedictines followed the frontier, establishing monasteries like St. Benedict's Abbey in Atchison, Kans., that have made the American Benedictine congregation to which it belongs the second largest in the world.

Monks enter St. Benedict's as novices. * * * Instructed by priests, they become clerics and are prepared for perpetual vows. Seven times a day the monks meet for prayer, following the scriptures quoted by St. Benedict: "Seven times a day I have given praise to Thee." After the last prayers the silence of meditation descends on the monastery until the following morning.

But although devotion is primary, the abbey is also a self-supporting part of the community. The 172 monks cultivate the land. They staff a college and school and act as the local weather observers, doing their duty in humility and leading their lives in the quiet belief that "the eye hath not seen * * * what things God hath prepared for them that love Him."

As even the untrained observer can well understand, it is not easy to portray in proper perspective such a significant story as this article in Life magazine. Yet, with only a dozen pictures and a short text, life at St. Benedict's Abbey was accurately and vividly depicted. Testimonial to this is a letter from the abbot of St. Benedict's Abbey, Cuthbert McDonald, to the editors of Life magazine. His letter, which appeared in the January 16 issue of the magazine, read as follows:

ST. BENEDICT'S ABBEY,
Atchison, Kans.

SIRS: These are quiet days around St. Benedict's Abbey now that we are all famous monks (a cloistered life of devotion). Everyone seems to have his head buried in a copy of Life. We were well pleased. You hit a deeply spiritual note, and the characteristic Benedictine motifs come out clearly.

CUTHBERT MCDONALD, O. S. B.

Brink of War: Mr. Dulles Refuses To Eat Words

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Superior Evening Telegram of January 27, 1956, by Jim Dan Hill, Ph. D., president, Wisconsin State College, Superior, Wis.:

LET'S LOOK AT THE RECORD—BRINK OF WAR: MR. DULLES REFUSES TO EAT WORDS

The pot and pother about the Dulles interview (brink of war) in Life magazine is of no significance except for two things.

It serves as a reminder to all of us that 1956 is a presidential election year. The overall impact of the political uproad on our allies is not too good.

Those who allege our Secretary of State was talking when he should have been listening are not on firm ground. Should he refuse frank and forthright discussions with

the press, the scream would be "secret diplomacy." In the end that would create far more uncertainty and distrust than have the bring-of-war remarks.

Now that we are in an election year, it is not likely he or any other Cabinet officer will be able to say very much without inviting an adverse analysis by someone.

Nor does the high level Republican officialdom merit any special sympathy. They are being paid in the same coin they used in denouncing the Truman foreign policies.

The Korean fighting was Harry Truman's war when the Republicans were the critics, it will be recalled.

The Democrats are probably making a mistake in creating such a furore over the mere words "brink of war."

They are reminding millions of Americans with reasonably sound memories that Korean policies under Truman and Acheson did not constitute merely a brink of war; it was war.

The teapot tempest started when Mr. Dulles gave a Mr. James Shepley, of Life magazine staff, a rather self-congratulatory interview on the fine art of diplomacy as practiced by the State Department under his leadership for the past 3 years.

The art was a pokerlike skill of so thoroughly convincing the other fellow America would shoot if the final card had to be drawn to stay in the game that the other fellow throws in his hand rather than play it to the final showdown.

There were three instances in which these brink of war techniques had given America diplomatic success. Mr. Shepley reported:

(a) In June 1953, when Syngman Rhee released his 27,000 North Korean prisoners and it was feared the Reds would break off the truce talks, Dulles had intimated America's next play would be bombs beyonds the Yalu and atomic weapons on the battlefield.

(b) Similar toughness had paid dividends for the West in general and France in particular in settling the Indochina mess in the spring of 1954.

(c) And finally the fleet in the Formosa Strait and Chinese uncertainty as to our policies saved the situation there last summer.

Mr. Shepley quoted Mr. Dulles on all these.

Mr. Dulles seemed surprised that other reporters considered the Life story sensational, or unusual. He said he had not yet read it.

When he had the chance he did not repudiate his remarks to Mr. Shepley, though Mr. Luce, boss of the Time-Life magazine group, offered some semiretractive remarks.

The facts seem to be that Life's Mr. Shepley oversimplified some highly complex, diplomatic situations—something that Mr. Luce's slick magazines do too often for complete accuracy.

It is the secret of their art in getting and holding reader interest. And in this they are just as artful as Mr. Dulles ever dreamed of being.

No harm is done on this side of the two oceans, but how about elsewhere?

England and France, of course, are apprehensive and do not accept the implication that any success in diplomacy is because of 1, 2, or 3 Americans—not even Mr. Eisenhower, not to mention Dulles.

They will get over this. They always do. We have learned to discount the vaporings of their politicians when they are approaching an election season. Our allies should learn as much about us.

All in all, this has proved to be the most noise-producing interview any Secretary of State has given since Dean Acheson called in the press and gratuitously announced he was not turning his back on Alger Hiss. This was immediately after the second trial in which Hiss was convicted.

Thus, if Mr. Dulles was broadcasting when he should have been receiving, he is by no means the first offender in that office.

The Keeping of a Great Tradition

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1956

Mr. THYE. Mr. President, on Sunday January 29, 1956, one of Minnesota's outstanding ministers, the Reverend Dr. Arnold Lowe, minister of Westminster Presbyterian Church in Minneapolis, spoke on the subject The Keeping of a Great Tradition. I might also add that this distinguished Minnesotan was recently named "national church preacher" by the general assembly of the Presbyterian Church.

I ask unanimous consent that the sermon may be printed in the Appendix of the RECORD.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

THE KEEPING OF A GREAT TRADITION

(Sermon of Dr. Arnold H. Lowe, minister, Westminster Church, Minneapolis, Minn., as the national church preacher, National Presbyterian Church, Washington, D. C., January 29, 1956)

Text: "Therefore, brethren, stand fast, and hold the traditions, which ye have been taught." (II Thessalonians 2: 15.)

The Gospel of Christ is endlessly implicated in all our relationships, from the most casual domestic situation to the deepest loyalty which leads a man to offer his life for his country. This matter has simple beginnings and magnificent consequences.

It begins with the simple intimation that a man is not the master of his fate and ends with the magnificent recognition that God is the key to history—not a nation living under an angry symbol of hammer and sickle; not a fearful weapon of destruction. The key to history is still God. This matter begins with a simple realization that God lends the touch of beauty to everything that has grace and color and ends with the magnificent conviction that the pyramiding stratas in the earth, the seeming depthlessness of the universe, the almost mystical relationship between time and space and matter, or even the deep hinterland of the human mind reveal the majesty of God, so that we are led to say: "I am fearfully and wonderfully made: marvelous are thy works; and that my soul knoweth right well." It begins with the simple observation that any man can love the soil which gave him birth and ends with the magnificent persuasion that only consecrated minds and hearts can keep the great tradition of a nation.

Now it is with us and our country as it was with us and those in whose shadows we walked when we were young. There are three things my father left me: a good name, a regard for intellectual integrity, and a thirst for truth. There are three things my mother left me: a love of books, a compassion for men, and a simple faith in God. These are good things to keep, but through the years I have learned that nothing can keep them but a consecrated devotion.

There is a spiritual kinship between a man and his country. The same blood runs in their veins. There are three things our forefathers left us: a Nation under God, a holy concern for the well-being of men, and a people morally strong. It will not be for historians of another day to say how well we will have kept the tradition. It is for us to know now how well we keep it. Like all wealth, a great tradition can be wasted. Men whose conscience is barren, whose minds are idle with vain ambitions, whose purpose is consumed in material satisfactions will not keep that tradition. No; the tradition has to fall into better hands than that. Only men and women whose hearts flame with the fire of God will keep it; only those who experience a divine urgency in their souls. A man's public service is an act of consecration, as it was when Isaiah said: "Here am I; send me"; as it was when Albert Schweitzer turned from his organ to a life of physical and spiritual surrender. For some reason a halo has been placed upon the preacher's head. This is unwarranted generosity. You who stand in the arena of public service must feel yourselves compelled by God, no less than those who stand in the pulpits of their churches. God calls his spokesmen from many ranks—statesmen and scientists, teachers, and workers, and here and there preachers, who must become prophets.

A nation under God—what a tradition that is. It involves much: Our way of life, our social and political morals, the wise use of our freedom, our common decencies. Those who came first to the eastern shores of our country did not seek gold at the end of their rainbow. They sought better things than that. The sought a drama of spiritual adventure. They sought a new way of life. They found the will to carve out of the forest a nation under God. To this purpose men held fast through the long years. There were storms; there was revolution; there was war of brother against brother; there was frustration and agony. But there was always this purpose—a nation under God. There was one frontier and then another. were storms; there was revolution; there was The wilderness yielded to the pride and the venturesomeness of men and women. It was still a nation under God. Rivers became highways; prairies became fertile fields; mountains became thoroughfares; hamlets became cities; security turned into plenty. It was still a nation under God.

In this day when people, are windblown by confusion, things of yesterday are fading into the background. Powerful influences are playing upon us. We stand challenged by a host of problems. At times we see darkening shadows of danger. A new world is emerging. But we are still a nation under God. It will take consecrated men and women to keep this tradition. If ever this dream grows dim and the great tradition is lost in the sands of indifference, we had better recall the words of Tennyson:

"O young Mariner,
Down to the haven,
Call your companions,
Launch your vessel
And crowd your canvas,
And, ere it vanishes
Over the margin,
After it, follow it,
Follow the Gleam."

Then we need to say with the Apostle Paul, "Hold the tradition which ye have been taught."

There is then this holy concern for the well-being of every man and every woman. What a tradition that is. It is woven into the texture of our souls. We did not create it. It was the deep concern of our Lord. He put it plainly: "The Son of man came to seek and to save that which is lost." Whatever Christ said—or, better still, whatever Christ did—He said and did because of His deep concern for the well-being of men. If He spoke of love and forgiveness, if He spoke of justice and mercy, if He suffered indignities at the hands of friend and enemy, it was because He was concerned for men. If He died on a cross, it was because He was concerned for men. Here a searching question reaches to the farthest corner of our minds. Why do men die before their time? In this

congregation there must be many who know the answer. They die for strange things—for freedom, for dignity of being, for self-respect, for God and country. It is the imponderables men die for. Not far from this city is the Tomb of the Unknown Soldier. I knew him well. I saw him die many times. Why did he die? Why did Socrates die before his time? Not because of his concern for things that could be bought and sold. Why did Jesus die before his time? Not because of His concern for things that could be traded in the market place.

There are times when we talk as though the great social virtues—justice and equality and fair play—were ends in themselves. They are not. Justice is not a straitjacket. If it were, we might someday stand in judgment and look in vain for mercy. Equality is not a test scale. If it were, we might someday be weighed in the balance and found wanting. Fair play is not a gratuity. If it were, we might someday ask out of the deep of our need and receive no more than we deserve. Justice and equality and fair play are instruments of mercy. They hold the power of social healing. They belong to the great tradition, and it will take consecrated men and women to keep it. If this tradition grows dim, it will be because we have lost Christ and do no longer say:

"If Jesus Christ is a god—
And the only God—I swear
I will follow him through heaven and hell,
The earth, the sea, and the air!"

—Richard Watson Gilder, The Song of a Heathen.

So we come to the end of the way and to the last great tradition: a people morally strong. We have permitted cynics to lead us into a barren land and let their siren voices tell us that there are neither moral nor spiritual finalities in our human scheme. But morality is not a human prerogative which we may accept or reject. Morality is not a philosophical conclusion with which we may agree or disagree. Morality is not respectability. It is spiritual cement, which in one instance holds a family together and in another instance, as in our day, makes a nation so strong that it keeps the world from falling apart.

Shall not a minister be the moral conscience of his church? Shall not the church be the moral conscience of a nation? Shall not a Christian nation be the moral conscience of the world? From the far yesterdays, screened by the centuries that have gone, come these words: "The spirit of man is the candle of the Lord." These are haunting words, are they not? But there are other times when these words are like hammer blows and we cannot escape them. Some of us know. Some of us have tried. When we do, our souls condemn us; leadership falls from our hands like a broken sword; and there is no peace in us.

Strength and goodness have been the secret of America's greatness. Many years ago de Tocqueville came to this country, hoping to find the source of America's greatness and genius. Upon his return to his native shores he wrote: "I sought for the greatness and genius of America in her commodious harbors and her ample rivers; and it was not there. I sought for the geratness and genius of America in her fertile fields and boundless forests; and it was not there. I sought for the greatness and genius of America in her rich mines and vast world commerce; and it was not there. I sought for the greatness and genius of America in her democratic Congress and her matchless Constitution; and it was not there. Not until I went into the churches of America and heard pulpits flame with righteousness did I understand the secret of her genius and power. America is great because America is good—and if America ever ceases to be good, America will cease to be great."

These words are almost frightening. They should be written over the portals of every public building and every school and church. They should be enshrined in every American heart. We will continue to be great if we allow ourselves to be compelled by God. Yes, the Gospel of Christ is endlessly implicated in our relationships, from the most casual domestic situation to that strange love of country which tears at our hearts and asks for our full surrender. This is the great tradition, and only consecrated men and women will keep it.

One does not close such thoughts with exhortations. There are no words at the end which have the sound of trumpets. One can close only with a prayer. Fifty years ago I came to this country. This is my country. May it always be God's country.

It will be if we keep the great tradition.

Eighty-third Annual Meeting of the American Public Health Association

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1956

Mr. CARLSON. Mr. President, the American Public Health Association held its 83d annual meeting in Kansas City, Mo., beginning on Monday, November 14, 1955.

There were several thousand delegates and visitors attending this annual meeting and a very interesting program was arranged. One part of the program was a symposium at which representatives from industry, labor, government, and education discussed on a panel, "Where Are We Going in Public Health?"

It was my privilge to speak on this panel as a representative of government, together with Adm. Ben Moreell, chairman of the board of the Jones & Laughlin Co., in Pittsburgh, Pa., for industry, Mr. Leonard Woodcock, vice president of the International UAW–CIO, of Detroit, for labor, and Dr. Fillmore Sanford, executive director of the American Psychological Association for Education.

As it was my privilege to speak for Government on that occasion, I ask unanimous consent to have the statement I made placed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR FRANK CARLSON, ASSOCIATION SYMPOSIUM, AMERICAN PUBLIC HEALTH ASSOCIATION, KANSAS CITY, MO., NOVEMBER 14, 1955

Mr. Chairman and officers, members and friends of the American Public Health Association, I am honored to be here and to participate in the Association Symposium, "Where Are We Going in Public Health?"

I believe the answer to that question will depend upon how well the people are informed on health matters—how active the various levels of government—namely, national, State, and local—become in meeting public health problems.

The Good Book says, "Where there is no vision, people perish," and we have been blessed in this Nation, in the field of public health, by having men and women with vision. It takes more than vision to build and carry out a great public health program. It takes faith and courage on the part of our citizens.

I realize there are more improvements required than just improvements in our medicine and surgery for a great public health program, but I believe we all recognize that great advancement has been made in these fields.

Some of the things which we now take for granted are priceless commodities that kings, emperors, and presidents could not obtain.

Would Abraham Lincoln and his wife, Mary, have quibbled about the price of a small quantity of antibiotics as they maintained their futile vigil at the bedside of their dying son?

Would Calvin Coolidge have preferred the wealth of the Indies or a few dozen sulphur tablets when septicemia was draining away the strength of his boy?

What of the untold thousands of parents who suffered mental anguish while their children were stricken with diphtheria, pneumonia, tetanus, influenza, smallpox, and other diseases which are almost unknown to American parents today.

Not being a medical man, I realize that I am treading on dangerous ground, but I do feel that there is some reason to believe that we are on the threshold of eliminating polio as one of the plagues of mankind. I am also confident that we are tightening the noose around the neck of cancer. Before many generations these words will be in the limbo of the past.

As we consider the field of public health, I know those of us in Government must give consideration to such programs as education, social security, vocational rehabilitation, juvenile delinquency, mental health, general health, hospital reconstruction, and training programs for doctors and nurses.

In the 83d Congress, which session began in January of 1953, Congress approved much legislation dealing with the various problems I have just mentioned:

1. Social security legislation was extended to cover an additional 10 million more Americans.

2. The Vocational Rehabilitation Act of 1954 will increase the level of rehabilitated persons from 60,000 to 200,000 per year.

3. Established a new Juvenile Delinquency Service Division in the Children's Bureau to offer professional consultation to States and communities and to search for improved methods of dealing with juvenile delinquency.

4. Changed existing laws to provide for Federal funds to supplement State and local resources for the building of chronic-disease hospitals, nursing homes, diagnostic and treatment centers, thus recognizing medical problems of older Americans, the group most susceptible to chronic illness.

These major legislative measures enacted by the 83d Congress are bringing many benefits to the American people.

During the 1st session of the 84th Congress, which began in January 1955, consideration was given to the omnibus health bill sent to Congress by President Eisenhower at the beginning of the session.

In this session, Congress responded to the President's request for legislation in only one of the measures proposed in the omnibus bill—that of mental health.

In this field, Congress did forward to the President a measure which he approved, Public Law 182, which authorized an appropriation of $250,000 for the fiscal year, ending June 30, 1956, and $500,000 for each of the next 2 years for grants by the Surgeon General for one or more Government agencies for a basic study and evaluation of our mental health problems.

Among the programs which failed of consideration during the 1st session of the 84th Congress were:

1. The establishment of a self-sustaining health reinsurance service to increase the number of Americans protected by health insurance and to increase the scope of protection they enjoy.

2. Provision of Federal insurance of mortgage loans for the construction of private hospitals, clinics, nursing homes, and related health facilities.

3. Expansion of practical nurse training under existing State vocational education programs.

4. The authority for the Public Health Service to provide traineeships for the graduate training of nurses and professional public health personnel in Public Health Service facilities or educational institutions.

5. Consolidation of the existing Federal grants-in-aid to the States for the promotion of general health services and the control of venereal disease, tuberculosis, cancer, and heart diseases.

It is my sincere hope that the second session of the 84th Congress will give favorable consideration to the proposal submitted by the President.

Every person who has worked in the field of government has a few achievements in which he quietly takes pride. As I now look back on my 4 years as Governor of the State of Kansas, it is health legislation that gives me some of my greatest satisfaction.

This kind invitation to visit with you affords me an opportunity to boast a bit of accomplishments in the field of health in Kansas, during my administration. Sincerely, I am glad to have been a part of health projects that so many persons worked on. I am glad these projects came into being while I was Governor. I am glad to report on them to you because now, some six or more years later, an obvious and apparent success is proof that our judgment was right and that there still is much work to be done.

The projects that immediately come to my mind are: Our mental-health program—our project to attain medical care in rural areas—and our project for handicapped children.

These are major undertakings and the cost of each was such that many persons wondered whether we could ever reap reasonable returns on our investment.

I believe our present story will supply the answer to that question:

I. MENTAL HEALTH

May I give you a brief account of what I recollect on the mental-health story in Kansas?

Our mental hospitals were what State-operated institutions for the insane all over the United States have been—relatively humane houses of incarceration to protect society from the patient and the patient from himself. Whatever else we said about these places was unrealistic and simply not true to the facts.

Actually, we didn't know what was happening until some surveys were made. From these surveys, the public learned the truth. They then became sufficiently aroused to act.

Now I do not need to tell you what our surveys revealed because the problem was the same everywhere—buildings were run down and overcrowded and were fire hazards and health hazards. Patients were all but forgotten—a commitment was almost tantamount to a life sentence and no one seemed to do anything about it.

We have the well-known Menninger Foundation in Kansas and we called in the doctors from this outstanding foundation and solicited their counsel and advice.

We called in doctors from all over the State, especially the Mental Health Committee of the Kansas Medical Society and we talked with leaders in every field—farmers, bankers, lawyers, churchmen, and yes, we talked with housewives, many of them.

Gradually we learned that the people wanted to do something to correct this situation and the professional people told us how we might do this.

I know there is much still left to be done—let there be no mistake about that—but let me show you what has been accomplished through the cooperation of the people of Kansas.

We immediately repaired and refurnished buildings. They are not new but they are safer today than they were and inside they are more attractive.

The long hard benches have been replaced with bright colored chrome chairs. There are rugs on the floors—curtains hanging in the windows—books for the patients to read.

There is organized entertainment and vocational therapy. The patients have begun to live instead of sitting out an endless existence. They talk—they laugh—and have an interest in things around them.

How this happened is far too long to recount here, but this is what has happened—Kansas has 3 mental hospitals, of which the 1 at Topeka was designated as a training center.

At this institution, there are 11 separate training programs such as adjunctive therapy, where people are trained in recreation, music and occupational work. There is a training program in psychology and social service—a training program for ministers who have an interest in such work.

Kansas schools of nursing now send their students here for their psychiatric experience. There are classes for lay volunteers who wish to help with the mentally ill. The University of Kansas School of Medicine sends each senior student to one of our mental hospitals for 6 weeks' training.

And there are others, but perhaps the most significant is the residency training program in psychiatry. Out of a 5-year residency, the physician who is specializing in psychiatry will spend 3 years at the Topeka State Hospital. I am told there are about 50 such physicians at this hospital now.

Such programs are gradually supplying us with trained personnel in our State hospitals, and of course we are training people for hospitals in other States too. But, in Kansas, the acute shortage of professional personnel may be over.

In comparing the Kansas situation of 1947 with that in 1955, here is what we find:

In 1947, there were 13 physicians in all our mental hospitals.

Today, there are 77, in addition to the 50 residents mentioned earlier.

We had no social workers in 1947, and now have 23.

Then, there were 9 registered nurses, now there are 56.

We had no trained psychiatric aides in 1947, today we have 609.

There were no dietitians in 1947; today there are 8.

The ratio of patients to employees has changed from 9 in 1947 to 2.2 at the close of last year. Expensive? Yes; this program is expensive in dollars and cents.

In 1947 it cost us 76 cents a day to keep a patient in a mental hospital. But in 1955, it cost us $5, and this cost will go still higher.

But look what our money is buying. We are sending people home cured and they are taking their place as constructive members of society again.

In spite of increased commitments, our average daily hospital census is actually declining. In 1948, we were proud to have released 400 persons. Last year, I am informed, almost 1,500 were dismissed as cured. And today the great majority are cured.

Worth the money? Honestly, I cannot think of any program adopted by our State that I could be more proud of, and this is only the beginning.

The future will be infinitely more dramatic. Where is there greater drama than in the restoration of a mind to useful service again? Where is there greater drama than in the reunion of a family?

That is why we are proud of this program, why I am pleased to have been a part of it, and why I am happy to have this opportunity to discuss it with you today.

II. DOCTORS FOR RURAL AREAS

The second major health effort was an effort to supply doctors to all parts of our State. It also is an expensive program but a successful one and one I wish I had time to discuss in detail.

After World War II, we were all concerned over the physician shortage and we all blamed the war for this situation.

In Kansas, we made a little survey and found that the war had very little effect on this crisis because we had been losing doctors constantly during the last 50 years and in addition to that, doctors were moving out of the country to the cities. So the entire State was losing doctors and rural Kansas was losing doctors twice as fast as the cities.

Dr. Franklin Murphy, now chancellor of the University of Kansas, came up with a formula that might cure this problem. It is in three parts which, as I remember, went a little like this:

1. We cannot expect other States to educate our young men and women in medicine. We must do this ourselves, if we expect them to come to Kansas to practice.

2. We must bring graduate medicine to the profession so they will not feel isolated.

3. Communities must understand that a doctor, to practice in a rural area, needs access to a hospital.

There was a great deal of effort spent in getting this project before the people but it was successful to a remarkable degree.

I had the pleasure of signing into law an appropriation bill of $3,862,560 to the medical school in 1949. It was most remarkable because, out of a house of 125 members, only 2 voted against this and they did so, not in protest to the plan, but because they wanted to draw the money from a different fund.

In other words, support of this venture was almost unanimous and, for our State, this $4 million was more than had been spent for the school in the past 20 years together.

Here is what it did: It increased the number of students per class from 80 to 125, at the present time. This makes it possible for 40 additional Kansas young men and women each year to enter medicine.

Now, as they finish their education, they are returning to Kansas to practice.

Part 2 of the program is strictly a professional venture—that of supplying graduate education. But I understand that our own school now ranks first in the United States in the volume of graduate education offered, so that problem has been solved and the hometown doctor can keep up with new developments without traveling long distances for such instruction.

Part 3 consists of preparing the community to receive its doctor. This involved many things and sometimes the construction of a hospital. In 1947, a division of hospital facilities was begun by the State board of health to administer the hospital licensing act passed by the legislature.

In the same year, we arranged to obtain access to Hill-Burton money and passed what I believe to be a very workable and elastic hospital district law. I wish I might go into detail because I find this a fascinating story, but time will not permit.

The conclusion is that the school of medicine was expanded—more students graduated and they began to locate in Kansas, in small towns too because they had built hospiptals or clinics. We have built or enlarged about 70 Kansas hospitals since the program went into effect. Today there are doctors practicing there, fine doctors doing an excellent job for Kansas.

Today, we have at least 1 doctor in each of our 105 counties and, in many small

towns where 1 doctor timidly set up to practice a few years ago, he had to get a partner. So now there are 2.

That is the story of the rural health program—a job we have done without subsidies or bonuses or contracts. If we could put the formula into one sentence, it would be that we tried to obtain doctors by making them want to practice and to live in our smaller towns.

I am proud also to have had a part in this venture because it is proving itself of value to the people of this State.

And now, I would like to just mention briefly one other Kansas project which I believe is of great importance both to parents and their children:

The Kansas Legislature of 1949, through House bill 440, created, within the State Department of Education, a division of special education. By this enactment, the State department of education could authorize certain schools to participate in a special education program for handicapped children.

That law has since been implemented and Kansas now has a program for children with speech deficiencies, supervised by well-trained and qualified speech teachers.

These children were not mentally retarded; they simply had a speech deficiency and needed special training and attention.

In addition to this law, the Institute of Logopedics of Wichita, Kans., is authorized to establish branch speech centers in certain qualified schools of the State.

Ladies and gentlemen, I have reported on these projects because it is my sincere belief that, if our people are to have the right kind of health programs and health protection, we must continue to conquer "medical isolation." We need to put additional emphasis on medical research and to carry on a progressive program in the field of public health education.

The Get-Us-All Address

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. BURDICK. Mr. Speaker, I have here an address which was handed to me by Mr. Art Ziegler, of Pittsburgh, Pa. Mr. Ziegler is a high-school boy who has been very active in American patriotism organizations in his area for the past several years. The address appeared in the April issue of Facts Forum in 1955, and I believe it worthy of a place in the RECORD.

The address follows:

THE GET-US-ALL ADDRESS

One score and twenty years ago our fathers brought forth upon this Nation a new tax, conceived in desperation and dedicated to the proposition that all men are fair game. Now we are engaged in a great mass of calculations, testing whether this taxpayer or any taxpayer so confused and so impoverished can long endure.

We are met on form 1040. We have come to dedicate a large portion of our income to a final resting place with those men who here spend their lives that they may spend our money. It is altogether anguish and torture that we should do this. But in a larger sense we cannot evade, we cannot cheat, we cannot underestimate the tax. The collectors, clever and sly, who computed here have gone far beyond our poor power to add and subtract.

Our creditors will little note, nor long remember, what we pay here, but the Bureau of Internal Revenue can never forget what we report here.

It is not for us, the taxpayers, to question the tax which the Government has thus far so nobly spent. It is rather for us to be here dedicated to the great task remaining before us—that from these vanishing dollars we take increased devotion to the few remaining; that we here highly resolve that next year will not find us in a higher income bracket; that this taxpayer, underpaid, shall figure out more deductions; and that this tax on the people, by the Congress, for the Government, shall not cause solvency to perish.

Address by Hon. Herbert H. Lehman at ADA Roosevelt Day Dinner

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 6, 1956

Mr. LEHMAN. Mr. President, on February 3, in New York City, I had the honor of addressing the ADA Roosevelt Day dinner, and I ask unanimous consent that the text of my remarks made at that time be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS OF HON. HERBERT H. LEHMAN AT ADA'S ROOSEVELT DAY DINNER, FEBRUARY 3, 1956, NEW YORK CITY

The sincere praise of good friends is music to the ear. I am afraid I have heard more tonight than is either justified or is good for any man. The presence and the words of my friend, Governor Averell Harriman, and of my beloved colleagues from the Senate, and of the array of other eminent and distinguished persons who have gathered here tonight, do me much more honor than I deserve.

But although I believe I am too old to have my head turned by praise, I am still quite young enough to enjoy and appreciate it.

Thank you for the honor of this occasion.

This tribute should, in fact, be directed to the memory of the man in whose name tonight's dinner is being held. And, in a certain sense, it has been. For I consider myself something of an apostle of Franklin Delano Roosevelt, and of all the great causes and principles which have come to be identified with him, and which history calls the New Deal.

I was not only his friend for 30 years, but in New York State I tried to be what he called me while I was his lieutenant governor—his good right arm. He often said that I did his worrying for him. And although I differed with him on some occasions, publicly as well as privately, I did my best during his lifetime, as I have since his death, to carry on the fight for the kind of government * * * the kind of society here at home and the kind of world order Franklin Roosevelt conceived and worked so greatly to achieve.

I am proud indeed to be along with HUBERT HUMPHREY, national co-chairman of these Roosevelt Day dinners across the country.

I am proud, too, to be a national vice chairman of the ADA. My pride is enhanced, rather than dimmed, by the attacks which have been and continue to be made against ADA.

In this election year we can look for those attacks to be intensified. They constitute, in fact, ADA's merit badge of achievement, a reflection of the effective role ADA has played in our public life.

Of course, ADA does not pretend to have a copyright on liberalism, nor does it insist on the use of its trademark on all liberalism or on all liberals.

But the ADA is concerned over the quality of the product that is offered under the name of liberalism.

Thus President Eisenhower was recently called a New Dealer because of his State of the Union Message. Shades of Alice in Wonderland. And to top it off, this so-called New Deal message won the immediate praise and support of such liberals as Senators BRIDGES, BRICKER, and BUTLER.

As a matter of fact, this is nothing to be really surprised at. This is simply a recurrent political phenomenon known as leap year liberalism. Every fourth year, in the same year that a maid can propose to a man, and when candidates for public office propose to the voters, so-called liberalism bursts out all over.

It should be reassuring, but it is disturbing, too. It is reassuring that liberalism is so popular, but it is disturbing to think that some voters may be taken in by the leap-year liberals.

The trouble arises from a lack of general understanding of what liberalism really is. To begin with, liberalism is much more than the sum of those specific programs and policies which have, at one time or another, been advocated by liberals.

Once upon a time liberals fought for public utility rate regulation, for the Sherman Antitrust Act, and for the Clayton Antitrust Act. Well, these eventually were adopted and today no one, but no one, directly repudiates them. Not even Senator BRIDGES. Does that make Senator BRIDGES a liberal?

The New Deal ushered in regulation of the stock market and the commodity market; it outlawed utility holding companies; it established bank deposit insurance, and social security. Does that make liberals of everybody who today accepts these programs—which is practically everybody?

President Eisenhower has indicated his acceptance of the principle of minimum-wage legislation, of Federal aid for school construction, of Federal aid for voluntary health-insurance plans, and of public housing, for example. Remember, I said "the principle."

Does that make President Eisenhower a true liberal, and make the Republican Party into a liberal party?

I am not ready to concede that. If liberals are willing to accept these, and these alone, as passwords of liberalism, then we have certainly lowered our standards, and liberalism has lost the meaning I always thought it had.

As I undestand it, liberalism is, above all, a spirit of action, a method of approach to problems, and a devotion to certain basic tenets of faith in freedom and in individual dignity.

And of these three characteristics, the last is the most important.

Liberals believe not only in the Bill of Rights, but in the right of individuals to exercise those rights, free from intimidation, coercion, or punishment.

Liberals believe not only in the right to be right, but even more importantly, in the right to be wrong.

Liberals believe not only in the words "equal opportunity" and "nondiscrimination," but believe that these words must be implemented by action: they believe that the denial of equality of opportunity, or the practice of discrimination on the basis of

race, creed, color, or national origin is not only absolutely wrong, but absolutely intolerable.

Liberals believe in the ceaseless reexamination of all doctrine and orthodoxy.

Liberals believe in the encouragement of the strong, but not at the expense of the weak.

Liberals believe in the widest and most equitable distribution of the benefits of prosperity. We are opposed to the trickle-down theory of economics.

Liberals do not believe that the sole business of Government is business. We believe that business of Government is the welfare of all sectors of the Nation.

Liberals believe in international cooperation and brotherhood; in the possibility of peace, security, prosperity and justice for all nations and all peoples.

Liberals believe that we are our brother's keeper.

Liberals believe that each human life and each human soul, whether in America or elsewhere, is important.

Liberals are opposed to communism and totalitarianism in any form, under any name.

I have listed 11 criteria of liberalism as I understand it. I have undoubtedly omitted some important ones.

I do not expect that every liberal will agree with my definitions. We do not expect every liberal to fit into a rigid category in order to be a liberal. But he must have the liberal spirit and the liberal faith.

The liberal spirit is an adventurous spirit—a spirit of bold experiment and courageous attack on problems. It is a spirit which strives for the practical but does not automatically reject the ideal.

It is a spirit of pressing forward toward new horizons, attempting not only to resolve the problems of today but to anticipate the problems of tomorrow.

The liberal sprit puts the accent on youth—on the youth who are the inheritors of our successes and our failures.

Do you remember—some of you are surely old enough to remember—the early days of the New Deal? Do you remember the Civilian Conservation Corps? The WPA? And the National Youth Administration?

High among the priorities of the New Deal were the programs designed to meet the problems of our young men and women.

Among other reasons, that is why the New Deal appealed so deeply to the young and why there was a trend, which has not yet been reversed, for first voters to become Democrats.

Where is the emphasis on youth today? Where is that bold forward-seeking spirit that characterized our Government in the days of Franklin D. Roosevelt?

Where is the ferment of ideas which led to some of the greatest advances our country had ever made—from the brink of economic disaster and despair to the highest levels of economic and scientific achievement the world has ever known?

The spirit of the New Deal is not to be found in the ranks of this administration.

There were some wild and woolly minded young men in Government in those days. But collectively they had a spirit which infected the land—a spirit of reform and recovery, of reconstruction and of construction. This spirit lighted new fires of sacrifice, dedication, and patriotic endeavor which brought America from depression into recovery, and then on to victory in World War II.

Today, in place of that spirit we have the stodgy, stifling atmosphere of caution and restraint—a spirit of search—not for solutions, but for slogans; an emphasis not on pioneering but on merchandising.

This is the spirit of 1956—the spirt of this administration, the spirit of this time.

I do not mean to indicate that all we need to do to renew and rekindle the spirit of the New Deal is to elect a Democratic President. It is not quite as simple as that. There are deep ailments afflicting the national soul today.

But I do mean that as we liberals go into this election year, our sights must be set high because we have fallen back and have far to go.

November is still 10 months away, but it is also very soon. Let us consider well what we are going to say to the people in the months ahead.

The people are wiser than some people think. Neither the violence nor the extravagance of unsupported assertions will convince them. They may be temporarily swayed, but they will not be held by trick or maneuver. nI the long run, they will see through hypocrisy.

Their support can be won by honesty, sincerity, vision, courage, and a sense of responsibility. It can be won by talking sense.

In appealing to voters we must speak in the language of the times and address ourselves to the problems of the hour. But we dare not try to anticipate too much the passing public mood and tailor our program and principles to it.

Such a presentation will ring false and come out untrue.

The people will know.

The chief task of liberals in the year ahead is to help frame the issues.

They must help to insure that the people will have a clear choice between clearly alternative sets of principles and programs.

Of all the issues there is one which, in 1956, serves better than any other as a touchstone of liberalism. I mean the issue of civil rights.

I have spoken too often on this subject—and this is too sophisticated an audience—for me to be required to spell out what I mean.

If a candidate is to qualify as a liberal candidate he must show a deep understanding and firm resolve on this issue. He may not duck or dodge it.

There is no halfway house on the road to equal human rights for all our citizens.

It is the duty of government to see that none of our citizens is treated less equally than others. When there is a threat to the very authority of government, as there is today, it is time that the struggle is joined and pressed to its inevitable conclusion.

I know that this issue cuts across party lines. I have heard the wish expressed that the civil-rights issue be taken out of politics. That wish is academic. And those who wish it are reflecting an inadequate understanding of the inner workings of democracy.

In this election, the people are going to vote on the civil-rights issue. It is their only opportunity to express themselves effectively. It is the only way they can give their mandate.

I have no doubt of what this mandate will be.

I have faith in the people's wisdom. I have faith in the basic truths of liberalism. And if all of us—each one of us here—and those thousands and hundreds of thousands like us throughout the country—if we truly have faith, we cannot truly fail.

Economic Idiocy

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial from the Hunterdon County Democrat, Flemington, N. J., dated January 12, 1956, which is quoted, as follows:

ECONOMIC IDIOCY

At a time when the administration is advocating a soil bank to take land out of production and the taxpayers are buying and storing surplus crops at a staggering cost, one would think that advocates of irrigation projects would be keeping mum. But that is not the case.

The Nation has 21 million acres of rich, idle farmland in the Midwest, South, and Southeast available for crop production when more food and fiber are needed. But Congress is being asked to approve the upper Colorado River project to irrigate 523,000 acres of arid mountain land at a cost of $4 billion in added taxes. Conservative estimates show that it will cost $5,000 an acre to bring water to this land and grade it so that it can be properly irrigated and brought into production.

Representative CRAIG HOSMER, of California, says "the whole thing is nothing short of economic idiocy." It so happens that the crazier the schemes are the more apt they are to be adopted by our economic planners. A letter to your New Jersey Senators and Congressmen may help to head this one off.

Inside the Republican Party

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Inside the Republican Party," written by David Lawrence, and published in the U. S. News & World Report on February 3, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INSIDE THE REPUBLICAN PARTY

(By David Lawrence)

Lately there have been rumblings about disaffection inside the Republican Party among conservatives and antiradical groups. The dissenters argue that the Eisenhower administration has accepted too much of the New Deal doctrine, has blocked the adoption of the Bricker amendment, or has not been vigorous enough on the issue of subversion and anticommunism in this country.

Differences of opinion on particular issues also confront the Democratic Party.

An interesting example of how a leading Republican conservative handles the dilemma was given by Senator JOHN W. BRICKER, of Ohio, at one of the "Salute to Eisenhower" dinners on January 20. He said:

"Just 3 short years ago we were embroiled in a bloody, stalemated war in Korea. Today, the ship of state sails on calm, though still treacherous, waters of peace. In just 3 short years, a Republican administration unraveled a tightly regimented economy. Today, we have a dynamic, free, and competitive economy—an economy which is providing us with the greatest material blessings in the history of man. We live in an era of uneasy peace and unparalleled prosperity.

"Only extreme partisans and demagogs will maintain that this peace and prosperity is not due, at least in part, to the leadership of the man who occupies the most powerful elective office on earth * * *.

"In choosing not to emphasize President Eisenhower's legislative program on this occasion, I do not mean to impugn its general excellence. The fact is, however, that the legislative program outlined in the state of the Union message is the work of an army of presidential aids. We should not expect our President to be fully conversant with all the details of his legislative recommendations. That knowledge could be acquired only by a criminal sacrifice of Presidential time—the time which he devotes to life and death issues of foreign and national defense policy. President Eisenhower rightly refuses to regard the Congress as a mere rubber stamp. Accordingly, he should not be blamed for Congress shortcomings nor given paramount credit for Congress achievements.

"As an example of the President's courageous leadership, I cite the foreign policy of this Republican administration. A President of less courage might have declared South Korea, Formosa, and South Vietnam beyond the defense perimeter of the United States. History proves, however, that firmness and courage in foreign policy are more likely to maintain peace than attitudes of vacillation or appeasement. President Eisenhower has had the courage to take risks. Partisan critics profess to be horrified by the fact that America has been pushed several times in recent years to the brink of war. They are, however, notoriously silent about alternative methods to stem Communist aggression. We do know this. During the administrations of each of the last three Democratic Presidents, America stood on the brink of war and each time plunged over the precipice. President Eisenhower has not permitted that to happen.

"As an example of patriotic leadership, consider the President's forceful actions against subversive influences. If there is a softness toward communism in the top echelons of government, no combination of congressional investigating committees can uproot it from the executive branch. President Eisenhower has not airily disregarded pertinent FBI reports. He has not promoted any Harry Dexter Whites. He has not decried undeniable evidence of Communists in government as 'red herring.'

"President Eisenhower's leadership has inspired not only America but the entire non-Communist world. Our network of mutual security alliances was never stronger. The President, almost single handedly, showed the world how the atom could be consecrated to man's life instead of being the instrument of his destruction. Yes, even the Communist dictators have been inspired by the President. They have been inspired by the healthy fear that any overt act of aggression is apt to bring swift and deadly retaliation.

"In the area of economic policy the conservative quality of the President's leadership has produced enormous benefits. One example of this conservatism was the President's reluctance to accept standby price and wage control authority which some Members of Congress were anxious to give him. No President in recent times has spurned a proposed grant of power. * * *

"President Eisenhower's leadership has been conciliatory in tone. No longer do we have a President who, for political gain, pits class against class, workers against management, and rich against poor. One result of this conciliatory leadership has been the generally harmonious relationship between the White House and Capitol Hill. Another result of this conciliatory approach has been the President's success in advancing equality of opportunity for all Americans without stepping beyond the limits of his constitutional authority * * *.

"We salute him tonight and hope to salute him on five more anniversaries of his inaugural."

More Than a News Photo Is at Stake Under Public Law 566—Freedom

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to an editorial which appeared in the Charleston Gazette, Charleston, W. Va., under date of February 1, 1956, protesting to the provision of Public Law 566 which prohibits the taking of pictures in Federal public buildings.

The editorial is as follows:

MORE THAN A NEWS PHOTO IS AT STAKE UNDER PUBLIC LAW 566—FREEDOM

It is somewhat astounding to learn that, in this land of the coveted free press, a newspaper photographer must look up the custodian of the Federal building and get special permission if his newspaper wants a picture of taxpayers waiting in line to pay their income taxes.

What makes it even more astounding—beyond the interference with freedom of the press—is that those people in line are there to pay the salary of the building custodian and all the expenses that go with the upkeep and services of that Federal building.

In short, the Federal building is a public building and all the Government employees working in that building are supposed to be servants of the people.

And yet, under Public Law 566, just because he has camera in hand, a newspaper photographer is not free to enter the Federal building for purposes of making a picture, notwithstanding the fact that he is part of the taxpaying public and also is supposed to be protected by the constitutional guarantee of a free press.

This law, enacted by Congress in 1948, says that "taking of photographs for commercial or publication purposes within property is prohibited unless prior permission is obtained."

Frederick D. Ehle, General Services custodian for Federal buildings and grounds in West Virginia, takes this to mean that special permission must be obtained from him before a newspaper photographer may make a picture—any picture—on Federal property.

Under the law and Mr. Ehle's interpretation, we presume the same procedure would have to be followed before any news picture could be made in the post office to illustrate the Christmas rush or any other unusual activity.

By the same strict interpretation, we must also presume that a saboteur who wanted to make a picture of a top-drawer secret in the Federal building would not be restricted by Public Law 566, because it refers to photographs "for commercial or publication purposes."

We have no particular quarrel with Mr. Ehle, even though it does seem to be going a little far in requiring special permission for a newspaper to photograph a line of people waiting to pay their income taxes.

Our quarrel is with Public Law 566 which, to our mind, is an abridgment of the Constitutional provision on freedom of the press and which says, in effect, that the public's business is none of the public's business.

Mr. Ehle has a job to do * * * just as a newspaper photographer has a job to do when he is sent on a picture assignment involving the Federal building. Unfortunately, if Mr. Ehle is ill or out to lunch, the newspaper photographer apparently is without the means of getting Government approval to do his job.

The big thing involved here is a principle. If a newspaper photographer is thwarted in his efforts to get a picture of a line of taxpayers, that will not be greatly missed nor long remembered.

But Public Law 566 provides the means of keeping secret the public's business * * * of denying the people their constitutional right to know what is going on in their Government.

This is the basis of government by secrecy, and that is the first stepping stone to totalitrianism—distatorship. It happened in Germany, in Russia, in Argentina—everywhere that freedom has been snuffed out, the first step has been suppression of the press.

Once that has been done, Government officials can make their plans and build their power under the protection of secrecy * * * and the people learn about it only when they awaken to find themselves powerless in the bonds of suppression.

In the name of freedom, Public Law 566 should be repealed.

The Use of Atomic Energy for Electric Power

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. HOSMER. Mr. Speaker, the CONGRESSIONAL RECORD of March 11, 1954, carried a report I offered for the record on the subject of the Use of Atomic Energy for Electric Power. In the nearly 2 years which have followed a great amount of change has occurred, and it might be apropriate for me to review in summary form the progress which has been made. Although all the data I am presenting has been drawn from public sources, the information is scattered, and developments are coming so fast that accounts of even a few weeks back are already out of date. This report covers what had been announced by December 31, 1955. I wish to acknowledge the very capable assistance of Charles S. Sheldon, II, Ph. D. of the Library of Congress staff in preparing it.

My concern is with reactors whose primary purpose is the generation of power. There are many parallel programs which impinge upon this field, and they affect each other because the advances in one reactor program influence the design and costs of other programs. Because these several programs are so interrelated, I want to talk about all of them.

Only a small part of our total expenditures for atomic energy has gone into the development of power reactors. This was because of the overriding need for weapons development in the race for survival. But power development can be delayed no longer, and in each of the last several years, expenditures for power

research and development have been stepped up.

Our specific projects which have been made public are easiest to comprehend if presented in tabular form. Table I shows this information, and my discussion of the several parts of this program is built around this table.

My report of 2 years ago described the four study groups which explored various power reactor concepts in a series of design studies. These groups were: First, Commonwealth Edison Co.-Public Service Co. of Northern Illinois; second, Dow Chemical Co.-Detroit Edison Co.; third, Monsanto Chemical Co.-Union Electric Co.; and, fourth, Pacific Gas & Electric Co.-Bechtel Corp. These initial studies have long since been completed and many of their results have been used in the concrete projects now underway.

CIVILIAN-REACTORS PROGRAM

A greatly expanded number of study groups are undertaking a wide range of projects associated with power generation. By June 30, 1955, there were 25 groups under contract with the Atomic Energy Commission: First, American Machine and Foundry Co.; second, Atomic Power Development Associates, headed by Detroit Edison Co. and consisting additionally of 25 utilities and 8 engineering, construction, and manufacturing firms; third, the Babcock and Wilcox Co.; fourth, Baldwin-Lima-Hamilton and the Denver and Rio Grande Western Railroad; fifth, Bendix Aviation Corp.; sixth, Bethlehem Steel Co.; seventh, Combustion Engineering, Inc.; eighth, Consumer Public Power District of Nebraska; ninth, Ford Motor Co.; tenth, Foster-Wheeler Corp.-Pioneer Service and Engineering Co.-Diamond Alkali, and 6 associated companies; eleventh, General Dynamics Corp.; twelfth, General Electric Co.; thirteenth, Kaiser Engineers Division of Henry J. Kaiser Co.; fourteenth, Monsanto Chemical Co.; fifteenth, National Rural Electric Cooperative Association; sixteenth, Newport News Shipbuilding and Dry-Dock Co.; seventeenth, Nuclear Power Group, consisting of 5 companies; eighteenth, Pacific Northwest Power Group, consisting of 4 companies; nineteenth, Pennsylvania Power & Light Co.; twentieth, Puget Sound Utilities Council; twenty-first, Rocky Mountain Nuclear Power Study Group, consisting of 9 companies; twenty-second, Seminole Electric Cooperative Association; twenty-third, Tennessee Valley Authority; twenty-fourth, the Vitro Corporation of America; twenty-fifth, Westinghouse Electric Corp.

TABLE I.—*Civilian power reactor program*

Reactor concept name	Location	Scheduled completion date	Moderator	Coolant	Fuel	Heat output (kilowatts)	Electrical output (kilowatts)	Total cost (millions)[1]	Cost per kilowatt[1]	Cost per kilowatt-hour (mills)[1]	Constructor	Operator
(a) Earlier experiments:												
Boiling water	Borax I, Arco, Idaho	1953	Water	Water	Nat and Hi enrich U						Argonne	Argonne.
Do	Borax II, Arco, Idaho	1954	do	do	Nat and Hi enrich U		3,700				do	Do.
Do	Borax III, Arco, Idaho	1955	do	do	Nat and Hi enrich U	15,000	2,400				do	Do.
Fast breeder	EBR-1, Arco, Idaho	1951	None	Na-K	U-235 in blanket U-238	1,400	170	3			do	Do.
Homogeneous, aqueous	HRE-1, Oak Ridge, Tenn.	1952	Water	D_2O	Hi enrich UO_2SO_4	1,000	140	10			Oak Ridge	Oak Ridge.
(b) 5-year program:												
Pressurized water	PWR, Shippingport, Pa.	1957	do	Water	Sli enrich U	264,000	60-100,000	85	630	8-20	Westinghouse	Duquesne Light Co.
Boiling water	EBWR, Lemont, Ill.	1956	do	do	Nat and Hi enrich U	20,000	5,000	17			Allis-Chalmers	Argonne.
Fast breeder	EBR-2, Arco, Idaho	1958	None	Sodium	U-Pu alloy	62,500	15,000	40			Argonne	Do.
Homogeneous, aqueous	HRE-2, Oak Ridge, Tenn.	1956	D_2O	D_2O	Hi enrich UO_2SO_4	10,000	300	47			Oak Ridge	Oak Ridge.
Do	HTR, Oak Ridge, Tenn.	1959	D_2O	D_2O	Same, plus thorium	65,000	16,000				do	Do.
Sodium graphite	SRE, Santa Susana, Calif.	1956	Graphite	Sodium	Sli enrich U	20,000	7,500	13			North American	North American.
(c) Later and proposed additions to 5-year program:												
	LASLR, Los Alamos, N. Mex.						5-10,000				Los Alamos	Los Alamos.
Liquid metal	LMFR				U-Bi hi enrich and Th_3Bi_5 blanket.		10-20,000				Babcock & Wilcox	Brookhaven.
Organic moderated	OMRE, Arco, Idaho		Dowtherm A or E.				20-40,000				North American	North American.

Fast breeder	(Philadelphia, Pa)							54			[Foster Wheeler?]	Philadelphia Electric.

[1] Not an accurate indicator for ultimate commercial production costs due to involvement of experimental and research items and other noncommercial factors.

[2] 17,600 nuclear.

[3] 140,000 nuclear.

The several laboratories of the Atomic Energy Commission have built experimental reactors for power generation. They have discovered that by altering reactor design, among the hundreds of variations open to them, they could maximize radioactivity for research purposes, or conversion of U238 into plutonium, or heat generation. All three processes simultaneously are present, and like the difficult cost accounting problems associated with a multipurpose hydroelectric dam, power costs depend a little on whether the primary interest is to breed plutonium for military purposes, or to generate heat for power.

My report of 2 years ago summarized the principal types of power reactors which were then known to the public. All of these types and more are now represented in working piles included in table I. Very small experimental reactors need highly enriched uranium in order to sustain a chain reaction. The larger models can go critical with only slightly enrished uranium. Many of the projects include some conversion of U–238 into Pu–239 or of Th–232 into U–233. This is the "stretcher-outer" type I referred to in my previous report, that allows some conversion of nonfissile material to economize in the use of the very expensive U–235 or its equivalents in plutonium and U–233. The greatest economies probably will be associated with breeder reactors which will produce more fissile material than they consume, but it will take longer to develop the experimental reactors of this type into large plants.

The first operational power reactors of significance are the military types used in submarines. The STR pressurized water reactor has to use very expensive, highly enriched uranium in order to be made small enough to mount in the submarine *Nautilus*. The SIR, which uses liquid sodium instead of water as a coolant, was the first to supply as a byproduct this year commercial power from the prototype at West Milton, N. Y.

The STR reactor which had to be developed under high priorities for naval purposes, supplied much useful data which could be used for the development of civilian powerplants. So, too, did the design study undertaken for the CVR project for a nuclear-powered aircraft carrier, which was canceled. Both of these were pressurized water reactors, one of the simpler designs, although not especially economic. It was adopted as the type for the first full-scale power project, the one which will serve the Duquesne Light Co. in the Pittsburgh area. Although it is not expected to supply cheap power, it seemed to offer the best prospects for gaining experience quickly in the operation of a large plant.

To avoid the complications of working with high pressures, the boiling water reactor, which is basically of the same type as the pressured water design, was tested in three successive small reactors at Arco, Idaho. It was Borax III, which for a short time supplied 2,000 kilowatts to the nearby town of Arco in 1955. These studies have led to the construction of an intermediate-sized boiling-water reactor at Lemont, Ill., for the Argonne Laboratories. Earlier experiments with a fast-breeder reactor have led to the planning of an intermediate-sized reactor of this type at Arco, but it is still over 2 years away from completion.

Reactors which are designed primarily for breeding plutonium rather than power have to be shut down frequently to change the fuel elements which contain the partially converted U238. In power generation, the purpose is to have as near continuous power production as possible with fuel elements which can remain in the reactor for extended periods. One solution to this problem is to depart from the heterogenous reactors which are best known, and to use homogeneous reactor fuel instead. This type uses highly enriched uranyl sulphate in a solution of heavy water. As it passes through the reactor vessel, the chain reaction is possible, but as the solution is piped to carry away the heat, it is not concentrated in sufficient quantity to react. A heat exchanger picks up the heat for the turbine. These experiments are continuing with scaled-up intermediate models, and in time may also breed some thorium into U233. There is no necessity to shut down the pile to replenish fuel, for byproducts can be separated from the continuously flowing liquid mixture, and new fuel added. This in the future may offer great economies. The highly corrosive nature of uranyl sulphate makes it difficult to handle, however.

Also difficult to handle is liquid sodium, which is a much more efficient heat transfer agent than water. Probably some of the experience gained from the SIR naval reactor will be useful to the sodium-graphite reactor being completed by North American Aviation as a part of the 5-year program of power reactors.

Although the Los Alamos Laboratory reactor has other uses, it is making contributions to the civil program and is now classed as part of the 5-year program. There are other new reactor suggestions which have also been commended for inclusion in the program. One is the use of a homogenous reactor which instead of being aqueous uses liquid metal. This promises potentially considerable savings in its greater efficiency but also involves difficult engineering design problems. It would circulate highly enriched uranium and bismuth with a blanket system of Th_2Bi_5. Another recent proposal is for an organic moderated reactor which would use Dowtherm A or E for the moderator.

Growing realization that foreign countries cannot afford large plants, even though they are the only ones that yet offer much prospect of early economy in operation, and the interest of some smaller utilities in sharing in atomic developments have led to the proposal for a new program for three sizes of small reactors. These plans probably will draw upon the experience which is being acquired in the Army package power-reactor program.

As a result of the earlier study group investigations of reactors and the amendment of the Atomic Energy Act, a power demonstration reactor program has been launched. This goes beyond the joint AEC-Westinghouse-Duquesne Light Co. plant under construction at Shippingport. It includes a number of central power station plans. The program has some limits to it. The purpose is to extend some Atomic Energy Commission aid to selected projects which will test each of the principal reactor types showing promise of generating reasonably competitive power. There is no substitute for the kind of experience to be gained from such actual operations. The Atomic Development Associates have proposed a very advanced fast-breeder reactor to supply power to the Detroit Edison Co. Some 21 companies will share in the development. The nuclear power group headed by Commonwealth Edison, and joined by seven utilities and the Bechtel Corp., plan a boiling-water reactor for the Chicago area. General Electric is to supply a dual-cycle type which offers marked economies over earlier test models. After first being rejected, now a revised plan of the Nebraska Consumer Public Power District is to receive power from a sodium-graphite reactor. In New England, the Yankee atomic electric group of 12 utilities wants to build a pressurized-water reactor on the Pittsburgh model, but as of this date there is still some question whether it meets the needs of the demonstration program. A late proposal of the Pennsylvania Power & Light Co. of Allentown would call for the construction of an advanced homogeneous aqueous reactor which might be eligible under the AEC's demonstration program. The smallest of the later proposals is for a boiling-water, closed-cycle reactor for Elk River, Minn. It would differ from the other reactors listed by using conventional oil fuel in a superheater unit to boost the temperature of the steam for greater efficiency in the turbine. Only 17,600 kilowatts of the total 22,000 kilowatts of electricity generated would be attributable to the nuclear part of the plant.

Outside the demonstration program is a major plant projected by the Consolidated Edison Co. of New York, to be built on the Hudson at Indian Point. It would not require partial financing by the AEC. It also is a pressurized-water type, using conventional fuel to superheat the steam. Of its total power output of 236,000 kilowatts of electricity, 140,000 would be of nuclear origin. Another independent project which has not reached concrete form yet is a proposal for a fast-breeder reactor to serve the Philadelphia Electric Co. and some eight other utilities sharing in the development. Finally, the Rocky Mountain nuclear power study group looks forward eventually to a 60,000-kilowatt plant delivering power at a cost of from 7 to 7.5 mills. Nine companies are supporting this project.

FUSION REACTORS

This brings up to date the status of the civilian power reactor program, so far as announcements have been made. Other power reactor programs are those of the Army, the Navy, and the Air Force. It would be a mistake, too, to ignore nuclear-power developments in other countries. For many of them, power costs are so high or fuel is so scarce that nuclear power has a much greater immediate business significance than is true at the present moment in the United States.

Finally, there is some speculation about the future, including use of fusion power, which is required to round out this report.

Dr. Bhabha, of India, at the Geneva meeting insisted that there was every prospect that within 20 years the secret of controlled fusion would be unlocked, and the world would have at its disposal unlimited power supplies. The United States somewhat reluctantly admitted

that it has been studying the problem for some years, but will not estimate when success will be attained if ever. Our country started project Matterhorn at Princeton, N. J. This initial work has been followed by project Sherwood with five of our best laboratories at work on the problem. In addition to the work at Princeton, study is underway at Livermore, Calif., Los Alamos, N. Mex., Oak Ridge, Tenn., and at New York University. There has been no public disclosure of a method to contain the high temperatures required to sustain a fusion reaction. In its semireport issued a few days ago, expressed belief there is a long road ahead before controlled fusion will become a reality.

ARMY REACTORS PROGRAM

Under actual construction is the APPR–1, the Army package power reactor, No. 1. It is designed to have its components air-transportable for later assembly at advanced bases where conventional fuel might be difficult to obtain in sufficient quantity or at reasonable cost. ALCO Products, with the assistance of Stone & Webster, is building it at Fort Belvoir, Va., with a scheduled completion date of 1957. It is of the pressurized water type, using water for both moderator and coolant, and enriched uranium for fuel. Its capacity is 1,825 kilowatts of electricity. The cost is about $2 million.

Some 10 other firms are making design studies under contract to the Army for more advanced reactors, and from among these will come later construction projects. These firms are: General Electric, Babcock & Wilcox, Westinghouse Airbrake, Fluor Corp., Walter Kidde Nuclear Laboratories, Glenn Martin, Sanderson & Porter, Argonne National Laboratory, Oak Ridge National Laboratory, and Army Engineer Research and Development Laboratories.

NAVAL REACTORS PROGRAM

Two prototype reactors for submarines have been put into operation, and two atomic-powered submarines launched to far. The SS571 *Nautilus* has already gone to sea. The SS575 *Seawolf* is nearing completion. The SS578 *Skate* is building at Groton, Conn., and the SS579 *Swordfish* is building at Portsmouth, N. H. Two similar ships are to be constructed at Mare Island and at Portsmouth. These latter 4 ships are smaller than the first 2 already launched. They may have the improved hull shape now under test with the conventionally powered U. S. S. *Albacore*. Also authorized for construction at Groton is a new very high speed submarine, and another exceptionally large submarine which will be of the radar picket type. It will be equipped with two reactors. A preliminary design contract for a much smaller submarine reactor has been let to Combustion Engineering.

The AEC has identified the following submarine reactors so far: The submarine thermal reactor, STR, was built as mark I at Arco, Idaho, as a prototype for the *Nautilus*. It was completed in 1953, was of the pressurized water type using water as moderator and coolant and highly enriched uranium as fuel. It could deliver 10,000 kilowatts of electricity. Westinghouse was responsible for its construction. Now it is being converted to other uses. The STR mark II was the unit actually installed in the *Nautilus* at Groton, and completed in 1955. The submarine intermediate reactor, STR mark A was built at West Milton, N. Y., by the General Electric Co. as a prototype for the *Seawolf*. Completed in 1955, it is graphite moderated and sodium cooled. It also produces 10,000 kilowatts of electricity. The SIR mark B of course is installed in the *Sea Wolf* which was launched in 1955. The AEC has also identified the SAR, submarine advanced reactor, being built with a mark A prototype at West Milton by Geneeral Electric and a mark B to go into an unspecified submarine. It is water moderated and cooled. Westinghouse has a contract for two SFR, submarine fleet reactors. Another reactor is the SRS, submarine reactor small. This is the one being built by Combustion Engineering.

The program of surface ship reactors was initiated with the CVR, intended for installation in an aircraft carrier. This was a Westinghouse project carried on with the assistance of the Newport News Shipbuilding & Drydock Corp. It was of the pressurized water type. When it was canceled, the study results were used in the PWR reactor under construction at Shippingport, Pa. Work has now been renewed by Westinghouse with the LSR, large ship reactor, of which a prototype is to be built at Arco. It is also of the pressurized water type, using water as moderator and coolant, and slightly enriched uranium for fuel. Corresponding ship designs to use this reactor are under study both at Newport News Shipbuilding and at the Bethlehem Quincy yards.

The Navy has discussed the possible construction of a new 85,000-ton atomic-powered carrier which might contain as many as eight reactors. But no budget request has been made yet for funds to cover its construction. The new budget contains instead a request for funds to construct an atomic-powered antiaircraft cruiser which would launch guided missiles.

The Navy also is interested in building atomic-powered seaplanes. In this effort, it is working with the Air Force. Airframe design contracts have been awarded to Martin and Convair. The powerplant is to be developed by Allison Division of General Motors designing the turbine and Nuclear Development Corp. the reactor. It already is sharing in the development contracts awarded to General Electric and Curtiss-Wright, through the Air Force. AiResearch of Garrett has a contract to develop certain auxiliary systems.

MERCHANT SHIP REACTORS PROGRAM

Serious work on this project will depend upon actions taken by the present session of Congress. The President's original proposal for an atomic-powered demonstration ship was not approved, nor was the alternate proposal for a commercially competitive cargo vessel. The United States Lines has talked of building a replacement for their liner, the *America*, which would be nuclear powered. Newport News Shipbuilding & Drydock Co. plans to build under contract for the AEC a merchant ship test reactor at Arco, Idaho.

AIRCRAFT REACTORS PROGRAM

Although it is not possible to state when a successful nuclear-powered plane will take to the air, a major effort is underway to make this possible. The former Manhattan District assigned the exploratory contract to Fairchild Aircraft under the initials NEPA, even before the present AEC was created. Those studies have been concluded. The present Commission has a number of contracts outstanding which are concerned with the many phases of the problem. Airborne reactor projects have been assigned to General Electric, Pratt & Whitney, Curtiss Wright, and Carbide & Carbon Chemicals. Airframe contracts have been assigned to Convair, Boeing, and Lockheed. It is thought by unofficial sources that General Electric will probably be paired with Convair, Pratt & Whitney with Boeing, and Curtiss-Wright with Lockheed.

A testing facility is under construction at Arco, while other development facilities are being prepared at Oak Ridge, Evendale, Ohio, Middletown, Conn., Fort Worth, and Sandusky, Ohio. The Sandusky research reactor will cost $4.5 million. A B–36 with conventional power has been the first to carry aloft a working reactor, to test problems of shielding and placement. A large seaplane may be the first to fly under actual nuclear power.

Since preparation of this report the Atomic Energy Commission has announced the testing of a nuclear aircraft engine prototype at its Arco, Idaho, installations.

FOREIGN NUCLEAR POWER DEVELOPMENTS

The Geneva meetings resulted in the unveiling of atomic projects in several parts of the world. Although most of the participating countries are only able to contemplate research reactors, there were also a number or nuclear power projects described.

PROGRAM OF THE BRITISH ATOMIC ENERGY AUTHORITY

The AEA has extensive facilities active in many lines of research necessary to both weapons and civilian use. In the field of power production, it has two major enterprises. Calder Hall in Cumberland uses a very simple design to produce both power and plutonium for the weapons program. Dounreay in the far north of Scotland is an experimental fast breeder reactor to pave the way to much advanced designs for use a decade hence.

Calder Hall will be in operation by 1956, probably the first plant of such size anywhere in the world. It is a thermal reactor, carbon dioxide cooled and graphite moderated. Using natural or slightly enriched uranium, it will produce plutonium, and as a byproduct, some fifty to sixty thousand kilowatts of electric energy from its two reactors. The plant will cost between $42 and $56 million. This is a cost of about $560 per kilowatt capacity or 7 mills per kilowatt-hour.

To expand production of plutonium further, and to supply more electricity as well, the AEA will build two more

Calder Hall type primitive reactors at Calder Hall and four more of the same type at Chapel Cross.

The Dounreay plant will use U–235 or Pu to convert natural uranium into Pu. This fast breeder will be ready in 1957 or 1958. It will be graphite moderated and liquid sodium cooled. The Zephyr research breeder already has produced at a rate of 2 for 1.

PROGRAM OF THE BRITISH CENTRAL ELECTRICITY AUTHORITY

Looking forward to 1975, the expectation is that 40 percent of electrical needs will be met by nuclear fuel-generated electricity. To this end, a program of 12 large plants has been established, with 16 reactors involved. All of these will be patterned after the Calder Hall installations, but with progressive improvements. The first 2 will have 2 reactors each and generate between 100,000 and 200,000 kilowatts. These will be carbon dioxide cooled and graphite moderated. The total cost of each plant will run between $84 million and $98 million. These plants will be completed in 1960 and 1961.

The next 2 plants also with 2 reactors each will be similar in design and capacity but may be slightly more expensive. They will be complete in 1963.

Then will come four plants to be completed in 1963 and 1964. Each will have only a single reactor, and similarly be carbon dioxide cooled and graphite moderated.

The final stage of this program is four more single-reactor plans, probably with liquid cooling. They will be in service by 1965. All told, the last 8 reactors will produce over 1 million kilowatts and cost about $350 million to build.

The entire program therefore will produce between 1,500,000 and 2,000,000 kilowatts at a cost of $560 million for plans, $112 million for fuel, $84 million for ancillary equipment, and $84 million to $112 million for prototype development, or a total investment of $840 million.

BRITISH PROPULSION PLANS

For 5 years, the Royal Navy has been sponsoring the construction of a nuclear submarine. The results have not been made public. The British Shipbuilding Research Association is exploring the application of such propulsion to merchant ships.

SOVIET PROGRAMS

The Russians claim to have been the first to deliver usable commercial electric power as a byproduct from a reactor. In 1954, they say they put into operation a demonstration power plant of only 5,000-kilowatt capacity about 50 miles outside of Moscow. It is of elementary design, using pressurized water as a coolant and graphite as a moderator. They claim that at some undesignated point, by 1956, a new full-scale station of 100,000 kilowatts will be completed. Other plants are projected, but their numbers and locations have not been revealed.

The Russians also have described a planned merchant ship of the icebreaker category to have a nuclear power plant of 200,000-kilowatt capacity. This may be its steam-generating capacity rather than net electrical output. The vessel is to be able to shoot out jets of steam to carve a way through ice. It will have a speed of over 24 knots and be 512 feet long.

Russian papers also have carried a suggested design for an atomic-engined plane with a needle-like fuselage which would put the crew compartment as far away as possible from the reactor near the rear of the plane.

What may be the truth and fact with regard to these Soviet assertions is not subject to verification.

THE FRENCH PROGRAM

Starting with Zoe at Chatillon in 1948, additional research reactors have been built. Zoe is heavy water moderated and turns out only 150 kilowatts of heat. The second reactor was built at Saclay. It is gas cooled and heavy water moderated. It turns out 2,000 kilowatts of heat, and uses natural uranium for fuel. Also building at Saclay is a reactor known as EL–3.

Electricité de France has two power producing reactors planned for Marcoule in the Rhone Valley. G–1 will be completed in 1956, and produce 5,000 kilowatts of electricity. This air-cooled reactor will produce 40,000 kilowatts of heat. In 1957 and 1958 will come the first unit of reactor G–2. It will produce between 100,000 and 150,000 kilowatts of heat, and 25,000 kilowatts of electricity. It will be fueled with natural uranium, graphite moderated and carbon dioxide cooled. A second unit of similar capacity will be added in 1958–59, and a third unit of 50,000 to 60,000 kilowatts electrical capacity will be completed in 1960. Thereafter, every 4 years,, the French expect to double the electrical output from nuclear sources. The cost of G–1 and G–2 will be about $86 million.

The French also are working on a submarine nuclear propulsion unit.

CANADIAN REACTORS

Following the experimental work with heavy water moderated research reactors at Chalk River, the first power reactor is to be built at Des Joaquims, Ontario, about 20 miles away. This is called the NPD—Nuclear Power Demonstrator. It will produce 20,000 kilowatts for Hydro-Electric Power of Ontario. It will be built by General Electric of Canada. To be ready in 1959, it will cost $11 million. Moderated with heavy water it will use natural uranium for fuel, slightly enriched with plutonium. The Atomic Energy of Canada, Ltd., is supporting the development.

BELGIUM

Westinghouse is to supply a power reactor to be ready by April, 1958, in time for the opening of the Brussels World Fair. A Belgian syndicate of 20 companies called the Syndicate d'Etude de l'Energie Nucleaire is cooperating in the venture. The plant is to produce 11,500 kilowatts of electricity. It will be of the pressurized water type, will cost between $5 and $5.5 million, or between $400–$500 per kilowatt of capacity. It will be fueled with slightly enriched uranium. United States cooperation with Belgium is especially critical because of our use of the Belgian Congo uranium output. The Belgians also are planning to construct a nuclear powerplant with an electrical output of 100,000 kilowatts.

ITALY

Westinghouse also has made tentative arrangements to sell a pressurized water reactor of 10,000 kilowatts capacity to the Fiat Company of Turin. It will operate with enriched uranium.

Another Italian group, the Societa Edison, centered in Milan, is seeking a reactor plant of 100,000 kilowatt electrical output capacity, but have not let the contract yet. They plan to spend from $22 million to $25 million for it.

NORWAY

Norway and the Netherlands have operated jointly the JENER—Joint Establishment for Nuclear Energy Research—which operates a pile at Kjeller, Norway. Proceeding from this experimental work, Norway is designing a merchant ship atomic reactor which they hope to complete in 1957. Norway also plans to build an atomic electric powerplant.

NETHERLANDS

Following from research carried on with Norway, the Dutch plan to build a power reactor in their own country.

SWEDEN

Sweden plans a power reactor, first of test size, then later of 100,000 kilowatt electrical output.

WEST GERMANY

West Germany plans a power reactor.

LATIN AMERICA

The American and Foreign Power Co. is in the market for three different reactor designs of about 10,000 kilowatts each, and costing between $15 million and $20 million each, for installation in countries where it operates conventional powerplants. It is thought that these may be built in Brazil, Cuba, and Mexico.

SOVIET AID

Just as the United States has an extensive program of experimental reactor agreements with other countries, the Russians claim they are offering similar aid to satellites and neutralist countries. They have promised powerplants to Czechoslovakia, Rumania, Egypt, and Red China. The plant in China is announced to produce 6,500 kilowatts of electric power.

Reliability of Soviet announcements and stated intentions in the nuclear field must, of course, be regarded with the same caution as in other fields.

SPECULATION ON THE FUTURE OF NUCLEAR ENERGY

There is every indication that existing knowledge of nuclear principles with some engineering development will yield electric power competitive in price with most conventional sources. Almost certainly there will be new discoveries which will reduce costs even below these levels, but there is nothing to indicate yet that power will become so cheap in the future as to revolutionize life. This is because even if fuel is free, as is already true of a hydroelectric plant, there will always be capital costs for the construction of the plant. What is true, however, is that nuclear fuel promises to rescue us from the danger of exhaustion of chemical fuels of reasonable cost, and to bring

cheaper power to places where chemical fuels are now high in cost. Further, its availability casts serious doubts on the advisability of investing taxpayers' dollars in hydroelectric projects, such as the proposed multibillion dollar upper Colorado storage project, which must sell power at relatively high rates for the next 100 years to return capital investments.

A better basis for estimating nuclear power costs has been provided by the revelations this last summer at Geneva of United States selling prices for materials associated with nuclear energy. Enriched uranium is now priced at $88 a pound, and pure U–235 at $11,000 a pound. Deuterium is priced at $140 a pound and heavy water at $28 a pound. The price of heavy water is now only about one-third what had been charged by the Norwegian supplier.

It was also made clear in the discussions at Geneva that the plentiful element, thorium, may become the principal atomic fuel of the world. It converts in a breeder reactor into U–233 which is fissile. Granite rock was revealed to be a practical source of both uranium and thorium, opening the door to even larger supplies of fuel for the future.

At least two new applications of nuclear power are under development, according to recent announcements. One is to use the heat of nuclear reactions to carry out coal gas synthesis at lower cost. Another is to operate a nuclear reactor with nitrogen gas as the coolant. Instead of powering a turbine coupled with an electric generator, the gas turbine would power the propeller shaft of a merchant ship. This design approach, under consideration in the United States, would use either graphite or beryllium as a moderator.

Although one can always wish for greater speed, sufficient progress has occurred in the 2 years since my last report to make the assertion that the outlook is very hopeful and that there is every expectation that the next 2 years will see many additional developments.

Resolution Calling for the Withdrawal of Our Membership From the United Nations

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. BURDICK. Mr. Speaker, Mr. Thomas Dixon, national commander of the United American Veterans, has presented the following resolution of that organization, which I should like to have inserted in the RECORD:

RESOLUTION CALLING FOR THE WITHDRAWAL OF OUR MEMBERSHIP FROM THE UNITED NATIONS

Whereas the principal purpose of the United Nations was to bring about world peace; and

Whereas the United Nations has been in existence for the past 10 years; and

Whereas during this time it has been unable to bring about the principal object of its purpose, world peace; and

Whereas, as matters stand today, the United Nations is being used by the communistic countries as a steppingstone to world communism: Now, therefore, be it

Resolved, That the United American Veterans go on record as petitioning the Committee on Foreign Affairs to render a report on H. R. 3296, as to permit this bill to reach the floor of the House for action by that august body. This bill was introduced in Congress by USHER L. BURDICK, of North Dakota, and deserves the immediate attention of Congress.

THOMAS DIXON,
National Commander.
FRANCIS F. LEBRUN,
National Adjutant.

There Are No Frontier Barriers for Free Men

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. ANFUSO. Mr. Speaker, on July 4 of this year our Nation will celebrate the 180th anniversary of the Declaration of Independence. Throughout its long history extending over 180 years of independence, the United States has been a beacon of freedom to colonial and dependent peoples yearning to attain their national independence. Our Declaration of Independence struck a notable spark which ignited a determination for freedom among the oppressed and subjugated peoples the world over when it declared:

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights, governments are instituted among men deriving their just powers from the consent of the governed.

Patrick Henry's stirring words, "Give me liberty or give me death" expressed the yearnings not only of the American Colonies, but also of those under colonial rule on other continents as well. From Paris, Benjamin Franklin wrote during the War of Independence as follows:

Hence it is common observation here that our cause is the cause of all mankind, and that we are fighting for their liberty in defending our own.

Likewise, the continuing influence of American opposition to colonialism and tyranny was envisaged by Thomas Jefferson in 1790. He said:

It is indeed an animating thought that, while we are securing the rights of ourselves and our prosperity, we are pointing out the way to struggling nations who wish, like us, to emerge from their tyrannies also. Heaven help their struggle, and lead them, as it has done us, triumphantly through them.

As our country grew in power, prestige, and population, the opposition of the American people to colonialism was reflected in our state policy. In his message to Congress in 1823, President James Monroe enunciated a new doctrine:

The American continents—

He warned in his message—

are henceforth not to be considered as subjects for future colonization by any European power.

The effects of this doctrine in helping to bring greater freedom, independence, and a realization of national aspirations of the Latin American peoples is now a matter of history. We are proud of our role in that great struggle for human liberty by our Latin American neighbors.

During the 19th century, colonial rule was severely tightened upon the continent of Africa. In Asia, the peoples of India, Burma, Ceylon, Malaya, Indonesia, Indochina, and the Philippines were all subject to alien control. In China there was a race among the colonial powers to fasten and extend their spheres of influence. When the total dismemberment of China appeared imminent in 1899, it was the United States which consistently remained firm in seeking to preserve China's territorial integrity. At that time our Secretary of State, John Hay, enunciated the so-called open-door policy—a policy of equal opportunity which, while it did not stop the expansion of foreign influence in China, it discouraged outright annexation of territory.

The consistency of United States policy in opposing the spread of colonialism in China has since become traditional throughout the past half century. Suffice it to recall that in 1932, even while the League of Nations was still debating the issue, the late Secretary of State Stimson proclaimed American nonrecognition of the Japanese conquest of Manchuria.

During World War II, a war in which the might of this Nation saved vast areas in all parts of the world from becoming colonies of Nazi Germany and Japanese imperialism, President Franklin D. Roosevelt minced no words in urging independence for the subjugated peoples in colonial areas. His opposition to the return of French rule to Indochina was outspoken. The same was true of our attitude toward the continued rule of the Netherlands in Indonesia. As for United States policy regarding independence for India, Burma, and Ceylon, it is recalled that at one point during the war our diplomatic representative in India was so outspoken on the question of freedom for that country that the British Government requested his recall.

When the United Nations Charter was being formulated and subsequently adopted at the San Francisco Conference in 1945, the United States supported the establishment of a trusteeship system which provided for international scrutiny of the administration of certain dependent areas in various parts of the world. At the war's end, we supported the independence of Korea. Independence was also restored to Ethiopia. The Arab States in the Middle East were granted their independence. Later, the new state of Israel was created and our

country was among the very first to extend its recognition.

The list of newly independent nations does not end there. True to the promise which had been given by our country, the Philippines were granted full independence on July 4, 1946, nearly 10 years ago. This was followed by the British grant of independence to India, Pakistan, Burma, and Ceylon in 1947. In contrast with our peaceful transfer of power in the Philippines and also in the former British dependencies in Asia, Indonesian independence was won in 1949 amid bitterness and hostilities.

In Indochina, after 8 years of costly warfare in human lives and resources, the independence of Vietnam, Laos, and Cambodia had been achieved. Among the last remaining colonial areas in Asia, Malaya and Singapore have each held elections during the past year and have thus taken a long step on the path toward self-government. In Africa, Libya gained its independence, while Tunisia and Morocco have been granted a large measure of self-government by France. In very recent days Sudan has cast off its British-Egyptian yoke and has joined the growing list of independent nations on that continent.

With certain exceptions, it may well be said that western European colonialism has been swept from the continent of Asia. It is now being seriously challenged in Africa. Parts of that sprawling continent are now in boiling ferment, while other areas are showing unmistakable signs of political stirrings. Judging by past experiences, it would seem that the western nations in that area of the world are facing the overwhelming trends of historical evolution—the trends toward freedom and national independence.

In its essence, the issue of colonialism is simply a question of the inherent right of peoples to exist in freedom from external domination and control. On this question, I am happy that the history of our country over these past 180 years has been a flaming testimonial of the opposition of the American people to the evils of colonialism. Only the blind can fail to see that testimonial. Only those who are themselves seeking to foist upon the world a new brand of colonialism and tyranny will not admit it, for it is in their selfish interests to try to label us as defenders of colonialism.

Nearly a year ago, on April 11, 1955, the President of the United States restated this heritage of the American people. He said:

> By tradition and conviction, our Nation is committed to the independence and self-determination of all peoples. This determination, rooted in our own revolt against colonial status, is exemplified by our encouragement of Cuba and the Philippines to assume full freedom and control of their own destiny as independent nations. Throughout our history, and especially in the postwar years, the American people have made substantial personal sacrifices so that other peoples may enjoy internal stability and hope for the future.

Yet now, as many of these former colonial and subjugated peoples are struggling with the trials and tribulations of their newly found independence, the freedom of these new states is being threatened by a militant communism. For the United States to stand aloof and permit Communist imperialism to trample upon the liberties of these free nations would hardly be consonant with our traditional opposition to colonial domination, including the Communist brand of colonialism. We Americans want the newly born states to remain free and to enjoy the fruits of their hard-won freedom. We have given them economic aid and we have extended them a helping hand out of the deep store of technical skill and knowledge which our people possess. We want to continue to share these blessings with them, so that they can stride confidently into the future as free nations.

Ironically enough, our motives are sometimes misconstrued by the very people whom we are trying to help. At times, these nations have the delusion or suspicion that through our aid we are endeavoring to impose upon them some new form of colonial control. The Communists, of course, strive mightily to nourish this delusion and to spread it far and wide, in order to divide the free nations and to entrap in their clutches the weak and the naive. They strive to cover up their own despotism and the lack of fundamental standards of freedom, decency and human dignity within the confines of the Communist empire.

In the December 13, 1955 issue of Look magazine, Supreme Court Justice William O. Douglas, who recently toured the Soviet Union, has an article entitled Soviet Colonialism—Product of Terror. The opening paragraph reads as follows:

> The Soviets denounce colonialism and pose as champions of the underdog. Yet, within its own borders, the U. S. S. R. today has a brand of colonialism similar to the kind the French practice in Morocco and more evil than anything England ever promoted.

Justice Douglas then adds the following:

> I speak of Central Asia, where I spent a month last summer. In this part of the Soviet Union, political control is concentrated in the hands of Russians; there are segregated schools, special courts for the trial of Russians, discrimination against the native people, a ruthless suppression of all nationalist sentiments, and a quick liquidation of all those who dare breathe a word about liberty.

Mr. Speaker, such is the type of colonialism practiced by the Communists. It is no different in Eastern Europe than it is in Central Asia. Nevertheless, during their recent tour of India and Burma, the Soviet leaders Khrushchev and Bulganin continually stressed how much the Kremlin hates colonialism. Upon his return to Moscow Mr. Khrushchev attacked the bourgeois nations of the West as representing an imperialistic pact that is a disgrace to modern man, and he emphasized: "We shall keep repeating this point as long as colonialism exists."

We wish he would do so, but we also wish he would tell the truth. In such event, he will be repeating himself a great deal, because Communist colonialism has chalked up a long and black record which is truly a disgrace to modern man. Will Mr. Khrushchev be sure to include the peoples of Albania, Bulgaria, Czechoslovakia, East Germany, Estonia, Hungary, Latvia, Lithuania, Poland, Rumania, and the Ukraine, who are suffering in Europe because of the colonialism of communism. He should also not overlook the peoples of Outer Mongolia, Tibet, North Korea, and North Vietnam, who are suffering in Asia because of the colonialism of communism.

And when Mr. Khrushchev speaks about India's and Burma's colonial status in the past, he must not forget to tell the truth here, too, namely—that it was "imperialists" like the British who gave them a free choice and enabled them to attain their independence. But this would be expecting too much from one who perverts modern history, who approaches it in a cynical manner, and seeks to interpret it in an upside-down version to suit communism's ends.

The fact of the matter is that, if Mr. Khrushchev would be honest and truthful with himself and with the world at large, he would stop shedding crocodile tears over the colonialism of the past and would try to convince his colleagues in the Kremlin to make an end to the colonialism of the present. I mean the brand of Soviet colonialism in Europe and Asia which is infinitely worse than that ever practiced by any Western power.

I cannot believe that the peoples of Asia, in their desire to maintain their freedom and independence, will voluntarily suppress this desire and allow themselves to be swallowed up by Communist colonialism. The untold millions of people in Asia, who a short while ago existed in faceless anonymity, are on the march to attain political and economic independence. It is incumbent upon us, the people of America, to bring to the people of Asia a clear picture of the advantages and the disadvantages of a free and democratic society such as we have in this country, as against the despotic and ruthless society of the Communist world. There is no doubt in my mind as to their choice, if given the true facts.

In a discussion of Asian policy, the London Times recently stated as follows:

> The West will fail to understand Asia if it thinks Asia's attitude to communism can be equated with its own. However much it has traduced its first ideals, communism proclaims itself the liberator of the common man from want and indignity. There are many common men in Asia suffering from both. It proclaims the brotherhood of man and that is echoed most warmly in Asia. It proclaims equality which Asia assiduously demands. Its message is all-embracing.

Mr. Speaker, before it is too late, we must bring to the people of Asia the truth that real liberation, that genuine brotherhood of man, and equality of peoples and nations will not be acquired by linking their future with communism. Communism is dangling false hopes and promises before their eyes. We must help open their eyes to the fact that once they get behind the iron curtain they can forget about freedom and brotherhood and equality and all the other things for which they are aspiring.

I stated above that there is distrust and suspicion of United States motives in that part of the world. The thought is widely shared by many people in Asia that the actions of the United States are compromising its traditions. In certain instances, it is felt, our country has placed strategy before liberty, and military policy before the advance of democracy. In short, they believe that, where a military ally of ours stands to be embrarrassed, we fail to act in support of the dependent and the oppressed.

To these people we should say: If you will judge our actions from a more realistic and long-range point of view, free from emotional or partisan approach, then you will find that in the vast majority of instances our actions have been determined on the basis of the general welfare of mankind as a whole, and of its future survival as a free civilization.

Perhaps what is needed at this time is a careful reorientation of our policy in Asia. That reorientation should also include a restatement or reassurance to all the peoples of Asia and Africa regarding the true American conviction on colonialism. I feel that the situation calls for dramatic and forceful evidence from the American people and their representatives in Congress that we are loyal to our heritage and to the doctrine of freedom for all.

Mr. Speaker, for these reasons I am today introducing a resolution reaffirming our traditional policy of opposition to colonialism as a basic tenet of American foreign policy. The resolution declares "there are no frontier barriers for free men" and maintains that United States policy "will continue to be the expansion of freedom throughout the world." The resolution also extends the greetings of this Congress and the American people to the subjugated people suffering from Communist colonialism in Europe and Africa and expresses the firm hope that they will soon be liberated from Communist domination and be "able to resume their existence as independent nations, developing their national cultures in peace and freedom."

Let us establish this firmly as one of the foundations of American foreign policy today. Let us unmistakably prove to the nations of the world that the United States disclaims any colonial prerogatives or designs. We always have been and always will be opposed to the subjugation of any nation, and we shall at all times be prepared to help subjugated nations attain their independence.

Let us emphatically establish this as our foreign policy for 1956. The American people stand for the expression of freedom throughout the world. In order to achieve this, we must plant the seed of hope among peoples everywhere. While the policy of Soviet Russia is to expand the Iron Curtain and to engulf as many nations as possible behind its bars, we must be determined to break it wide open wherever it now exists. We do not recognize, and never will recognize, that there are frontier barriers for freemen.

Mr. Speaker, the Holy Bible has served humanity as a great source of inspiration in times of stress because of the eternal truths which it expounds. In similar fashion, our Declaration of Independence, our Constitution, and the Bill of Rights are a source of genuine inspiration to the people of the United States and of the whole world because of the fundamental principles of freedom and human dignity which they expound. It is, therefore, imperative for us to reaffirm strongly and clearly that, since colonialism is against the principles enunciated in these basic documents on which our Nation is founded, hence we cannot tolerate it anywhere in the world.

Such is the meaning and purpose of my resolution. I call upon all of my colleagues to support it. I also urge the committee to which the resolution is being referred to give it early consideration. We cannot afford to lose any more precious time.

The text of the resolution is as follows:

House Concurrent Resolution —

Concurrent resolution reaffirming the United States' policy of opposition to colonialism, restating the United States' policy of expanding freedom throughout the world, and sending greetings to those suffering under the colonialism of the Communists

Whereas it is now evident that it is the policy of the Union of Soviet Socialist Republics to expand and extend the Iron Curtain to engulf other free nations; and

Whereas the United States, has, throughout its history, opposed the subjugation of any nation, through colonialism, imperialism, or any other form of tyranny; and

Whereas the United States is at all times prepared to help subjugated nations attain their national aspirations and their freedoms; and

Whereas the United States at this time reaffirms its traditional policy of opposition to colonialism, imperialism, and similar forms of tyranny which is, and always has been a basic tenet of the foreign policy of this country: Therefore be it

Resolved by the House of Representatives (the Senate concurring), That, in pursuance of this policy, the Congress and the people of the United States declare that there are no frontier barriers for free men and declare that the foreign policy of the United States for 1956 will continue to be the expansion of freedom throughout the world, and send greetings to the people of Albania, Bulgaria, Czechoslovakia, East Germany, Estonia, Hungary, Latvia, Lithuania, Poland, Rumania, and the Ukraine, who are suffering in Europe because of the colonialism of communism, and to the peoples of North Korea, North Vietnam, Outer Mongolia, and Tibet who are suffering in Asia because of the colonialism of communism, and express the firm hope that these peoples will soon regain their freedom from domination by the Communists and will be able to resume their existence as independent nations, developing their national cultures in peace and freedom.

Mr. Speaker, under leave to extend my remarks, I am also inserting into the RECORD a very timely article which was published in the Washington Post and Times Herald on January 3, 1956. The article is written by Edward Crankshaw and deals with the subject I discussed above. It reads:

RUSSIA'S RECORD AS A COLONIAL POWER

(By Edward Crankshaw)

LONDON.—It was all too easy for Mr. Khrushchev in Indian and Burma to represent the Soviet Union as the champion of anticolonialism. But it has nothing to do with the truth. Russia is also one of the great colonial powers; and, unlike Britain or France, Russia has never given up an inch of the territory she has taken from small nations.

The conquest of Siberia proceeded almost unnoticed by the outside world; the Russians, over the centuries, moved slowly east until they got to the Pacific. But it was a conquest nonetheless, involving innumerable small wars and the subjugation and reduction of innumerable Asiatic tribes and nationalities.

It was an operation not unlike the American conquest of the Red Indians, but it took longer, and what remained of the tribes of Siberia, the Yakuts, the Bashkirs, the Tartars and the rest, has now been absorbed into the Union of Soviet Socialist Republics.

The grandfathers of the present-day inhabitants of Uzbekistan, Kazakhstan, Turkmenia, Khirgizia, to say nothing of the Georgians and the Azerbaidjans, and Armenians of tho Caucasus, did not submit themselves to Moscow of their own free will. They fought hard and bitterly and over many years against the organized armies of the Tsars.

When the Revolution came the process in many cases had to be repeated. With the collapse of central authority, there was an empirewide move toward separatism. This included not only the Asiatic nationalities, but also the Ukranians and the peoples of the little Baltic nationalities. Of all these, only the last managed to preserve their separate identities—until they were reoccupied once more by the Russians in 1940.

For the rest there was no hope at all, though the proud and high-spirited Georgians gave the Russians a grueling time before they finally surrendered to their great compatriot Stalin.

Even today separatism is far from dead: it constantly smolders and intermittently flares up all round the perimeter of the great Muscovite empire, and is kept under control only by the efficiency and ruthlessness of General Serov's security police.

Mr. Khrushchev does not call this rebelliousness a national liberation movement: he calls it bourgeois nationalism, and it is the supreme crime against the Soviet state. For Stalin laid it down explicitly that the idea of self-determination among nations was always right when the ruling power belonged to the bourgeois world and always wrong and counterrevolutionary when the ruling power was Russia. And so it goes on.

This is not an argument against colonialism as such. Colonialism has clearly had its place in the history of world development.

Colonialism, with all its evils, has raised up and educated backward peoples to the point at which they feel able to turn successfully against their conquerors the very weapons from newspapers to guns which those conquerors taught them to use. Everywhere, that is to say, except in the great Russian empire where, sealed off from the outside world, the colonial nations cannot make their voices heard.

Dreadful things have happened throughout the length and breadth of the Soviet empire, and dreadful things are still happening. So it can truly be said that Mr. Khrushchev is interested only in national liberation movements and anticolonialism when these are directed against the Western powers and are calculated to weaken their economy and undermine their authority and strategic position.

The peoples of Indonesia, of Africa, are encouraged to raise their voices and fight the imperial authority. The peoples of Uzbekistan and Georgia may not cry out and, if they move against the imperial authority, are immediately struck down.

Nobody would deny that Russia has brought benefits to her colonies. The re-

ward of total obedience is a gradual raising of the standard of living and increasing absorption in the Soviet way of life—which means the Russian way of life.

But the peoples are still subject absolutely to the central authority.

The Russians take the line: Resist us and we shall annihilate you; do exactly as we tell you, however different it is from what you want to do, and we shall share with you everything we have. It may not be what you want, but it will be good for you. There may not be much to share now, so that you have to give more than you receive; but one day, if you do what we tell you, we shall all be rich together.

This is a point of view. But it is not the point of view of the hundreds of thousands of martyrs who struggled for so long, who in lesser numbers still struggle, against Russion domination. And Mr. Khrushchev knows it.

The Status of Forces Agreement

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Daily News, of February 1, 1956:

CAPITOL STUFF

(By John O'Donnell)

WASHINGTON, January 31.—We wish all good luck to Representative FRANK J. BECKER, Republican of New York—because he'll need it—in his effort to persuade Congress to end the fantastic arrangement by which every American in our Armed Forces, ordered to serve in a foreign country by United States military command, loses his rights as an American citizen once he is picked up by foreign police and tried by foreign courts.

It makes no difference whether the arrest on foreign soil is on suspicion, or whether the charge be minor or major—a traffic violation or a murder—the fact remains that for the first time in the history of the Republic an American in uniform is no longer subject to trial and discipline by his commanding officer. Instead he is surrendered to the far-different criminal jurisdiction and punishments of Japan, France, North Africa, and some of the distant lands we're protecting, where petty larceny is punished by the amputation of the offending, thieving hand.

Members of our armed personnel are now serving time in the prisons of Japan, Germany, France, etc., after convictions by foreign courts under circumstances which denied them the rights of American citizens. All this started when Harry Truman's Secretary of State Dean Acheson worked out the so-called "status of forces" agreement and on June 16, 1952, Truman sent it up to Capitol Hill as a "Presidential agreement."

It was, in fact, a treaty—and a bad one—and should have been help up until it received a two-thirds approval of the Senate. It never would have become law had the proposed Bricker amendment been on the books to curb the assumed Presidential authority which burgeoned when Franklin D. Roosevelt loftily took over treatymaking power on his own.

Since that time, scores of members of the overseas Armed Forces have been tried and convicted by foreign countries. They have complained that they have been deprived of their constitutional rights by such trials and convictions and efforts have been made to get a Supreme Court decision on the issue. Legal efforts, backed by the Veterans of Foreign Wars and the American Legion, regarding some French convictions of American GIs, have stalled in the appellate divisions here when efforts to serve habeas corpus writs on the Defense and State Department leaders ran into legal obstacles.

DEMANDS CONSTITUTIONAL GUARANTEES

More recently, counsel retained by American soldiers convicted by Japanese courts have intervened in Federal court proceedings here in Washington. These are still pending. As Representative BECKER declared before the House Foreign Affairs Committee, "If we are going to draft the Americans, send them overseas to die, then the least we can do is to give them their constitutional guarantees."

Representative HARRISON WILLIAMS (Democrat, of New Jersey) came to the defense of the White house "right" to make these personal "agreements" with foreign governments.

This White House "status of forces" personal agreement tagged onto the NATO setup is in head-on collision with the basic law laid down by the great Chief Justice John Marshall (1755–1835) incidentally himself a soldier. It also collides with traditional procedure in such cases, including World Wars I and II, until July 12, 1953, when the "agreement" got an OK from the Senators then on the floor.

Until that date an American in uniform guilty of misbehavior or crime on foreign soil was promptly turned over to his commanding officer for trial and punishment and never, under any circumstances, handed over to foreigners. We Americans followed the same rules here. If allied personnel got drunk or disorderly in Times Square they were taken into custody by New York police and promptly turned over to their foreign superiors. Which is as it should be. But that isn't true of Americans today. Yet Chief Justice Marshall clearly put it into the law of the land:

"Service in the Armed Forces of the Republic of the United States shall not abrogate or nullify the constitutional rights of an American citizen."

GI'S FEEL THE UNITED STATES HAS LET THEM DOWN

Representative BECKER, who in 1950 codified and rewrote the military laws for New York State, takes a dim view of the Defense Department defense, which runs along the line: "After all, in general, these men found guilty got off with lighter sentences from foreign courts than they would have received from an American court-martial."

BECKER, in Britain last summer, interviewed GI's imprisoned in such famous jails as Wormwood Scrubs Prison, Maidstone Prison, etc. He reports that the Americans he interviewed "almost to a man" feel their Government has "let them down" by failing to insist on their constitutional guaranties in trials abroad. They are entitled to counsel, under the treaty, but only to advise; not to represent them, he said.

One disadvantage to the GI convicted in Britain is that when he appeals, he runs the risk of having his sentence increased—a risk not incurred under American justice.

One Becker example: an American GI was arrested for drunken driving in England and fined 150 English pounds (approximately $400). Although he had not had an accident or injured anyone, while a United Kingdom citizen was fined 10 pounds ($28) the same day for the same sort of offense.

"I don't see why we can't put our forces in those countries without whittling away some of our constitutional protection," he said. "After all, it's for mutual defense; theirs as well as ours."

A Revolution in Warfare

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to the following editorial which appeared in the Washington Evening Star on February 4, and was entitled "The Marvelous *Nautilus*." The editorial asserts that the world's first atomic-powered submarine represents "a new dimension in naval tactics and strategy," and says that it has "expedited a military revolution."

This tremendous achievement reflects the highest possible credit upon our Navy, our scientists, and all others who pioneered in this development; and to them should go our deepest thanks.

On the other hand, this event should point up the sober and alarming fact that the Soviet Union is working at feverish speed and with all available resources in this and related fields. Already, the Russian submarine fleet is the largest in the world, and their production of military aircraft outstrips our own. Further, they are believed to have a guided missile of much greater range than ours, and to have tested a hydrogen bomb high in the air which indicates great strides in this field.

Let me again urge with all the strength at my command that our leaders reject at once and for all times the fatal temptation to put dollars above defense, or to place a balanced budget above national security in a world which is fraught with peril to every nation in the free world.

The editorial is as follows:

THE MARVELOUS "NAUTILUS"

Just a year ago at this time, the U. S. S. *Nautilus*—the world's first atomic-powered submarine—made history with its initial test run. And since then, according to a Navy report on its performance to date, it has proved itself many times over as a seapower instrument full of revolutionary significance.

It is no exaggeration to say this. Never before has the world seen anything quite like the *Nautilus*. Never before has there been a submarine so fast or so deadly—and so marvelously equipped to carry out undersea offensive and defensive missions over vast distances without having to surface for air. What it represents, in itself, is a sort of new dimension in naval tactics and strategy.

To appreciate this, we have only to bear in mind a few of the facts that the Navy has cited in reporting on what the *Nautilus* has achieved in its first year of operation. It has traveled, all told, more than 26,000 nautical miles without refueling. On one cruise it has sailed nonstop for 8 days and 14 hours. On another cruise, totally submerged, it has moved at an average speed of 16 knots on a 1,300-mile mission. And on yet another cruise, it has stayed beneath the surface of the sea, without once rising for a breath of fresh air, for 3 days, 17 hours, and 14 minutes.

Moreover, as the Navy's report proudly declares, there are other statistics about the *Nautilus*—statistics bearing upon such things as its true maximum speed on the surface and submerged—that are far more impressive, but they cannot be revealed for security

reasons. What we can be sure of, however, is that they all add up to an unprecedented and extremely potent new factor in American seapower. Small wonder that the President's budget message for fiscal 1957 calls for still more atomic submarines, and for an experimental nuclear-powered cruiser, and for action to make a reality of atom-propelled aircraft carriers and giant bombers. In proving itself, the Nautilus has expedited a military revolution.

Another Old Soldier Speaks

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. SCRIVNER. Mr. Speaker, we have recently read, and in the future will hear, much about some remarks made by an "old soldier." He, however, is not the only one who can write.

Robert L. Thompson, who started his military career in combat in World War I, and served in World War II, accumulating as a citizen soldier, a National Guardsman, over 17 years of active military service, recently came back from Japan, and started a newspaper, the Moran (Kans.) Sentinel.

After reading the first installment of the Ridgway articles, Colonel Thompson, who has a high regard for General Ridgway as a soldier, took pen in hand last week and in his editorial columns wrote, speaking from personal observation and experience:

MILITARY WASTE

In the first of a series of articles appearing in a national magazine, former Chief of Staff Matthew B. Ridgway is critical of the defense policy of the Eisenhower administration. According to Ridgway we are not spending enough money on national defense. It is the same old tune all generals sing, especialy after they retire on a fat pension.

It is true, as Ridgway says, that we do not have adequate defense, but it is not the fault of the administration. It is the fault of the Army, the Air Force and the Navy.

Since War II ended more than half of the Federal budget has gone to these three services, yet our defenses are pitifully weak. It is due entirely to unexampled and criminal waste in the armed services.

For 10 years the Congress has appropriated adequate sums for defense but most of it has been wasted by protean and credulous dullards who, while enjoying the dolce far niente of the Pentagon, have never learned anything except how to squander money.

Today, as always, officers and enlisted men are being transported from one post to another throughout the world for no good reason. Today, Major Jones, now serving in Korea, will receive orders transferring him to Fort Riley. Tomorrow at Fort Riley, Captain Ward will receive orders transferring him to Germany. In 6 months he will probably have his feet on a desk in the Pentagon. All of this insane shuffling of personnel goes on month after month, and no one knows how may millions it is costing the taxpayers.

What is needed is not more cash for the armed services but men in the Pentagon endowed with some capacity for adult ratiocination in matters pertaining to business administration.

A Petition for a Solvent America

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a petition of the Oklahoma Public Expenditures Council and an editorial on this petition which appeared in the Oklahoma City Times. The response to the action by the council was overwhelmingly sympathetic and strikingly gratifying, with nationwide response from all segments of the American scene.

A PETITION FOR A SOLVENT AMERICA

Whereas the Federal debt has risen to such proportions that the annual interest charge now constitutes the second largest item in the Federal budget,

Whereas the Federal budget remains out of balance even though the national income is now at an alltime high.

Whereas a continuation of deficit financing by the Federal Government necessitates further increases in the Federal debt,

Whereas continuing increases in the Federal debt will further depreciate the value of our American dollar,

Whereas the financial chaos which will result from a continuation of this policy may well destroy our present form of government and our individual liberty,

Whereas Members of Congress, seeking reelection in 1956, will be subjected to terrific pressure to both reduce taxes and increase spending: Now, therefore, be it

Resolved, That members of the Oklahoma Public Expenditures Council, assembled at their ninth annual meeting, place themselves on record petitioning Congress:

1. To take such action as may be necessary to place our Federal Government on a pay-as-you-go basis except in times of extreme emergiencies.

2. To forego any reduction in taxes until such time as the budget is balanced and a start made toward orderly reduction of the present burdensome debt.

3. To approve no new or increased spending programs unless plans for financing such new or increased programs within the framework of a balanced budget be included as a part of the authorization; be it further

Resolved, That copies of this petition be mailed to the President of the United States, the Secretary of the Treasury, the Budget Director, all Members of Congress, the national chairman of both major political parties, and presented to the proper committees of Congress at the appropriate time; be it further

Resolved, That copies of this petition be mailed to the presiding officers of State and national organizations, and that such organizations, their members, and all citizens be invited to join in this effort to protect the solvency of our Nation.

[From the Oklahoma City Times of November 29, 1955]

OKLAHOMA'S CRUSADE FOR SOLVENT AMERICA

About a month ago the Times commented upon a petition originated by the Oklahoma Public Expenditures Council, approved unanimously by that organization. Since that action a significant thing has happened.

The petition was printed in a newspaper of national circulation, and signed petitions have been piling into the OPEC office at a great rate, with 44 States represented, including 5,000 Oklahoma names in 1 week.

The petition, in brief, calls on Congress to put the Government on a pay-as-you-go basis, forego tax reductions until the budget is balanced and a start is made on reducing the public debt, and disapprove all new spending proposals which cannot be financed within the framework of a balanced budget. The document is significant for a number of reasons—for instance:

1. It constitutes a blueprint for sound fiscal administration on the part of the Federal Government.

2. It indicates that a substantial number of citizens are willing to forsake temporary—and that word should be emphasized—individual benefits for the welfare of their country.

3. It now shows signs of snowballing into a national movement of monumental proportions which can become a major factor in saving the citizens of this country from the disastrous effects of runaway inflation.

4. It provides all citizens an opportunity to register their protest against unsound and dangerous Government policies and practices supported and advocated by demagogs in both parties.

Every widow—in fact, every person living on a fixed income in this country—should be listed among the signers of this petition. Every life-insurance policyholder, every man or woman who owns a Government bond should add their names to the list.

These people, striving to provide for themselves rather than become wards of the Government in their declining years, have been robbed of $158 billion in purchasing ability in the last 15 years by inflation—generated to a great extent by Government policies.

Petitions are worth not a dime a dozen unless they are vigorously followed up by an individual action and support. If there is a strenuous followup, Oklahoma will get the credit for starting one of the most momentous movements in the history of our Nation.

Something To Bank On

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I insert in the Appendix of the CONGRESSIONAL RECORD, an editorial from the Peru (Ind.) Tribune:

[From the Peru (Ind.) Tribune of February 1, 1955]

SOMETHING TO BANK ON

During war and its aftermath, the Government gave American farmers incentive to expand their output to meet the extraordinary needs of this country and its allies. Now it must supply fresh incentives to get them to reduce production in the face of monumental surpluses.

For too long the high, rigid price support law encouraged farmers to produce too much. Foreign markets fell off but the crops kept piling up—in Government warehouses.

At length, under President Eisenhower, a shift was made toward more flexible supports designed to minimize the lure and put prices more in line with true market conditions. But the switch was so long in coming that by then the Nation's surpluses had become well nigh unmanageable.

Meantime the farm price decline that set in even before the Eisenhower regime has continued apace. Total net income from farm products has slipped substantially. This has hurt family-sized farms more than large commercial establishments. It has

left many ordinary farmers outside the sweep of America's newest wave of prosperity.

The President's new farm proposals represent a broader and more drastic attack upon the farmer's dilemma. They seem to emphasize not so much immediate relief as a long-range approach which might conceivably get farmers out of their predicament for an indefinite time. In this respect they show political nerve in an election year, when the clamor is for quick solutions.

In addition to offering a multitude of devices for directly reducing present surpluses—research into new market uses, removal of barriers to sales abroad, etc.—the President asks Congress to enact what is being called the soil-bank program.

Under this plan farmers would be compensated for taking out of production either fertile lands or marginal soil or both. Payment could be taken in cash or feed stocks now in Government hands.

In this case of productive soils, farmers would be asked to cut their crop acreage voluntarily below existing allotments, in return for payment.

They would also be used with the same incentives, to put their marginal lands back into forest or grassland. This soil presumably would be removed indefinitely from the crop-producing category.

These soil bank measures, together with the frontal assault on current surpluses, would be expected within fair time to make deep inroads into our mountainous reserves.

No one can properly say how effective this approach would be. But at least it is an approach that goes beyond the sterile thinking which says that high, rigid price supports and only they can get American farmers out of their low spot.

At the minimum the soil bank plan constitutes a start down newly inventive lines. At best it may contain the core of a real solution.

Federal Funds for Cancer Research

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Moline Daily Dispatch of Tuesday, January 31, 1956:

FEDERAL FUNDS FOR CANCER RESEARCH

The proposal of President Eisenhower that Congress provide more money for medical research into the preventions and cures of the great human killers—especially cancer and heart disease—makes extremely good sense.

He requested an appropriation of $126.5 million to penetrate "the dark mysteries" of cancer and other diseases.

Although Mr. Eisenhower treated the proposed program as new, we interpret his remarks to mean that he urges a vastly stepped-up program.

Congress has usually been responsive to requests for cancer research funds. The current appropriation of $21.7 million is $2 million higher than the fiscal 1954 appropriation. In addition, the American Cancer Society last year raised more than $24 million through private solicitation, of which about one-third went directly into research.

A stepped-up program is needed for cancer research. Now the Nation's second most potent killer—behind heart disease—cancer is draining countless wasted millions of dollars off the gross national product, to say nothing of causing shocking suffering throughout the land.

The money being poured into research by the American Cancer Society and the Federal Government has not been sufficient to maintain an adequate research program on a continuing and integrated basis.

For one thing, cancer research has a staggering overhead because it involves the use of expensive electronic equipment, atomic energy devices and fuels and the time and energies of hundreds of highly skilled doctors, technicians, and scientists. Some elements of this research cannot be put together on a modest basis; by the nature of steps needed to go through experimentation, these elements must be huge or nothing.

For another thing, research of this magnitude cannot be programed on a 1-year basis. The human beings involved need to have something more tangible for their own futures than year-by-year contracts. Many of them, of course, are on permanent tenure, but there is a high degree of insecurity in research which a greatly expanded program will soften.

On the matter of principle, Federal aid should not be used to help people who are not inclined to help themselves. But in this case, with the American Cancer Society straining to raise every dime it can and falling far short of a goal—that of all-out research—Federal participation on a major basis is justified.

High Stakes Over China

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of Tuesday, January 31, 1956:

HIGH STAKES OVER CHINA

"If we stand together, there is almost anything we can do together. If we fall apart, or if we are driven apart, then there is no danger which may not befall the free world."

So spoke British Foreign Secretary Selwyn Lloyd on his arrival with Prime Minister Eden for talks at the White House. Mr. Lloyd's remark offers much for Americans and British to think about. It could be an epitaph for the free world, or it could be the foreward to a glorious and peaceful and secure future.

None of the difficult subjects to be discussed at the White House threatens to drive America and Britain apart more than the long-standing disagreement over Red China. Nothing could torpedo the American-British alliance more quickly than a British vote to admit Red China to the United Nations.

Such a move would provoke a wave of resentment and anti-British feeling in this country unparalleled in years. It would open a major campaign to get the United States to quit the U. N. It would either wreck the U. N. or convert it into a rubber-stamp organization for the Communists. It would be the coup de grace for an already weak Western alliance.

Sir Anthony is too much of a practical politician not to see the dangers of such a move in an American election year. But we hope he will find time while here to sound out American sentiment. If he does, we believe he is too much of a practical diplomatist not to see the disaster that would be caused by British support of Red China's membership in the U. N.—this year or any year in the foreseeable future.

Britain recognizes Red China; the United States does not. Britain believes Red China should be admitted to the U. N. But because of American opposition, Britain has refrained from openly pressing the issue. It has adhered to an unwritten understanding not to provoke the question—that is, an agreement to disagree.

Pressure for admission of Red China to U. N. will be greater next year, however. Many new members admitted last fall favor it, and India's pressure on Britain to abandon the United States will increase.

That would be a bonanza for the Communist world—a diplomatic and political triumph for the Reds comparable to the Communist seizures of power in Russia and China. It would legitimize the bandit regime in Peking, already branded an aggressor by U. N., and elevate it to a legal and moral position of equality with the great powers.

It would defeat the main objective of American and free-world policies—to contain communism from further expansion and prestige.

Whatever will be the ultimate place of Red China in the world, this certainly is not the time to pass out honors to a regime that has transgressed not only the laws of nations but the laws of humanity.

Sir Anthony could do no greater service for American-British unity or for the free world's cause against despotism than to stand firmly with the United States in opposing the pressures to honor Red China with admission to U. N. and to dishonor Nationalist China with ouster.

It is no longer enough to stand passively on the sidelines. Britain must stand together with the United States against Red China's bid to shoot its way into the United Nations. Otherwise, both Britain and the United States may hang separately from a Red gibbet.

Bill To Provide Federal Program of Insurance and Reinsurance Against Flood Loss

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. BOLAND. Mr. Speaker, I have today filed in the House a bill of insurprovide for a Federal program of insurance and reinsurance against flood loss in this country.

This measure is similar to that filed in the Senate today by Senators LEHMAN, of New York, and KENNEDY, of Massachusetts.

The bill encourages private insurance company participation in the program. The Commissioner of the Federal Flood Insurance Administration, the new constituent agency of the Housing and Home Finance Agency, would be required to give Congress his opinion every fifth year on the feasibility of private insurance companies taking over the program completely.

We all know, Mr. Speaker, that thousands of property owners in the

Northeast and on the west coast suffered millions of dollars in damage due to the 1955 floods. Citizens must have the opportunity of being protected against such future disasters. In the past, however, private insurance companies just could not risk flood insurance offerings and still hope to remain solvent.

Under this bill we are offering protection to real and personal property owned privately or by State and local governments, but no State participation is required. The bill sets a per policy limit of $10,000 face value on real and personal property for one to four family residences and $100,000 face value for other real and personal property in a single location.

This should encourage private insurance companies to issue policies covering risks above these limits, with the aid of Federal reinsurance.

Conservationists End Colorado River Project Opposition

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DAWSON of Utah. Mr. Speaker, my colleagues, Hon. WAYNE N. ASPINALL, of Colorado, and I recently notified leading conservation organizations that Echo Park Dam would not be a part of the upper Colorado River storage project—that an alternate site had been adopted. Echo Park Dam has been deleted by agreement of Representatives and Senators in the upper basin States, and an amendment is being proposed to the project act to insure the integrity of the national park system.

For the information of the Members of Congress, I am submitting herewith a letter I have received from the Council of Conservationists, 568 Fifth Avenue, New York, N. Y.:

JANUARY 23, 1956.

Hon. W. A. DAWSON,
House of Representatives,
Washington, D. C.

DEAR MR. DAWSON: Congressmen from the upper Colorado Basin States and prospective Senate conferees have guaranteed the Nation's conservationists that the Echo Park Dam will not be reinserted into the upper Colorado bill when it comes up for action in this session of Congress, and the administration has also reversed its former stand on this matter and has agreed to drop the Echo Park proposal.

Furthermore, we have now been assured that the following two provisos will be added, in their appropriate places, to H. R. 3383 when it reaches the floor of the House and that Senator ANDERSON and other prospective Senate conferees will support the inclusion of these two provisos:

1. *Provided further,* That as part of the construction, operation, and maintenance of the Glen Canyon unit the Secretary of the Interior shall take adequate protective measures to preclude impairment of the Rainbow Bridge National Monument.

2. It is the intention of Congress that no dam or reservoir constructed under the authorization of this act shall be within any national park or monument.

In view of these agreements we no longer oppose this bill. In fact, we also wish to commend the proponents of the project for the addition of these provisos, which we are glad to support as of great positive value to the cause of conservation, for they are a reaffirmation of the national park principle at a time when the National Park System, in the minds of many, is in serious danger.

We who have led the fight against the Echo Park Dam are accordingly pleased to be able to take our present position.

Sincerely yours,

HORACE M. ALBRIGHT,
Trustee for Conservation.
IRA N. GABRIELSON,
Citizens' Committee on Natural Resources.
HOWARD ZAHNISER,
Council of Conservationists.

Salute to the Boy Scouts

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Paterson (N. J.) Evening News of February 1, 1956:

SALUTE TO THE BOY SCOUTS

We salute the Boy Scouts of America on its 46th birthday, to be observed during Boy Scout Week, beginning Monday.

Scouting is a program for all boys everywhere. It is successful in the widest rural areas and in the most congested cities because it possesses an inherent appeal for the healthy, vigorous, normal American youth and also offers fields of achievement for the handincapped.

It has often been said that a boy can always find something to do. It is when he finds something to do that does not measure up to reasonable standards that he may get in trouble. Scouting offers a steadying hand that often tips the scales away from delinquency.

Scouting has three program parts to meet the needs of boys of different age levels.

Over 1 million families, together with their 8-to-10-year-old sons, participate in Cub Scouting, said to be America's largest and most dynamic parent-and-boy program. Today there are 1,430,000 Cub Scouts in 36,000 Cub packs.

Boy Scouting provides for boys from 11 to 13 an outdoor program that helps them grow in character and citizenship. Today 1,160,000 Boy Scouts are active in 54,000 troops.

Exploring serves the boy of 14 and over with a rich program filled with high adventure and opportunities to practice good citizenship. Today 440,000 Explorers are members of 14,000 Explorer units or Boy Scout troops.

Many hands join to bring scouting to these 3,030,000 boys and young men. In addition to the 1,070,000 adult volunteers who provide the leadership for them there are 68,000 sponsoring institutions that actually operate the 104,000 scouting units. This roll of institutions sponsoring Scout units really represents democracy in action. They represent the religious, civic, educational, and veterans' organizations of the Nation.

Appropriate indeed it is to say: "Happy Birthday, Boy Scouts!"

Congress To Use the Atom

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. COLE. Mr. Speaker, nearly a year ago, the House of Representatives authorized the House Office Building Commission, in collaboration with the Architect of the Capitol, to enter upon a very substantial program for not only the construction of a new office building for House Members, but also for enlarging and modernizing Capitol Hill, generally.

In connection with this sizable undertaking, there are the problems of heating, electricity, and air-conditioning, all of which are the natural by-product of atomic energy.

Since I have been somewhat instrumental in encouraging greater application of the possible uses of atomic energy, it occurred to me that perhaps here was an opportunity to show not only the Congress, but the Nation and the entire world just how helpful and practical the atom could be. Accordingly, I made a suggestion to the Architect of the Capitol, Mr. George Stewart, that he discuss the matter with knowledgeable persons in the Atomic Energy Commission as well as the staff of the joint committee.

When it became evident that the initial consideration showed that the idea might be feasible, I then wrote to the Speaker of the House, the Honorable SAM RAYBURN, more formally, urging that the matter be thoroughly considered and canvassed.

During the intervening months, the matter has been rather thoroughly explored and the point has been reached where all persons, who had given any thought to it, are confident that the idea is not only feasible and practicable, but that it can be done economically as well.

In order to be more certain of its feasibility and practicability, it seems highly desirable that a detailed study and survey be made by competent persons in the field of atomic energy. Accordingly, the Honorable CLINTON P. ANDERSON, junior Senator from New Mexico and chairman of the Joint Committee on Atomic Energy, and I have introduced companion measures in the Senate and House today authorizing the appropriation of $200,000 for the necessary survey to be done under the direction of the Architect of the Capitol, and the Joint Committee on Atomic Energy.

Under leave to extend my remarks, I include the letter addressed to Speaker RAYBURN last year and the press release issued today by the Architect of the Capitol:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 22, 1955.

Hon. SAM RAYBURN,
The Speaker, House of Representatives,
Washington, D. C.

DEAR MR. SPEAKER: As senior member of the Joint Planning Committee you are aware that present plans for expansion of Capitol

Hill buildings, together with new construction under way of contemplated and certain planned classified activities, will require approximately 25,000 kilowatts of heat to provide space heating in winter and electricity for air-conditioning in summer. These planned modifications and new construction are needed not only to meet the pressing office and committee space problems, but also to provide suitable and safe locations for Capitol Hill personnel in the event of enemy attack.

In thinking about these matters, it occurred to me that the Congress should consider the installation of an atomic power reactor to provide the needed heat and electric generating capacity. The atomic power reactor appealed to me from several vantage points:

1. It would provide a source of heat and electricity for the Capitol area independent of any disruptions that might occur to Metropolitan utility systems. It could be buried beneath the present powerplant. The sort of shielding necessary for the reactor itself would also give it protection for everything but a direct hit with a very large bomb.

2. Its economics of operation, I am told, may well prove to be more attractive by the time it is operating than any other independent source of energy. For such an independent source of energy the only alternative in this area is a diesel plant, which requires underground fuel storage, and whose fuel is relatively high cost in Washington.

3. The size of the reactor needed to do the job—about 25,000 kilowatts of heat energy—is of very widespread interest for use by rural electric cooperatives, in small metropolitan areas and in many foreign countries. Yet, to date, no substantial effort on a plant of this size has been undertaken by Government or industry. A need for such a plant by the Congress would serve to speed the day when such users would be able to benefit from atomic power.

4. The location of an atomic-power plant at the Capitol, undertaken at the initiative of the Congress, would serve as a dramatic demonstration of the practicability of atomic power and the feasibility of locating atomic-powerplants in cities. It would also be a fine example of leadership by the Congress in an area of untold national significance. Similarly, it would have great international impact.

5. Additionally, it would provide an early opportunity for the tens of thousands of American citizens who come to Washington and who have supported the development of atomic energy with their taxes to see a practical application of atomic power.

These considerations led me to explore further the idea of installing a 25,000-kilowatt atomic reactor on Capitol Hill. Discussions were held with the Architect of the Capitol, scientists of the Atomic Energy Commission, and members of the staff of the joint committee. Far from regarding the idea as impractical, these discussions show it to be quite worthy and workable. A preliminary study of such a reactor system for Capitol Hill is being undertaken by the Atomic Energy Commission, in consultation with the Architect of the Capitol. In my opinion, the study will bear out the preliminary estimates.

I recommend this project to you, and urge its most serious consideration by the Joint Planning Committee.

Very sincerely,

STERLING COLE,
Member of Congress.

[Press release issued by the Architect of the Capitol, February 6, 1956]

A bill was introduced in the Senate, today, by Senator CLINTON P. ANDERSON, of New Mexico, and in the House of Representatives by W. STERLING COLE, of New York, both members of the Joint Committee on Atomic Energy, authorizing the Architect of the Capitol, under the direction of that committee, to make surveys and studies and prepare recommendations and reports, including preliminary plans and estimates of cost, for providing and utilizing atomic energy for lighting, heating, power, and air-conditioning refrigeration for the Capitol Building and Grounds; Senate and House Office Buildings; Capitol Power Plant; Supreme Court Building; Congressional Library Buildings; Botanic Garden; Legislative Garage; Government Printing Office; Washington City Post Office; and the Folger Shakespeare Library (all of which are connected with the Capitol Power Plant, which produces air-conditioning refrigeration and steam for heating and other purposes, and from 1910 to 1951 also generated electrical energy for light and power); the additional Senate Office Building now under construction; the additional House Office Building and related improvements authorized by Congress last year and now in the planning stage; the Extension of the Capitol and related improvements also authorized by Congress last year and now under study; and for any new construction and improvements which can be reasonably anticipated and for which lighting, heating, power, or air-conditioning refrigeration services may reasonably be expected to be supplied from the same source as the Capitol group of buildings.

Under the provisions of the proposed legislation, the Architect of the Capitol, under the direction of the Joint Committee on Atomic Energy, is authorized to engage such professional engineering services as may be necessary for making the surveys, studies, recommendations, and reports authorized.

The proposed legislation also provides that the surveys, studies, recommendations, and reports shall develop full information concerning the feasibility of providing and utilizing atomic energy for the purposes proposed, and shall also develop full information concerning the safe, practical, adequate, and appropriate means and facilities for accomplishing such purposes.

The proposed legislation further provides that, upon completion of the surveys, studies, recommendations, and reports, the joint committee shall submit to the Senate and the House of Representatives a report thereon, together with such recommendations as the committee may deem advisable.

Greatest Engineering Blunder in Our History

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. HOSMER. Mr. Speaker, gigantic Glen Canyon Dam, $421 million main unit of the proposed upper Colorado River project, could become the greatest engineering blunder in our history, because water for the project might pour into two enormous subterranean sievelike basins, instead of flowing through the dam to make hydroelectric power.

Alongside of the proposed Glen Canyon Dam and Reservoir are two underground basins of almost unbelievable size. Once the 700-foot-high dam was built across the Colorado River, the flow of water could back up and pour into these immense sieves.

One of these great subbasements of the earth is known as the Kaiparowits Basin. It would hold at least 250 million acre-feet of water. The other is the Henry Mountains Basin, and it would hold 100 million acre-feet of river water. An acre-foot of water is enough water to cover one acre of ground a foot deep.

That is 350 million acre-feet of water, or at least 26 years' flow of the whole Colorado River at this point.

If adequate power cannot be produced by the dam to pay its cost, it hardly seems reasonable to build it and force this great new loss on the taxpayers of the Nation.

Scientific data in my hands make it doubtful that Glen Canyon Reservoir could be filled in our lifetime, and doubtful as well that adequate power could be produced by the dam. I am appending at the conclusion of my remarks the full text of a memorandum to me by geologist Harold W. Hoots, Ph. D., on this subject.

This matter demands an exhaustive investigation by independent geologists and engineers who have no personal interest in the project, as do those employed by the Bureau of Reclamation whose employment depends on authorization of more projects by Congress.

The Kaiparowits and Henry Mountains Basins can hold enough water to cover the District of Columbia to a depth of 8,000 feet.

That is enough water to serve the people of New York City for 98,000 days, or 268 years.

Here, based on sound geological reports, we have the frightening spectacle of the whole Colorado River flowing for years into gigantic underground sponges.

The great dam that is proposed here could well stand as a towering monument to engineering folly and a memorial to the wanton waste of all these millions. It could become history's most colossal white elephant.

These endless cellars are immediately adjacent to the reservoir site and plunge as far as 2,000 feet in depth. There are miles and miles of rock of great porosity through which the river water would flow away, to be forever lost to use in the cavernous depths of the earth.

This rock is marked by enormous cracks and fissures which I have observed myself as late as last December. Water backed up behind Glen Canyon Dam could have free flowing passage into them and into the great basin through them. Undoubtedly many of these cracks and fissures occurred during the gigantic geologic earth movements that created these tremendous downwarps.

Such a loss would be a major tragedy. In addition to the great money loss to all taxpayers, the entire economy of most of the West would be irreparably damaged. This in turn would affect the welfare of the entire Nation.

Last December, in the company of Geologists Harold W. Hoots, Ph. D., and Peter H. Gardett, I made an examination of the Glen Canyon Dam and Res-

ervoir area in northern Arizona and southern Utah. The country contains no roads, and the trip was made by helicopter. Samples of Navaho sandstone and Chinle shale rocks were brought out from the reservoir site.

A portion of Dr. Hoots' memorandum states as follows:

The Navaho sandstone clearly is sufficiently porous and permeable to contain large quantities of water, and to permit movement of this water from the proposed reservoir into and through the sandstone walls to areas of lower hydrostatic pressure.

I wish to emphasize that the Bureau of Reclamation has reported favorably on the proposed upper Colorado River project and its chief unit, Glen Canyon Dam, without adequate information as to the practicability of the project, without proper engineering studies, and without determining the immensity of water losses that would occur.

In House Document No. 364 of the 83d Congress, the Bureau of Reclamation's explanation of the project, a startling admission is made as to water losses of an unexplained nature in the San Juan Basin. The reservoir's waters would extend 71 miles up the San Juan River which is crossed by the Henry Mountains downwarp. At page 180 the following is stated:

Unexplained losses of water have been reported also in the San Juan River Basin. The proposed study in the vicinity of the Navaho Reservoir is for the purpose of evaluating this loss, and determining the quantities that are lost by evaporation and transpiration.

In connection with these structural basins, House Document No. 364 adds on pages 180–181:

There is also the question whether the Kaiparowits and Henry Mountains structural basins contain significant amounts of unsaturated strata in positions where they might draw water from the Glen Canyon Reservoir.

Several wells drilled in the region for oil indicate that the regional water table is at great depth below the plateaus. In the Mexican Hat field along the San Juan River, small quantities of oil were encountered in a synclinal structure, an exceptional occurrence which has been explained as due to the lack of ground water in the area. Ground-water studies are proposed for the purpose of determining the position of the regional water table. There is also the question whether the Kaiparowits and Henry Mountains structural basins contain significant amounts of unsaturated strata in positions where they might draw water from the Glen Canyon Reservoir.

I most emphatically agree with Dr. Hoots and other eminent geologists and engineers that the Glen Canyon reservoir project has been proposed and recommended without benefit of a vast amount of information essential to a determination of the practicability and future success of this project. This is evident from statements made by the United States Geological Survey that much of this essential information is not available.

Orderly consideration of his project should come only after the Geological Survey has had an opportunity to complete the topographic and geologic mapping of the entire proposed reservoir area, investigate underground water conditions, soil and erosion hazards, and appraise and make available to all concerned the results of these studies.

On last Monday I told this body of the existence of large outcrops of Chinle shale in the proposed reservoir area that could be undermined by its waters, causing collapse of overlying massive rock formations and disaster to the power potential of the Glen Canyon power project and thus the entire financial structure of the proposed upper Colorado River storage project.

If the reservoir will never hold water, concerning which there is considerable doubt from what I have said today, the Chinle of course, will not have opportunity to disintegrate and fill the reservoir with its own residue and the overlying rocks.

In either eventuality, or with a combination of them, the net effect would still be to make the Glen Canyon project a complete failure.

Thus it would be folly to proceed to consideration of this legislation without a complete and thorough geological study of this area and the final and absolute determination of the questions I have raised.

My studies have been attacked and will be attacked by proponents of the project whose local interests are understandable. But these local interests should be subordinated to the general welfare of the Nation, its taxpayers, and its fiscal integrity.

If I am wrong in this geological analysis, if the respected and distinguished geologists who agree with me is wrong, then let the facts be collected through studies that are yet to be made. But let not this Congress embark upon a program which learned and distinguished opinion warns may be one of tremendous folly and disastrous financial consequence. I reiterate, no further legislative steps should be taken with regard to this project until full, complete and thorough geologic studies and analyses have been made of the Glen Canyon Reservoir site.

I say this despite the fact that under date of February 2 the Department of the Interior finally wrote an answer to my inquiries dated January 3 with respect to these basins and other geologic questions regarding the Glen Canyon site. It is interesting to note that this February 2 letter did not reach my office until February 4, whereas another February 2 letter from the Department to me appeared on that date in the CONGRESSIONAL RECORD proceedings of the other body.

In 1950 when House Document No. 364 was prepared Interior geologists concluded:

Several wells drilled in the region for oil indicate that the regional water table is a great depth below the plateaus.

In 1956, now that the geologic feasibility of the plan is under scrutiny and the Bureau of Reclamation is hot to perpetuate its massive bureaucracy by having Congress authorize new projects, any new projects, they say, through the Department's letter:

All evidences from existing oil and water wells and observation of springs and seeps within the basin show a normal tributary water table with no significant volume of unsaturated strata.

Comparing the two quotations one wonders indeed how such contrary conclusions can be reached if in truth and in fact the Bureau of Reclamation is producing unbiased and uncolored scientific opinion rather than self-serving statements toward its goal of self-preservation at the taxpayers expense.

It also should be a matter for those interested in evaluating these conflicting Bureau opinions to know that the so-called water wells on which the Bureau is placing substantial reliance for its 1956 opinion are little more than scratches on the surface which could be expected under any conditions to yield some recently captured rainfall. This is the footnote in the Bureau's letter describing two wells on the northeast side of the Kaiparowits Basin on which the Bureau's learned 1956 opinion is based:

Utah State Engineer Application No. 8288 located T.40S, R5E. (unsurveyed) Depth-water 5' yield 2g/PM–Utah; State Engineer Application No. 8289 located T.41S., R5E. Unsurveyed. Water in standstone at 5' yield 2g/PM.

I submit that 2 scratches on the surface, only 5 feet deep, yielding the meagre amount of 2 gallons of water per minute can hardly substantiate the Bureau's conclusion. Turn on the tap in any kitchen sink and you will get out a lot more than 2 gallons of water in a minute.

I repeat once again, no further legislative steps should be taken with regard to this project until full, complete, and thorough geologic studies and analyses have been made of the Glen Canyon Reservoir site, preferably by geologists other than those in the employ of the Bureau of Reclamation.

So that there may be no question or doubt with resepct to the Hoots' memorandum, I am setting it forth in its entirety, except for the illustrations which cannot be reproduced in this RECORD:

MEMORANDUM ON GEOLOGICAL ASPECTS OF THE PROPOSED GLEN CANYON DAM SITE AND RESERVOIR AREA IN NORTHERN ARIZONA AND SOUTHEASTERN UTAH

(By Harold W. Hoots)

The writer was requested by Hon. CRAIG HOSMER to undertake a geological investigation of the proposed Glen Canyon Dam site at Mile 15 on the Colorado River in northern Arizona, and the proposed reservoir area located principally in southeastern Utah and extending 186 river miles up the Colorado River from Mile 15, and 71 miles up the San Juan River.

PURPOSE OF THIS INVESTIGATION

The purpose of this investigation was threefold, namely:

1. To inspect in the field critical geological aspects of the proposed Glen Canyon Dam site and reservoir area, and to collect rock samples considered essential to this investigation;

2. To review:

(a) existing conclusions and recommendations pertaining to the proposed dam site; and

(b) published geological data pertinent to the proposed dam site and reservoir area, for the purpose of appraising the adequacy of geological investigations that preceded the recommendation of this construction project; and

3. To ascertain from tests by qualified engineering laboratories certain critical physical properties of rocks exposed at the proposed Glen Canyon Dam site and in the reservoir area.

PROCEDURE

Fieldwork

The geological investigation and collection of rock samples in the field was done by Harold W. Hoots and Peter H. Gardett, consulting geologists, December 12–14, 1955. Transportation by helicopter made it possible not only to inspect the geology of the proposed Glen Canyon Dam site and reservoir area from the air, but also to land at strategic localities for the examination of rock outcrops and the collection of rock samples along both the Colorado River and the San Juan River.

Several hundred pounds of rock samples were collected, flown out by helicopter, and shipped for laboratory determination of certain physical properties of the Navaho sandstone and the Chinle shale. Samples of water from the Colorado River and the San Juan River also were collected for use in conducting laboratory tests on rock samples under conditions that would approach actual field conditions within the proposed reservoir area.

Photographs were taken to illustrate the erosional characteristics of rock formations critical to the proposed reservoir area, and to emphasize the difficulty and tremendous expense involved in constructing a dam that would adequately protect Rainbow Bridge from destruction by the proposed reservoir.

Laboratory tests of rock samples

The more important of the laboratory tests were directed toward:

1. Determination of the permeability and porosity of the Navaho sandstone which forms the walls of the canyon of the Colorado River at the proposed Glen Canyon Dam site and along most of the 186 river miles of the proposed reservoir area.

These tests were made with water from the Colorado and San Juan Rivers, and were designed to duplicate, insofar as possible, conditions that would exist within the proposed reservoir. Their purpose was to determine:

(a) the ability of this Navaho sandstone to absorb water from the reservoir;

(b) the capacity of the pore-spaces within a unit volume of this sandstone;

(c) The total quantity of reservoir water that could be lost by leakage through the sandstone walls of the proposed reservoir, and thence by natural gravity drainage into the large structural basins known to extend from the Colorado River for many miles to the north;

(d) The magnitude of the leakage that might occur around the abutments of the proposed Glen Canyon Dam at mile 14; and

(e) Whether Rainbow Bridge National Monument can be protected from flooding by a dam built in this sandstone.

2. Determination of the physical characteristics of the Chinle shale which outcrops, and would be covered by water, along 50 river miles of the proposed reservoir area.

The purpose of these tests was to determine the ability of the Chinle shale to maintain its position and physical strengthen when saturated with water, and, under these conditions, to support the load of several hundred feet of overlying cliff-forming Wingate and Navaho sandstone, and to thus prevent the ultimate loss of much of the calculated capacity of the proposed reservoir.

Office studies and preparation of this memorandum

Critical review of available information bearing directly on investigations of, and recommendations made for, the proposed Glen Canyon Dam and reservoir was essential to this investigation and the preparation of this memorandum. Particular attention has been devoted to:

1. Published and mimeographed reports by the United States Bureau of Reclamation and the United States Geological Survey on the geology and ground water of the area containing the proposed Glen Canyon Dam and reservoir area;

2. To the adequacy of the investigations made by the Bureau of Reclamation of the physical character of the Navaho sandstone at the proposed Glen Canyon Dam site, and to the extent that the Chinle shale in the reservoir area will increase sedimentation and reduce the storage capacity and usefulness of the reservoir; and

3. The problems and expense involved in the construction of a dam designed to protect the Rainbow Bridge, and the uncertainty that such a dam would actually provide this protection.

FINDINGS

The Navaho sandstone

The canyon of the Colorado River at the proposed Glen Canyon Dam site and along most of the 186 river miles of the proposed reservoir is composed entirely of Navaho sandstone. This sandstone, as it occurs in this region, is described by Dr. Herbert E. Gregory and Dr. Raymond C. Moore[1] as follows:

"The Navaho sandstone is essentially an aggregate of white, crystal-clear quartz grains, loosely held together with cement. In general the cement is weak. Even where iron oxide forms the bond it is not easy to obtain a well-trimmed hand specimen, and much of the rock exposed at the surface is so friable that it crushes under the foot, and a single blow of the hammer may reduce a block of sandstone to a mass of dust. Blasting this rock with powder presents special difficulties."

J. W. Harshbarger, C. A. Repenning, and J. T. Callahan[2] of the United States Geological Survey, make the following statement regarding the Navaho standstone:

"One striking feature of this sandstone is its great permeability and capacity to absorb, immediately, a substantial portion of the light precipitation. Evidence of this rapid absorption is the extremely small amount of runoff from the area of outcrop. Undoubtedly, the Navaho sandstone transmits water more freely than any other water bearer in the region."

Laboratory tests of porosity and permeability

Samples of Navaho sandstone collected from the lower part of the canyon wall at the site of the proposed Glen Canyon dam were determined to have a porosity varying from 24.3 to 25.5 percent, and an average porosity of 25 percent. One acre-foot of this sandstone thus has sufficient porosity to contain one-fourth of 1 acre-foot of water.

The permeabilities of these samples of Navaho sandstone to air were found to be uniformly high, to vary from 4,920 to 5,180 millidarcys, and to average 5,060 millidarcys. Their permeabilities to Colorado River water under normal vertical hydrostatic gradient for 100 hours averaged, at the end of this 100 hour period, 1,330 millidarcys. Permeabilities of this magnitude permit comparatively rapid movement of water into and through the Navaho sandstone.

Significance of established porosity and permeability: The Navaho sandstone clearly is sufficiently porous and permeable to contain large quantities of water, and to permit movement of this water from the proposed reservoir into and through the sandstone walls to areas of lower hydrostatic pressure. Several such areas of lower pressure adjoin the proposed reservoir and are tabulated below.

1. The sandstone walls of the canyon adjacent to the proposed dam and the lower end of the proposed reservoir: Average permeability of this sandstone indicates that in excess of 15 million gallons of water may leak around the abutments of the proposed dam every day.

2. The Kaiparowits downwarp or structural basin: This geologic feature, one of the major structural basins of this region, extends from the lower part of the proposed reservoir northwestward for 70 miles. (See accompanying map of A. A. Baker, of United States Geological Survey.) It is a magnificent natural basin for containing water in volume many times that calculated for the proposed Glen Canyon Reservoir.

Access of water to this basin from the proposed reservoir is provided by porous and permeable Navaho sandstone walls along 50 river miles of the proposed reservoir immediately above the proposed dam. This basin covers over 1,700 square miles and has the capacity, within the Navaho sandstone alone, to hold an estimated 250 million acre-feet of water when the proposed Glen Canyon Reservoir is full. Since this capacity is about 10 times that calculated for storage in the proposed Glen Canyon Reservoir, it is essential to determine how much of this capacity is empty and is thus free to drain water from the proposed reservoir.

3. The Henry Mountains Basin: This geologic feature crosses the Colorado River about 45 river miles above the mouth of the San Juan River. It is similar to the Kaiparowits Basin in its geologic character and ability to drain water from the proposed reservoir. It has ready access to the reservoir through permeable Navaho sandstone walls along many river miles of the proposed reservoir, and it has the capacity, within the Navaho sandstone alone, to hold an estimated 100 million acre-feet of water when the proposed Glen Canyon Reservoir is full. It is essential to determine how much of this capacity is empty and is thus free to drain water from the proposed reservoir.

4. The Rainbow Bridge National Monument: This area, it is proposed, is to be protected from flooding by a dam built in the porous and permeable Navaho sandstone, but regardless of the cost expended this low area will be subject to flooding by seepage of water from the proposed reservoir through the Navaho sandstone.

The Chinle shale

The Chinle shale is exposed along the canyon walls of the Colorado and San Juan Rivers for an aggregate distance of about 50 river miles within the proposed reservoir area. Its importance to the proposed reservoir area lies in the fact that it immediately underlies the canyon-forming Wingate and Navaho sandstones and, in areas of exposure of this shale, provides the only foundation support for these overlying cliff-forming rocks.

The Chinle shale is a fine-textured bentonitic type rock that varies in color from gray to blue, red, and purple. When exposed to the elements it has little resistance to erosion, and when brought in contact with water it expands and rapidly disintegrates to a shapeless mass of mud.

If brought in continuous contact with water from the proposed reservoir this Chinle shale, which now is partially protected in canyon walls above the river level, would immediately disintegrate and flow down slope into the reservoir. More importantly, it would undermine and cause collapse of all overlying cliff-forming rocks in extensive areas bordering the proposed reservoir. All of the broken debris resulting from this collapse would move down slope and would partially or completely fill the proposed res-

[1] The Kaiparowits Region, U. S. Geological Survey Professional Paper 164, pp. 65 and 66, 1931.

ervoir in these extensive areas of Chinle outcrop.

Field and laboratory investigations of the character, distribution, thickness, and geological relations of the Chinle shale strongly indicate that this formation, if brought in contact with water in the proposed reservoir, would contribute materially to rapid diminution of the capacity and usefulness of the reservoir for water storage.

The Chinle shale is not thin. According to H. D. Miser[2] this formation has a thickness of 800 to 1,000 feet in the drainage area of the San Juan River. Its thickness in at least some of the critical areas of exposure along the nearby Colorado River appears to be similar.

LACK OF ADEQUATE INFORMATION

It is essential that the expenditure of money required for the proposed Glen Canyon Dam project be supported and justified by adequate data, and expert appraisal and interpretation of these data. Published statements by the United States Geological Survey emphasize the fact that a vast quantity of data essential to a technical evaluation of the soundness of this project has not been obtained.

The following quotations of statements by the United States Geological Survey are taken from pages 178–182 of House Document No. 364, 83d Congress, 2d session, entitled "Colorado Storage Project."

Page 178, second paragraph:

"Although much information on water resources of the upper Colorado River Basin already has been collected, available records fall far short of presenting the complete understanding of water resources which will be needed for purposes of the storage plan outlined in this report, and for full utilization of the waters allocated to the respective States under the terms of the upper Colorado River Basin compact. Detailed geologic maps and data for the upper Colorado River Basin are inadequate, and in large areas they are entirely lacking. The topographic mapping essential for inventory of both water resources and mineral resources is likewise far from adequate. Only 11 percent of the basin is adequately mapped, and mapping is in progress in an additional 2 percent of the area."

Special Erosion and Sedimentation Studies (p. 179, first and second paragraphs):

"The Colorado River has always been outstanding in sediment transportation, and has been cited as a horrible example of land erosion and soil wastage by may writers. The sedimet has been a vexing problem in the preparation of the storage project. * * *

"Far more research is needed before reliable predictions can be made as to sedimentation in the future, and before evaluation can be made of proposed preventive measures. * * * A complete analysis of the problem will involve study also of meteorological aspects, as well as soils and vegetative cover—that is, coordination of effort among the Geological Survey, the Weather Bureau, and agencies of the Department of Agriculture."

Special Water-Loss Studies (p. 179, last paragraph):

"In the case of Glen Canyon, it has been estimated that evaporation losses would average about 63 inches annually, of which 54 inches would be chargeable to the basin. These estimates are based on very meager data as to evaporation from free water surfaces, and transfers of data from remote areas in the case of natural losses from the stream. Detailed investigations have not been made of evaporation from streams in the basin under varying conditions of turbulence, or of evapo-transpiration from riparian vegetation or from flood plains bordering the streams."

[2] The San Juan Canyon, U. S. Geological Survey Water Supply Paper 538, fig. 2, p. 34, 1924.

Glen Canyon Reservoir and vicinity, Arizona and Utah (p. 180, last paragraph, and p. 181, first and second paragraphs):

"Topographic mapping of more than 2,600 square miles has a high priority for the Glen Canyon project. Geologic mapping of a slightly smaller area along the Colorado and San Juan Rivers is proposed. The rocks cropping out in the reservoir area are predominantly sandstones, as shown by geologic reconnaissance. It is known that structural basins lie northwest of the reservoir site under the Kaiparowitz Plateau and also under the Henry Mountains. Groundwater studies are proposed for the purpose of determining the position of the regional water table. There is also the question whether the Kaiparowitz and Henry Mountains structural basins contain significant amounts of unsaturated strata in positions where they might draw water from the Glen Canyon Reservoir.

"Several wells drilled in the region for oil indicate that the regional water table is at great depth below the plateaus. In the Mexican Hat field along the San Juan River, small quantities of oil were encountered in a synclinal structure, an exceptional occurrence which has been explained as due to the lack of ground water in the area. Ground-water studies are proposed for the purpose of determining the position of the regional water table. There is also the question whether the Kaiparowitz and Henry Mountains structural basins contain significant amounts of unsaturated strata in positions where they might draw water from the Glen Canyon Reservoir. * * *

"The Glen Canyon Reservoir will extend upstream into Cataract Canyon, where gypsum and salt of the Paradox formation crop out near river level in several places. The possible effect of these rocks upon the quality of water in the reservoir should be investigated."

Classification of Federal Lands for Water Development (p. 182, first paragraph):

"The Geological Survey is responsible for classification of Federal lands as to their water-storage and waterpower values. These values are dependent in part upon the upper basin's ability to furnish water to the lower basin as required by compact, and dependent therefore upon the Colorado River storage project. Many of the streams in the basin are not adequately mapped, and geological investigations of possible dam sites must precede any classification as to their waterpower or water-storage value."

CONCLUSIONS

The Glen Canyon Reservoir project has been proposed and recommended without benefit of a vast amount of information essential to a determination of the practicability and future success of this project. It is evident from the above-quoted statements by the United States Geological Survey that much of this essential information is not available.

Orderly consideration of this project should come only after the Geological Survey has had an opportunity to complete the topographic and geologic mapping of the entire proposed reservoir area, investigate underground water conditions, soil and erosion hazards, and appraise and make available to all concerned the results of these studies.

Of particular importance is the determination of:

1. The magnitude and rapidity of water loss that can be expected from the proposed reservoir into the large Kaiparowitz and Henry Mountains basins;

2. The extent to which the disintegration of water-soaked Chinle shale and other similar formations will reduce the capacity and usefulness of the proposed reservoir; and

3. How the dam suggested for the protection of the Rainbow Bridge National Monument can be built in the impassable terrain surrounding this area, and how any dam, regardless of its construction, can protect this national monument from flooding.

HAROLD W. HOOTS,
Consulting Geologist.

Food Merchandising

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 6, 1956

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the annual banquet of the Marathon County Retail Food Dealers Association, at Wausau, Wis., on February 4, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES INTENSIFIED EVOLUTION OF FOOD MERCHANDISING—STATES OUTLOOK FOR AMERICA BRIGHT

I am indeed happy to address your annual banquet.

You—the independent businessmen of this fine association—are symbols of the hard-working, free-enterprise system which is the mainspring of economic progress in our Nation.

The more than 340,000 independent food dealers across the country are transacting over $22 billion worth of business yearly. This represents a tremendous contribution to our overall national income.

In Wisconsin alone, as you know, there are more than 7,000 independent dealers, contributing to the wealth and growth of our Badger State.

YOUR ROLES IN WISCONSIN COMMUNITIES

I personally am definitely interested in the wellbeing of your group as a whole and in ample opportunity for every single member of this audience.

I am interested in all this, because each of you here plays not only an important economic role in your community—a vital role in the American distribution system—but because all of you are, I know, significant contributors to the social, political, church, veterans, and fraternal life of your communities.

THE MAN BEHIND THE COUNTER

The man behind the food counter is one of the vital men behind America's great happiness and growth.

The man who stands in front of the cash register, checking out food purchaseed by our citizens, is a man who is helping to satisfy the changing needs of the American people.

THE REVOLUTION IN MERCHANDISING

I emphasize "changing needs," because this is an era of change. The whole food distribution system has been and is being revolutionized—peacefully—by ingenious, daring sales—conscious pioneers, constantly evolving new techniques.

Indeed, the principal theme that I will submit to you tonight is that the helpful economic revolution which has occurred in America—with 65 million jobs and a constantly rising economy and population—is going to continue at an ever accelerated pace.

And it is up to all of us to contribute to progress in this peaceful revolution. Why? Because it means greater happiness, a higher

standard of living for all of us, better nutrition, healthier minds and bodies.

It means too, an ever healthier retail food industry for our country.

THOUSANDS OF NEW PRODUCTS

I need hardly remind you, my friends, that a century ago, less than 100 food items were available in the average food store.

Today, independent food stores combine together an average of 4,000 separate food and grocery items; and in the case of larger stores, as many as 15,000 different items.

Each of those items represent new businesses that have been established in our country—new products which have been developed, new skills, as well as new types of packaging, bottling, displaying, advertising, and merchandising, as a whole. In other words, every single day we are satisfying more and more needs of the average man, and you are contributing to this process.

You yourself are constantly perfecting your store—its physical appearance, its layout, its inventory, its signs, its lighting. You are constantly streamlining operations, cutting costs wherever possible, increasing efficiency, adding to volume, diversifying brands.

You represent America at its best—changing for the better, growing, serving.

You of course, are far more familiar than I with the details of this revolution in food merchandising. The entire growth of the self-service store, the growth of the frozen food industry, the development, say, of detergents—the installation of automatic machines—"silent salesmen"—are but a few instances of how the genius of American free enterprise has responded to American needs.

BARGAINS THROUGH COMPETITION

Mrs. Average Housewife today wants more of her foods precut, prepackaged, yes, precooked. Mrs. Average Housewife today is, however, always looking for bargains, and the food dealer is giving her bargains.

I know of few, if any, industries in America where independent owners are providing every single day a better example—than your industry—of competition at work.

But what you want and what I want is healthy, fair competition.

The kind that produces the best product for the public's consumption.

The kind that delivers the product at a price the consumer can afford.

The kind that provides a living return—a living profit—for both the producer and the retail dealer, based on their heavy capital investment.

THE FIGHT AGAINST MONOPOLY

I need not tell you that the independent food dealers of this country have had to wage down through the years, a continuous campaign in their own self-protection.

A peak of that campaign's effectiveness was reached on June 19, 1936, when the Robinson-Patman Act became law. The passage of that act marked a landmark in the fight to assure fairness in American competition. The passage of the law served to prevent the big man—the big chain—from competing unfairly with the little man; served to prevent the big man from getting, for example, price rebates in direct or disguised form—rebates on the basis of which he could slash his prices and thereby destroy his competition.

FULLY SUPPORT ROBINSON-PATMAN LAW

Of course, the Robinson-Patman Act did not prohibit anyone from competing or from meeting fair competition. It did, however, soundly require that when a price cut is given to a big mass distributor, it must be offered on equal terms to merchants who are competing with him.

This is a sound objective. For this reason and for other good reasons, I have supported the Robinson-Patman Act in its letter and in its spirit, since the day I came to Washington.

I support it now. I am definitely opposed to any efforts which would nullify it, which would emasculate it. I am for strengthening it wherever and whenever it is indicated it must be strengthened.

I am for clearing up any ambiguities, however, any inconsistencies.

The Robinson-Patman Act is not, of course, the "last word" in American antitrust laws.

There are continuous problems of working out the complex and overlapping relationship between the Sherman Law (now more than 65 years old), the Clayton Act, and the Federal Trade Commission Act, (both over 41 years old) and the 19 year old Robinson-Patman Act.

There is a continuing problem in resolving some points of controversy in the letter and spirit of some of these acts.

One of my jobs in Washington is to make sure that all of these laws are, in practice, applied in a consistent manner which will best serve their most basic objectives, the objectives of 165 million Americans.

MY WORK ON MONOPOLY SUBCOMMITTEE

As you know, one of my important assignments in Washington, is to serve as senior Republican of the Senate Committee on the Judiciary. In turn, one of the important subcommittees of that group is its Subcommittee on Antitrust Laws and Monopoly.

I take my position on this subcommittee particularly seriously. We are dealing on that subcommittee, not only with enormous national problems, such as questions concerning the merger of large corporations, say, the proposed merger of Bethlehem Steel and Youngstown Steel—questions concerning competition in giant industries like automobiles; rather, we are dealing as well with the very lifeblood of the small retail food dealer and other small merchants of our country.

INTERIM REPORT BEING DRAFTED

Right now, we are in the process of writing an interim report of the subcommittee. It is not my purpose at the present time to attempt to anticipate our subcommittee findings. I may state, however, that in the interim report, it is our intention to suggest lines for further study—lines for additional hearings which should be held, e. g., as regards the respective jurisdictions of the Federal Trade Commission and the Department of Justice in antitrust matters.

As a Senator, serving in a quasi-judicial capacity, I don't want to attempt to prejudge any specific problem before those hearings are held.

But I do want to say this: I don't believe in antitrust laws remaining on the statute books as a dead letter.

I don't believe Congress wrote laws just for the "noble sound" or in order to have them clutter up the statute books.

If any law is not being applied, we must find out why it is not being applied. If it is obsolete in terms of the changing necessities of modern times, then it must be modernized.

Similarly, the law must be made clear. In many instances today, it is obviously very ambiguous—so ambiguous that the courts, in decision after decision, have condemned much of the language of our antitrust statutes as so fuzzy as to be inapplicable.

Of course, the language in statutes must, to a considerable extent, be kept general, because laws are designed to cover a vast number of situations.

Nevertheless, it is one thing to have broad language, which covers many instances; it is another thing to have cloudy, vague and unmeaningful language, which cannot possibly be applied in the Nation's courts.

FOSTERING SOUND ECONOMIC CLIMATE

But you and I know that the Retail Food Dealers of America are affected by more simply than antitrust laws.

You are affected by the general economic climate of our country. If our people have full confidence in America—if they believe that there are going to be more jobs tomorrow, rather than less; more purchasing power, rather than less; more opportunities, rather than less—then they are going to buy more of the good things of life from you and from other merchants.

It is our job, therefore, in Washintgon to help maintain confidence strong in America. It is our job in Washington to make sure that there is a continually favorable economic climate in our land.

TEN-POINT PROGRAM FOR PROGRESS

I want to suggest now several points in a program for assuring a favorable climate for our country:

1. We must pursue sound economic policies with the purpose of stimulating and encouraging growth and expansion in all fields of private enterprise.

There is one bill now before the Senate which would unfortunately do just the opposite. It is the Harris-Fulbright bill, which would gouge 400,000 Wisconsin consumers of natural gas. That is why I favor amending this bill, so as to protect home, store, and factory users of natural gas.

2. We must broaden our programs of developing skills and technology; this means training more people, more engineers and technicians, and expanding our scientific research.

3. We must increase and encourage the international flow of money and goods, for economic developments abroad are important to provide markets for our many products.

4. We must accelerate our atimic-energy development—for peacetime, as well as wartime uses. For example, we need atomic power to propel ships, run factories, generate electricity, and many other uses—medical and agricultural—known and yet undreamed of.

5. We must, of course, guard against attack from world communism.

Here in Wausau—a seemingly safe and distant place—we are dangerously close to enemy bases, as measured by time in the jet age. We may soon be less than 30 minutes away from possible guided-missile attack, and less than 6 hours away from jet bombers from Siberia. Consequently, we need a strong anti-Communist program. Our defense spending—about $40 billion a year—is necessarily geared to meet the Communist threat to our own and others' freedom.

6. We must increase our efforts to get the true story of the American way of life to the people of the world.

For this purpose, I am a cosponsor of a bill to make American participation in foreign trade fairs a permanent feature of our overall program to help bring the truth about America to the people abroad.

The trade fair is an opportunity to display our way of life—yes, our markets and our supermarkets—and our other technological advancements to foreign countries. It will help open new markets for our machines and our products, and it will create improved international relationships and understandings.

7. We must evolve stronger practices of conservation—that is, preserve our reservoir of strategic materials and conserve our water, soil, forests, and other natural resources.

8. We must embark on new, bold programs of internal development. For example, the St. Lawrence seaway, with deepened connecting channels, will, at completion, be a 2,300-mile deep-water artery of travel and trade into the heart of America, a tremendous asset to Wisconsin and to the Nation.

9. We must assure adequate purchasing power for the 10 percent of our population, which is aged 65 years or older. Yes, too many of our 14 million old folks can barely make ends meet these days. That is why

I have offered comprehensive old-age assistance legislation in the Senate to help them as regards jobs, housing, health, training, et cetera.

10. We must equip ourselves with a flexible economic policy to meet the needs of current, and future, situations. For instance, we need to provide relief for victims of flood disaster, drought, or other natural catastrophes. We need to take care of unemployment in isolated, depressed areas. We need to prevent unbalance in our economy, such as is now occurring in agriculture.

Of this, I shall have a bit more to say later on.

FULFILLING POSTAL SERVICE NEEDS

If time permitted. I would like to turn to in detail to certain other specific challenges which we face.

It may not be realized, for example, by the average man, but the food dealers of our country depend very heavily upon local newspaper advertising and direct mail advertising.

To strengthen our local papers, I have been urging steps to increase newsprint supply.

And, with reference to direct mail, I know that many of you use postal cards, as well as letter mail, to acquaint consumers with the latest food bargains.

I regard the fulfillment of postal service as one of the real pillars of the American free enterprise system, including our food distribution. I would oppose the false concept that the Post Office should not remain primarily a service institution.

The post office was created to serve America. We don't like postal deficits. But if we wanted to forget every other factor but profit and loss and run the post office strictly to get into the "black ink," then there are probably hundreds and even thousands of the 42,000 post offices in our country which might have to be closed. Such a thought would, of course, be utterly objectionable, and no thinking, fair-minded person seriously contemplates it. But some people do speak at times as if they wanted radically to change the post office and run it strictly for a profit, ignoring almost completely its essential service functions.

Instead, I say, the post office must serve you and serve your customers.

A sound retail food industry is a cornerstone of a sound America.

WE WANT A HEALTHY AGRICULTURE

I know that you will agree with me, too, that all of us want a healthy agricultural segment of our population. We want the farmer to earn his cost of production, plus a reasonable profit.

The retail grocer, selling, say, dairy products, does not want to profit at the expense of the dairy farmer. Nor does the thinking consumer.

At the same time, the farmer is glad to turn out ever higher quality food, and at a fair price for the distributor to move, for the trucker to deliver, for the food dealer to sell, and for the consumer to buy. There is no inconsistency in seeking fair play and a fair price for all.

Naturally, representing as I do America's dairyland, it is my hope that our food dealers will continue to sell an ever increasing proportion of dairy items—more nutritious fluid milk, more cheese, more butter, more nonfat dry milk solids, more ice cream. And attractive displays of dairy products on food counters, on shelves, and in food freezers are, of course, a most important element in increasing dairy item consumption.

I wish that time might have permitted me to comment in further detail on other phases of interest to you.

It has, however, been a pleasure to review, if only briefly, these few important matters.

I hope that when I return to Washington, you will continue to give me the benefit of your judgment, and let me know how I can be of service.

Integration

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1956

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Integration Exhibit No. 1," which appeared in the Richmond Times-Dispatch on Sunday, February 5, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTEGRATION EXHIBIT NO. 1

As a showcase for integration, District of Columbia schools do not display anything worth the ruinous prices asked.

The most damaging item in the exhibit is the drop in academic standards resulting from putting Negro and white pupils in the same classroom. The adverse effect on white students is incalculable.

In 1 of his 4 articles on the Washington school situation in this paper last week, Reporter Larry Weekley wrote:

"A fearful anticipation—that of wide intellectual and cultural differences between white and Negroes—has become a startling reality. The public's clearest idea of what this problem is came after a study of the results of citywide achievement tests given a year ago. * * *

"The results showed briefly:

"That one-fourth of the ninth-graders were reading on or below the level of the sixth-graders, and that 43 percent of the ninth-graders were doing arithmetic on or below the level of sixth-graders.

"There is no accurate statistical information on how many of these retarded children were Negroes, since authorities also have desegregated statistics. But there is no doubt in anybody's mind that at least 90 percent of the retarded children were Negro. One principal estimated that 99 percent of the retarded children in his former white school were Negro."

The United States Supreme Court has said that children of the minority group are deprived of equal educational opportunities when there is segregation solely on the basis of race.

Citing that ruling and referring to the Washington school situation, David Lawrence declared in his nationally syndicated column Thursday:

"The question now will be asked whether the children of the majority group are not being deprived of educational opportunities because of the achievement lag of children in the minority group who are put in the same schools with them."

Faced with a deteriorating academic situation, District of Columbia officials are calling for more money to operate the schools. Southern School News reports that District of Columbia school officials "have indicated to the [District] Commissioners during budget discussions that integration required more teachers and smaller classes, and that it would not save money."

Apologists for integration explain away the decline in academic standards in Washington by saying that the former all-Negro schools were inferior ones and that thus Negro pupils were not able to receive the quality of education given the whites.

Even if this were the right explanation, and there is no proof that it is, it still would not make sense to throw the Negro and white pupils together and thus compound the educational problem. The aim should be, instead, to improve the Negro schools, and this was being done in Virginia long before the 1954 Supreme Court decision.

Mr. Weekley's study of the Washington situation revealed other facts:

Integration has brought an end to or drastic curtailment of some types of extracurricular activities—social affairs and dramatic performances, for example.

Many white families apparently are fleeing to suburban areas outside of Washington to escape integration.

Tardiness, playing hookey, laziness, personal uncleanliness have increased markedly in some former all-white schools which are now integrated.

In considering those findings, it is important to remember that the climate of public opinion in Washington is far more favorable to integration than in most places farther South.

If integration has given rise to these problems in Washington, how much more serious would these and other problems be if schools were integrated in, say, southside Virginia, where whites are almost solidly opposed to integration, and determined to resist it by every lawful means?

Pandora's box is an overworked descriptive symbol, but what else could so aptly illustrate the multiplicity of difficulties that would be turned loose upon the South if coercive integration became a reality? Southerners will study every conceivable legal means to bypass the Supreme Court's ruling. In the meantime they will sit on the lid.

The Hughes Case

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of February 4, 1956:

THE HUGHES CASE

The trial of Paul H. Hughes now is over and comment by this newspaper is appropriate. Hughes came to members of our staff with stories of improper conduct by Senator JOSEPH MCCARTHY. When these charges did not seem sufficiently serious to the editors to warrant publication, he returned with more serious allegations. They were so serious, in fact, that the editors alerted the Department of Justice to the possible of an imminent criminal act.

The charges against the Senator, on careful investigation, turned out to be false. Not a line of the story was ever set in type. Not a word of it was printed.

Hughes then falsely told a New York grand jury that his conversations with staff members also had concerned Harvey Matusow's recantation. The grand jury, after hearings extending over weeks, decided that he had committed perjury in making these statements, and indicted him on several counts. The jury which heard this case dismissed two charges and disagreed on the others.

The staff members who interviewed Hughes on his MCCARTHY story behaved as careful reporters ought to behave in checking allegations against public officials. Much time was

spent on this story. The time it takes to prove a story false is as well spent as the time it takes to prove a story true. Newspapers ought always to be credulous in listening to charges and skeptical before printing them.

This sort of credulity in the past produced the Teapot Dome story. Investigations by this newspaper led to the reform of the Washington Police Department and helped launch the Kefauver inquiry into organized crime. By the same token, the Hughes story is not the only story that our skepticism has kept out of print. Both qualities—credulity and skepticism—will, we trust, continue to be found in our staff.

We hope we never may be as incredulous of charges as the Ottawa Journal was when Igor Gouzenko vainly tried to tell it about Soviet espionage in North America. We hope we may never be so lacking in skepticism and responsibility as to print untrue charges, however expensive may be the inquiry required to prove them untrue, and whatever the reprisal of disappointed informers.

The Government's Investment in Surplus Grain and Fiber

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 6, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news letter issued by Representative USHER L. BURDICK, Member of Congress from the State of North Dakota. The letter is in regard to "The $8 billion invested by the Government in surplus grain and fiber."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

YOUR CONGRESSMAN COMMENTS

(By USHER L. BURDICK, of North Dakota)

THE $8 BILLION INVESTED BY THE GOVERNMENT IN SURPLUS GRAIN AND FIBER

WASHINGTON, D. C.—Those who are opposed to giving the farmer a near parity of price for his products compared to the price he has to pay out get right out and screech so they can be heard for four blocks, "Look what we have lost in supporting price of wheat! Look at the overpowering surplus! We can't stand such huge losses."

If these town criers, and that means administrators here, and everybody down to the line, would stop for a moment and compose themselves, here is what they would find:

The Government has not lost $8 billion or any major portion of it. We still have the grain and fiber, and it could be liquidated, in a pinch, and the loss would be reduced 82 percent. The amount of subsidies in this farm classification is a tiny part of the subsidies that are annually granted to others.

The last available figures on the sale of alcoholic liquors is illuminating. In 1953 the people of the United States spent over $10 billion for liquor—and what good has it done? That liquor is gone and those that used it cannot prove they are better off for having used it, but on the contrary, the proof is abundant that its users are worse off after consuming all this liquor.

The per capita consumption of alcoholic liquors in the United States in 1953 was $62.42, but here at the seat of government the per capita consumption was $168.38. I presume that great consumption here is due to the fact that we follow the world customs, and every visiting delegation to the capital has to be warmed up before the conferences begin. And from some of the results of some of these conferences it is obvious that liquor played a more important role than brains.

This $10 billion is a dead loss, or worse, while those who use it seem to holler the loudest against an investment in food, in which at best there is only a slight loss. I think Bernard Baruch is on the right track when he advocates putting a large part of our surplus wheat aside as a protection to this country embroiled in a threat of war. He is, no doubt, a student of history and knows that no army has any hitting power unless backed by food. What happened to Napoleon when he invaded Russia? His army ran out of food, and years later after the retreat of his army from Russia its course could be seen by the bleached bones of the French soldiers. What happened to the German armies in World Wars I and II? They ran out of food, not guns. The German people could not back up the armies because they were foodless at home.

What does the Army do with its surplus planes, guns and munitions? They are charged up to loss, and these losses run to many times the billions we have invested in food. What do the farm machine companies and the automobile companies do with their surplus machinery and cars? They sell them for what they can get in some other country, and keep up their manufacturing business. But if the farmer plants 2 acres of wheat more than his allotment he is haled into court and fined because he has contributed to this awful surplus. All we hear here is surplus, surplus, surplus. It is a good thing—but these criers don't know what a valuable thing surplus food is.

It is time for these objectors to take an invoice of themselves, and if they did they would learn how wrong they are. What would you rather have? Eight billion dollars invested in obsolete engines of war or $8 billion invested in food, especially since the investment in food is not a loss, while in obsolete guns it is.

Atoms and Public Policy

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Monday, February 6, 1956

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times of February 2, 1956. The editorial concerns the recent report of the Panel on the Impact of the Peaceful Uses of Atomic Energy to the Joint Committee on Atomic Energy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ATOMS AND PUBLIC POLICY

The report to the Joint Committee on Atomic Energy of the Panel on the Impact of the Peaceful Uses of Atomic Energy must be regarded as one of the most important public documents issued in recent years. It reviews what has been done thus far with atomic energy in power production and in advancing medicine, agriculture, and industry; it examines and in general approves the policy which has been laid down by Congress in the Atomic Energy Act; it recommends modifications which would do away with unnecessary secrecy; it praises the Atomic Energy Commission for the manner in which it has performed the difficult task of meeting both military and civilian needs.

To prepare the report 15 seminar or discussion groups were convened, some 50 special studies prepared, and 327 authorities consulted. What we have, then, is a cross section of the best available opinion on the present state of atomic knowledge, so far as it can be applied in industry and for general practical purposes, the kind of cross section that a businessman, an investor or, for that matter, the general public needs to judge what lies before us in 1975, by which time, it is generally agreed, atomic power will play a conspicuous part in our daily lives.

There are many questions that demand answers. When will we have atomic powerplants? What will happen when radioisotopes play their part in increasing the output of crops at a time when we are perplexed by the problem presented by farm surpluses? What part can private enterprise play in developing atomic energy for civilian purposes? Scores of such questions arise. There is no attempt at evading answers in meaningless generalities. The report makes positive, constructive recommendations.

In the first place, there is the Atomic Energy Act. Though the doctrine on which it is based is accepted, the need of a revision that goes beyond the liberalization of 1954 is recognized. Until the fear of another world war is dispelled we cannot afford to weaken the military safeguard essential to the preservation of national security. However, access to information that designers of atomic power plants must have is difficult to obtain, which suggests that all reactor technology should be freely published. These and similar reommendations have been made before by scientists and engineers. They gain new strength by their repetition in this important official document. Secrecy in the industrial field is an obstacle to the development of atomic energy for peaceful purposes, and the report emphasizes the fact.

The panel insists that free enterprise must be permitted to play its part in the development of atomic energy, a policy that Rear Admiral Strauss, ever since he became chairman of the Atomic Energy Commission has been trying to carry into effect within the limits imposed by the Atomic Energy Act. We cannot expect the Government to build all the atomically driven ships, locomotives, and central stations of the future or carry on or pay for all the research still required to make the most of atomic energy or forever to monopolize the ownership of all nuclear materials. The case for the proper participation of private industry and science in developing the peaceful atom has never been more convincingly put. Equally important is the technical assistance that we are to give to backward regions under the Eisenhower program for the improvement of their economic condition through the application of atomic energy and raising their deplorably low standard of living.

The humanitarian potentialities and the social implications of atomic energy in all its forms have never been fully appraised. Nor can they be appraised for lack of knowledge. Hence this report must be regarded as only the first of a series of similar reports to come. We need this appraisal and reappraisal of our atomic condition because of the tempo of research and because the impossibility of today becomes the possibility of tomorrow. Besides, we need time. We have about 20 years to prepare ourselves for a new order—time enough. Though the report considers possible disruptions in some industries when atomic power becomes cheap enough—coal mining is one such industry—it believes that they can be antipicated.

Taken as a whole, the report lays down the policies that ought to be followed in developing the peaceful atom. This means

above all a reconsideration of the Atomic Energy Act. It is the conviction of the panel that unless public opinion is thus expressed and heeded we shall find it difficult to maintain our acknowledged leadership in the exploitation of atomic energy.

Blaming Benson Won't Help

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith insert an editorial which appeared in the Des Moines Sunday Register:

BLAMING BENSON WON'T HELP

Discontent always leads to a search for villains. The sag in prices of farm products has brought forth something of an uproar from farm people, quite understandably, especially since incomes of nonfarm people are continuing to rise, and the "villain" is Agriculture Secretary Ezra Taft Benson.

The recent series of articles by Clark Mollenhoff in The Register, reporting on attitudes of Iowans about the farm situation, brings this out pointedly. Secretary Benson is the target of abuse, the personal villain. The so-called flexible price support policy, which Mr. Benson advocates so determinedly, has become the subject of ridicule and blame.

It isn't that simple.

Secretary Benson has made some serious mistakes, to be sure. He has counted too heavily on the "automatic" adjustments of the market to correct farm surpluses and low prices. He gives the impression that he simply does not understand the position of agriculture in a booming industrial economy, dominated by administrative decisions made in business, labor, and Government. He talks and acts as though this was the halcyon period of growth in the 1900–14 period. He gives farmers the feeling that he wants to abandon Government action in agriculture as quickly as possible.

Still, Secretary Benson did not cause the decline in farm prices and incomes. Most of the decline occurred before the change in price support policy took effect. And Congress passed the law which permitted lowering price supports for basic crops.

Dislike for Mr. Benson has blinded many people, including Congressmen, to the bankruptcy of the Nation's agricultural policy prior to his taking office. The fixed 90-percent-of-parity price supports were creating unusable surpluses of wheat and cotton. They were forcing lower and lower acreage allotments. They were hampering exports and interfering with the basic national policy of freer international trade. They were shifting the surplus to the feed-livestock sector of farming.

The chief criticism which reasonably could be made of the new flexible price support law is that it is not flexible enough. Prices of cotton and wheat are still too high. The chief criticism of Secretary Benson and Congress which reasonably could be made is that they have not explored other methods for bringing about adjustment and maintaining farm incomes.

Making Mr. Benson a villain will not solve anything.

Making flexible price supports the tool of disaster will not solve anything. Making rigid price supports the tool of prosperity will not solve anything.

The present emotionalism might easily lead just to a return to 90 percent guaranties. What would that accomplish? It would leave the real maladjustments untouched.

Agricultural leaders and Congressmen need to center their attention on the problem of too many people in farming.

They need to think creatively of ways to get farm resources out of wheat and cotton.

They need to think creatively of ways to use an increasing supply of meat, milk, eggs, poultry, vegetables and fruit to improve American diets.

They need to think creatively about ways to use America's great agricultural producing power to lift living conditions in other lands.

Yes, and they need to think about ways of modifying the free market system to bring about more stability in production of farm products, and in incomes of farm people. No simple flexible or rigid price support program can possibly do the job.

Let's leave off berating Secretary Benson and flexible price supports and start applying reason and judgment to the farm problem.

General of the Armies

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared in the St. Louis Globe-Democrat of February 1, 1956:

GENERAL OF THE ARMIES

Several bills are pending before the Congress which would confer the rank of General of the Armies upon Gen. Douglas MacArthur. They should be passed swiftly and unanimously as a tribute to one of America's greatest heroes.

The contribution which General MacArthur has made to the people of the United States in three wars and in the years between is far too well known to need detail. The youngest general officer in World War I, the Chief of Staff in the dark days of the depression, as the commander of our armies in the gallant defense of Bataan and Corregidor and in all the victorious campaigns back from Melbourne through New Guinea and the Philippines to Japan, he established a military record which almost unquestionably will never again be equaled in the annals of warfare.

As the representative of the free world in Japan, Gen. MacArthur did a job which can be characterized simply as unbelievably good. He did more in the space of a few years to advance Western prestige in the Orient than most people felt could be accomplished in a matter of centuries. His civilian administration will stand forever as a monument to the entire white race.

In Korea, he fought a superb war with pitifully few men and equipment to face the hordes opposing him. When the Truman administration, for reasons which unquestionably seemed proper to them at the time, forbade final victory, General MacArthur was recalled.

History must pass final assessment on this most unfortunate chapter, but as of this moment there seems little doubt that the entire cause of world peace would be farther advanced had General MacArthur's advice been heeded.

Of course he has been a controversial figure. Any great man is. General MacArthur, in the course of a supremely busy lifetime, has made mistakes which he would be the first to admit. None of these reasons, however, should be allowed to stand in the way of confering a most merited award by a grateful people on this superb soldier.

Only General John J. Pershing now has the title of General of the Armies. With no disrespect to General Pershing's fame, it is utterly impossible to compare the two. By the standards of the war in the Pacific, the First World War in terms of American participation was very minor indeed.

General MacArthur celebrated his 76th birthday last week. While he is in excellent health and has every reason to expect many years of the happiness and contentment he so richly earned, the Congress should not delay this most deserved honor.

There are few ways that America can further show its honor to a son who has received virtually every tribute to which any man may aspire. It is only because General MacArthur's contributions have been so unique and so vast and so completely irrepayable that this most merited tribute should be bestowed upon him by Congress in the name of the whole American people.

Remarks of Hon. Andrew F. Schoeppel, of Kansas, Before the Kansas Republican Veterans, Topeka, Kans., January 28, 1956

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. SMITH of Kansas. Mr. Speaker, on January 28 Senator ANDREW SCHOEPPEL, senior Senator from Kansas, delivered an address to the Kansas Republican Veterans. I believe this address to be most timely in view of the fact that veterans are indicating more and more interest in their Government. I commend this address.

Thank you for your kind invitation to be with you at this gathering. I appreciate it very much.

I am glad that I could get away with others of my colleagues to be with you.

Everything in Washington at the moment is a bit hectic, and most pressing, and of course charged with a slight degree of politics, on the eve of a national election.

I am here as a Republican, at this Republican gathering where we can speak frankly in the interest of our party, and as the Commentator John Cameron Swayze would say, "glad we can get together!"

I am not here to poke my head in the clouds or to shout fine platitudes, or to look down on you from on high (from the Washington scene).

Rather, I prefer to be one of you—with you. I hope I have an honest understanding of how you and I feel about our political policies, philosophies, and approaches to fundamental principles which tie us to our party and the principles for which it stands.

I hope that I will not approach these matters as bluntly as a filling-station attendant did recently over in a fine town in Missouri, when a gentleman in a yellow Cadillac convertible drove up to his filling station, presumably for gas. The attendant looked it over, stuck his head in the car, and said,

"Hello, boob, what question did you flub on the $64 TV program?"

We cannot afford to flub the $64 questions and approaches that we have confronting us today—more especially because we are on the eve of a tremendously important national election.

I am sure we would not want to be like the man in a rowboat on the Potomac River the other day, when a friend of mine, driving to the airport in Washington, noticed the individual in a rowboat hollering at the top of his voice, "No, no, no."

My friend thought the man was in serious trouble and immediately upon arriving at the airport contacted a policeman and told him what he had seen and heard, and suggested the policeman go out and care for him, as he appeared to be in trouble.

The officer studied a moment, and then hesitantly said, "Don't worry about that; that's a 'yes' man from the White House staff on vacation."

My Republican comrades, across this great Nation of ours a few nights ago there were gatherings of men and women by the tens of thousands, paying honor and respect to the President of the United States—a Republican President of the United States.

True, it is they who paid $100 or less for a plate or a box lunch.

True, it is and was that by that account they each contributed financial aid to our party and its organization throughout this land.

But, beyond that, something of greater import was manifested.

First, they respected and honored the man who as President of these United States had fought his way back from the near tragedy of a severe heart attack, with a will to carry on his responsibilities—and we all wish him a speedy and complete recovery.

Then they met to express and say that by and large the policies established and proposed by the Republican Party which he heads, are meeting with the approval of millions of Americans who were sick, disappointed, and disillusioned with the 20 years of the New and Fair Deal and what it portended for this Nation had it been continued.

Yes, I think by that outpouring they said most positively that we as Americans are interested in seeing our Nation remain steadfast to fundamental principles which embody honesty in public office, a loyal faith in our system of free government, the protection of the liberties of our people—and that here is and shall remain the principle that the Government shall not be the dictator and director of all activities or things.

That the industry and initiative of the individual was to be respected.

That the private-enterprise system was to continue under proper and necessary safeguards in the public interest.

That bureaucratic controls and regimentation was not to be the order of the day.

And further, that this Nation should be strong in its defenses both from within and from without.

I am well aware that I am speaking to men who offered their services and if need be, their lives, for our country.

There are those among you who did their job for $30 a month, hoping they had fought a war to end all wars and preserve this Nation in its way of life.

Also in this group are those who fought in two wars for the same objectives.

You have emerged from these wars, returned to civilian life, willing to live and to fight for the same principles which engaged you in fields of battle beyond our shores.

In the span of only a few years you have seen forces at work which challenged our economic system and which, if continued and carried to a logical conclusion, would have in time undermined and weakened our civic and our financial stability.

You have all learned the hard way, that you cannot take without giving. In simple terms, we cannot continue to give away or to borrow ourselves out of public debt.

At this juncture I want to point out that, thanks to a careful administration, we are able now, for the first time in many years, to do what I consider a most important thing—balance the budget of our Nation, and may even put a few hundreds of millions of dollars left over to apply on the national debt.

In my years in Washington as your Senator I have received thousands of letters from people protesting the billions of dollars which we have expended in foreign countries. Hundreds of them recognized the economic plight of our Nation and have in their way justified requests for more local projects and consideration on the theory that if we can throw it around the world, why not spend more of it at home?

Many have pointed to waste, duplication, and a lack of business methods in administering and spending these funds abroad.

In response to these inquiries, my friends, I have consistently said that waste of our funds abroad does not justify waste and extravagance at home, and that we should reevaluate the use to which our tax moneys are put abroad as diligently as we do at home.

I do not mean to infer that you should be precludod from making expenditures abroad for real and genuine national defense, but I fail to see, and I cannot condone, this apparently endless demand for foreign spending on projects that have little or no relationship to our national defense.

I do not deny that many countries need military aid and technical assistance in meeting problems of hunger, disease, military defense. But we have segments in our national economy that are also in need of serious consideration at this time.

The present plight of our farmers, our agricultural economy, is a good example of what I mean, and I again emphasize that the time has come when a new appraisal should be made of this entire foreign spending program. I am not unmindful that many of our so-called allies have presently exceeded the goals which we established when these programs were enacted. It seems to me that they should now be called upon to pay their fair share of any such program which we so liberally have contributed to in the past.

The time has come when the nations of the world which are with us should realize that this burden is not ours alone, but that of every country whose economy has reached the level where, in equity and good conscience, they can and should contribute to their and our collective program.

Fundamentally, there is little difference between our Nation and many others.

Every nation has its natural resources, its people, its tools, yet during our 167 years of national existence we have gone from a weak, loosely bound federation of 13 Colonies, ridiculed and despised by many of these foreign nations, until today we are reputed to be the strongest nation in the world.

I realize that we are even now criticized by some, feared by a few, and I hope respected by all.

What has been the basis of our success and our phenomenal growth? The people who settled this land had learned well their lessons from experience and the school of hard knocks.

They knew so well that every man lived by the fruits of his own labor. They built their homes, their churches, their schools, expanded their highways and means of communication.

In those days, my comrades, when times were rough, they did not have a government in Washington that could care for them in all of their needs. They did not expect, nor did they ask, for many of the programs which we now consider to be commonplace. What has caused this?

The answer probably is not simple, but many feel and think that a philosophy has been developed over the last 20 years and more, that the National Government can solve all of our people's problems. And there has been a growing tendency to look to Washington for the solution of all problems, without realizing that for every concession a powerful government grants it demands some portion of our liberty and freedoms as individuals and a submission to some type of Federal control.

Liberty is old in thought but new in the practices of our era. Our Government was conceived to foster freedom. Our people believe in liberty. This was and still is a revolutionary idea when for so much of historical time liberty has been suppressed by emperors, kings, dictators, and the so-called people's democracies.

As a political party Republicans must be eternally opposed to all forms of tyranny over the individual, whether it be fascism or communism abroad or a totalitarian creed at home which centralizes all power in government, regiments our people, and dictates the courses of our lives.

Liberty means more than freedom of speech, of religious worship, of the press, and the protections of equal justice under law. It means the freedom of each individual to choose his occupation, to start and develop a business of his own, to acquire and manage his own property, and to dispose of his property as he pleases, subject only to the rights of others to do the same.

At the heart of the problem of liberty and freedom is the relation of government to its people. In American Government, liberty is safeguarded by a constitutional system of checks and balances to prevent the rise of any special interest or power capable of dominating the Government.

If government becomes highly centralized, if it engages in enterprise in competition with its citizens, if it takes in taxes too much of the people's income to spend as bureaucrats dictate, if government becomes the controlling, directing, and dominating boss over the daily activities of the people—then the lights of individual freedom will be darkened.

Many of you before me today have gone through the horrors of war. You have been close to, and well may have been a part of, the interesting as well as terrible discoveries that have been made in this atomic age.

One of the most interesting of all discoveries to have come out of the atomic age is so mysterious that we have not as yet given it a name—our scientists refer to it as the binding force.

It is neither magnetic nor electrical, but is a billion times stronger than the force of gravity. They tell us it works only in the center of atoms. If it did not exist the universe would dissolve into hydrogen gas. This is the force which keeps all nature in balance.

I mention this phenomena of nature because in a way it is applicable to the American veteran. In our national life the American veteran should constitute the binding force. You represent no special interest. You are from the professions, the crafts, the businesses, the industries, and from amongst the tillers of the soil.

You share in the experience of having served your country. Your patriotism and your devotion to the country have been demonstrated by deeds and actions, and not alone with words.

As veterans, therefore, we have a responsibility to sell and resell our philosophy of government, and to put our shoulders to the wheel to see that we have men and women in responsible positions in our Government

who believe in our constitutional processes and the protection of our basic rights.

If time permitted, I could point out to you today that within the Halls of Congress there are being debated issues that are of great importance to the individual and to our Nation.

Specifically, in the past 3 years the Eisenhower administration has been able to record many accomplishments. Let me briefly state them for you.

1. We have secured peace—an uneasy peace, it is true, but nevertheless no American boys are being killed on foreign soil.

2. We have strengthened our defenses and those of the free world.

3. We have reduced spending and now have submitted a balanced budget.

4. We have reduced taxes with over 60 percent of the reduction going to individuals.

5. We have halted inflation and stabilized the dollar.

6. We have ended price, wage, and rent controls and restored these matters to the normal control of supply and demand.

7. We have strengthened our internal security against Communist infiltration.

8. We have extended our social security and retirement benefits.

9. We have restored honor and decency o government.

For your own particular interest as veterans I would like to mention some of the accomplishments of the first session of this Congress, in veterans' affairs.

1. We gave 5-percent increase in pensions and pay for veterans of all wars and their widows and dependents.

2. We gave Korean veterans the same benefits and preferences as World War II veterans in war housing, civil-service appointments, and GI training, and extended the period for initiating training under the GI bill.

3. We raised funds for building veterans' hospitals to record amounts; speeded construction.

4. We continued direct home- and farmhouse-loan programs for veterans—supported legislation liberalizing direct farmhouse loans and permitting Government-guaranteed loans to veterans for farmhouse purchase, construction, and repair; increased revolving funds so more direct loans could be made.

5. We continued Federal contributions to dependency allotments for more than 1 million enlisted personnel.

6. We continue paychecks and family allotments under the Missing Persons Act for Korean war prisoners and soldiers missing in action.

7. We provided automatic renewal of term insurance policies and simplified handling of veterans' life insurance policies.

8. We extended the period of granting military service credits toward old age and survivors' insurance, assuring many servicemen of larger retirement benefits.

9. Increased Federal payments for veterans cared for in State soldiers' homes.

I hope you will not consider me somewhat old-fashioned or ultra conservative, when I dwell upon some of these fundamental virtues that I think are a part of our American system.

Naturally, all the problems which we inherited have not been solved. We cannot undo the excesses of 20 years in 3 years. In my opinion, however, considerable progress has been made and more will be. We are at work seeking constructive solutions to the difficult problems of agriculture, education, civil liberties, highways, and many others.

We want your support—we need your help in furtherance of the program established by our Republican Party and our President.

In a few short months the people of this country will be engaged in a political campaign for the Presidency and the Congress. We have a message to bring to the American people, and you as veterans can wield a tremendous influence, with your enthusiasm and whole-hearted support, and I shall be with you in your endeavors.

In conclusion may I briefly review one matter which has caused me considerable concern and which I intend to restify if it be within my power. This is the so-called Status of Forces Treaty under which the criminal jurisdiction over American Armed Forces overseas was taken away from our military authorities and given to the country in which our troops were stationed. It was my contention when this abortive treaty was adopted that (1) it deprived American servicemen of their constitutional guaranties, (2) it exposed them to cruel and unusual punishments in foreign lands, (3) it exposed them to possible persecution by Communist judges for propaganda purposes; and (4) it was an abject surrender of American sovereignty.

To draft a Kansas farm boy, send him involuntarily to France for the defense of that nation and then to deprive him of his constitutional rights of due process and Anglo-Saxon jurisprudence seemed to me to be the height of folly and injustice.

Events have justified my concern. Though there are many others, I cite the case of Richard Keefe now in solitary confinement in a French jail serving a 5-year term for stealing a taxicab and attacking the driver. The press reports that Keefe must pay a customs duty on food packages sent to him by his mother and that the United States Army chaplain who visits him is not allowed to bring even cigarettes which Keefe must purchase from the French authorities at 55 cents a pack. Furthermore, he is even denied the privilege of American language newspapers.

I could mention the case of another young American soldier sentenced to 3 years at hard labor by a Japanese judge for commandeering a taxicab and taking 1,400 yen which was later restored to the driver.

If these were the only cases, it will be sufficient for the repeal of the atrocious arrangement. Unfortunately, there are many others. The last information I received indicated that 58 United States citizens, subject to military law, are in foreign prisons.

Therefore, in the coming session you have my assurance that everything will be done to restore to our soldiers the rights to which they are entitled under our Constitution.

With all the sincerity of my heart, I congratulate you on the work that you have done and the work which you will do in the future as the "binding force" of our beloved State.

Tax on Fuel for Farm Use

SPEECH
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. AVERY. Mr. Speaker, because of my long-standing support for the provisions of H. R. 8780, which exempts fuel used in farm production from Federal excise tax, and because I was delayed by inclement weather and could not return from an official business trip to my home district in time to register my vote, I wish to take this means of going on record in favor of the bill. Had I been here, I would have voted "yea." I have long been a proponent of this type of legislation. I am confident H. R. 8780 will soon become law and the farm people will shortly be enjoying this saving in production costs. I ask leave to have this statement entered in the permanent RECORD immediately following the vote on H. R. 8780.

A Taxpayer's Views on Government Employees' Junkets

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. HOSMER. Mr. Speaker, at the National Reclamation Association's convention at Lincoln, Nebr., last fall Bureau of Reclamation personnel seemed to be present in generous numbers. I wondered then about it, but have been too busy on other matters meanwhile to make a point of it.

This morning I received the letter set forth below and its enclosure which shows what at least one taxpaying citizen is thinking in this regard. It seems valuable enough to place before the entire membership of Congress in this manner. I will send a tear sheet of these remarks to the House Committee on Government Operations for such action as its chairman may deem advisable.

I think it particularly important to reflect on Mr. Larson's conclusion both with respect to the lobbylike activities of these junketeers and as to the competency of the Bureau of Reclamation in connection with matters of economics.

DENVER, COLO., *February 2, 1956.*

Hon. CRAIG HOSMER,
House of Representatives,
Washington, D. C.

DEAR MR. HOSMER: I am herewith enclosing a copy of letter written to the Director of the Budget which, I thought, would be of interest to you.

I am calling the attention of the Director of the Budget to such matters as employees leaving their regular activities, and the question of expenditures. However, there is a far greater significance to sending 31 individuals, who are on the Government payroll, to a convention. These men, supported by their superiors of course, are determined to peddle their merchandise in the gullible mart of increasing pork-barrel projects, all at the expense of the American taxpayer. Such individuals have no interest whatever in the problems of the engineer engaged in private practice, or in any other activity connected with free enterprise, for that matter. But such people are definitely determined to saddle upon the taxpayer projects which can cost, as they have in the past, enormous sums of money. From personal experience with many such boondoggling ventures I know that the average Government employee, as well as heads of departments, sections, and/or subsections, do not give a continental about the economic value of the project which they may be planning. In fact many of these Government employees are not qualified to determine the economic worth of a project, which according to some newspaper accounts, one agency has worked on for two decades.

The question of economics is clearly overlooked by such an agency as the Bureau of Reclamation. Although I have known many

of the individuals connected with that agency, for a long time, and have discussed various projects with men who actually work on the investigations, plans, and specifications, they all shun the subject of economics. A few years ago one of the engineers from the Bureau of Reclamation discussed the Frying Pan-Arkansas project, at one of our local section meetings here in Denver. After talking about this proposed imposition upon the American people, various individuals, including myself, asked about the economic feasibility of this scheme. Is this project economical in the face of over production of agricultural products? The mumblings of the speaker produced no satisfactory answer. He even seemed surprised to know anyone was thinking. Then the request was made for copies of a detailed report including plans and specifications of this as well as other projects. But the response was a most emphatic, "No. We do not have the money to publish such reports." In other words, the Bureau will not permit others, some of whom are better qualified as professional men than they are, to even review a project which they are advocating. Their projects will not withstand the scrutiny on the part of other engineers and/or geologists who are quite competent in their own fields. But the nefarious purpose behind many of these meetings or conventions is merely to impose something upon the people so they in turn can keep their jobs.

Like the competent farmer who pulls weeds from his cornfield, it is now time to eradicate certain agencies which are rendering no useful service to our country, or at least, restore to them the functions for which they were established.

Sincerely yours,

HARRY LARSON.

FEBRUARY 1, 1956.

DIRECTOR, BUREAU OF THE BUDGET,
Executive Office of the President,
Washington, D. C.
(Attention: Mr. Percival F. Brundage, Deputy Director.)

DEAR SIR: Just recently a convention program prepared by a section of the American Society of Civil Engineers was received. It was immediately noted that there appears to be a preponderance of Government employees on this program. These are from various sections of the country and are scheduled to present papers at this convention which will be held at Dallas, Tex., on February 13–17, 1956. The names of these Government employees together with their respective titles and departments, as given in the subject program, and one Army officer, are as follows:

Herbert H. Howell, Director, Office of Airports, Civil Aeronautics Administration, Washington, D. C.

Harold Melville Martin, head, Hydraulics Laboratory, Bureau of Reclamation, Denver, Colo.

Clarence F. Wicker, Chief, Engineering Division, Philadelphia District, Corps of Engineers, Philadelphia, Pa.

S. E. Travis, Jr., Deputy Chief, Airports Division, CAA, Region 2, Civil Aeronautics Administration, Fort Worth, Tex.

Louis A. Ness, Chief, Engineering Branch, Installation Division Headquarters, Air Materiel Command, Dayton, Ohio.

Frank M. Mellinger, civil engineer, Ohio River Division, Corps of Engineers, Cincinnati, Ohio.

James P. Sale, head, Soils Division, Ohio River Division Laboratories, Corps of Engineers, Cincinnati, Ohio.

Conrad P. Straub, senior sanitary engineer, Health Physics Division, USPHS, Oak Ridge National Laboratory, Oak Ridge, Tenn.

Gerald Fitzgerald, Chief Topographic Engineer, United States Geological Survey, Washington, D. C.

G. Earl Harbeck, Jr., United States Geological Survey, Denver Federal Center, Denver, Colo.

Frank L. Weaver, Chief, Division of River Basins, Bureau of Power, Federal Power Commission, Washington, D. C.

Charlie M. Moore, head, Design Section, Engineering and Watershed Planning Unit, Soil Conservation Service, Fort Worth, Tex.

Trigg Twichell, Regional Representative, United States Geological Survey, Austin, Tex.

George S. Vincent, bridge engineer, Structural Research Laboratory, Bureau of Public Roads, Seattle, Wash.

Hershel Engler, Sanitary Engineering Director, Assistant Chief, Health Services Branch, Department of Health, Education, and Welfare, PHS, Washington, D. C.

Norman R. Moore, Chief, Engineering Division, Bower Mississippi Valley Division, Corps of Engineers, Vicksburg, Miss.

W. P. McCrone, colonel, Corps of Engineers, district engineer, Galveston district, Galveston, Tex.

Alonzo O. Taylor, division engineer, United States Bureau of Public Roads, Manila, Philippine Islands, care of American Embassy, APO 928, Postmaster, San Francisco, Calif.

William E. Wood, Fort Worth District, Corps of Engineers, Fort Worth, Texas.

Kenneth Heagy, Chief, Engineering Division, Galveston District, Corps of Engineers, Galveston, Tex.

Joseph F. Friedkin, principal engineer, United States Section, International Boundary and Water Commission, El Paso, Tex.

Myron W. DeGeer, Assistant Chief, Engineering Division, Tulsa District, Corps of Engineers, Tulsa, Okla.

Gordon M. Kline, Chief, Organic Materials Division, National Bureau of Standards, Washington, D. C.

Edwin W. Eden, Jr., Chief, Hydrology and Hydraulics Section, Jacksonville District, Corps of Engineers, Jacksonville, Fla.

James V. Madison, supervisory soil scientist, Kansas River projects, Bureau of Reclamation, McCook, Nebr.

J. Willis Ervin, irrigation agriculturist, Kansas River projects, Bureau of Reclamation McCook, Nebr.

Willard J. Turnbull, Chief, Soils Division, Corps of Engineers, Waterways Experiment Station, Vicksburg, Miss.

Charles I. Mansur, Assistant Chief, Embankment and Foundation Branch, Waterways Experiment Station, Vicksburg, Miss.

R. I. Kaufman, Chief, Design and Analytical Section, Waterways Experiment Station, Vicksburg, Miss.

Woodland G. Shockley, Chief, Embankment and Foundation Branch, Waterways Experiment Station, Vicksburg, Miss.

T. B. Goode, Chief, Inspection and Exploration Section, Waterways Experiment Station, Vicksburg, Miss.

I am constrained to call your attention to this matter and to the participation of these individuals in what appears to be extracurricular matters. People who engage in research work and investigations which constitute contributions to the science of engineering, are certainly to be commended, but such findings and results can be published. It is requested that an investigation be made in the case of each of the above named individuals to determine the authorization of absence from their established and designated places of activity, or station, and just what agency, or who, is paying the expenses of each individual while attending this convention. There certainly appears to be no justification in having travel and all other expenses paid by the American Taxpayer.

Very truly yours,

HARRY LARSON.

Helping Communist China With Strategic Goods—Let's Halt This Bloody Dollar Business Now

---

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a timely editorial that appeared in the Milwaukee Sentinel on January 27.

There is only a shadowy distinction between strategic goods and nonstrategic goods. When food is eaten by the Red soldier and when clothing material is used for his body, both food and clothing are strategic materials. Let us remember the scrap-metal situation prior to World War II. There should be an end to this bloody dollar business and now.

STRATEGIC GOODS

The annual report of the Senate Investigations Subcommittee of which Arkansas' Senator MCCLELLAN is chairman, reports an alarming increase of shipments of strategic materials to Red China.

This is not a new warning, by far. This same subcommittee, under this same Democrat chairman, issued the same warning a year ago.

For several years before that, this same subcommittee under the chairmanship of Wisconsin's Senator JOE MCCARTHY, issued repeated and highly documented warnings that this was so.

Like the McClellan-led reports, the McCarthy-led reports noted that our good old ally, Britain, was the worst offender in its bullheaded and shortsighted business-come-what-may policy with Peiping.

When Senator MCCARTHY spearheaded this able subcommittee's report on this sickening and destructive condition, it was tossed off as just so much more McCarthyism.

Now with Senator MCCLELLAN spearheading the past 2 years of reiterated warnings, are we to brand it just so much McClellanism?

It would be just as wrong, just as tragic, yes, just as immoral and suicidal, to brand such sound pro-American advice "McClellanism," as it was to brand it "McCarthyism."

It would be just as ill-advised and terrible to play politics or possum with the new MCCLELLAN-led report as it was with the MCCARTHY-led reports.

Let's get down to bedrock—to the too-often overlooked business of our survival.

There would be no better time, however overdue, for our Government to begin serving full and proper notice that this despicable practice must stop, than in the about-to-begin Eisenhower-Eden Washington talks.

It's high time, after all these costly years, that our friends and foes stand and be counted, and then dealt with accordingly.

It was this same miserable urge for profit-at-any-cost by the British and other of our "allies" that prevented our victory over the Communists with whom, even then, they were trading as our men were dying in Korea.

As the Sentinel has warned before in this shocking connection, for those who would close their eyes and open their purses for "business as usual" by which the Communists are permitted aid, comfort and strength, even by indirection, we repeat:

"Remember that scrap metal we once sent Japan—and remember the form in which it was returned—at Pearl Harbor."

When the Reds return such material, the Pearl Harbor can be Washington—and Milwaukee.

Let's bring this nauseous, bloody, dollar business to a halt—now.

Small Business in the Continued Growth of Our Economy

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith an editorial from the New York Journal of Commerce, of February 2. I commend this excellent editorial to the attention of every Member of the House interested in promotion of the competitive status of small business in the continued growth of our economy. This editorial clearly shows that our small businesses are prospering, contrary to loose charges currently in circulation in the press and on the air. Mr. Speaker, just what is the situation?

Keeping in mind that there are now one-third more businesses than in 1939, from a statistical standpoint there should also be more than one-third more business failures.

Now, let us examine the record. In 1939 there were 14,768 failures. In 1955 there were 10,969—fewer failures than during 1939, although there were about a million more businesses in existence. But the important thing is the rate of failures. How many failures per certain number of businesses?

The average over the past 56 years has been 70 failures per 10,000 units of business during war and peace. The rate of failures in 1955 was 41.6 per 10,000, which is the lowest rate of failures during any normal year. This occurred during the Eisenhower administration. In relation to the total small business population of about 2,600,000 covered by Dun & Bradstreet only 10 businesses failed in 1955 out of every 2,600—an infinitesimal figure. And the other 2,590 are thriving, expanding, growing.

So when you hear that the rate of business failure was 10 percent higher in December than it was some previous month, bear in mind that the person is trying to get you greatly concerned over the fact that out of every 2,600 businesses in the country, one more business failed, and usually you are not told about the healthy condition of the other 2,599.

That is why it is important to examine carefully statistics that tell only part of the story. For instance, I have seen a report published in a national magazine that small business did not fare as well in the fourth quarter of 1955 as it did in the second quarter. Be careful if anyone gives you statistics for part of a year. The whole year, good or bad, is the correct yard stick.

The New York Journal of Commerce editorial of February 2 follows:

The Senate Small Business Committee is gravely concerned because smaller businesses do not seem to have shared in last year's overall prosperity.

In a recent report, the committee asks, first, why "more of the bloom of 1955's industrial bonanza did not rub off on small business" and, second, why there was such a "high rate of small-business bankruptcies.

For reasons which we may assume to be not entirely economic, it selects as its base period, for purposes of comparison, the first half of 1952. The committee finds that during this period the smallest manufacturers enjoyed a 10.6 percent return on stockholders' equity, which compared quite favorably with the 11.25 percent return to the largest size group.

In contrast, the profits rate has subsequently "held steady or increased" for the big companies, while the earnings of the smallest ones "plummeted to a low of 2.25 percent in the last half of 1954."

As to bankruptcies, the committee cites a rate of 42 failures per 10,000 in 1954 as the "highest rate in the past 12 years, exceeding the average for the post-World War II years 1946 through 1953 by 68 percent," and with 1955 failures expected at about the 1954 level.

It is curious that the committee should have elected to compare the experience of the smallest group, or companies with assets of $250,000 or less, with that of the so-called giants, those with $100 million and more.

While there is perhaps on sensible overall dividing line for small and other businesses, the difficulty with using groups at the two extremes is that you are not likely to have companies in the same competitive area, and, unless you do, your conclusions cannot be too meaningful.

The Small Business Administration, on the other hand, compares companies with assets over and under $1 million. Using this dividing line, the SBA, in its last midyear report, found not only that a long downtrend in net sales and earnings over the past several years had been halted, but that "the financial position of small business has improved substantially as the trend line has moved upwards. Small businesses are now sharing to a greater extent in the national prosperity."

The fact is that the sharp down movement began well before the period which followed 1952—in 1950, in fact—although there were interruptions in the trend.

Smaller firms did lose ground relative to the bigger ones, in part because they did not participate sufficiently in the Korean procurement program and, in part, too, because of material shortages affecting the civilian market. The bigger companies improved their competitive position relative to the smaller ones.

What is significant is that, beginning with 1954, there has been an upward movement for the smaller companies. The lowest point in earnings before taxes was 60 (using an index based on 1047–49). Through the third quarter of 1955 there has been a rebound to 76.

So while small businesses are admittedly not so well off relatively as in 1947–49, the reversal of the sharp downtrend which carried through in 1953 shows that they have made important gains during the period of prosperity.

There is, of course, no reason why the relative position of small businesses at any particular point of time ought necessarily to persist. Changes in technology and distributional shifts will be reflected in changes in the size structure of the economy. And it is quite obvious if, over a given period, industrial expansion is marked with respect to types of industries normally composed of relatively fewer units, this fact will be reflected in a changed proportion of smaller firms to the total, even though they are still doing quite well in their fields.

As for the specific profits comparisons used, a word of warning is needed with respect to the selection of any part-year data for smaller companies which tend to charge off depreciation in the fourth quarter. For instance, for 1952, the quarterly statistics for return on stockholders' equity were, respectively, 8.9 percent, 12.3 percent, 13 percent and 2.8 percent. For the big companies, they were 11.5, 11, 11.8, and 13.7.

Using the average of the first two quarters, the Senate committee is able to give the impression that, in 1952, the companies with assets under $250,000 were doing just about as well as the "giants."

The opposite, of course, could be proved by averaging the last half-year percentages, when the return to the smallest group would have been only 7.9, compared with 12.3 for the bigger ones. But, of course, that would not be valid either because of the depreciation element.

As for the matter of business failures, the rates of 42 per 10,000 is, as the committee claims, the highest rate in the past 12 years. But these were very abnormal years, leading up to 1953. In the period 1939–41, the failure rate was 63 per 10,000, and over the past half-century it was 263. So, once again, it depends a lot on what you are comparing.

The Political Crisis in Asia

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1956

Mr. FEIGHAN. Mr. Speaker, on Sunday, February 5, I gave a report to my constituents over WHK Broadcasting Station, Cleveland, on a very serious situation now developing in Asia which bears upon the future security and well being of all the American people. This was part of my report to my constituents on a 7 weeks inspection tour of Asia which I undertook on behalf of the House Committee on the Judiciary. Because I believe what I had to say will be of interest to my colleagues in Congress, I ask unanimous consent to insert my address in the RECORD:

THE POLITICAL CRISIS IN ASIA

It is a pleasure for me to have this opportunity to resume my talks of last year, made possible by the courtesy of WHK. This affords me an opportunity to tell you, my constituents, and all the people of Cleveland, about some developments which have come to my attention since the adjournment of the first session of this Congress.

As a member of the House Judiciary Committee, I was requested to undertake a special study mission in Asia, the purpose of which was to evaluate the administration of the Refugee Relief Act, to estimate the upset of populations caused by Communist aggression in that part of the world, and generally to observe developments that may have a bearing on the future security and well-being of the American people. I undertook this mission because it was obvious to me that a political crisis was rapidly developing throughout all of Asia which could very well spell the difference between peace and war.

I left the United States by air on October 2 and visited the following countries—the Philippines, the Crown Colony of Hong Kong, Vietnam, Cambodia, Laos, Thailand, Burma, Indonesia, Macao, Formosa, Korea, and Japan. This mission lasted 7 weeks and was a

most arduous one due to the difficulties of travel, lack of ordinary accommodations in so many of the countries and the need to be constantly alert to the many food problems Americans have traveling in that part of the world. Today I am going to try to give you some of the highlights of my findings on this special mission and in later weeks I will have more to say on this subject.

To begin with, I found that the population upsets throughout al of Asia caused by Communist aggression, had caused widespread human suffering and grave social and economic problems. However, despite these problems, I was encouraged by the spirit demonstrated to me by the hundreds of thousands of people who had risked their lives to escape from Communist tyranny and their determination to solve their own problems and eventually to rid their homelands of the scourge of communism. For example, in the wartorn country of Vietnam, I visited the refugee villages where some 700,000 victims of Communist aggression now reside. In these villages I talked with men, women, and children who had firsthand experiences with the cruelties of communism. They had lost all their material possessions and their homes, but they were convinced beyond any doubt that communism would lose in the end because it violated all the things that mankind everywhere regard as decent and just. As another example, in the Crown Colony of Hong Kong, the population has more than doubled during the past 5 years because well nigh over 800,000 refugees of Chinese aggression have been given political asylum in Hong Kong. Here I witnessed the splendid work of the American governmental agencies and the American voluntary agencies in providing temporary shelter for these victims of communism and in setting up fitting programs for the refugee children. You will be interested to know that surplus foods from the United States were used in this program which feeds over 25,000 children each day. I only wish that more programs like this could be developed for the victims of communism because it costs the American taxpayer practically nothing and the benefits that result are beyond measure.

In Korea I saw very much the same picture, but here again I was encouraged by the determination of the refugees to build a new life and to remain free and independent.

During my investigation I uncovered a very serious breach of the free world security which I would like to tell you about briefly at this time. Over 5,900 so-called White Russians have been moved out of Red China to some twenty-odd countries of the free world without having any security investigation whatever made on them. The vast majority of the so-called White Russians were traveling on valid passports issued by Soviet Russia and all of them were in possession of an exit visa given to them by the Chinese Reds. I was amazed to find out that the United States taxpayers' money was being used to pay the transportation costs of these so-called White Russian refugees from Hong Kong to the various countries of the free world. When I learned that the United States taxpayers' money was involved in this matter, I inquired as to why no investigation was made on these people, and the reason given was that no investigation was possible because their investigators would not be allowed into Red China.

On my return to Washington, I prepared and issued a special report on this breakdown in free world security and called upon responsible officials in the Government to take corrective action. To my knowledge, nothing has been done up to this time to close this breach in the free world security, so I will certainly have much to say about this at a later date.

There is a revolution taking place throughout all of Asia today. I call it a revolution because the changes taking place there are so basic and sweeping that the pre-World War II Asia will no longer exist. The people of Asia have awakened and are now demanding equal rights, equal recognition, and the opportunity to run their own affairs and chart their own destiny. The colonialism of the past which, in many respects, forms a dark chapter in the history of civilized mankind, is dead. Many new countries have fought for and secured their national independence. Still other countries, still held in colonial bondage, are seeking their national independence. Against this upswing of the people in free Asia, one finds the other part of Asia now gripped in a new type of colonialism 10 times more cruel and ruthless than the colonialism of the past. I refer, of course, to Russian colonialism, and the manner in which it has occupied and exploits the mainland of China, Manchuria, Inner and Outer Mongolia, Tibet, North Korea, and North Vietnam. I am sure all of you have heard a great deal about the Iron Curtain which the Russian Communists have erected between their world of slavery and the free and independent nations of Europe. I want to assure you that the curtain erected in Asia by the Kremlin is just as cold and cruel as the Iron Curtain in Europe. Just as in Europe, thousands of Asians are today risking their lives to escape from under that Asian curtain into the free world. In every respect, the colonial slavery of Moscow is the same in Asia as it is in the non-Russian nations of central and eastern Europe.

And so the political crisis in Asia today is the struggle between Russian communism and the national independence movements which have thrown off, or are seeking to throw off, the yoke of colonial bondage. Many of the nations which have but recently gained their rightful status as independent sovereign nations, are today threatened with the new colonialism of the Russian Communists. These newly independent nations look to the United States for leadership and support in the cause of justice and freedom. The stakes at issue in this struggle are indeed among the highest in all of history. The outcome of this struggle will determine not only the question of peace or war, but very well could determine the destiny of mankind for hundreds of years.

While this struggle is intense and apparent on all sides in every one of the countries I visited, I believe there are three countries that might well be used by the Russians as a fuse to set off world war III. The first one, of course, is the Republic of China, on Formosa. The Chinese Reds are constantly threatening to invade and occupy free China and threaten the most dire ends for all who would dare to support the just cause of free China. The free Chinese, of course, are determined that the stooges of Moscow will not successfully invade or occupy free China. The United States has made known to the world its intention to defend Formosa against the alien invasion and occupation of the Chinese Communists. Whether we will have total warfare between Red China and free China is now a matter of grave speculation. You and I know that the Chinese Communists would not hesitate to set off world war III if they thought they had a 50–50 chance of winning it.

Korea is another country in which the Communists pose a daily threat to freedom and justice. The Communists caused a war of aggression in Korea which cost us Americans dearly in terms of the loss of our loved ones. We know, too, that the toll of Korean lives taken by that Communist war of aggression was very, very heavy. The armed truce which now prevails in Korea is, in my judgment, a very thin and precarious guarantee of peace.

While in Korea I uncovered evidence which leads me to believe that the Chinese Communists and the Russian Communists are determined to occupy all of Korea just as soon as we weaken our determination to stand by our good ally, the Republic of Korea. The people of the Korean Republic are equally determined that they shall not give up their freedom and independence. The Communist war lords might at any time choose Korea to set off a general war in Asia and probably world war III.

Vietnam is the third most critical area in Asia. Here the Russian Communists used one of their old comintern agents, Ho Chi Min, to masquerade as a Nationalist and seize temporary control of the national independence movement in Vietnam. The war with France followed, which was ended by a Geneva agreement splitting the country in two. One-half of it put under the tyranny of communism and the other half loosely allocated to the free world and which the United States had to immediately protect or the Communists would have gobbled up all of Vietnam.

In free Vietnam, a young democratic government is attempting to establish a permanent democratic way of life based on principles of law and justice. Here, too, I was impressed with the determination of these freedom-loving people to keep their independence and to unite all of the country under a government representative of the people. But the Communist-occupied section in North Vietnam now ruled by the same Ho Chi Min, is determined that all of Vietnam will be put under the colonial yoke of Russian communism. Here again we find the ever-present possibility of open conflict and war brought about by Communist aggression.

For example, only Friday we learned of the new Communist aggression and war taking place in the newly independent state of Laos, which borders on the state of Vietnam.

The political crisis in Asia is one that we, as free people, must understand and face up to. Involved in this political crisis is the choice of human freedom or the colonial slavery of communism. If the forces which stand up for human freedom and independence emerge as victors from this political crisis, there will be no war in Asia. I assure you, as your Congressman, that I shall do everything I can to make certain that our Government supports all those measures which advance the cause of human freedom in order to avert the catastrophe of world war III.

Procedures To Be Followed in Seeking Federal Help on Building Dams for Flood Control and Other Purposes

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. FISHER. Mr. Speaker, a subject of transcendent importance to the American people today is that of water, its conservation and its use. The President recently submitted to Congress a report by an Advisory Committee concerning water resources. In my own State of Texas people in all walks of life have become acutely aware of the importance of water and its conservation.

Many questions are being asked by the man on the street about the methods to be employed in getting water projects initiated. With several agencies of the Federal Government participating in various types of water conservation,

there is considerable confusion on the part of the people in regard to when and under what conditions the Federal Government will interest itself in flood control, irrigation, power production, watershed-flood prevention, and similar activities.

In an attempt to be of some help in removing that confusion and providing understandable answers to many questions that are being asked each day, I have, in collaboration with the Corps of Engineers, the Bureau of Reclamation, and the Department of Agriculture, prepared a series of questions and answers. After preparing these, they were submitted to the respective department heads, and I believe it can be assumed that the answers are factually accurate. These questions and answers follow:

FLOOD CONTROL—CORPS OF ENGINEERS

Question. Suppose a community thinks it proper that a dam be constructed on a stream, what steps should be taken to get the project built?

Answer. Local people who desire a flood-control project should contact their Congressman and give him as much information as possible to justify the project.

Question. Then what can the Congressman do?

Answer. Under the law the Corps of Engineers (which makes all surveys for Congress on justification for flood-control projects) cannot undertake such a survey and study unless Congress first authorizes it. Therefore unless the survey is already authorized, the Congressman would contact the committee having jurisdiction and seek a resolution enabling the engineers to proceed with the study.

Question. When such a survey is made by the engineers, do local people have a chance to present their views and any facts they have in support of the project?

Answer. Yes, the district engineers hold public hearings for that purpose.

Question. Under what authority does the Corps of Engineers make recommendations following surveys?

Answer. Under the Flood Control Act of 1936 which outlined the procedure and the formula which guides the engineers in their surveys and recommendations.

Question. What is that formula?

Answer. That law requires that, as a general rule, before the Corps of Engineers recommends the building of a flood-control dam the estimated value of the annual benefits resulting from the project must equal or exceed the annual costs.

ENGINEER SURVEYS ALREADY AUTHORIZED ON MOST TEXAS STREAMS AND WATERSHEDS

Question. Do the Corps of Engineers now have authorization from Congress to make surveys and studies of Texas streams?

Answer. Yes, most of them. That includes the upper Colorado watershed, the Nueces River watershed, Devils River, Pecan Bayou, and others.

Question. What is the status of the engineering survey work on the Colorado river watershed in Texas?

Answer. It is inactive at the present time. Under authority of Congress a comprehensive report on the Colorado River and its tributaries was submitted to the Chief of Engineers by the district engineer in 1944. But this report was returned to the district engineer in 1948 by the Chief of Engineers for further study and revision. Since that time the resurvey work has not been undertaken due to curtailment of funds.

Question. Did the 1944 report include studies of possible flood control projects on such streams as the Llano, San Saba, and Concho rivers?

Answer. Yes, as well as the main Colorado stream.

Question. Did the report recommend dams on the Llano and San Saba Rivers?

Answer. Actually three dams were recommended in that report as being economically feasible—one on the Colorado near Winchell, one on the Colorado near Marble Falls, and another on the San Saba a few miles above the town of San Saba.

Question. What about upper San Saba and its watershed area and the Llano and its watershed tributaries?

DAMS ON LLANO AND UPPER SAN SABA RIVERS NOT JUSTIFIED

Answer. From the study that was made the engineers did not find dams either on the Llano River or at any other site on the San Saba to be justified under the Flood Control Act of 1936.

Question. Is it possible under the law for the engineers to recommend the construction of a dam where the primary justification is for recreation and wildlife?

Answer. No, the law does not authorize that. Primary justification must be based upon benefits resulting from prevention of floods. There are other factors that may contribute to the justification, such as water supply to a city, irrigation, hydroelectric power, etc. If electric power is produced the government sells that and the revenue adds to the economic justification of the project.

Question. How do engineers predict probable benefits over the life of a project?

Answer. The engineers make a flood frequency analysis which is essentially a study of all past flood records and a projection into the future by means of statistical and mathematical procedure. They predict the probable damage that will be done without the improvement and how much damage can be prevented if the structure is built.

Question. Do the Corps of Engineers ever recommend flood control dams when the benefits do not equal or exceed the costs?

Answer. As a general rule, no. In rare instances where intangible values are involved such as abnormal loss of life, national defense, or economic security of a region as a whole—which is rare and exceptional—a project may be approved even though the costs may exceed direct benefits.

WHY SMALL DAMS ARE NOT RECOMMENDED FOR FLOOD CONTROL

Question. Why does the Corps of Engineers not recommend a series of small dams on streams to control floods rather than the larger dams?

Answer. There are several reasons why it is not feasible to build several small dams on a stream rather than one large one to control floods. First, the cost per acre-foot of water would be greater; secondly, small dams do not control the river basin but only a small immediate area. Thirdly, with small dams there is less opportunity for making multipurpose dams in cases where they are feasible. A fourth reason is that operation from a rainfall standpoint is far less satisfactory with several small dams and sometimes might be more disastrous than no dams at all. Finally, there is more evaporation in several small dams than in one large one.

This refers to main streams and not to watershed areas where the Soil Conservation Service builds small dams under watershed-protection programs.

INTERIM REPORT

Question. What is an interim report?

Answer. An interim report is essentially a report on a separable area of a project under survey. It does not affect the comprehensive planning of a watershed as a whole.

Question. In the case of the Colorado watershed report of 1944 where a dam was recommended on the San Saba in San Saba County, Tex. (along with two others on the Colorado), is it possible for an interim report to be made in regard to the San Saba project without waiting for the more expensive, time-consuming comprehensive resurvey to be made of the entire watershed?

Answer. The Chief of Engineers, after careful study of the situation, has ruled that it is not proper or feasible to make an interim report on the San Saba project.

Question. Why is that?

Answer. The Chief of Engineers tries to discourage interim reports because the whole project in a watershed is usually interrelated and when interlated to the extent of the Colorado watershed in Texas, it is difficult to make a separate report because so often plans called for in an interim report have to be changed when the whole survey is completed. If an interim report may affect the survey of the whole project, it is not recommended. And that was the basis of the Chief of Engineers' finding in respect to the San Saba project.

Question. What about local contributions on flood-control projects?

Answer. It varies, depending on the purpose and nature of the project. In the case of flood-control reservoirs the Corps of Engineers pays all or nearly all the cost and then operates and maintains the dam after completion.

Question. Under what conditions do cities get municipal water from flood-control projects?

Answer. The primary purpose of flood-control dams is to prevent damages from recurring floods, and the project must be justified on that ground, if built under flood-control authorization. The project may, of course, be a multipurpose one and not only fulfill its primary function but also supply a municipality its water for home and industrial use, provide power for electricity, and water for irrigation. In the event the project does supply a city with its water and an irrigation district with water, the city would have to pay for that portion of construction which is allocated to city water supply; and the farmers would have to pay for that portion allocated to irrigation.

Question. Assuming that a district engineer, after a survey, finds a flood-control project economically feasible, what is the next step?

Answer. The district engineer makes his report to the division engineer, who processes the report and forwards it to the Chief of Engineers. The Chief of Engineers submits it to the Board of Engineers for Rivers and Harbors. The latter makes its findings and recommendations.

Question. Do other governmental agencies also see the report?

Answer. Yes. The report is submitted to the Reclamation Bureau, the Secretary of Agriculture, and other agencies that may be interested. In addition, it is sent to the governor of the State for his comments.

Question. After all of that, what is the next step?

Answer. Assuming that the proposed project is approved by those who study it, and by the Bureau of the Budget, it is submitted by the Chief of Engineers to the Secretary of the Army, who, in turn, submits it to Congress.

Question. Is legislation then required?

Answer. Yes; when submitted to Congress, the report is referred to the proper committees, and the usual procedure is for hearings to be held on it, along with all other projects that have been thus cleared, and if approved by the committee the project is included in an omnibus measure and is then advanced to the House and Senate for action.

BUREAU OF RECLAMATION PROJECTS

Question. Under what authority does the Department of Interior get into the dam-building program?

Answer. The Reclamation Act of 1902 and subsequent acts and amendments, together constitute the reclamation law, authorize and direct the Secretary of the Interior to investigate, construct, and operate irrigation and multiple-purpose projects for development of the water resources of Texas and the 16 other Western States. The Bureau of Reclamation is the agency which is entrusted with these responsibilities.

Question. Is Federal reclamation limited to water resources only for the irrigation of farmlands?

Answer. No. Reclamation projects may also be multiple purpose, involving hydroelectric power, flood control, municipal, industrial and domestic water supply, salinity control, stream pollution abatement, fish and wildlife conservation, recreation and other purposes.

Question. How are needed projects brought to the attention of the Bureau?

Answer. Either by local interests, a Member of Congress, or from inventories of the development of water resources in a particular river basin in regular basin surveys made by the Bureau of Reclamation.

Question. Is the Bureau studying the entire water resources situation throughout the 17 Western States?

Answer. Yes, to the extent of available funds the Bureau is reviewing by means of comprehensive river-basin reports the entire water resources situation, thus planning for the optimum utilization of water. These basin reports inventory the potential developments from which projects are selected for more detailed investigations.

Question. Where does the Bureau get its money for general investigations of potential projects?

Answer. From Congress, which makes annual appropriations for the Bureau to proceed with a program of investigations.

Question. Are local interests expected to contribute to the general investigations funds?

Answer. General investigations funds are limited; local or State interests sometimes contribute additional funds to speed up investigation of a project. The law requires that one-half of costs of investigations not previously scheduled by the Bureau which are undertaken at the specific request of local interests are to be paid for by those local interests.

WHAT TO DO TO GET A PROJECT STARTED

Question. Who are the proper people for local interests to contact in connection with the development of a project?

Answer. Expression of interest may go to regional directors; in Texas the regional director is Robert W. Jennings, P. O. Box 1609, Amarillo. The interest may also be expressed to a Congressman who will bring it to the attention of the Commissioner of Reclamation.

Question. What is a feasibility investigation?

Answer. It is a detailed study directed toward a determination of (1) engineering feasibility—the planning and the estimating of costs of physical structures; (2) economic justification (benefits will exceed costs and operations of structure) and (3) financial feasibility—that is, that the project will pay for itself over a period of years and that the users have the ability to pay—irrigators, power users, etc.

LOCAL INTERESTS ARE CONSULTED

Questions. During the planning of a project does the Bureau consult with local interests and other governmental agencies?

Answer. Yes. The Bureau maintains close cooperation with local interests and with other Federal agencies in order to obtain the views, desires, and support of all concerned. The results of the various investigations by the Bureau are also summarized in a planning report which is submitted for review and comment by the affected local, State, and Federal agencies, and other interests.

Question. What happens to the report after it has been submitted to local and other interests?

Answer. Upon receipt of these comments, the regional director makes whatever revision in his report he considers proper in the light of these comments and then submits his report to the Commissioner of Reclamation. Upon approval of the regional director's report, the Commissioner submits his report to the Secretary of the Interior.

Question. What is the next step?

Answer. The Secretary of the Interior submits the report, as his proposed report, to the State where the project is located and to Federal agencies for official review and comment under the provision of the Flood Control Act of 1944; these States and agencies have 90 days in which to comment. Upon receipt of the comments from the reviews (or the expiration of the 90 days without receipt of the comments) the Secretary submits his report with his recommendation to the President through the Bureau of the Budget to determine if the authorization and construction of the project is in accordance with the program of the President.

REPORT FINALLY GOES TO CONGRESS

Question. Does the report finally go to Congress?

Answer. Yes. Upon receipt of clearance from the Bureau of the Budget the Secretary transmits the report to Congress. At or about this stage of the work your Congressman will introduce legislation to authorize the project, under the terms and conditions of reimbursement contained in the report.

Question. After a project has finally been officially authorized, when does construction get underway?

Answer. Construction cannot be undertaken until funds for the purpose have been appropriated by the Congress. These appropriations are made annually. Request for appropriations are made by the Bureau and is first cleared through the Bureau of the Budget.

Question. Does the Bureau of Reclamation do the actual construction work?

Answer. No. Construction is done by private contractors under the supervision of the Bureau.

SOIL CONSERVATION SERVICE WATERSHED PROJECTS, DEPARTMENT OF AGRICULTURE

Question. What is the general purpose of the watershed flood prevention projects?

Answer. Under Public Law 566, 83d Congress, the program is designed to supplement both the present agricultural soil and water conservation programs (of the individual farm or ranch) and the programs for development and flood protection of major river valleys (such as those undertaken by the Corps of Engineers and other agencies). It bridges the gap heretofore existing between the two types of programs.

Question. Does this law add to the authority of the Secretary of Agriculture?

Answer. Yes. It authorizes him to cooperate with States and local agencies in carrying out jointly planned and mutually agreed on flood-prevention and water-management projects.

Question. What is a watershed under the act?

Answer. All land and water within a natural drainage area of 250,000 acres or less.

KINDS OF FEDERAL ASSISTANCE

Question. What kinds of Federal assistance are authorized under the act?

Answer. Technical help in working out and applying a watershed work plan, and determining its feasibility; also funds for the equitable Federal share of the costs of installing the needed flood-prevention and water-management measures. Storage capacity for other than flood preventions must be paid for from non-Federal funds.

Question. What must local people do?

Answer. They initiate the action and help develop a watershed work plan. They must acquire necessary land, easements or rights-of-way; assume an equitable share of the project's cost; arrange for operation and maintenance; acquire necessary water rights; and get agreements from owners of not less than half of the lands in the drainage areas above dams to carry out soil-conservation programs.

SIZE OF DAMS

Question. What size structures can be built?

Answer. Single dams are limited to total storage capacity of 5,000 acre-feet. Watershed work plans including any structures of more than 2,500 acre-feet total capacity must be approved by the House and Senate Agriculture Committees before funds can be provided for the project.

Question. May a farmer irrigate from a lake created on his land?

Answer. Yes. But storage capacity specifically for water for irrigation must be paid for from non-Federal funds. If the water is stored incidental to the primary purpose of the structure, no such payment is required.

MUNICIPAL USE, RECREATION

Question. What about municipal water supply?

Answer. Storage for municipal water supplies may be included as part of the watershed work plan, but structural costs above those necessary for flood prevention must be paid from non-Federal funds.

Question. What about recreation?

Answer. Many opportunities for recreation developments will arise incidental to the works of improvement. But the costs of developing recreational facilities must be borne by non-Federal funds.

PROJECT MUST BE FEASIBLE

Question. What, basically, is the requirement for a project on a watershed to be justified?

Answer. As a general rule, the project must be found to be economically feasible; that is, the estimated benefits must equal or exceed the cost.

Question. How would any local organization, such as a soil conservation district, initiate action under the law?

Answer. Formal application blanks and suggestions for filling them out are available in the State office of the Soil Conservation Service (in Texas, Henry N. Smith, State conservationist, Post Office Box 417, Temple), and the State agency (State Soil Conservation Board, 1012 First Street, National Bank Building, 1620 South Main, Temple), designated by the Governor to act on applications.

Question. At what stage do the Soil Conservation Service people begin to assist the local organization in developing a watershed work plan?

Answer. After the Soil Conservation Service, acting for the Secretary of Agriculture, has approved the project for planning. This approval can be given only after approval of the local organization's application by the authorized State agency or the Governor.

Question. If a satisfactory watershed work plan is developed, what is the next step?

Answer. The plan is transmitted to the Administrator of the Soil Conservation Service, acting for the Secretary. A period of up to 60 days is then allowed to the Corps of Engineers and the Reclamation Service, if they are concerned, in which to review and comment on the plan. The Secretary of Agriculture next forwards the plan to Congress, through the President, together with any recommendations of those agencies. Forty-five days during which the Congress is in session must then elapse before any installations involving Federal assistance are begun. In addition, as noted above, if the plan includes any structures larger than 2,500 acre-feet total capacity, it must be approved by the House and Senate Agriculture

Committees before appropriations can be made.

LOANS FOR SOIL AND WATER CONSERVATION PURPOSES, FARMERS' HOME ADMINISTRATION

Question. Under what authority may a farmer or an association borrow money from the Federal Government for financing soil conservation measures?

Answer. Public Law 597, 83d Congress, which makes available to farmers and ranchers a new type of credit for financing soil conservation measures.

Question. Who is eligible?

Answer. A farmer is eligible when he has sufficient experience to indicate reasonable prospects of conducting successful agricultural operations, and is unable to obtain the necessary credit on reasonable terms and conditions from private and cooperative sources. The applicant must be engaged primarily in agriculture. Associations are eligible which are primarily engaged in extending to their farm members services directly related to soil conservation, water conservation and use, or drainage of farmland.

LOCAL COMMITTEES PASS ON LOANS

Question. Who determines the eligibility of applicants?

Answer. The local three-member county committee of the Farmers Home Administration. This committee is composed of persons at least two of whom are farmers, who are familiar with local agricultural conditions and whose judgment is established and respected in the community in which they reside.

Question. Where can a farmer or rancher apply for these loans?

Answer. At the local county office of the Farmers Home Administration.

Question. What can the loans be used for?

Answer. The loans can be used to pay case costs of materials, equipment, and services directly related to the application or establishment of soil and water conservation practices, water facilities, and drainage. Water facilities means tanks, cisterns, wells, pumping and irrigation equipment, and similar facilities. Soil and water conservation practices include construction or repair of terraces, dikes, and ponds, pasture improvements, basic application of lime and fertilizer, tree planting, and similar measures.

Question. Is there any limit to the amount that can be loaned to an individual, corporation, or association?

Answer. Loans to individuals are limited to $25,000. Loans last year averaged about $5,000. Loans to associations are limited to $250,000.

Question. What is the interest rate?

Answer. On insured loans the interest rate is 3½ percent per year on the unpaid principal. In addition, each insured loan borrower will pay each year in advance an annual loan insurance charge of 1 percent on the unpaid principal. On loans made from appropriated funds the interest rate is 4½ percent.

Question. When do loans have to be repaid?

Answer. In no case will the repayment period on loans to individuals exceed 20 years. Loans to associations can be repaid over periods not to exceed 40 years.

Tension in the Middle East

EXTENSION OF REMARKS

OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. MACDONALD. Mr. Speaker, the noise of the Egyptian and Israelian guns, fired thousands of miles away, is having a depressing effect on political, military, and diplomatic officials in Washington. Last week President Eisenhower and British Prime Minister Eden discussed the problem of what to do about mounting tension in the Middle East where the fuse has been burning for several years. Social, political, and economic unrest make this area the world's newest danger spot, especially vulnerable to Communist assault. We all know that a new war between the Arab States and Israel can only accelerate violent internal revolt, produce chaos, beneficial to no one, except perhaps to the enemies of freedom. Therefore, I contend, Mr. Speaker, that peace, freedom, and prosperity, are immediate imperatives for the Middle East. In the name of justice and America's good name among the nations I urge our Government to act firmly and decisively before it becomes too late. With these facts in mind I want to first discuss the problems which threaten the existence of the State of Israel and the peace and security of the entire free world, and second, the steps that would help resolve some of the problems in the area. I am convinced that if the proposals I suggest are accepted and fulfilled, the tension in the Middle East will subside, the stability of the region will be strengthened and a peaceful settlement on honorable terms could then be attained between Israel and the Arab States.

Seven years after its war of independence the State of Israel still faces a security problem of unusual complexity. The area of the country is only 8,100 square miles. Owing to the peculiar shape of its territory there are more than 400 miles of frontier. Three-quarters of the population of Israel lives in the coastal plain, running from north of Haifa to south of Tel Aviv, with a slender branch heading to Jerusalem. This densely settled area has an average width of no more than 12 miles between the Mediterranean and the Jordanian border. From the Israel Parliament buildings in Jerusalem, the armed sentries of the Jordanian Arab Legion can be seen a few hundred yards away. The headquarters of the Israel General Staff are within clear view from the hills which mark the Jordan frontier. The country's main roads and railways are exposed to swift and easy attack. Scarcely anywhere in Israel can a man live or work beyond the very easy range of enemy fire. Indeed, except in the Negev, no settlement is at a distance of more than 20 miles from an Arab frontier.

Obviously then, the term frontier security has little meaning in the context of Israel's geography. The entire country is a frontier, and the whole rhythm of national life is affected by any hostile activity from the territory of neighboring states. On the other hand, the Arab States are in no such position, especially Egypt. Border tensions affect only a narrow fringe of their territories, beyond which, stretch deep hinterlands entirely remote from the hazards and strains of frontier life. An American citizen who can cross a vast continent without seeing a foreign, let alone a hostile, face requires a highly unusual measure of imagination to understand the degree of vulnerability which geography imposes upon the people of Israel.

The effects of geographical vulnerability are aggravated by the fierce antagonism, directed against Israel across her embattled frontiers. There is no other State in the world community, whose very right to existence is so persistently challenged by all its contiguous neighbors. This is not the classic pattern of international conflict, in which neighboring peoples recognize each other's statehood but are divided by specific disputes which they have failed to reconcile. The struggle between the Arab States and Israel has passed through four phases: First, before 1948, there was a determination to prevent the establishment of an independent Israel; second, in 1948, there was an unsuccessful attempt to destroy Israel's independence at its birth by armed assault; and third, in the period 1948–54, there has been an attitude of inveterate revenge based on nonrecognition and the undying hope of Israel's extinction. Fourth, Egypt in 1955, as leader of the Arab world, has embarked on a special arms seeking policy in which it invited arms from Communist sources. The elementary duty of members of the United Nations to recognize each other's right to sovereignty and integrity has never been found in the relations of the Arab world with Israel.

It is necessary to take into consideration the expressed intentions of the leaders of Israeli's foes against the Israelis. The secretary general of the Arab League has said:

> This war (in 1948) against Israel will be a war of extermination and a momentous massacre which will be spoken of like the Mongolian massacre and the crusades.

Indeed, the Arab attack, especially in its first guerrilla stage, did not lack instances of disregard of the rules of war. This is illustrated by the fact that at present there are more than 180,000 Arabs living in the State of Israel, but not one single Jew survives in any part of Palestine that came to be occupied by the invading Arab armies. The Jewish quarter in the old city of Jerusalem, with its ancient synagogues and monuments, was completely destroyed; even the Jewish cemetery of the Mount of Olives was desecrated and laid waste.

Naguib, then President of Egypt, said:

> The existence of Israel is a cancer in the body of the Arab Nation.

This was said on April 18, 1953. The man who succeeded Naguib, the former colonel and current President Nasser, said on May 8, 1954:

> Israel is an artificial state which must disappear.

During his visit at the Lebanese Parliament on July 1, 1954, the Egyptian Minister of National Guidance, Maj. Salah Salem, stated:

> The evacuation of the occupation forces from our country will free essential forces of ours. We shall then be able to raise our voices and to liberate Palestine. We shall prepare the forces that will liberate Palestine. And, with the help of God, there will be a great revival.

Mohammed Salah-ad-Din said recently:

The Arabs will not be satisfied with the implementation of United Nations resolutions. We shall only have complete satisfaction when Israel is finally blotted out from the map of the Middle East. The Arabs will find no rest until this cancer has been removed from their heart.

On another sphere—an economic sphere—hostility has been shown the State of Israel. From the very inception of the State of Israel, an economic boycott has been enforced against it by the Arab States, of which the most significant aspect was the closing of the Suez Canal to all Israel shipping, and the interference with the passage of ships of other nations carrying cargoes to Israel. This action of the Egyptian Government was a violation of the Constantinople Convention of 1888 under which the power contiguous to the Suez Canal is bound to keep the canal—

Always * * * free and open in time of war as in times of peace, to every vessel of commerce or war without distinction of flag.

The Security Council of the United Nations on September 1, 1951, ruled that under the armistice agreement neither party could assert that it was actively a belligerent, or entitled to exercise the right of visit, search, and seizure. The Council found that Egyptian interference with the passage through the Suez Canal of goods destined for Israel was "inconsistent with the purpose of the armistice agreement" and an abuse of the exercise of the right of visit, search, and seizure. It called upon Egypt to terminate all such restrictions. No heed was paid to this decision and the Egyptian blockade went so far as to flagrantly seize an unarmed Israel ship, in the international waterway.

A widely ramified boycott machinery was set up with headquarters in Cairo to prevent trade between the Arab states and Israel, indeed between Israel and other countries. International firms trading with Israel were blacklisted, airlines and shipping companies are denied servicing in Arab airports and harbors if they insist on maintaining contact with Israel. A conspicuous example of this policy was the campaign of intimidation conducted by the Arab states against the German Federal Republic which has signed a reparations agreement with Israel. Danger to international air traffic has been caused by the refusal of Arab airports to provide flight information to aircraft proceeding to or from Israel. The boycott of the Arab states against Israel extends even to the denial of information on the movement of infectuous diseases or locusts.

Is it, therefore, unreasonable that Israel, in her isolation—the only democratic country in the world so isolated—should seek a pact with the United States, the country which once befriended her. The first country to recognize her as a free state?

The situation in the Middle East has deteriorated where it now constitutes one of our own weakest security links. Through a lack of firmness with the Western Powers, our obvious indecisiveness, so open to the Arab states that they have successfully played the East against the West, we now face Soviet penetration of the Middle East.

The Western World has reason for its alarm about the advances made by the Communists in the Middle East. It is amazing to me that the Western World, dedicated to the preservation and even to the expansion of democracy, should have turned its back on the one practicing democratic nation in that area of the world.

Is it that the Government of Great Britain considers Israel expendable? Can Eden on one hand deprecate an arms race in the Middle East and on the other condone the supply of arms to the country of declared and open hostility against Israel?

In all this, where is United States policy? Will our leadership go by virtue of its absence?

We cannot, of course, say that our Government will inevitably steer the wrong course in this area. We do know that there has been—and apparently still exists—a split among the State Department advisers as to what course will be followed. And we also do know that our diplomacy has not been successful in Egypt. However, a course must be set by us soon in the Middle East. We must act with realism, after staring the real facts straight in the face. We must stop merely hoping and start acting for we cannot afford any conflagration in this area in the name of our own security.

What then can be done? It would seem clear that the following steps would help resolve some of the problems in the area:

First. Under no circumstances sell any United States arms to Egypt. If Egypt desires peace she has more arms than she needs—if Egypt wants war she has more arms than she deserves.

Second. United States should enter a mutual security pact with all peace-loving nations of the Middle East. A pact which would not preclude the entrance of Israel into mutual defense against non-Middle East enemies and which would guarantee the borders of those countries.

Third. Impose economic sanctions on nations that breach the peace. That is, for example, unload our surplus cotton, for which all our taxpayers have paid their tax dollars to support, in Egyptian foreign markets at a low price, if Egypt should breach the peace in this area.

Fourth. Offer concrete help in order to develop Israel's oil resources to their fullest.

Fifth. Provide defensive arms needed by Israel to protect itself against any aggression.

Sixth. By educational methods and by the pressure of world opinion, try to bring to the consciousness of the Arab States that it is to their own self-interest that Israel survive. So that its men of learning, its doctors, its public health experts, its irrigation experts may be utilized by the people of the entire area. So that the whole of the Middle East may flower and peace again shine on the lands from which all mankind sprang.

In my opinion, Mr. Speaker, until these things are done it is only logical to expect that the prestige and influence of the United States will fall even lower in this most important and strategic area of the world.

Letter From a Senator—Goldwater Tells Stand on Labor

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD a letter from the junior Senator from Arizona that appeared in the Arizona Republic of January 29, 1956. The junior Senator from Arizona has been the subject of some controversy concerning his views on unionism. I feel that it is proper to include this letter in the RECORD as it will set forth the Senator's feelings in his own language.

LETTER FROM A SENATOR—GOLDWATER TELLS STAND ON LABOR

(It is customary for Congressmen to answer all letters they receive, but few go to such lengths as Senator BARRY GOLDWATER did this week when a constituent wrote him. Because his answer explains why he is a friend, not a foe, of labor, the Republic publishes it in full herewith.)

DEAR SIR: From the comments made in your letter of January 6, it appears that you have misunderstood the statements I have been making for the past several months about the use of union funds for political purposes. You seem to have concluded that my criticism of certain leaders of organized labor in this connection constitutes an attack on all leaders of organized labor and on all unions. Nothing could be further from truth.

Do you remember back in 1949 when Phil Murray was attacking the Communist leadership of some of the unions in the CIO and went so far as to have those unions expelled from his organization? Or more recently, when George Meany was attacking the corrupt leadership of the longshoremen's union on the Atlantic seabord? Did anyone say that Phil Murray or George Meany, by courageously attacking some of their fellow labor leaders in those situations, was attacking all labor leaders and all unions? Certainly not. And I sincerely believe that in attacking certain labor leaders for corrupt political activity I am in the same boat as Phil Murray was when he was attacking Communists and George Meany was when he was attacking racketeers. The only difference is that I do not happen to hold office in a union.

What I have been talking about and what I am fighting for is political freedom, nothing more and nothing less. It so happens that certain labor leaders are engaged in activities which many besides myself believe constitute a grave threat to that freedom. If you or anyone else can point out to me where leaders of business are threatening political freedom by similar or any other activities, I will be the first to speak out against them and to expose them.

This is not a management versus unions issue. It is an issue that goes to the very heart of our existence as citizens of this great country. This Nation was founded for freedom and I will fight encroachments on freedom from any quarter, whether it be labor, management, government or any other group.

Millions of wage-earners join unions and pay dues to support those unions. They pay those dues to defray the expenses of collective activity in dealing with their employers, to gain and maintain for themselves

the best possible wages and working conditions. This is well and good.

As a result of the tremendous growth in union membership, these dues constitute, in the aggregate, vast sums of money. We have big unions and these big unions are big business. The individual union member is similar in many respects to a stockholder in a big corporation. He has a voice in electing the management of the union, but he must trust in the ability of integrity of those he elects to run this big business for the purposes for which he joined it and contributes to it. Unions, just like corporations, are made up of both Republicans and Democrats. In fact, as near as we can tell from polls and other surveys, about 40 percent of the union members in this country are Republicans. Therefore, Republicans and Democrats supply in almost equal proportions the vast sums of money which union leaders have at their command.

Now let's assume that you are both a union member and a Democrat. In 1956 John Smith is the Democrat candidate for Governor of Arizona. Bill Jones is the Republican candidate. You are very much in favor of John Smith. You spend a lot of your spare time working in his behalf and you even put up $25 as a contribution to his campaign. Now it happens that the leaders of your international union have some tie-in with Bill Jones, the Republican candidate—he's promised to do them some favor in exchange for their support. So they take $150,000 out of your union's coffers and contribute it to Bill Jones' campaign. With the help of this money Jones is able to beat Smith and to become Governor of Arizona. Your hopes for John Smith and your $25 have gone down the drain. And whose money sent them down the drain? Your money, the dues you and other Democrats and Republicans paid to the union to assist you in bargaining with your employer. How would you feel if a corporation in which you own some stock, or your church, did this to you? You would be plenty mad, I'm sure, in any case—whether it was your union, your corporation or your church. And you would wonder what had happened to your political freedom.

If your union did that to you in Arizona where you are free to join or not to join as you see fit, it would be bad enough, but think of our fellow wage earner in Michigan, for example, who has to join a union and pay dues in order to keep his job. Maybe he's a Republican and likes to give effective support to Republican candidates for office. Or maybe he's a Democrat who opposes the particular Democrat the union leaders back in the primary. You would fight for his right to do so. And yet in 1950, CIO unions spent $211,550 of union funds, some of it his money, to defeat candidates in Michigan, supported by many individual union members? How would you like to be in his shoes?

That's what I've been talking about. I don't care whether it's voluntary union dues or compulsory union dues or whether its used for Democrats or for Republicans, the principle, or rather the lack of principle, is the same. Many thousands of union members in this country are being disenfranchised as a result of the political activities of a few labor leaders. I am not contending that those union leaders are telling those union members how to vote—its been proven plenty of times that they can't. But I am contending that by using the money of those union members they are nullifying their votes. If this is an attack on all union leaders and all unions, then the same is true of an attack on Communists and racketeers in unions. You and I both know that that isn't so.

I want you and everyone else to know what I am trying to do. I am trying to eliminate the abuse by a few power-hungry leaders of a very fundamental right, the right to individual, effective political action. My sole objective is to defend and maintain political freedom. The few whom I have criticized on this score don't like it, and to cover up their wrongdoing they cry out in the very name of the persons whose political freedom they are shackling. The Communists and the waterfront racketeers did the same thing when Phil Murray and George Meany attacked them. The union men and women of this country were not fooled then. I don't believe they are fooled now.

Sincerely,

BARRY GOLDWATER.

Highways for Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. BARTLETT. Mr. Speaker, the Washington Daily News on January 28 published an editorial recommending that Alaska be included in any road bill considered by the Congress at this session. This, says the editorial, would be in the interest of the Nation as well as of the Territory. All the States, the Territory of Hawaii, and the Commonwealth of Puerto Rico now are under the Federal-aid highway system. Alaska is not. I am glad to present here the succinct and logical conclusions of the Washington News editorial:

HIGHWAYS FOR ALASKA

Leaders of both parties in Congress apparently are agreed that the Nation must have a large highway-building program.

If it will be paid for by those who use the highways, as seems to be the plan, we see no objection to it.

But why not include Alaska in the program?

No area under the American flag is in greater need of roads and highways. None ever was, for that matter. And Alaskans will pay whatever extra taxes are levied for the new road program, just as they pay every other tax that people in the 48 States pay.

The little highway construction that has taken place in Alaska—apart from the military roads—has been financed by the Interior Department. Its performance may be measured by the fact that Alaska has 3,784 miles of highways, while Nevada—with little more population and a far smaller area—has 25,000.

This year the Interior Department asked for less than $8 million for Alaska highways—about one-third of the amounts that were being spent yearly before the Korean war. Obviously the Department is as indifferent about Alaska's development in this respect as in its failure to prevent depletion of its fisheries.

Alaska cannot share as heavily in paying for highways as a developed State can. It is a vast Territory with less than 250,000 people. But they are willing to pay what they can, and Alaska should be brought into the Federal program under a formula which takes its special conditions into account.

More roads and highways will speed up the settlement and development of Alaska, which everyone agrees is as desirable in the national interest as in Alaska's own. Congress can and should remedy the Interior Department's failure.

The Plight of Small Business in America

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mrs. GRIFFITHS. Mr. Speaker, under leave to extend my remarks, I wish to draw the attention of the House to the following radio talk given by the distinguished newsman, Mr. Eric Sevareid, of the Columbia Broadcasting System.

Broadcast on February 2, 1956, this searching analysis of the plight of small business in America merits wide attention and thought.

A transcript of the broadcast follows:

Good evening, all who read as they run are by now aware that one deep fissure or fault endangers the American prosperity structure, which looks so solid on the surface; they know that farmers generally are suffering a recession. But it is not yet widely recognized that there is a second fissure in the structural foundation. And that is the condition of American small business, defined as those concerns with less than a quarter million in assets; in net figures, they are not disappearing as small farms are disappearing; but neither are they growing in number as the economy grows, and the number of small business failures has risen to levels that alarm some observers.

While the press gives page 1 spreads to the profit margins of the giant concerns and their expansion plans, little is said about the present or the future where small business is concerned. But the information is there for anybody willing to look trouble in the face, in these days of mass hypnotic belief that there is no trouble. One so willing is the director of the Public Affairs Institute, who bases his argument on the uncontroverted figures of Dun and Bradstreet, the Federal Trade Commission, and the Securities and Exchange Commission. For one thing, net growth in the number of business firms stopped in 1953, after growing by 200,000 new concerns in the previous 4-year period. Furthermore, the profit margin of small businesses has not only stopped growing, it has sharply dropped, while that of big business has continued to grow. For example the smallest size group of manufacturers last year suffered a tremendous 65-percent drop in profit after taxes, compared with 3 years before; funds available for reinvestment or expansion tell the same kind of story—a 40-percent drop.

The story and small business failures is quite a tale; the chapter on firms that handle wearing apparel, for example. The number of retail failures there increased last year by 7 percent over the year before, the number of wholesale failures increased by 36 percent.

In a report earlier this month, the Senate Small Business Committee reached essentially the same troubled conclusions—unanimously. And what deeply troubles them, they said, is that there simply is no evidence that the American small-business man is going to be able to hold his ground, shaky as it is, in the future. They find a direct ratio, not only between size and success, but size and survival.

There seems much agreement that what chiefly is choking down small business is heavy taxation plus lack of credit. Big business can arrange big, long-term loans; any workingman can buy a house, car, furniture, whatnot, for about 10 percent down and 3 years to pay. But, a small-business

man in Los Angeles writes me, what about the modest retailer, jobber, wholesaler, serviceman? He has to pay more for rent, labor, supplies, insurance, taxes, yet his credit situation hasn't changed at all; he still has to pay for his goods in 30 to 60 days. If he applies for extra help to the Federal Small Business Administration, what happens? Well, as the Public Affairs Institute points out, the SBA has received about 11,000 inquiries a month and has granted less than 400 direct loans in 2 long years.

So far, hardly a whisper of concern has been voiced by the administration over the profound social fact that the big get bigger, while the small get smaller; a fact, concludes the Senate committee, that will ultimately change the fundamental character of the American economy, perhaps beyond easy recognition by the present generation.

Our Mental Health Problem—Mental Illness Can Be Cured

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. ROGERS of Texas. Mr. Speaker, under permission to extend my remarks, I wish to include the second of a series of articles on mental illness. This series appeared in the Amarillo (Tex.) Globe-Times and are the result of extensive research on the part of the writers, Louise Evans and Mary Tom Rasco. I heartily commend this series on this very serious national problem to the attention of all the Members of the House:

THE MENTALLY ILL CAN BE CURED—JUST WAITING TO GET LIKE THE REST OF THEM

(By Louise Evans and Mary Tom Rasco)

The sweet-faced girl leaned forlornly against the door. She was pretty, or would have been if her bedraggled, neglected hair had been combed, her dress had not been so drab.

The door opened into a corridor of the Kansas State Hospital for the Insane in Topeka. And the doctor walking down the corridor noted the alert look in the blue eyes that watched his progress.

"What are you doing here?" He asked absent-mindedly, as he passed.

The bright look faded from the pretty face. "I guess I am just waiting to get like the rest of them."

KANSAS WAKES UP

The year was 1948. The doctor was Dr. William Menninger, the man who headed the mental health program for the 10 million American soldiers of World War II. He was in the State hospital because treatment of the patients there had become a State scandal.

A young Kansas University student, Harry Levinson (now a staff psychologist of the Menninger Foundation) had been in the hospital to collect material for a thesis. He found that a new superintendent, zealous for economy, had cut off even the drugs needed for treatment. Staff members quit. More than 1,800 patients were under the care of one nurse, and two doctors, one elderly and the other a dope-ridden alcoholic.

A newspaper reporter took up the crusade, and for the first time Kansans were aware of the conditions within their State hospitals.

The Governor and legislators moved quickly. No one knew exactly what to do but funds were provided—$1 million for training staff—above the regular appropriations for care and maintenance of more than 5,000 patients in the hospitals.

The people of Kansas had spoken. Never again would a pretty girl of 23 wait at the door to get like the rest of them, with no doctor to diagnose her trouble—slipping deeper and deeper into the darkness because no one cared.

(In Texas last year, the Texas Research League found more than 20 percent of all patients in the State mental hospitals has never been diagnosed, and that 30 percent who had been released from the State hospitals likewise lacked diagnosis.)

AND IT PAYS OFF, TOO

In less than 7 years, Kansas moved from 47th among the States to 4th place in the care of the mentally ill.

Kansas is the only State in the Union in which for 5 years the hospital population has decreased steadily. While nationally the population of the mental hospital has increased by more than 15 percent, Kansas hospitals have shown a decrease of 7 percent.

Admissions to Kansas State hospitals have increased 400 percent—proving that the mentally ill in Kansas are going to the hospitals for treatment. Kansas dismissals have increased so that 82 percent of newcomers leave after only 6 months' treatment—proving the mentally ill are being rehabilitated and returned to normal lives.

The cost: $189,653 less than the care of the mentally ill would have been under the pre-1949 program, but, more important, funds used have treated and rehabilitated patients instead of providing custodial care. The planning, researching, and staffing have built a broad base on which future costs can decrease because the Kansas staff knows how and where to divert its funds for solving the problems of the mentally ill, instead of providing only hospital beds to hold them.

THE OVERALL PROBLEM

What did Kansas do?

1. It changed its thinking; it substituted the care and treatment of the mentally ill for the custody of the insane.

2. Admission laws were changed because mental illness, like diseases requiring surgery, needs prompt attention. Diagnose and treat the trouble immediately, and the patient likely will be out of the hospital in a few months. Wait 5 years for diagnosis and treatment, and generally he will be in custody for life. If a man must be committed for insanity with consequent loss of civil rights, he will not seek treatment eagerly. Kansas removed this stigma from its basic State law, and now Kansans enter the hospital for treatment before they are so ill they become life-long custodial cases. (At the present Texas rate of $2.13 per patient per day, this means 30 years of custodial care will cost nearly $25,000 per patient.)

3. It substituted "brains for bricks." Not one dollar was spent to enlarge the "human warehouses" which were holding patients. The increased budgets went for hiring more personnel and for training psychiatrists, psychologists, psychiatric nurses and aids, therapists, and social workers.

4. It overhauled the obsolete pattern of its social welfare programs for the most economic use of manpower and funds. Kansas in 1949 had—as Texas does today—special schools for the deaf, blind, and feebleminded; homes for aged and orphans; hospitals for insane, epileptic and tubercular; and prisons. It also had social workers for the old-age pensioners and public assistance programs out in the counties. Now the program for mental health, as it touches these varied activities, is one program.

Kansas tackled the overall problem, recognizing that the criminally insane were in hospitals and mentally ill in prisons—that the feeble-minded were in the insane hospital and the mentally ill were in the industrial schools—that there is a difference between the aged who need only homes or nursing care and those who require treatment for mental illness—that mental illness can appear in childhood and, therefore, a program for the mentally ill child must be planned. Kansas began to handle the problems of its neglected children and handicapped persons so they, too, would not gravistate eventually to the hospital for the insane.

STANDARDS ARE HIGH

Dr. George W. Jackson, one-time medical director of the Texas State hospitals and special schools, is now director of institutions for the Kansas State Board of Social Welfare. By basic Kansas law the man who holds that job must be a physician, graduated from a school approved by the American Medical Association, with a diploma of the American Board of Neurology and Psychiatry. He also must have had at least 5 years of experience in hospital administration.

The board, by State law, licenses all places where persons of unsound mind may be housed and is given the duty of "visitation and inspection of all private asylums." Therefore, Jackson can build a statewide, integrated system of mental-health care. First line of defense is the county social workers who, too, are board of social welfare employees and are on the alert for mentally ill persons. Often they are the ones who discover those borderline cases that need a little treatment to stave off eventual disabling illness. Frequently they can persuade those men and women voluntarily to enter the State hospitals for treatment.

Nursing and boarding homes, the children's receiving center, the industrial schools, the alcoholic clinics (operated by the Kansas Committee on Alcoholism), the training schools for the mentally defective are carefully integrated and, therefore, can screen for the mentally ill—and in turn receive those from the State hospitals who do not require hospital care.

"The Kansas hospitals are for the treatment of the mentally ill—not the old folks no one wants; not the mentally retarded whose rehabilitation demands training and education, not treatment for nonpsychotic physical illness; not the criminally insane who are diagnosed as psychopathic personalities and require only incarceration; not the nonpsychotic alcoholic whose primary need is for proper clinical care; not the patients who merely are indigent and need medical care," Dr. Jackson says.

The director thinks Kansas is on the right road, but not so far down it as he would like. Outpatient clinics are needed at all the hospitals (Topeka has the only one); traveling clinics, staffed by psychiatric teams from the hospitals, should go into all communities, and a vast preventive program against mental ill health should be started in every town in the State, he believes.

He is also concerned with the role the local community should play in care in the mentally ill, especially the aged senile. He is an advocate of nursing homes and boarding homes in the local communities and in the attachment of neuropsychiatric wards in the general hospitals. He sees the State hospital system as the research and training unit for the statewide mental-health program—not as the only treatment center for mental illness.

THE TAXPAYERS SAVE

As an administrator, Dr. Jackson particularly is pleased with some of the definite savings to Kansas taxpayers this integrated, hopeful plan has brought about.

In a recent study of the Kansas statistics balanced against those of 8 surrounding States, it was revealed that the care of the mentally ill was costing each Kansas citizen $3.63 per year as opposed to an average of $3.99 for the citizens of the other 8 States.

Kansas has cut its hospitalized patients to 2.26 per 1,000 Kansas citizens, while the others have 3.4 patients per 1,000 population.

These successes were bought by the Kansas citizens. Sometimes, as the programs began, they weren't too sure they didn't have a pig in a poke.

They learned (as Texans will have to learn) that the costs go up before they go down. In 1948, before the program started, the cost per patient released was $4,806. In 1951 the cost had risen to $10,867 in one hospital; to $12,712 in another by 1952. By 1955 the cost was back down to $5,266 and probably will continue to drop as the hospitals are at last reaching a point where at least the term of "adequately staffed" can be used.

In 1948 more than 48 percent of the inmates of Kansas State hospitals had permanent dismissal—death. In 1954 the rate was down to 16 percent and is falling fast this year.

In 1951 the Kansas Legislature was unhappy with the increased appropriations which seemingly had bought little progress. In 1953 the members raised their eyebrows at the rocketing costs but did not cut the appropriation. By 1955 they liked what they saw so well that they asked Kansas citizens to vote a half-mill tax on their property to modernize and renovate the buildings so the physical plant would be attractive. The measure carried 2 to 1.

LONG TRAINING NEEDED

Kansans are so sold on the program of training and paying dedicated workers to rehabilitate those who are mentally ill that the annual appropriation of $1 million for a training program is voted, whether or not the State hospital system has been able to spend all of the old appropriation.

Kansans now know money won't buy all of the needed personnel. It takes years of training added to professional degrees in medicine, social work, and psychology, to produce a worker proficient in the care of the mentally ill, and it takes time to find those who want such training.

Texans will learn the same hard facts.

Mixed Schools: Lower Standards

EXTENSION OF REMARKS

OF

HON. ARTHUR WINSTEAD

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. WINSTEAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Meridian Star of February 2, 1956:

MIXED SCHOOLS: LOWER STANDARDS

Question: Do mixed schools lower classroom standards?

For the answer we refer to a copyrighted article in the U. S. News & World Report, an independent weekly news magazine published at Washington, about the problem there.

A close look at what has happened to schools in the Nation's Capital, after nearly 2 years of mixed classrooms shows this: Since Negro and white children were integrated, pupils' test averages have run below the national average; and costly new measures are being taken now to maintain standards and give help to lagging pupils.

Both Negro and white teachers agree on that answer.

In Washington, where 64 percent of all public-school children now are Negro, the resulting problem is a big one.

School officials are taking strong measures to prevent mixed schools from lowering the quality of education for the average or above-average children.

They are also taking steps to help the less-advanced Negroes and whites to catch up in their education.

These measures, however, cost much money. To some degree they involve a return to what might be called a form of segregated classes, if not schools.

The magazine relates that before integration the white school students were given tests which compared favorably with national standards, but in tests given last spring the results were far below national standards.

The difference in the educational levels shows up plainly in the results of last year's tests of students in two of the larger junior high schools.

At Miller Junior High School, where no white children had yet enrolled, 61 percent of the 6th grade pupils were at a reading level of the 4th grade or below.

At Paul Junior High School, where there are only 38 Negroes to 1,024 whites, only 9 percent of the 6th grade pupils had a reading level of the 4th grade or lower.

The article also points out that Washington educators are undecided as to when the education levels of the two groups will come closer together; some say it will be 10 years—others say it will be much longer.

The division into fast and slow learners is now producing a new type of partial segregation in education.

This is what white leaders have been holding out as a truth for these many, many years.

Thus the Washington problem affords new ammunition.

Akron, Ohio, Area Development Committee

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. AYRES. Mr. Speaker, on August 31, 1954, John S. Knight, editor of the Akron Beacon Journal wrote an editorial entitled "Akron, Let's Go." Few of us realized the impact of these three little words.

Amongst other things, Mr. Knight had this to say:

What we propose is that all of us stop kidding ourselves and start dealing with the facts of life.

Either we are determined to have a growing, thriving community, or let it slowly go backward by default.

Let's start selling Akron to its own people before we sell it to the world. Let's bring together all elements of our town—labor, business, industry, merchants, professional-men and every citizen who is vitally interested in Akron's future.

The facts can be laid on the table and discussed in the spirit of community unity.

We have managed to settle most of our civic problems in this manner, and it is our firm conviction that a study of the facts involved can bring labor and industry into a better understanding of each other's problems and lead the way to a mutually productive relationship that will give our town the tonic it needs.

The slogan caught on and it was decided that the area surrounding Akron should be included in the let's go, Akron, program.

A committee was selected by Akron's mayor, Leo Berg, to study the planning of Akron and the area's future and to seek new industries for the community.

Thoma A. Ferns, a dynamic personality, resigned as president of the Akron Chamber of Commerce to become chairman of what was termed the area development committee.

The committee met with representatives from Summit, Portage, and Medina Counties working together as a team. New industry became interested in locating in this area.

Although Youngstown, Ohio, is not located in this immediate vicinity, you can see from the article printed below that other communities are interested in what is being done by this group of devoted citizens:

[From the Youngstown (Ohio) Vindicator of December 18, 1955]

AKRON'S AREA DEVELOPMENT COMMITTEE IS STUDY IN SUCCESS—YOUNG TEAM SPEARHEADS DRIVE FOR NEW PLANTS

(By Jack F. Ballantine)

AKRON, December 17.—It's like a rookie baseball player hitting a home run on his first trip to the plate in the big leagues..

The Area Development Committee here scored its home run by landing a huge new Chrysler Corp. plant for the Akron metropolitan district in its first bid to attract new industry to the three-county area it serves.

Now there are more irons in the fire, and and it's not unreasonable to assume that this hustling young organization will make future hits among at least five big industries with which it is dickering.

The ADC has had a Cinderella career. Whatever its future, the ADC already has been a tremendous success. It has brought to this area an $85 million plant with 3,800 employees and an $18 million annual payroll.

NEW CHRYSLER PLANT

The new Chrysler plant will be at Twinsburg. Geographically, that seems almost in the Cleveland area. Actually Twinsburg is in northern Summit County. The new plant's property will add to Summit County's tax duplicate, bring new prosperity to a Summit County village and provide employment for hundreds in Akron and nearby communities.

(Reports show that although the Ford Motor Co.'s Walton Hills plant is in Cuyahoga County, closer to Cleveland than Chrysler's plant will be, more than 900 Ford employees live in Akron proper and 40 percent in Summit, Portage, and Medina Counties.)

The Area Development Committee, in little more than a year, apparently has solved for Akron a problem that is not uncommon to other cities, including Youngstown. They, too, want new industries, but few have found how to go about getting them.

SUCCESS FORMULA

Akron may have found the answer now, but there was a time when it was just as backward as its neighbors. The Nation's industry outside of Akron was spending unprecedented millions for expansion. Akron wasn't getting any of it. The chamber of commerce's new industries committee was mildly active, but interested primarily in Akron only. Utilities and rail groups were doing some promoting. There were other agencies working in their own way to attract new business to Akron and to keep old industries from moving out.

But apparently no one was doing the job right. That's where ADC came into being on the heels of a thought-providing editorial in the Akron Beacon Journal entitled "Akron,

Let's Go," and written by the editor and publisher, John S. Knight.

Knight asserted that it was time for industry, labor, and others to forget their differences and to begin working together to sell Akron. He suggested that Mayor Leo Berg appoint a committee to do the job.

The Area Development Committee, organized in October 1954, and incorporated 2 months later, is the result. The ADC now numbers some 200 members, with its control vested in an executive committee of 20 members, headed by Thomas A. Ferns, a highly successful Akron insurance agent.

POLITICIANS EXCLUDED

The executive committee is noteworthy for at least two reasons. It includes no politicians, nor are there any representatives of the rubber companies, Akron's biggest employers. But both these groups are 100-percent cooperative with the committee's endeavors. The rubber firms were left out because it would not be fair to have only one company represented on the board, and four industry representatives would be too many. Politicians were not included because the committee wanted to be strictly nonpartisan.

The secret of ADC's success apparently has been a united effort by business, industry, and labor, plus a direct selling campaign that takes the area's big businessmen right to the prospective customer's front door.

The details of working out an attractive offer are left to a paid staff, but top men of business, industry, and labor, not their secretaries or agents, aid in the campaign. They take time off to work as a team in selling the Akron area to a new industry. Their approach calls for personal visits to a prospect, presentation of a package of facts on what the tricounty area offers in the way of sites and other facilities, friendly exchanges, and complete assurance that the area will provide the new plant wholehearted cooperation. Representatives of the prospective new firm are brought to the three-county area, shown sites, introduced to the community's leaders and provided information and any type of service they may desire. There is a constant followup on all prospects.

GIVE DETAILED INFORMATION

The committee has discovered that it must have ready at a moment's notice information of a highly technical nature, along with other facts. Prospects need detailed information on water, roads, schools, wages, housing, taxes, and other data as to sites.

The committee has found that it is best to present these facts in person through men whose experience permits them to speak with authority. They believe it is advantageous to lay the information before a prospect and have available men who can answer any questions immediately.

To this end, the committee has presented the top men of business, industry, and labor as the leaders in its movement. A glance down the membership roster proves this, and these men of high executive caliber will be found on the sales trips to get new industry for the area.

SELL ENTIRE AREA

The ADC is not selling Akron alone. Its territory includes Summit, Portage, and Medina Counties. Its leaders assert that what's good for Medina, Lodi, or Ravenna is also good for Akron and vice versa. And they will work just as hard for a new industry for Barberton as they will for Akron, even though many of them call Akron their home.

The complete absence of petty jealousies and political bickering among the communities in their intense desire to get new industry and promote the area's growth has been termed by some observers to be absolutely amazing.

ADC leaders see the day coming when they may be working closely with similar organizations promoting the welfare of possibly another northern Ohio area such as Trumbull, Mahoning, and Columbiana Counties. For, although 45 miles apart, there are close economic ties between Youngstown and Akron where larger affairs are concerned and their interests overlap.

While securing the Chrysler plant for the Akron area has won widespread recognition for the ADC, the committee's leaders consider their assignment important in other fields, such as planning and coordinating the economic and residential development of the entire tri-county area. They are looking as far ahead as 1980 with their plans for roads, sewers, zoning, and other community needs.

The ADC has learned, too, that it can do a valuable job of public relations. This was demonstrated recently when ADC leaders met opposition from representatives of a big eastern corporation who first said they would not consider Akron as a site for a new plant because Akron had a bad labor record and many strikes.

When it was shown that actually Akron's record for strikes in recent years has been good and labor is cooperating in the ADC's efforts, the firm not only agreed to listen to the ADC's offers but also sent a survey team to Akron to look over several potential industrial sites.

This is the type of objection that ADC believes can be overcome only by personal selling. A letter to that corporation advertising Akron as a likely site for industry would have been discarded in the waste basket.

In fact, ADC leaders are convinced that direct selling of an area's assets are a must in any campaign for new industry.

"You can throw away your circulars and letters. You've got to go and see them, and sell them," an ADC committeeman said.

EMPHASIS ON YOUTH

ADC leaders also have found that a one-man staff is too small to conduct a new industries campaign. They have a 4-man staff in addition to 3 secretaries. The committee's budget of $50,000 for its first year has been upped to $100,000 for next year. The funds are contributed by industry, business, and labor.

The ADC's young staff is typical of the hustling attitude of the organization. They are all go-getters, eager to serve and eager to please. They are just as willing to get new, fresh information as they are to show their elaborately prepared catalog listing hundreds of available industrial sites and their characteristics, complete to a log of all wells within a mile of a proposed plant. They are quartered in bright, new offices on the eighth floor of the First National Tower, Akron's tallest building.

The emphasis in the ADC's family is on youth. Its executive director, George E. Wilson, is only 32. His assistant, Robert Spaethe, is 27. Robert Schmidt, facilities engineer, is 30, and Nick Andreef, research director, is 25. Wilson is a former assistant secretary of the Akron Chamber of Commerce and Spaethe was head of the chamber's convention and business bureaus. Both are University of Akron graduates.

Mr. Speaker, on January 19, 1956, in an official ceremony, ground was broken for the new Chrysler plant. President L. D. "Tex" Colbert came to Akron for the ceremony along with other Chrysler officials. It was a great day for the man who wrote the Akron, Let's Go editorial, Mr. John S. Knight. It was a happy occasion for the area citizens because we realize it is important to our economy to create more jobs for more people.

It was a memorable day for the Chrysler Corp. We welcome the forward look to our area.

It was a busy day for George Brittain, executive secretary of the chamber of commerce.

Our community will grow with America. With labor, management, and the area development committee pulling together you may rest assured that many new organizations will want to become part of this expanding spirit.

Farm Ideas Are Popping

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith insert the following editorial which appeared in the Des Moines Register:

FARM IDEAS ARE POPPING

One thing the drop in farm income has accomplished—it has stirred up the brain cells of a lot of city folks to thinking about farm problems. In Iowa, this is especially important, since the economy of the State is so closely tied to the welfare of agriculture.

We have received letters from a good many people "tossing into the hopper" ideas about curing the farm problem. Some of these are valuable contributions to thinking. Some are pretty fuzzy. But all of them show a healthy concern about one of the major domestic issues of the day.

A Knoxville, Iowa, businessman, William E. Lemaster, has proposed a variation on the food subsidy idea. He would have retail food dealers sell "distress" commodities below the wholesale price, this loss to be made up by a Government payment to the retailer. This plan has an advantage over some surplus disposal schemes in that it would operate through the regular channels of trade. There would be no stigma attached to buying cheap pork or beef from the store, as there sometimes is when distribution is through relief channels.

Under Mr. Lemaster's plan, the retailer would lose his profit on the surplus commodities he handled. He would get only the equivalent of the wholesale price. Mr. Lemaster thinks retailers would be agreeable to this, as a goodwill proposition and as a help toward solving the farm surplus problem.

This plan would increase consumption of certain foods, perhaps, but it probably would not increase total farm income. People would buy more pork, if they could get it at a bargain, but probably would reduce their spending for other meats and poultry. This has been a weakness of "surplus disposal" programs all along. It is a weakness in all the promotional schemes to boost certain foods.

If the farm surplus is to be alleviated by expanding consumption, then it should be done across the board. The program should be aimed at improving nutrition, not disposing of surpluses. Nevertheless, Mr. Lemaster's idea is worth study. It is better to subsidize consumption than to subsidize a reduction in production of foods so long as some people can't buy a nutritious diet.

Another proposal that has come our way is an effort to make the ever-normal granary of feed grains work more effective. Roscoe S. Jones, an Atlantic, Iowa, attorney, would have the Government insure the individual farmer up to 75 percent of his normal feed-grain production—payments on this insur-

ance to be made from the Government-held feed-grain reserve.

Mr. Jones suggests that the premium cost might be taken care of by a charge of a cent or two per bushel in connection with the corn-loan program. Or, he says, perhaps it would be enough just to require cooperation in the crop adjustment program.

This would be a way of protecting the farmer against a severe loss from drought, hail, or other natural calamity. However, it would not touch the surplus or low-price problem. Mr. Jones lives in a part of Iowa which has suffered drought for several years; naturally he is concerned about that phase of the farm situation.

Judging by experience with the experimental crop-insurance programs of the Government in recent years, there would be a considerable subsidy in any such guaranty of 75 percent of normal feed output. But maybe that is one good way to subsidize agriculture. At least it is a suggestion which deserves study.

Secretary of Agriculture Benson has asked for ideas on farm programs. These two we have mentioned and others ought to be sent directly to him in Washington. Plainly, the country needs some new ideas. The old programs are not doing the job, yet there is a real danger that Congress will simply return to more of the same.

Tribute to the American Indian

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 6, 1956

Mr. NEUBERGER. Mr. President, we owe a great debt to our American Indian people. I have received a most eloquent and moving tribute to the American Indian which was written by the Reverend H. Richard Rasmussen, pastor of the University Presbyterian Church of West LaFayette, Ind. I have been indebted for this fine sermon to Mr. Jimmie James, a constituent of mine in Portland, Oreg., who is a stalwart supporter and friend of the Indian people.

I ask unanimous consent that the Reverend Rasmussen's impressive sermon and Mr. James' brief letter appear in the Appendix of the RECORD.

There being no objection, the sermon and letter were ordered to be printed in the RECORD, as follows:

PORTLAND, OREG., *January 1, 1956.*
Senator RICHARD L. NEUBERGER,
Portland, Oreg.

DEAR DICK: I would like to draw your attention to an article written by Mr. H. Richard Rasmussen, of West LaFayette, Ind. It is a wonderful article, and I believe it should be published in the CONGRESSIONAL RECORD.

Will you please read it over and tell me what you think of it?

I wish you every success during the coming year, and may health and happiness as well as success be yours.

Very sincerely yours,

JIMMIE JAMES.

BROTHERHOOD AND THE FIRST AMERICANS

(By H. Richard Rasmusson, University Presbyterian (All-Student) Church, West Lafayette, Ind.)

Like many preachers, I have had a blind spot. Always when I have preached on brotherhood I have preached about the Negro. The needs and plight of other minorities escaped me.

But I am being corrected. Traveling this past summer through the great West, both Northwest and Southwest, I became aware of our first Americans. Then a friend got me interested in the problem and began needling me to preach sometime on the Indian American.

Did you know that there are 400,000 Indian Americans living in these United States? This is only half of what were here when the first white man came to the New World, but still more than most people realize. Some people think the Indian problem is disappearing because the Indian is disappearing. How wrong these people are.

I write with hesitation on this matter because it is exceedingly complex. It is complex because the Indian Americans are located in 26 States and in Alaska; they live on lands (not necessarily good land) which, if put together, would be larger than six New England States. They are divided into 250 tribes, living on as many reservations. And as a Government bulletin puts it, "In actuality, there is not one Indian population; there are many Indian populations. They present differences in customs, languages, resources, concepts of religion and culture as great as those existing between the French and the Norwegians, the British and the Italians, or the Spanish and the Dutch.

But there are certain principles of justice and humanity and these I want to use in our consideration of the present plight of the Indian American, and whom we should have discovered in his plight and need long ago.

I

The first aspect of justice and humanity that needs stressing as we face the Indian problem is the need to operate in the framework of the democratic process as concerns the Indians.

Senator RICHARD NEUBERGER of Oregon has asked pertinently of all Americans the question, "What's a treaty with the Indians worth?" He has said: "Congress has now authorized an immense dam which will inundate Celilo Falls. Work is about done on this $348 million project near The Dalles, Oreg. The dam came first. The solemn treaty between the Government and the Yakimas came second. It is a clear disregard for the ultimate desires of these original inhabitants of North America, who had believed they were making a pact with the Great White Father to last for 'as long as the river runs, as the sun shines, and as the snow is on the mountains.'

"Why was the dam started first, and then the faded treaty considered last?

"This seems to me to betray our utter disregard for the elemental rights of these people who are the descendants of the people the Pilgrim Fathers, and Lewis and Clark found on this continent. The salmon fishing at Celilo Falls amounts to virtually the oldest cultural heritage of the Indians of the Northwest.

"Public opinion in the Nation should insist that a treaty with Indians be accorded the same respect as any other treaty. The United States, through its United Nations, often upbraids the Russians for violation of treaties, and rightfully so. Yet our country was in the position of violating a treaty with the Yakimas when it started construction of a dam first and negotiated with the Yakimas afterward. A pledge addressed to warriors in feathered bonnets is as binding as one made to an ermined ruler on a throne.

"This is a moral frontier on which much pioneering remains to be done."

The 1955 convention of the National Congress of American Indians, among many other decisions, asked one—the repeal of House Concurrent Resolution 108, which declares that it is the policy of the Congress to terminate Federal responsibility for carrying out its obligations under treaties and agreements with Indians; and two—the endorsing of Senate Concurrent Resolution 25 of the 84th Congress, 1st session, which requires consultation with Indians on any legislation affecting their welfare.

And let it be remembered that in his 1952 campaign, Mr. Eisenhower pledged, to consult with the Indian people of this country and to give them every opportunity for a full expression of their desires, suggestions, hopes, and aspirations.

In all decency, let this be done.

II

Another aspect of justice and humanity is concern for a decent economic existence for the Indian. Man doesn't live by bread alone, but neither does he live long without bread. Christianity has been called the most materialistic of the world's religions because it faces the bread and butter problem and deals realistically with man's existence in a body. "Give ye them to eat." "Heal the sick."

Anyone who has been in the Southwest knows the life there is in water. Where there is water, there is vegetation, growth, and the possibility of a people living even on poor land being able to make a fair living. But denied water, there can be only poverty.

Here for example, are the Pima Indians of Arizona. When the Gila River Reservation was established in 1859 by an act of Congress, it was specifically stated that the waters of the Gila and Salt Rivers should be for the use of its wards, the Indians. But powerful, selfish white interests, indifferent to the claims of humanity and justice, denied the Indians their right.

Then a heroic Presbyterian missionary by the name of Dirk Lay fought this injustice into the very Congress of the United States, and in 1924 Congress passed a law authorizing the building of Coolidge Dam across the Gila River and the act clearly stated that the dam was to provide water first for the Indians. But again injustice was done to the Indians and he didn't get his opportunity for a decent agricultural existence.

As. Dr. Fey of the Christian Century tells the story, political pressure was exerted on the Interior Department from white Arizonians that the Indians did not need all the water Congress had given them. The Indians protested through legal channels, but were never given a fair chance to present their case. Am I talking about terrible Russia? No! I am talking about the United States. The Gila River decree, which is still operative, has been described as one of the greatest crimes in history.

Let us write our Representatives in Congress and the Commissioner of Indian Affairs, Mr. Glenn L. Emmons, that adequate educational programs be set up preparing Indians to leave the reservation and find work outside when he or she so desires; expansion of job opportunities for competent Indian workers; adequate water rights, where these are now denied; loans for farming and ranching to those who wish to farm; farm-bureau assistance to Indians on crop rotation, better methods of farming, better housing, etc., etc.

The Government has been relocating Indians. In each of the past 2 years it has relocated about 2,600 people, including both workers and their family dependents. This we are happy to know. Funds for relocation have now been raised to $900,000. This is good news, too. Here is a new kind of displaced person program for the church to get interested in. What is your church doing about it? Let us be concerned with the words of Christ: "Give ye them to eat."

III

The third aspect of justice concerns health. Growing out of malnutrition, inadequate

dental care, uncorrected physical ailments, the health of the Indian is pitiful.

Consider these startling facts: The tuberculosis death rate for the Indian is nearly 6 times that of the general population. Pneumonia and influenza kills four times as many as the general population. The typhoid fever death rate is four times as high. There are 91.7 deaths of Indians under 1 year of age, per 1,000 live births, compared with 31.5 among other children. Among the Navahos, diarrhea enteritis is 20 times higher than general population. The average life expectancy of the Indian is just a little more than half of the non-Indian of the Nation. Among the Papagos in Arizona, it is 17 years against 68 for the Nation as a whole.

I am happy to learn that whereas in 1911, appropriations for Indian health were only $40,000 in 1955 it has been increased. Let us hope that now that legislation has been enacted transferring the health activities for Indians from the Department of the Interior to the Department of Health, Education, and Welfare, effective July 1, 1955, frontal attack will be made on this disgraceful situation.

It's a big problem that should have been tackled realistically and humanitarian-wise long ago. The 51 hospitals, with a total bed capacity of 3,900, must be increased. Training for health programs should be enlarged. Indians in school should be equipped to bring to their people methods of sanitation and personal hygiene.

But the root of the matter is a more decent economic existence for the Indian. As a Government bulletin recognizes, "Poor diet is a direct result of a low economic base * * *. Inadequate income makes for insufficient housing, which leads to crowding and facilitates the spread of disease."

Let us insist that our leaders follow through on this matter, attacking it with information, science, and love. "Inasmuch as you did it to one of the least of these my brethren, you did it to me," says the Christ. Shakespeare makes one of his characters say:

"We came into this world like brother and brother.
And now let's go hand in hand, not one before another."

May this be our spirit toward all whom we, from our posiion of relative advantage, speak of as minorities. And may we become politically active, doers of what is right for all men.

Ohio Heading for No. 1 Industrial Spot

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. JENKINS. Mr. Speaker, the State of Ohio has been the leading State in some ways for many years. I am happy to note that from an industrial standpoint Ohio has a good chance of becoming the leading industrial State in the Nation in a short time. In this connection, an editorial recently appeared in the Columbus Dispatch which indicates clearly that Ohio continues to move steadily to the No. 1 industrial spot in the United States. The editorial is as follows:

OHIO HEADING FOR NO. 1 INDUSTRIAL SPOT IN UNITED STATES

Ohio continues to move steadily toward the position of the first industrial State in the Nation.

It is now in second place, having passed both Michigan and Pennsylvania, but still some considerable distance behind New York, which remains in first place.

However, Ohio's increase in population, its increase in the amount of industrial production and its increase in factory capacity are greater than the similar increases being registered by New York.

Verification of these facts was made before the Ohio Chamber of Commerce Industrial Development Clinic here last week by George A Moore, manager of the Cleveland office of the United States Department of Commerce.

Mr. Moore supports his forecast of Ohio's preeminence by citing the factors of a central location for this State, the availability of raw materials, the nature of the population, the reasonableness of climate and the easy access to Ohio of users of its manufactured goods.

Ohio also has the room for large and swift development in many of its less crowded areas, and along with these is the site also of many raw materials used in many manufacturing processes.

Its transportation systems—rail, air, and highway—are either in excelelnt condition now or are potentially excellent, and with the State being the natural center and gathering point for communications both east and west and north and south across the Nation its attractiveness for new industry is bound to continue for a long time into the future.

The prospect is bright, and is made brighter by the present rate of development along the very lines noted by Mr. Moore.

Permanent Peace

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Carroll County Independent, Center Ossipee, N. H., Friday, February 3, 1956, entitled "Permanent Peace."

PERMANENT PEACE

The current issue of Time magazine gives a remarkably lucid and clear explanation of the international race to produce the first ICBM; the letters ICBM stand for the phrase Inter Continental Ballistic Missile.

The successful ICBM will be able to span the Atlantic Ocean and reach into the heart of Europe. It will move so far above the speed of sound that it cannot be touched by any type of defense rockets. It cannot be jammed and thrown off course by radar or radio. It will be self-navigating and will probably set its course by a series of stars. It will be self-deaccelerating, so that when it comes back into the atmosphere of the earth, it will not burn up.

The first nation to secure the real ICBM will be able to write its own ticket. That is, it will be able to impose its will upon other nations without firing a single missile. As Time points out, probably an isolated area in the Pacific would be designated as a demonstration target area. When the qualified observers tracked a few ICBM's in on their radar screens and saw the ocean go up into the sky with atomic hits—that would be a demonstration of the ultimate weapon.

The above is not a Sunday supplement dream. If you happened to read the help wanted section of last Sunday's Boston Herald you noted advertisements for engineers qualified to work in the development of special navigation systems and controls. And these navigation systems were obviously for use in ultra long range missiles that could not be affected by radio jamming in any way.

The first notion to develop the ICBM will establish hundreds of launching sites.

Then any enemy action can be answered by a volley of missiles that will, for all practical purposes, wipe the people of the offending nation from the face of the earth.

Strange as it may seem, the development of the ICBM may lead to permanent peace. Or rather, to a permanent stalemate. No nation will dare to pull the trigger. For any aggressive action would be answered by the wipe-out volley.

This is a strange world in which we live. Living in a small country town, we pick up the paper on a quiet Sunday afternoon while the snow drifts down, and read advertisements seeking men who have the skill to design weapons that will wipe out a quarter of a million people at a shot—a missile that gives no warning of its coming except a quick flash on a radar screen.

If the Russians win the race to develop the ICBM, they will gain world dominance. If we win the race, or tie in development with them—we may know permanent peace through mutual fear and stalemate.

Upper Colorado Pays Its Own Freight

EXTENSION OF REMARKS
OF
HON. ANTONIO M. FERNANDEZ
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. FERNANDEZ. Mr. Speaker, in all fields there is competition. Competition in the production of cotton is the keenest ever. Water belonging to the upper basin States of the Colorado River is flowing down to Mexico where cotton production is increasing in competition with our own.

The upper Colorado River Basin States do not expect to raise cotton. In fact they could not if they wanted to. The climate in those States does not lend itself to the production of cotton. Nor do we begrudge Mexico its ability to raise cotton, but we do believe that they should not be using water which belongs to the upper Colorado River States to do so. They will continue to use it and to expand—and you cannot blame them—so long as we do not build our own dams and reservoirs to hold and control the water that belongs to us.

I place in the RECORD an article which appeared in the December 14 issue of the Deseret News and Telegram of Salt Lake City, which points out that although Mexico is entitled to only 1,500,000 acre-feet of water, it is actually diverting 4 million acre-feet a year. The article reads as follows:

IT PAYS ITS OWN FREIGHT—RECLAMATION HAS BUILT THE WEST—WEALTH POURS INTO THE TREASURY LONG AFTER COSTS ARE REPAID

Opponents of the Colorado River storage project recently have broadened the scope of their attack to include reclamation itself.

"The Nation can no longer afford reclamation projects," they say.

Actually, the Nation cannot afford to pass up the opportunity.

Reclamation has built the modern West, and every westerner knows it. So does anyone who has taken the time to study the history and economy of our part of the country.

However, bitter foes of the Colorado River storage project currently are loudly proclaiming that the project is a western giveaway to be paid for by nonwestern taxpayers.

Quite frequently, uninformed citizens will be taken in by this pocketbook appeal; particularly if they are from the eastern or southern part of the Nation and are unfamiliar with the benefits which have resulted from our modern pays-for-itself reclamation policy.

These uninformed citizens are not aware that:

1. Today some 6,200,000 acres of arid and semiarid lands are irrigated from reclamation projects and are producing wealth in which all America shares.

2. Power-generating capacity of reclamation units now stands at 4,300,000 kilowatts—enough to supply the power needs of 8½ million citizens.

3. Crops produced with reclamation water last year were valued at $865 million.

4. People in the areas served by reclamation projects have paid some $2,500,000,000 in Federal taxes since 1916. This is 25 percent more than the entire cost of reclamation in our Nation to date.

5. The cumulative crop values on all reclamation projects up to 1953 is nearly $10 billion.

Reclamation creates wealth which continues to pour tax revenues into the public treasury long after the total cost of the project has been repaid.

"Here is just one example of how reclamation has more than paid for itself.

This fall the $11 million Salt River project will be paid in full. The last contract installment will be paid by the water users, repaying in full the original investment.

REPAID COST

But, like all reclamation projects, this unit has more than repaid its original cost. The annual return in Federal taxes from Maricopa County, Ariz., in which the Salt River project lies, equals about nine times the total Federal expenditure in the original Salt River project.

The project has been largely responsible for the development of this county from just another desert valley into its present position as one of the Nation's leading and most prosperous agricultural communities.

And the benefits from this single reclamation project will continue to pour in as long as water continues to flow down the Salt River.

If anyone is still skeptical about the success of our Nation's reclamation policy, he has but to study another typical reclamation project on which we have first-hand facts and figures.

STRAWBERRY PROJECT

That is Utah's Strawberry project. This project is the oldest one in Utah and one of the first in the Nation. It cost $3,348,518 back in 1905–1913 to build a 3.75-mile tunnel and other structures needed to divert surplus water into southern Utah County.

Today, 42 years later, more than 80 percent of its cost has been repaid by water users. In another 10 years, every cent the United States Government spent on the project will have been returned.

And here are some of the things the project has done:

1. Some 45,000 fertile acres are safeguarded against drought.

2. The assessed valuation of the southern end of Utah County—that part of the valley which the project directly affected—jumped from $6,271,000 in 1911 to $30,558,000 in 1920. Most of the increase is directly attributable to the Strawberry project.

The Strawberry project also resulted in many new crops being introduced by farmers of the area—crops which replaced the former dry-farm grain staples. Onions, string beans, tomatoes, peas, lima beans, carrots, cabbage, squash, lettuce seed, and grapes became major crops of the area.

And that example illustrates how the Colorado River storage project, even though it will bring new acreage into production, will not materially add to current crop surpluses.

As noted, crops presently in surplus are crops which can be grown on marginal lands—dry-farm crops like wheat, oats, rye, and barley. When those lands enjoy a stable water supply, the farmer then can grow diversified crops, crops which are in demand and not in surplus.

The Colorado project will provide supplemental water for 233,930 acres—acres now restricted to dry farm or limited irrigation crops, most of which is now producing Government-supported crops. It would do this while providing full water supplies to 132,360 new fertile but dry acres. (Both of these figures are based on the project as provided by the House-amended bill.)

DEMAND CROPS

With Colorado River project water, all this new acreage then could grow crops in demand: fruits, vegetables, livestock forage crops, beef, and related items.

On the other hand, if the Colorado River storage project isn't built the water belonging by solemn compact to the upper basin States will flow downhill to southern California and Mexico. And there it very materially will add to crops which are in surplus, cotton for example.

Few persons realize the phenomenal growth of cotton acreage in California in recent years. Immediately after the war, California's Imperial Valley—whose crops are entirely grown with water from the Colorado River—had a total of just 9 acres in cotton. Paloverda and Coachella Valleys in nearby Riverside County, also watered from the Colorado River, had a mere 829 acres in cotton production in 1946.

In 1953, however, Imperial Valley's 9 acres had grown to a staggering 116,630 acres and Riverside County had 46,500 acres in cotton production.

Cotton currently is California's most valuable crop, accounting for 13 percent of the total income of her farmers.

Cotton production also has been booming in parts of Mexico irrigated by the Colorado River. Mexico's cotton exports in 1946 totaled 47,664 metric tons; in 1954 the figure had risen to 259,419 metric tons. In recent years, Mexico, which is guaranteed 1,500,000 acre-feet of Colorado River water by treaty, has been diverting as much as 4 million acre-feet a year, the surplus being water belonging to the upper basin States which cannot be used there until the river system is regulated and controlled.

Endorsement of Chiropractic Hospital in Denver, Colo.

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 6, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a letter I have received from L. B. Anderson, of Flatwoods, Ky.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FLATWOODS, KY., *February 3, 1956.*

The Honorable SENATOR LANGER:

As I have been an asthma sufferer for 18 years and tried everything the medical doctors could do and finally went to Spears Hospital, Denver, Colo., which is a chiropractic hospital, and in 6 weeks I was able to return home and go back to work. And I would appreciate anything you could do or say to help this wonderful institution. They are doing so much for the sick and suffering.

Yours truly,

L. B. ANDERSON.

Are Veterans Being Studied, Stalled, Double-Crossed and Hooverized?

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. CHRISTOPHER. Mr. Speaker, when the President appointed his $300,000 President's Commission on Veterans' Pension, those experienced in veteran affairs were not fooled, and the very thing they expected has come to pass.

In the first place, Mr. Speaker, what does this Commission, outside of General Bradley, know about pensions? Are they expert legislators? I have their names and their professions. Not one of them is capable of writing a bill, not one of them has distinguished himself in the field of civil government.

Mindful of the fact that our Nation's veteran policy has always been the responsibility of the Congress, and knowing that this Democratic Congress would not jump through the hoop, an old holdover, self-perpetuating clique that attempted to sell President Truman a bill of goods, has pushed Eisenhower into a leaky boat. Their scheme is to transfer all aged VA pensioners to some sort of social-security scheme and thereby to fire the first shot in their campaign to eliminate the traditional veteran class.

But Mr. Speaker, that is not all. This Bradley commission is being used as a stalling device. In his budget message, the President stressed the point that "the Congress and the country would want to consider" this Commission's report. In brief, he told us to keep "hands off" until this Commission makes a report. When will that report come forth? That Commission has been in existence for more than 12 months. It was instructed to report in November, but an extension was granted, and today no Member of Congress knows when the Commission will report.

In the meantime, I suppose we are to sit and fiddle—just fiddle—until these pseudo experts decide to give us the benefit of their findings.

The distinguished ranking minority member of our Committee on Veterans' Affairs, the gentlewoman from Massachusetts, has forgotten more about the pension system than this Commission will ever learn; and I hope that our committee will never be influenced by an undisclosed commission report to be trans-

mitted to the Congress at some unknown future date.

Then, of course, Mr. Speaker, we have the residuals of numerous Hoover Commissions to cope with. Mr. Hoover's only noteworthy contribution in the field of veteran affairs is found in his order to General MacArthur to drive the starving bonus army out of Washington and to later have his Attorney General brand them criminals. So, the man who could not make good in government himself, now poses as an authority on everything from the lowly hamburger to management of the atomic energy program. With literally thousands of disabled veterans being denied VA medical care, the great victor over the unarmed bonus army demands that still more Veterans' Administration hospitals be closed.

Under leave granted, I am inserting an editorial from the National Tribune for January 26, 1956. The National Tribune is the oldest veterans' newspaper, and I commend the editorial to my colleagues.

TIME TO CLOSE RANKS

President Eisenhower has sent to the Congress his budget message for the year ending June 30, 1957. The message in fact spelled out in detail the many promises made in the state of the Union message and repeated the rosy results to be expected if his recommendations are followed. The budget makers peered into the crystal ball, pontificated at great length and, for the Chief Executive, came up with a document asking for record-breaking expenditures based upon the hope of a dynamic prosperity that anticipates a balance between income and spending and presages a small surplus to be used to retire a little of the vast public debt and lead, possibly, to a mild reduction in taxes. The budget proposes expenditures of nearly $66 billion, more than a billion dollars in excess of the outlays for 1955 and a billion and a half more than it is estimated will be spent by the end of the present fiscal year ending next June.

We would ourselves enter into the stargazing business if we were to pass judgment on expected revenues or on savings that it is hoped will be accomplished, but we have our own troubles and we shall leave that to self-claimed experts. We do know that regardless of the claims of budgeteers, the national budget has not been in balance for over a quarter of a century, and long-anticipated tax reductions appear to be futile election year promises predicated upon new revenue-raising legislation that we judge may well not be realized. Whether or not advice to young mothers or other proposals made in the message are sound, we hesitate to predict, nor would be express opinions about the advisability of building satellites in space or about placing new moons in the cosmos. We have our abiding doubts about the purpose expressed of outspending the Soviet in the long-range quest for friends abroad and concerning the bolstering of economies of friends and former enemies, because we consider it to be foolhardy to try to compete with Communist promises which we do not believe can be or will be kept. We also feel that charity should begin at home, but we note that while no effort seems to have been spared by this administration to spend its largess where it appears to be needed elsewhere in this country, we see that the veteran class has once more been held up as a specter of fear and the inference is made in the budget message that those who have saved the Nation and its economy by turning back foreign aggression are again considered to be the greatest menace to its well-being.

Unlike the state of the Union message that devoted a mere 43 words to sharing "a continuing concern for those who have served this Nation in the Armed Forces," the President's budget message devoted many paragraphs to veterans and their dependents and recommended that considerable money be spent on them and in their behalf. The request for the Veterans' Administration was for $4.9 billion, second only to the $36 billion plus for the Department of Defense and the $8 billion for the Treasury Department, and a little more than is requested for the President himself, who asked for $4,353,000,000 to run his office and manage by remote control the affairs of the world. The VA request is about $422 million more than was spent in 1954–55 and $86 million more than the expected outlay for this fiscal year. The biggest boost is for compensation and pensions that must be paid under existing laws. GI bill costs are expected to diminish sharply and it is asked that some rights be terminated, but expenditures for medical care and hospital construction and maintenance are considerable, and even the United States Soldiers' Home is going to be permitted to spend $5 million of its own money that was raised by court-martial fines and contributions from enlisted men. All this is on the credit side of the ledger, and even though nothing in the way of new legislation is taken into consideration, we cannot complain too much about the amounts proposed to administer veterans' laws. After all, new laws are always appropriated for only after they are enacted.

General Eisenhower, however, did not fail to enlarge upon those 43 words in his state of the Union message. Whereas, in the new message to the Congress he once more anticipated passage of the White House supported bill for survivor's benefits that makes no distinction between peacetime and wartime service and cares for widows and orphans of only about 4 percent of those who saw service in our major wars, he appeared in in his message to be greatly concerned about the expense of caring for the 22 million war veterans now extant and who, he indicates, will in time, with their loved once, compose nearly half the population, all potential claimants upon the country's income. It all seems a little silly to us, if for no other reason than that death and other considerations, to say nothing of the fact that only a minimum of war sufferers in all of our wars have ever claimed rightful benefits have kept down the numbers on pension rolls, but somebody has sold the President a bill of goods that has him worried. In his message, he spelled out this potential danger in great detail and projected his thinking to the end of the century when he said that direct payments of compensation and pension "may be twice their present yearly total of nearly $3 billion." General Eisenhower dwelt on this theme, noted that as time goes on many veterans of proper age will take a larger pension payment instead of lesser compensation rates and that costs would, therefore, multiply.

Then the cat was let out of the bag. The Congress and the public, the President stated, will want to give careful attention to the findings of his Bradley Commission that will report later this year on "the relation of existing nonmedical programs for veterans to each other and to the numerous civil benefits which the Nation now provides for the aged, the needy, the infirm, and the disabled—both veterans and others." The White House is obviously more concerned about this than anything else and, even though it would be idle to try to say now what will be included in the Bradley recommendations, it would appear that the President, who named the investigating group, is fully determined to lump together the veterans' compensation and pension program with that of social-security benefits, if the Congress will accept his proposal. There are more than words in this budget message insofar as the veteran class is concerned. There is money to take care of obligations already imposed by our legislators, but there is also the clear implication that a new deal for former servicemen and their dependents is going to be proposed, and there is the implicit warning to all Members of Congress to go slow until the proposals are relayed to them.

Meantime, the Congress is in session. Before appropriate committees are numerous relief measures advanced by organized veterans that deserve honest consideration before the solons close up shop and go home in July or early August to talk to their constituents about continuing their public service. Not the least among the pending bills are those seeking pension adjustments and our war veterans expect them to be given earnest attention, but of perhaps even greater consequence is the necessity for a sales compaign to impress upon all Congressmen the fact that there is a vast difference between relief measures for the worthy poor and a system of benefits that has been built up through the years with full public support to reward not only those who have become disabled in preserving this Republic, and to make reasonably secure the happiness of the dependents of their honored dead, but also to care for those others who also served and who have through age and disability required the aid of those whose rights and privileges have been preserved. It would be inexcusable for this Nation to attempt through any means to default on its responsibility. It would grossly insult those who have died in their country's uniform to recommend that this be done. And yet it is this possibility that today faces the veteran class. The implications are vividly present. All veterans' groups had better see to it that their numbers are strengthened and that every member is prepared to do his or her part in the battles ahead. It is time to close ranks.

Federal Aid to and Control of Education (The White House Conference)

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. GWINN. Mr. Speaker, one of the most outstanding witnesses before the Committee on Education and Labor was Steve Stahl, of Oklahoma City, Okla. A partial résumé of his testimony and of his splendid report on the White House Conference is contained in a speech before the Rotary Club of Oklahoma City as follows:

SPEECH ON THE WHITE HOUSE CONFERENCE ON EDUCATION AND ON THE QUESTION OF FEDERAL AID TO EDUCATION BEFORE THE OKLAHOMA CITY ROTARY CLUB BY STEVE STAHL, EXECUTIVE VICE PRESIDENT, OKLAHOMA PUBLIC EXPENDITURES COUNCIL, TUESDAY, JANUARY 31, 1956

This opportunity to bring to the Oklahoma City Rotary Club a report on the White House Conference on Education and to discuss the question of Federal aid to education is greatly appreciated.

Factual information in this report is either thoroughly documented or easily provable. Naturally, the conclusions are my own.

Copies of this report, with a documentation reference list attached, may be obtained by writing or calling the Oklahoma Public Expenditures Council, 207 Commerce Exchange Building, Oklahoma City.

During the past 2 years the Oklahoma Public Expenditures Council has spent more than $20,000 in an effort to improve the quality of eductaion in Oklahoma. We are continuing and will continue these efforts.

The Conference was authorized by Congress at the request of President Eisenhower. The Conference in Washington was preceded by local, area, and State conferences.

Delegates to the Washington Conference were assigned to 160 tables of 10 or 11 each. Chairmen of each of these tables moved up to the second plateau of 16 tables of 10 each. Chairmen of these tables moved to the third plateau of 2 tables of 8 and the Chairmen of these 2 tables moved to the summit and wrote the final report.

Delegates were run through this procedure 6 different times on the 6 major topics outlined by the White House Committee. Please bear in mind the ratio of lay citizens to professional educators was supposed to be of 2 to 1.

Yet of the 12 people to reach the summit and who were selected to write the final reports on each of the topics, 9 were professional educators and 3 were lay citizens.

The odds against starting out at the bottom with a ratio of 2 to 1 and winding up at the top with a reverse ratio of 3 to 1, according to several of my mathematical friends, are 553 to 1, yet that is exactly what happened.

That fact by itself, I submit, is sufficient evidence to support my contention that the Conference was rigged.

I made that statement at the Conference and as Coordinator of the National Conference of State Taxpayer Associations, I requested an audit of the records at each of the 160 tables on the question of Federal aid, in a letter to Mr. Neil McElroy, Chairman of the White House Conference Committee.

It is now 2 months since the Conference became history and as yet I have no evidence which would cause me to change my mind.

Nor am I alone in my contention that the Conference was rigged. I have some illustrious company. Just to name a few—Gov. Alan Shivers, of Texas; M. E. Lundberg, chairman of the Nevada delegation; Mrs. Ruth Cole, president of the Los Angeles School Board; Mrs. Agnes Meyer, wife of the publisher of the Washington Post, and Dr. Joel Hildebrand, president of the American Chemical Society and professor emeritus of chemistry, University of California. Let me quote from the last two mentioned:

"The White House Conference on Education was a glaring example of how such large, nationwide conferences should not be conducted. Delegates had no opportunity for floor debate and open discussion on a conferencewide basis. Whether the original purpose of the Conference to control the delegates and their opinions was successful or not, the fact remains that this phony type of organization can be used for that purpose."—Mrs. Meyer.

"The White House Conference followed the Soviet pattern by letting people express themselves freely at the bottom levels and then by the so-called process of distillation making sure and certain that party policy would be written at the top."—Dr. Hildebrand.

Please do not get the idea that all the rigging took place in Washington. It started back in a goodly number of the States. Let's examine the picture in Oklahoma.

Much publicity has been given to this 2 to 1 citizen-educator ratio. Frankly, I dislike the idea of labeling people and I firmly believe it was a mistake to do so in connection with the conferences on education.

However, that was the method employed. How did it work out in Oklahoma? There were 34 people named to the committee for the Oklahoma conference on education. This committee planned the area and State conferences, set up the mechanics by which delegates to the National Conference were selected and, in some instances, actually made the selections.

Twenty of the 34 people on this committee are professional educators; 6 are officers of State educational organizations affiliated with national associations on record in favor of Federal aid; 2 are officers of the State School Board Association and both have been proponents of Federal aid. This leaves 6 who might be classified as lay citizens.[1]

Delegates to the State conference never had an opportunity to vote on any question nor did they have an opportunity to express their approval or disapproval of the final report. This report was written by two professional educators, the 2 top officers of the State Boards Association and the presidents of 2 school organizations on record for Federal aid.[1]

Oklahoma is on record at the National Conference as one of the States in favor of Federal aid although at a meeting of the Oklahoma delegation in Washington the suggestion that Oklahoma delegates be polled on the question was vigorously opposed and quickly rejected.

The Oklahoma delegation, according to the White House Committee's official list of delegates in attendance, was composed of 21 members, 13 of whom were professional educators or officials of organizations on record for Federal aid.

You have been given the impression that the question of Federal aid was a relatively minor one at the Washington Conference—that only one-sixtieth of conference time was devoted to it—that it was not even discussed at some tables.

Truth of the matter is—it was the question.— As proof, I hold here a booklet entitled "Suggested Homework" which was prepared by the White House Conference Committee and sent to all delegates in advance of the conference.[2] This booklet contains 83 pages, 22 of which are devoted to a discussion of the Federal aid question.

I should also like to call your attention to an article by William Carr, executive secretary of the National Education Association, on page 9 of the January NEA Journal, in which he labels the question "the major specific national issue before the conference."[3]

Who wrote the report on this major specific national question? Mrs. Pearl Wanamaker, Washington State Superintendent of Schools, and, Edgar Fuller, executive secretary of the Council of Chief State School Officers.[4] The two have long been known as outstanding, aggressive, and extremely vocal advocates of Federal aid.

It is also interesting to analyze the composition of the final two tables of eight each on this major question. Twelve were professional educators; two were State senators and chairmen of the senate education committee in their respective States; one was a newspaperman and a long-time advocate of Federal aid; and the final member is employed as an educational expert by a large industrial company.

You may draw your own conclusions as to whether the conference was rigged or not. I still say that it was and still feel I had a perfect right to ask for a look at the deck.

Regrettably all the publicity and all of the headlines have been devoted to the so-called conference attitude on Federal aid. I should like to call your attention to a pertinent statement from the official report which is really significant and which has been almost completely overlooked.

You can find it on page 7 of the official report and it reads as follows: "No State represented"—and all States were—"has a demonstrated financial incapacity to build the schools it will need during the next 5 years. But, with the exception of a few States, none of the States presently has plans which indicate a political determination powerful enough to overcome all the obstacles."[4]

I, for one, am not willing to concede that the American people are morally and politically bankrupt to that extent. If we are, I assure you it is a malady which cannot be cured by doses of Federal aid.

Now apparently the rarified atmosphere in Washington had a profound and peculiar effect on some of the delegates.

That conclusion is inspired by a comparison of the Washington report with State conference reports. Delegates at Washington were reported as 2 to 1 in favor of Federal aid for school ocnstruction and about even on the question of Federal aid for general operating costs. An analysis of the State reports—and all have been examined with the exception of Delaware—shows the following:[5]

1. On the question of Federal aid for school construction, 18 States were in favor without qualification; 5 States were in favor with qualifications, 12 were opposed, and 12 were uncommitted. In other words, only 18 of the 47 States were on record in favor of construction aid on a general basis.

2. On the question of Federal aid for general operating costs, 8 States were in favor without qualifications, 2 were in favor with qualifications, 17 were opposed, and 20 were uncommitted. Does that indicate an even split?

It is most certainly apparent that grassroots sentiments as expressed in the State reports took a beating in the distillation process in Washington.

On the other side of the coin, the White House Conference plan has served a worthwhile purpose. Through community, area, and State conferences it has stimulated a great amount of citizen interest in the problems of education and it has served to focus the spotlight of public attention on the many weaknesses in present efforts to educate our future citizens. Believe me, these weaknesses cannot all be measured by dollar signs.

I do say it was indeed regrettable that the Conference was subverted into an empty drum on which to beat out the theme song of Federal aid. As such it became a major factor in a campaign of fraud and deceit.

Let me assure you I would not make such a statement without evidence to back it up. The best way to present that evidence is to trace the history of this long-drawn-out campaign for Federal funds which started in the early forties.

In the first place, this drive for Federal Aid does not stem from a demand on the part of the people in any State. To my knowledge no Governor has ever appeared before Congress to request financial assistance for the schools of his State. So far as I know there has been only one legislature which has passed a resolution requesting such aid.

The whole idea was conceived in Washington, packaged in Washington, and shipped down to the grass roots by top officials of several national organizations who helped wrap the package.

For the last 10 years at least, Congress and the American people have been bombarded with phony facts and figures in an, as yet, unsuccessful effort to sell this package.

This campaign has been carried on relentlessly with but little, if any, consideration given to efforts being made by the several States to solve their own problems.

From 1942 to 1952, year after year, bill after bill was considered by Congress. While the method of allocation was changed from time to time, the amount requested

Footnotes at end of speech.

Footnotes at end of speech.

remained constant at $300 million. During that same period the 19 so-called poor States had increased school expenditures by more than $1 billion. Nevertheless the need, according to proponents, remained the same.

Now, let's take a look at more recent history. The 81st Congress appropriated $3 million to conduct a nationwide survey to determine the school building needs in each State and to measure the financial ability of the States to meet their respective needs.

The first report on this school facilities survey was released in December, 1953.[6] Thirty-nine States had participated and according to the report, not a single one was shown as able to finance its own school building requirements.

As coordinator of the National Conference of State Taxpayer Association Executives, I sent copies of this report to each of my colleagues, with the request that they compare the Federal report with actual conditions in their respective States.

Some 20 States responded to this request. The specific details varied from State to State but the overall pattern was constant. Building needs had been magnified, costs exaggerated and the measure of financial ability totally unrealistic.

Time does not permit the presentation of statements from the various States, but I will give you an example from right here at home. The Oklahoma report set the financial capacity of the Oklahoma city school district for building purposes at $3,801,587. The survey started in 1951. In the last 4 years we have spent $16 million on building sites and new construction. That's more than four times the amount of our federally reported ability. For the entire State, applicable resources or financial ability was reported to be $34.5 million.[6] A check at the Attorney General's office shows that school bond issues during the past 5 years totaled $51.1 million.

I presented this evidence to the House Committee on Education and Labor on April 21 of last year. In doing so I branded the Federal School Facilities Survey as one of the great frauds of the fifties. This statement was supported by witnesses from 11 other State associations.[7] It was publicized in newspapers and magazines across the Nation. To this good day it has not been denied.

However, and I think this is significant, Secretary Hobby, who knew the validity of the survey was being questioned, appeared before this same committee and made the statement that, "Taking the new State figures of estimated need and the current construction level of 60,000 per year, we find that the estimated classroom deficit by the year 1959–60 would be 176,000 classrooms instead of 407,000 classrooms."[7]

In other words, the original estimates exaggerated the building needs by 231,000 classrooms and the financial requirements by nearly $3 billion. By this exaggeration a problem was magnified into a crisis which, we are told, calls for immediate action on the part of the Federal Government.

While one side of the picture was being grossly exaggerated, another side was being almost completely concealed.

The report of the Intergovernmental Relations Commission created by Congress with the approval of the President is a case in point. This Commission was composed of 15 members appointed by the President, 5 by the President of the Senate and 5 by the Speaker of the House.

The Commission appointed 10 study committees, one of them being a Committee on Federal Responsibility in the Field of Education. This committee was composed of 16 members. Eight were from the field of education, one was a school board member and all had long records of friendly, active interest in education.

Armed with a competent research staff they spent more than a year in a dispassionate, objective study of the Federal-aid question. They held numerous hearings at which both proponents and opponents were heard. They assembled and studied 40 tables of statistical information.

And they concluded that "Federal aid is not necessary either for current operating expenses for public schools or for capital expenditures for new school facilities."[8] In fairness, I will tell you that three educators refused to sign the report.

This report was accepted and approved by the parent Commission. The Commission's statement, which appears on page 194 of the official report to the President, reads as follows:

"The Commission recommends that responsibility for providing general public education continue to rest squarely upon the States and their political subdivisions. The Commission further recommends that the States act vigorously and promptly to discharge this responsibility. The Commission does not recommend a general program of Federal financial assistance to elementary and secondary education, believing that the States have the capacity to meet their educational requirements. However, where, upon a clear factual finding of need and lack of resources, it is demonstrated that one or more States do not have sufficient tax resources to support an adequate school system, the National Government, through some appropriate means, would be justified in assisting such States temporarily in financing the construction of school facilities—exercising particular caution to avoid interference by the National Government in educational processes or programs."[9]

I have yet to see a digest of this report in any educational journal. And, quite frankly, I am amazed to note that the President completely ignored the work and recommendations of this committee in his recent message to Congress in which he recommended a program of Federal aid.

Let's now consider two questions:

1. Does Oklahoma need Federal assistance in order to meet building needs and to provide adequate educational opportunities for all Oklahoma children?

2. What would Oklahoma gain dollarwise in a Federal-aid program?

The answer to the first is a definite "No." In the official report of the Oklahoma Conference on Education, "It is estimated a total of 7,939 new classrooms will be needed by 1960. Of this number, 3,811 will be needed to care for increased enrollments and 4,128 for replacement of obsolete, unsafe, or unsatisfactory facilities. This is the finding of the Oklahoma School Facilities Survey conducted under the sponsorship of the State department of education."[10]

In this same survey, the average cost per classroom was estimated at $20,000. Twenty thousand dollars times 7,939 classrooms equals $158,780,000.

The increase in school debt capacity approved by Oklahoma citizens last year, based on present valuations, amounts to $96.5 million. Revenues from the 5-mill building fund levy over a 5-year period will amount to $48.2 million, and this figure does not include any capacity available under the old 5 percent debt limit or any increase in net assessed valuation which increased more than 50 percent from 1945 to 1955.

The sum of these two figures is $144.7 million. On the basis of simple arithmetic it is apparent that we are not in any desperate need of Federal aid. It may well be that we will have to forego the luxury of million-dollar field houses and monumental school edifices until our classroom shortage is met. I contend that is a sacrifice we can make without too much hardship.

It is difficult to answer the second question in a specific manner. I have not yet seen any legislation designed to carry out the proposals requested in the President's message. Consequently it is impossible to determine how much money Oklahoma would receive from the suggested $1.2 billion direct grant appropriation.[11] Oklahoma's share in the cost of that program would be $13.2 million.

Under the direct grant provisions of the Kelley bill which is now out of committee and before the House, Oklahoma, over a 4-year period, would receive $24 million and Oklahoma's share in the cost of that program would amount to a minimum of $18 million.

Do you want to sell control of education in Oklahoma to the Federal Government for $6 million?

There is another factor in the Kelley bill which merits your attention. As you well know, much of the clamor for Federal aid is based on the need for equalizing educational opportunities among the States. How does the Kelley bill propose to meet this desirable goal? Under the proposed formula Mississippi, the poorest State, would receive $6.7 million annually for 4 years. New York would receive $32.2 million annually.

In fact, the 24 wealthiest States would receive $960 million and the 24 poorest States would receive $592 million.[12] How we can equalize opportunities by giving the wealthiest States $368 million more than the poorer States over a 4-year period, is something I would like to have explained.

In summation, I should like to quote from my statement to the House Committee last April:

1. The Federal Government, so deeply in debt that interest payments constitute the second largest item in the budget, is in no position to shoulder additional responsibilities.

2. Congress cannot keep faith with our children by charging a substantial part of the cost of their education and leaving them either a bankrupt Nation or an unmanageable debt.

3. The States and local communities can meet their responsibilities in the field of education if they are willing to do so. The operation will not be painless but the patient will recover more rapidly if no Federal sedatives are prescribed.

4. The alluring prospect of Federal aid over the past 10 years has served to retard improvement in our educational systems. Many States and local communities have been dragging their feet, waiting for the Federal Government to come to the rescue.

5. Members of Congress—and particularly members of this committee—are entitled to more accurate information than they have been furnished thus far before reaching any decision on this important question.

6. Congress has appropriated $1,074,000 to finance the work of the Intergovernmental Relations Commission which it created. One of the Commission's assignments was a study of Fededal responsibilities in the field of education. The Commission's report on that subject should be disinterred so that Members of Congress and interested citizens may have an opportunity of reviewing its recommendations before committing the Federal Government to an entirely new aid program.

7. It is to be hoped that neither this committee nor the public will be misled by doctored information or pressured into hasty action on any proposal committing the Federal Government to a program which will cost billions annually and which can lead only to Federal domination in the education of our children.

A moment ago I mentioned the matter of Federal control. Let's elaborate on that subject because it is important.

"Federal aid without Federal control" has been repeated so often it has become the theme song for Federal aid proponents. Let

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

me tell you there is no such thing. Nor should there be.

Advocates of Federal aid without Federal control are advocates of irresponsible government. Anytime one unit of government allocates money to another in the form of a blank check, it is opening the door to waste, inefficiency, and corruption. If any of you doubt this statement, you are invited to spend a few days with us in county courthouses where you can observe for yourselves the terrific waste of county-road funds which commissioners are receiving from the State and spending without supervision and control.

Furthermore:

1. The Supreme Court has ruled that the Federal Government has the right to control that which it subsidizes.

2. This Congress cannot control, by legislative act, the decisions or legislation of any future Congress.

3. The lives of the American people today are affected more by rules and regulations promulgated by Federal agencies than we are by laws enacted by the Congress.

I am not at all convinced that some of the leaders in this continuing campaign for Federal aid really mean what they say when they piously insist that control must remain in the local community.

Mrs. Wanamaker, who made the report on the question of Federal aid at the White House Conference, just recently overruled one of her county superintendents who had fired a teacher because she pleaded the fifth amendment when asked by the House Un-American Activities Committee if she were a Communist. Certainly that is interfering with local control.

On July 9, 1947, William G. Carr, the present executive secretary of the National Education Association, addressed the 85th annual meeting of that association in Cincinnati. The title of his speech was "On Waging the Peace." Incidentally, Mr. Carr was one of the two people who wrote the White House report on what should our schools accomplish? In this address to the assembled delegates, he declared:

"Finally, lay the ground for a stronger United Nations by developing in your students a sense of world community. The United Nations should be transformed into a limited world government. But that cannot happen until the psychological foundations have been laid.

"Encourage, therefore, all kinds of international contacts, however slight, as long as they are cooperative and constructive. Teach about the various proposals that have been made for the strengthening of the United Nations and the establishment of world law. Teach these attitudes which would result ultimately in the creation of a world citizenship * * *. World government, when and if we get it, will be the product of planned education." [12]

Mr. Carr should tell the public—and particularly the teachers for whom he presumes to speak—just how we can have planned education without controlled education.

Right here I want to digress for a moment to pay tribute to International Rotary for the magnificent job it has done over the years in promoting mutual understanding and friendly cooperation among nations. This worthwhile program should be accelerated. Certainly it has no relationship to Mr. Carr's proposal that we sell political world government by brainwashing our children under a system of planned education.

And I beg of you never to forget that if world government can be sold by planning education, so can any other foreign ideology.

I suspect I am looked upon by a great many people as an alarmist. Frankly, I am alarmed over a great many things which are taking place in this country in which, by the grace of God, I was born and which has been so very, very good to me.

Footnotes at end of speech.

Again, I thank you for this opportunity to speak to you. But frankly, it has been a waste of your time and mine if this meeting is the end result.

Therefore, I ask you to check the accuracy of this report thoroughly. Make up your own mind as to whether you want Federal aid to and Federal control of education and then tell your representatives in the Congress what you want.

And the time to do it is now.

[From the Oklahoma City Times of January 26, 1956]

NO OCCASION FOR A RUSH ACT

The more that is seen of the present frantic drive for Federal school aid, the more suspicious it looks.

The movement has all the earmarks of an artificially directed and engineered effort to maneuver the American public-school system into the position of serving as a socialist propaganda medium, under Federal bureaucratic control.

It happens that we have some fresh local information on this point.

A statement by Governor Gary Wednesday says that only 66 of the 1,732 school districts in the State voted the emergency levy authorized by the constitutional amendment adopted last year. About $2 million of the statewide total of taxes, amounting to $2,482,791 was voted by 2 districts—Oklahoma City and Tulsa—and everybody who knows anything about the Oklahoma economic situation knows that these 2 cities are not suffering from hardship such as might call for Federal aid. The reason for voting emergency levies in the two largest cities of the State had to do with unusually sudden and rapid growth in school population, temporary congestion in defense industry locations, and other factors which do not reflect the longtime economic status. This is one of many indices produced by the Oklahoma Public Expenditure Council in the effort to halt the frantic rush into a socialistic Federal aid program.

Steve Stahl, director of OPEC, was a delegate to the so-called White House Conference, for which the the White House was not to blame, since it was engineered and controlled by professional promoters of Federal aid.

To illustrate the confusion that arose after this conference, the magazine News Week published an obviously slanted story in the January 23 issue called Too Big a Package? Mr. Stahl vigorously dissents from the implications of the article, which says, among other things, that the conference "voted 2 to 1 for Federal aid." The fact is that no such vote was taken. The article furthermore said that "470,000 new classrooms are necessary," whereas Secretary Hobby, on March 29, 1955, specifically denied this, saying the shortage was 176,000 classrooms.

The House Rule Committee, as this is written, is holding hearings on H. R. 7535, the Kelley school construction bill. Those who have views on Federal aid, for or against, should make their views known now, or forever hold their peace.

For some unknown reason the report by the Committee on Intergovernmental Relations, adverse to Federal aid, has been ignored, in favor of the garbled and slanted output of the misnamed "White House Conference." But even the "White House Conference" said that, "No State represented has a demonstrated financial incapacity to build the schools it will need during the next 5 years; but, with the exception of a few States, none of the States presently has plans which indicate a political determination powerful enough to overcome all the obstacles."

These scattered indices show that there is a flimsy and ill-supported but highly vocal clamor for Federal aid.

Mr. Stahl says, on this point: "I am unwilling to concede that we are politically bankrupt to that extent. If we are, it is a disease which canont be cured by Federal aid."

Four of the outsanding facts about this present attempt at a rush act are: (1) A definite part of the Fabian Socialist program is to put as many activities as possible under centralized Federal control; (2) conspicuous educators that heavily influence the National Education Association have come out openly in favor of making over the public-school system on a socialistic basis, by use of slanted texts; (3) despite all denials and disclaimers it is an inexorable truth that the Federal Government may control that which it subsidizes; (4) the money for Federal aid would have to come from local communities in any event, so why ship it to Washington and then go there begging to get some of it back?

Rt. Rev. Msgr. U. A. Hauber and Davenport Daily Times Support Billion Dollar Mud Puddle Charges

---

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. HOSMER. Mr. Speaker, on January 31 the Davenport (Iowa) Daily Times verified my charges that Chinle shale found extensively in the Glen Canyon Dam reservoir site might produce gigantic landslides at this $421 million key finance unit of the multi-billion-dollar upper Colorado River storage proposal.

The Daily Times had samples of Chinle tested by the Right Reverend Monsignor U. A. Hauber, chairman of the division of natural sciences and mathematics at St. Ambrose College, Davenport. The Daily Times carried a picture of the Right Reverend Monsignor Hauber inspecting the rock in his

laboratory which carried the following caption:

Inspects rock: The Right Reverend Monsignor U. A. Hauber, chairman of the division of natural sciences and mathematics at St. Ambrose College, Davenport, inspects the rock which Representative CRAIG HOSMER, Republican of California, says is Chinle shale. The rock according to Representative HOSMER, was taken from the walls of Glen Canyon, where it is proposed to build a $421 million power dam and reservoir. It disintegrated when water was poured on it.

The accompanying articles in the Daily Times was as follows:

CHALLENGES $421 MILLION JOB—TESTS HERE BEAR OUT LEGISLATOR'S CHARGES

Tests made in Davenport apparently verify charges by Representative CRAIG HOSMER, Republican of California, that gigantic landslides might destroy the $421 million Glen Canyon Dam and Reservoir, key unit of the proposed multi-billion-dollar upper Colorado River project.

Representative HOSMER claimed that 50 miles of the immense walls of the long, narrow reservoir site are composed of rock so soft that it swells to nearly twice its normal size and disintegrates when touched by water.

Rock samples sent to the Daily Times were taken to St. Ambrose College for inspection by the Right Reverend Monsignor U. A. Hauber, chairman of the division of natural sciences and mathematics. When he poured water on the rock it distintegrated immediately.

Representative HOSMER sent the following certification with the rocks:

"To Whom It May Concern:

"I, Harold W. Hoots, Ph. D., previously with the United States Geological Survey, hereby certify that on December 13, 1955, Geologist Peter Gardett and I personally collected a large quantity of samples of Chinle formation in the area of the Colorado and the San Juan Rivers to be covered by the reservoir of the proposed Glen Canyon Dam."

The reservoir would extend 186 miles along the Colorado River and 70 miles along the San Juan River, according to HOSMER.

"If this is permitted to happen," HOSMER said, "the Nation's taxpayers would be left with a billion dollar mud puddle. Congress should withhold any consideration of the legislation pending a full and complete geological survey and report of the site."

What Price Federal Power?

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 6, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the condensation of a recent speech by Adm. Ben Moreell, chairman of the board, Jones & Laughlin Steel Corp., Pittsburgh, Pa., who, during 1954 and 1955, was chairman of the Water Resources and Power Task Force of the second Hoover Commission, which studied reorganization of the executive department of the Federal Government. His speech was entitled "What Price Federal Power?" and should be carefully read by everyone concerned with this vital subject.

There being no objection, the condensation of the speech was ordered to be printed in the RECORD, as follows:

WHAT PRICE FEDERAL POWER?

(By Adm. Ben Moreell, Chairman, Hoover Commission Task Force on Water Resources and Power)

The following excerpts from the Hoover task-force report is pertinent to our consideration of this subject:

"Since there is no present or prospective necessity for Federal power development to overbalance the social undesirability of continuing such activities, the task force finds that they are not essential Federal activities. This task force believes that the Federal Government does not owe a responsibility to supply any community, section, or region, with its power requirements. Nor does the presence of potential waterpower in a Federal water resource development project necessarily constitute a mandate for its development; but when such potential power can be developed in accordance with sound business principles, it should be developed in the national interest by selling the potential or the power at the lowest technological level which will produce fair returns to the Federal Government."

Without doubt, power generation and distribution are the most important of our studies, for two reasons: First, because those who advocate intrusion by the Government into the economic affairs of its citizens have found that this issue has a strong popular appeal, which makes it a convenient vehicle on which political demagogs can hitchhike into public office; and second, because socialization of electric power can easily lead to socialization of all large-scale industry. He who controls power can have a large measure of control over all of industry.

There is no logical reason for the popular appeal of public power. But demagogues have been able to hoodwink the public into believing that it is an important factor in their cost of living. Actually, the cost of power to the average householder is about 1 percent of his family budget, as against 29 percent for food, 9 percent for clothing, and 2 percent for tobacco and smoking supplies. A reduction of only 3 percent in his tax bill would pay for all of his power. But the damagogue conveniently forgets about tax reduction. He says that high taxes, the spending of which he controls, are essential to promote the general welfare.

As for manufacturing, except for the electrochemical and electrometallurgical industries, the cost of power averages little more than one-half of 1 percent of the product value. For the two industries it averages a little over 10 percent.

Technically and financially there is no present nor prospective need for Federal public power. Private industry is amply able to finance and install needed generating, transmission, and distribution facilities. Since the end of World War II, investor-owned electric companies have spent approximately $20 billion for such facilities, as against an approximate total expenditure by the Federal Government, from the very beginning of its program in 1906 to mid-1953, of only $2.3 billion.

FEDERAL AGENCIES IN THE RED

The task force concluded that if all Federal power rates had been based on power values computed in accordance with methods prescribed by the Federal Power Commission, the rates would be increased 30 to 50 percent; and the Government would have received $130 million more in power revenue in 1953 alone. If the present Federal rates are continued for the power projects now programed, this revenue loss, which in its effect is a subsidy, could amount to $400 million a year.

Proponents of the public-power program have charged that since public power systems never have been called upon to pay Federal income taxes, they should be exempt from any participation in support of the Government. These partisans have taken figures prepared by the task force and purport to show that the requirements proposed by the task force, excepting all taxes, could have been met and still have left a surplus for the Federal Treasury. Their arithmetic conceals the facts. For the year 1953 the TVA record shows that even on this basis, there should have been a deficiency of approximately $2 million, provided, however, that TVA would not be reimbursed for the $3.4 million paid by it to State and local governments as compensation for taxable properties removed from their tax rolls.

The Southwest Power Administration and the Southeast Power Administration make no payment in lieu of taxes and the deficiencies of these two systems would have been respectively approximately $2½ million and $4¾ million. The whole Federal power program for that year would have been deficient by about $1¼ million.

The General Accounting Office, in its audit, reported that additional revenue necessary to cover the cost of producing electric energy and to amortize the Government's investment in Southwestern Power Administration as based on Corps of Engineers' estimates was deficient in 1952 by $818,000 and in 1953 by $1,230,000. The task force figures, of course, show that the deficiencies for these 2 years were considerably greater. Our studies used an interest rate of 3 percent and made allowance for Federal, State, and local taxes. My point is that the revenues do not even meet the costs as computed by the agencies themselves.

DOUBLE STANDARD BOOKKEEPING

Those favoring big government, paternalism, government-ownership, socialism—call it what you will—give control of electric energy by Government high priority. Such control can be obtained only if the movement has popular support—or lacks popular opposition. This means that there must be a strong appeal if Government ownership is to be sold to the people. The most obvious appeal is price. Actually, in a country of such technological competence as ours, cost differences in power production, as between public and private development, in a given area, will be slight, provided all costs are included by each. With true costs the same, the only way an advantage can be shown for public power is by subsidizing it. Subsidy is, therefore, a political necessity, and our studies show that all Federal power is subsidized. The subsidy takes one or more of the following which are evidenced in lower power rates:

Use of interest rates which are lower than the actual cost of long-term money and risk capital. The law provides that the Bureau of Reclamation include 3 percent interest in its rates for power from its projects. The practice is to include 2½ percent in the rates for energy produced at Corps of Engineers' projects. The TVA charges 4 percent to the Atomic Energy Commission, another Federal agency, but on the overall earned in 1953 and 1952 only 3.2 percent and 2.7 percent, respectively. REA charges 2 percent for the money it lends.

The average interest rate on the whole Federal indebtedness is approximately 2½ percent; but this is made up largely of short-term borrowings. For years there were no long-term borrowings. Long-term money has been obtained by the present administration through issues paying, most recently, 3 percent and as high as 3¼ percent. A return to the Treasury of less than 3 percent clearly involves subsidy.

The figures I have just recounted are a measure of the subsidy involved in the difference between what the Government pays directly for money and what it charges its power activities for the same money. Actually the subsidy is greater. It is the differ-

ence between the cost of money and the amount paid for it by the power activities.

The real subsidy in the low interest rates can best be measured by the difference between the cost of money in the open market for a specific kind of private project and the amounts charged by Government to the same kind of public projects.

Omission of Federal income taxes or comparable contribution to the cost of the Federal Government. No Federal income taxes are paid by Federal projects; and the supporters of the public-power program argue that since there is no income from the projects, there should be no income tax. However, all costs of government must ultimately be borne by production. Wealth to support nonproductive services is created solely by changing materials and energy to usable forms that are in demand. To exempt all or a part of any one form of production from its share of the cost of running the Federal Government—that is our national defense machine, as well as the continuing overhead costs of the executive, judicial, and legislative branches—constitutes a subsidy to that particular item.

The Hoover Dam pays $500,000 annually from its revenues into a fund to finance Federal studies for the further development of the Colorado River. While it is not proven that this annual payment fianances a sound activity, it can perhaps be argued that the amount involved in some measure a payment to the Federal Government in lieu of taxes. But it is the only payment by Federal public power that can be so classed.

The full measure of subsidy through failure to pay taxes is not solely the amonut of corporate tax foregone. The income earned by private investors in power projects is also subject to tax and this amount is also lost to the Government in a power project. It is only partially offset by the taxes that are paid by holders of Government securities.

A study of the 1953 financial records of the investor-owned electric utilities indicates that on an average basis stockholders and bondholders paid taxes equal to about 25 percent of those paid at the corporate level. At the top-bracket level the ratio would have been nearer 38 percent. Roughly, half of this would be offset by income taxes paid by investors in Federal Government bonds used to finance Federal public power projects. Thus, something in the neighborhood of six to nine million dollars which would have been paid by investors was lost to the Federal Government by reason of tax exemptions and Federal public power practices. Such a tax loss must be made up from other sources, and it constitutes another element of subsidy involved in the whole activity.

With two exceptions, Hoover Dam and TVA, omission of State or local taxes: Only two projects make payments in lieu of State and local taxes. The Hoover Dam pays a fixed annual amount to the States of Nevada and Arizona. The Tennessee Valley Authority pays amounts to the local government within its area in lieu of the taxes those governments would have received from TVA properties if they had remained in the State of their original acquisition by the Federal Government.

Charging large parts of the initial capital costs to wholly subsidized Federal activities such as flood control, navigation, fish and wildlife, etc.: A few years ago a congressional study gave considerable publicity to the difference in proposed allocations to power in the Southwest Power Administration area between, on the one hand, the figures of the Corps of Engineers and the Federal Power Commission as contrasted, on the other hand, with the figures of the Department of the Interior. In capital costs alone the Department of the Interior proposed charging some $200 million more to flood control, navigation, and other nonreimbursable items than did the other two agencies.

Excessive charge-off has not yet stopped. Under the general control fof the Department of State a reservoir has been built on the Rio Grande in Texas and Mexico to provide flood control, water for irrigation, and hydroelectric power. As the United States share, $5,872,165 has been allocated as the cost for 31,500 kilowatts installed electric capacity. This is a current 1955 figure. It means an allocation of only $186 per kilowatt as against current costs of $300 or more. This allocation includes nothing for the dam and reservoir but is limited to the cost of the power plant proper. Those other costs are charged to flood control and water supply, gifts of the Federal Government to the people in the area.

Charging administrative costs, insurance, and pensions to other Government accounts.

The Bonneville Power Administration includes in its energy rates a component to provide for miscellaneous administrative costs of the Government that are not paid for directly by that agency. In no other Federal power project is there any attempt to provide reimbursement of the Federal Government for the costs involved in funding, auditing, insuring, or providing employee retirement. In general, there is no provision for meeting any of the administrative costs beyond those incurred for personnel directly assigned to the project or the costs of rentals and materials furnished by the General Services Administration.

Any one of these examples should show just why no private business can compete with a Government business. A private entrepreneur must meet all costs. The Government can always shift some costs to the general taxpayer.

ACCOUNTING—PLAIN AND FANCY

In addition to these obvious forms of subsidy, more obscure subsidy is introduced by what I call "accommodation accounting," i.e., accounting which accommodates the wishes of those who desire to prove that public power is a blessing showered upon us like manna from heaven.

Now for a few brief examples of plain and fancy accounting. The act authorizing the Hoover Dam provided that $25 million of the cost would be allocated to flood control and would be repaid without interest after the amounts allocated to power had been repaid. The law also provided that other amounts advanced for construction from the Treasury would be charged interest. When the amendatory Boulder Canyon Adjustment Act was put into law, it provided that for the purposes of accounting, the first $25 million advanced by the Treasury would be considered to be that allocated to flood control. In other words, the first money advanced, and the last to be repaid, would not bear interest. At a 3-percent rate this means that the annual interest load would be about $750,000 less than it might otherwise have been during the construction period.

POWER AT 30 PERCENT OF VALUE

Something super is performed in the accounting of the Cumberland River Projects. Here we have three dams built for flood control and hydroelectric power development by the Corps of Engineers on the Cumberland River. The Corps of Engineers has proposed allocating $120 million of the cost to power. The sales agency, the Southeastern Power Administration, has proposed to allocate only $103 million to this purpose. The Corps of Engineers has estimated the annual charge for power for the three projects at $5,112,000. The Southeastern Power Administration has made a comparable estimate of $4,134,000. The estimated average annual power benefits based on power values furnished by the Federal Power Commission are $11,540,000. The payoff comes in the next figure. The Southeastern Power Administration has contracted to sell the energy to TVA and estimates that the gross annual revenue will average $3,500,000. These figures indicate that the power will be sold for about 30 percent of its value and somewhere between 60 and 80 percent of its cost as computed by the agencies themselves. This cost, of course, assumes interest at no more than 2½ percent and makes no allowance for Federal, State, or local taxes.

A more complicated accounting "gimmick" revolves around the so-called interest component.

The scheme was developed by the Department of the Interior in connection with the Columbia River project. In brief, the net effect is to permit interest received by the Federal Government on the unamortized portion of investment allocated to power in a reclamation project to be applied to liquidation of costs allocated to irrigation rather than, as might be expected, returned to the Treasury as payment for the use of money. It is clear that this device provides a subsidy to irrigation. Some of the more naive have argued that the device does not provide a subsidy to power. However, the Director of the Power Division advocated approval of the interest component because lower charges could be made for both irrigation and power.

TAXPAYER PAYS DIFFERENCE

Data furnished out task force showed payout schedules for many projects still computed on the basis of using the interest component.

The most recent proposal of the Department has been to defer repayment of amounts charged to irrigation, but beyond the ability of the water users to repay until after the amounts allocated to power have been repaid by power revenues. These deferred irrigation charges would then be repaid by power revenues. Remember, however, that the costs allocated to irrigation do not pay interest. Who, then, pays the interest during a long period of deferment? Correct, the general taxpayer.

Thus does our Government openly and brazenly renounce any pretense of conforming to our traditional system of private enterprise in the field of electric power generation and distribution; instead, it charted a bold and ruthless course which could lead only to complete socialization of this basic industry.

AN EVIL PATTERN

I believe that all public power which is subsidized by tax funds, whether on the Federal, State, or local level, is economically and morally wrong. Where a local community, or even a State, desires to indulge in such socialistic adventures, I deplore it greatly. In the field of morality, honest compromise is impossible. Where this solely is a matter of governmental and economic policies, I would say that the hazard of economic waste is not so great when State and local governments undertake such activities provided they pay all local, State, and Federal taxes. If their socialistic exactions become too onerous, many citizens will move out taking their wealth with them. But the Federal Government is in competition with no one. It is an all-powerful monopoly with unlimited taxing power, plus the power to devalue the currency by issuing printing-press money.

Federal power sets an evil pattern for all other segments of the economy to indulge in self-seeking competition for Government handouts. These handouts are bought with votes; and when votes are thus prostituted, freedom is endangered.

Perhaps you will conclude from the foregoing that I do not believe in public power. If so you are absolutely correct.

The Bricker Amendment: We Still Need It

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting at this point in the RECORD a timely editorial that appeared in the Monroe (Wis.) Evening Times of January 26. The writer points out that this is the time to pass the Bricker amendment to control treaty-making powers which violate our Constitution or domestic laws. The editorial follows:

WE STILL NEED IT

This is as good a time as any to pass along a reminder that Senator Bricker's proposed amendment to control treaty making powers still is pending in Washington.

Senator BRICKER is at odds with many of his Republican associates in this proposal, among them Senator WILEY, of Wisconsin. Most certainly, his proposal still is frowned upon by those of both parties who seem to have absorbed an international attitude toward meeting the problems of today.

In brief, Senator BRICKER proposes this policy: That any treaty in conflict with provisions of the Constitution shall be null and void; that no President shall make law binding on the citizens by executive agreement, and that approval of treaties shall not be achieved with only a handful of Senators participating in the vote.

Long range purpose of the Bricker amendment proposal, of course, is to make certain no international agreement infringing on freedom of individual Americans, as guaranteed by the Constitution, shall become the law of the land.

Such a safeguard, many Americans believe, has become vitally necessary under our new role in international affairs, and particularly under our participation in the United Nations.

When first presented in compromise form in February 1954, the Bricker proposal came within one vote of the required two-thirds of the Senators taking part, 60 to 31. Forty-four Democrats back the idea, while 32 of the 46 Republicans also supported it.

The next time around, that amendment proposal will have a tougher time—unless citizens generally inform their Senators they want that safeguard.

Samuel B. Pettingill, former Congressman and constitutional law authority, has brought to light one point overlooked so far in the Bricker amendment discussion.

Pettingill says that to become law of the land, acts of Congress must be "in pursuance" of the Constitution, while treaties need only be "under the authority of the United States."

In view of this confusion, the Supreme Court has held a treaty need not be in pursuance with the Constitution.

Reason for this confusing situation, he explains, is this: the United States existed for 13 years before the Constitution was ratified. During that time, several treaties were placed in effect which the Constitution framers wanted kept in force.

The language "under authority of the United States," therefore was used to protect those early treaties.

Subsequently, the Supreme Court ruled treaties do not need to conform to the Constitution. This gives the President and two-thirds of the Senate treatymaking powers, or the President and foreign governments, under executive order, power to circumvent the Constitution.

We sincerely believe the Bricker amendment to be a necessary clarifying addition to the Constitution. We also believe that action is needed as soon as possible in view of trends toward international action.

That belief does not reflect any lack of confidence in Mr. Eisenhower's desire to protect the rights of citizens. It does, however, concern a realization that in other dangerous emergencies to come there may be other hands directing the affairs from the White House.

Another Soviet Achievement

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. PRICE. Mr. Speaker, again I wish to call the attention of my colleagues to the provocative but frightening series of articles being written by Joseph and Stewart Alsop on the critical problem of America's defenses. The article in the New York Herald Tribune and the Washington Post of January 23, 1956, is one of the best in the series.

The Alsops have a very profound understanding of airpower. It was the Alsops, in an article published several years ago, who first used the phrase, "a shield," to describe our United States Air Force. That great Air Force is a protecting shield behind which our national defense can be built, and ways to permanent peace explored. It was very much a shield during the days of the Berlin airlift, which so captured the public imagination. Unfortunately, we have failed to build the strength we require while the shield was still able to protect us.

As Senator JACKSON, of Washington, previously pointed out, the Alsops now reveal that the American Government has convincing evidence that the Soviet Union has built a guided rocket with a striking range of approximately 1,500 miles. Thus once more it appears that Soviet technology has caught up with us, perhaps even overtaken us. To quote the Alsops:

> In the form of this IRBM (intermediate range ballistic missile), the Soviets * * * have a solid leg in the race for the intercontinental ballistics missile, which we are now trying to win by a crash effort.

In terms of strategic air power, the intermediate range ballistic missile may be compared with medium range B–47 bombers. We need both. We also need most urgently the ICBM and truly intercontinental bombers.

General LeMay, SAC's great commander, has asked that this year's budget make provision for greatly stepped-up production of B–52's. His request was rejected for reasons of budgetary economy. It is not too late for the Congress, however, to grant what the budget makers refused. I trust that the news of another Soviet achievement will be clearly in our minds when we set to work to make the appropriations for the Department of Defense for fiscal year 1957.

With the consent of my colleagues, I wish to extend my remarks and insert the Alsop article, "Soviet IRBM," which follows:

MATTER OF FACT

(By Joseph and Stewart Alsop)

SOVIET IRBM

The American Government now has convincing evidence that the Soviet Union has built a guided rocket with a striking range of approximately 1,500 miles.

This is the so-called intermediate range ballistic missile, or IRBM, in common Pentagon jargon. Building an American IRBM is the purpose of newly authorized, highest priority weapons development programs of the United States Army and Air Force.

There have been earlier reports that the Soviets might have this weapon which the American services have just begun scrambling to get. These have come from several sources, notably Senator HENRY JACKSON, of Washington. This is the first time, however, that it has been possible to state on undoubted authority that the Pentagon has in its hands virtually conclusive evidence of the existence of a Soviet IRBM.

There is a good deal more than this, in fact. One new weapon may be the result of a brilliant accidental breakthrough. Producing a family of new weapons requires a general forward movement on all technical fronts, and the evidence indicates that the Soviets have such a family of intermediate ballistic missiles with ranges varying from 800 to 1,500 miles.

This in turn confirms the long-prevalent suspicion that the Soviets have achieved massive advances in the missile art. To be sure, the data are lacking to show positively whether the Soviet test missiles have yet attained satisfactory accuracy in guidance. It is not positively known, either, whether these test missiles have been capable of being fitted with a nuclear warhead.

Yet these two unknowns in the equation are not so impressive as they may seem at first glance. The problem of fitting a nuclear warhead is relatively minor, compared to the really basic problems of ballistic missile design.

For these reasons, it must now be assumed that the time is fairly near at hand, if indeed it has not been reached already, when the Soviets will pass from the testing phase into the vital phase of producing intermediate range ballistic missiles in militarily significant quantities. By the same token, it is also reasonable to suppose that the Soviets are well on their way to building the even more important intercontinental ballistic missile, or ICBM—the ultimate weapon which will carry a nuclear warhead from continent to continent.

The Soviet IRBM tests are also rather final and decisive proof that this country has lagged far behind in missile development. Until a few months ago, the American missile program altogether neglected the intermediate ranges.

There were short range, tactical missile projects, such as those which have centered at the Army's Redstone Laboratory. There were also long range projects sponsored by the Air Force—"Atlas," for an intercontinental ballistic missile; "Navajo," for an intercontinental ramjet: and the highly dubious "Snark," for a long-range pilotless aircraft.

But the projects for intermediate range ballistic missiles only came to life some months ago. At that time the National Security Council, no doubt partly moved by the news of the Soviet IRBM, gave an overriding priority to guided missile development. Final approval of the Army's paper plans for producing an IRBM at the Redstone Labora-

tory was granted only last week by the Pentagon's Ballistic Missile Science Advisory Committee, headed by Dr. John von Neumann.

Besides the Army project, there is one more American IRBM project controlled by the Air Force.

Thus the Soviets now have an intermediate range missile, which we do not have and can hardly get for a considerable time to come. In the form of this IRBM, the Soviets also have a solid leg in the race for the intercontinental missile, which we are now trying to win by a crash effort.

Curiously enough, however, the most important short-run effect of the Soviet success with the IRBM may well prove to be its effect on the American Strategic Air Command. Very few Americans realize that the great SAC force, which is the mainspring of American and free world strategy, is not really a long-range air force. Yet about 80 percent of SAC's fighting aircraft are medium-range B–47's.

To reach Soviet targets, the B–47's must either take off from overseas airbases, or else be twice refueled in the air, SAC's tanker fleet is insufficient to provide double air-refueling for more than about one-fifth of SAC's 1,500 B–47s. Hence SAC today is almost wholly dependent on its overseas bases. And it is precisely SAC's overseas airbases that the new Soviet IRBM's will threaten most directly.

With the overseas bases out of commission, in turn, there is every reason to think that our "massive retaliation" would not be nearly massive enough. The SAC commander, Gen. Curtis LeMay, would then be able to mount an attack on the scale of only a little more than 600 aircraft.

This explains, no doubt why General LeMay asked this year to have his B–47s replaced by urgent and greatly stepped-up production of B–52s. His request was rejected for reasons of budgetary economy, but here again, the news of the Soviet IRBM would seem to change the picture.

Can Farmers Agree on a Farm Policy?—This Is the $64,000 Question

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Mr. W. E. Winn, president of the Pure Milk Association, which appeared in the January issue of Pure Milk News. This article points out that if the farmers cannot agree on a solution to their problems, how can Congress expect to write favorable legislation for them? The article follows:

The new Congress has announced that legislative assistance to stop the decline in net farm income is one of the first items to be taken up this year. Divided thinking among the leadership of our major farm organizations certainly makes the political problem of our Congressmen more complex.

If farmers themselves cannot agree on a solution to their problems, how can Congressmen be expected to, and since a part of their job is to satisfy the farmers they represent, why should they even try if their solution only pleases one of several groups of a divided agriculture?

We seem finally to have almost unanimous agreement that there is a problem in farmer income that is serious both to them and to the large segment of our economy dependent on farmer purchasing power.

Simply stated, farm net income reached its peak in 1947 at $17 billion. It has declined since then to $10.2 billion. This includes a 10 percent loss in 1955 and further decline is predicted in 1956. Consumer disposable income (net after taxes) has increased during that time from $169 billion in 1947 to $266 billion in 1955.

This constant increase in wages and prices since 1947 as represented in the cost of things farmers buy is the basis of the cost-price squeeze farmers are in.

The other end of the dilemma is the huge pile of surpluses of farm products in Government storage which depresses farm prices and will continue to do so as long as it exists.

Farmers are not entirely responsible for this situation. War and rehabilitation after war required a tremendous increase in farm production urgently needed by our country and its allies. Farmers responded with an increase of over 40 percent in total production since 1940, all of which was needed until 1952.

Today's problem is "How do we shrink this agricultural plant to present-day needs?"

If control, as in the auto industry, was vested in about six boards of directors, the solution would soon be arrived at. But we have 4,700,000 boards of directors, or farm families, each making separate decisions as they see their individual problems. And these problems are individual, not only as they relate to families, but as to the different farm commodities. Wheat, for instance, has 2 years' supply now on hand. Not a bushel would need be raised in 1956. But the hungry people abroad who would have starved without this wheat for the 10-year period ending in 1952 now have their own wheat and resent even our giving it to them .

Letting supply and demand have full sway immediately under these conditions would certainly bankrupt wheat growers.

The question now being debated among farmers is whether the price of the entire wheat crop should be lowered to the world level where surpluses can be exported, or should we have a two-price system, a higher price for wheat used in domestic consumption and a lower price for export?

Dairy products are at the other extreme end of the surplus situation. About 4 percent of our total production had to be purchased by CCC in 1955, and predictions are for an equal amount in 1956. But even these relatively small surpluses have lowered our milk price in the Chicago market 23 percent since 1952, and without supports our price would have been much lower.

Despite this sharp reduction in the price to producers, milk production has increased every year since 1952 and predictions are it will be higher in 1956.

Nor have the sales of dairy products responded to the decrease in price. Per capita sales of all dairy products, in terms of milk equivalent, declined from 686 pounds in 1952 to 682 pounds in 1955, according to the United States Department of Agriculture Outlook Report. It has long been known and proved that the responses in both production and sales of dairy products to changes in price are very slow.

Obviously we need a surplus-management program to put an end to wide fluctuations in price due to relatively small surpluses.

Our immediate need is for more understanding of the problems of different farm commodities and agreement among our organization leadership as to what legislative program will best fit the needs of the different farm commodities. Dairy farmers as the largest segment of agriculture have taken the lead.

In response to an invitation from the National Milk Producers Federation to all the major farm organizations, a meeting was held December 19 attended by representatives of the National Grange, National Farmers Union, National Council of Farmer Cooperatives, and the National Milk Producers Federation.

The Federation's self-help plan, which would take the surplus dairy products out of Government hands and dispose of them through a stabilization organization while supporting market prices at higher levels than at present, received a great deal of attention.

Our $64,000 question is whether farm organizations can agree. The figure of $64,000 is fairly representative of the size of the problem. It is about the capital investment of an average PMA dairy farm. This investment is being eroded today by a milk price which does not protect us against the depreciation of our buildings and equipment.

Those who say that cutting our price to 75 percent of parity will cure our problem of supply and sales have been proved wrong. The need for study, willingness to compromise, and reach agreements, was never greater.

The best solution to the very complex problems of farmers today will be found by first making sure that our decisions are based on the facts and then presenting to Congress the request of a united, not a divided, agriculture.

The Bill of Rights

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. DOYLE. Mr. Speaker, when I was home in the 23d Congressional District, I was honored by being the guest speaker at the South Gate Kiwanis Club. It was during the Commemoration of the American Bill of Rights Week. The young student, Gordon Outher, who wrote the following essay, recited at the Kiwanis luncheon, and he delivered it so splendidly and it seemed such an unusual approach to his worthy subject that I told him that if he would send it forward to me, I would be pleased to ask unanimous consent to have it inserted in the RECORD. Heretofore I have received unanimous consent so to do.

The essay follows:

THE BILL OF RIGHTS

(An essay by Gordon Outhier, South Gate, Los Angeles County, Calif., 23d Congressional District)

Four thousand years ago you lived and toiled, Egyptian slave. Many times your back was bleeding from the whip when you faltered from fatigue. But you built the mighty pyramids which stand majestically in the desert, even now.

You steadied the huge block of stone while hundreds threw their weight against the rope to hoist it into its place. You knew that the rope was weakening from overuse, and you had complained of it to the other slaves. But no one would dare stand before the master and demand a new and safer rope. So you kept quiet and just hoped the rope would hold. But one day the rope gave way, and your legs were crushed under the slab of stone.

Your master was enraged because, in falling, the block of stone had been chipped, and a finely chiseled stone was hard to get. He took no notice of your pain; there were thousands of other slaves. So there you lay in great agony, watched only by your fellow slaves. You were left a cripple, with no legs, and you later died from starvation.

But remember how you felt during the rest of your short lived life. There burned within you a desire to gather the people of the streets and denounce your great injustice.

"Alas," you lamented, "I am but a slave."

Your tongue could not move in syllables of protest. If you had even whispered your feeling among your fellow slaves you might have been discovered by a spy and thrown into prison.

You might think it strange that I picked you, an Egyptian slave, in writing this essay, to be an unknown soldier in the long fight for freedom. But as your legs were being crushed under that massive stone your friends were thinking of you as getting your freedom from the whip. For no longer would you have to work on the pyramids. You thought that it would not be much longer and all of your friends would be free. However, you died, thinking that it was impossible to break away from the whip.

But you were wrong. Down through the ages, man has revolted against hard masters and slowly man's desires have found ways to express themselves in words, on paper, in the form of a doctrine. The doctrine that was created for my country is the greatest in the whole world. It is the foundation of my country.

This doctrine was proposed on September 25, 1789, and became a part of the National Government on December 15, 1791. This doctrine gives the people of my country some 38 rights. In this doctrine it states that what you wanted as freedoms or as payment for doing as you are told are not freedoms, but they are rights. We believe that these rights are granted to us by God. In His eyes we are all created equal and we are all deserving of these rights.

Most of the people in my country will admit that we are ashamed of some of the people in our country because they do not realize just how lucky they are to be born in a country where these rights are granted to them at birth. I know that if you had had these rights when you were living, you would have fought to the death, if need be, to keep them free for your children and your loved ones.

If you had been born when I was, your legs would not have been crushed under that slab of stone, and you would not have died from starvation. Now, Egyptian slave, you are wondering what is the name of this great country which has for its foundation such a great document that could have stopped my legs from being crushed and kept me from dying from starvation. What is the name of this great document and its coutry? They are, Egyptian slave, the United States of America and her Bill of Rights.

The Deceptive Budget

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. PRICE. Mr. Speaker, so far as American airpower is concerned, the budget for fiscal year 1957 presented to Congress last week is deceptive. It falls miserably short of meeting the real needs of military airpower in the critical areas of research, development, production, and maintenance, even though it shows increases both in obligational authority and in expenditures. Evaluated in reference to current international problems, this budget is as unrealistic and deceptive as that of fiscal year 1950, which so strongly encouraged the Communists to launch their aggression in Korea.

There are three principal areas in which this airpower deception is being perpetrated: First, the modernization rate of the combat units is being artificially retarded by the stretchout of current aircraft production; second, the technical pace of our research and development will not be appreciably accelerated in spite of constantly recurring evidence that the Soviets are challenging us in technology and probably leading us in the race to perfect an intercontinental ballistic missile; third, funds for the procurement of new aircraft for the Air Force have been cut so substantially that only 1,900 new planes will be contracted for during the next year. This is about 1,400 planes short of what the United States Air Force estimates it needs annually merely to maintain and modernize its authorized 137 combat-wing strength.

During the past year all the responsible leaders of the Air Force have publicly warned that the tremendous technical progress made by Russian airpower poses one or the greatest challenges ever faced by this Nation. Only last Sunday, an Air Force spokesman stated that many of its newest and most powerful aircraft are spending most of their time on the ground because of a shortage of skilled maintenance crews. The new budget will put the Air Force's expansion program to 137 combat wings by the end of fiscal year 1957 on such a thin financial base that it cannot actually have the full strength of combat-ready wings currently scheduled for that date.

In 1950 the Air Force created paper wings to provide an illusion of meeting its program when in fact its real combat strength was inadequate. The new budget, if adopted by Congress, will encourage the Air Force to the same expediency.

At the end of June 1950, just as the fiscal year was ending, the Communists struck in Korea. The deceptive budget presented last week might well encourage the Communists to strike again in June 1957.

Mr. Speaker, all these facts are ably marshaled and presented by Mr. Robert Hotz in an editorial in Aviation Week of January 23, 1956. In asking unanimous consent of my colleagues for permission to extend my remarks and insert this editorial, I wish to quote the final paragraph of Mr. Hotz's editorial:

> We are reaching a critical point in the technological race with the Russians for superior weapons. The stakes in the race far surpass a political victory or a military promotion. This is a time for men's consciences to speak out before the airpower budget fraud becomes a fact.

The editorial is as follows:

THE NEW AIRPOWER FRAUD

The fiscal 1957 airpower budget presented to Congress last week is deceptive. Although the Defense Department budget shows increases both in new obligational authority ($2.5 billion) and in expenditures ($1 billion) for fiscal 1957, it falls miserably short in meeting the real needs of military airpower in the critical areas of research, development, production, and maintenance. Evaluated on the scale of current international problems, the fiscal 1957 budget imposes artificial limitations on the growth of airpower that are as bad as those in the now infamous fiscal 1950 budget of Louis Johnson, Defense Secretary of the Truman administration. It is significant to remember that Johnson's airpower budget that was once billed as adequate for our defense needs and as "cutting the fat but not the muscle," strongly encouraged the Communists to launch their Korean aggression and sent us into that bloody fray woefully weak in the air.

If the fiscal 1957 airpower budget is approved by Congress without change, it will serve notice to the Communists that our military airpower is again on the decline and that our policy of massive retaliation is being built on bluff and bluster rather than superior weapons. This airpower budget submitted by the executive branch of the Government will mean that American airpower will lose further ground in its technological race with the fast-growing Communist air forces. If the trends it initiates are continued, American airpower will not only fail to improve its present slim margin of superiority over the Communist air fleets but will not even maintain its present position.

For this fiscal 1957 defense budget is not a budget of airpower progress, as billed by Defense Secretary Wilson, but a budget of airpower stagnation followed by inevitable retrogression.

There are three principal areas in which this airpower deception is being perpetrated:

First, stretchout of current aircraft production is being continued by a limitation on expenditures. This means that the modernization rate of the combat units is being artificially retarded and that the aerial weapons in our usable arsenal will be deliberately kept closer to the beginning of their obsolescence curve.

Second, the fallacy of the constant level of funds for research and development that is adopted again in this budget (Aviation Week, Jan. 2, p. 13) will mean that our technical pace will not be appreciably accelerated and will certainly lose more ground in the race with the Russians.

Third, funds for procurement of new aircraft have been cut substantially for the Air Force so that only 1,900 new planes can be contracted for during the next year. This is a bare few hundred more planes than those lost every year through normal operational attrition. It is about 1,400 planes short of what USAF estimates it needs annually merely to maintain and modernize its authorized 137-combat-wing strength.

Censorship imposed by top-level Defense Department officials in the guise of military security has carefully concealed the real problems facing the Air Force in particular and our military airpower in general.

For example:

Nearly one-third of the fighter strength of Tactical Air Command is grounded due to lack of qualified maintenance personnel. Strategic Air Command has quantities of bombers grounded for the same reason, although it has not been hit as hard as TAC.

Strategic Air Command is rapidly losing its intercontinental atomic attack capability as the B–36, only bomber in the United States arsenal with genuine intercontinental range, is sliding rapidly down the obsolescence curve. SAC is now essentially a medium-range force relying almost entirely on B–47's

that require multiple aerial refueling from relatively-slow KC–97 tankers at low altitude to operate against the Russian heartland even from foreign bases. General LeMay's program to reequip SAC as fast as possible with longer range B–52's and its KC–135 jet tanker companion have been junked by the fiscal 1957 airpower budget. For the next several years, the retaliatory power of SAC will be significantly curtailed by this production stretchout, and its future power will be delayed by the research fund ceiling.

USAF's expansion program to 137 combat wings by the end of fiscal 1957 is programed on such a thin financial base that it will not actually have the full strength of combat-ready wings now scheduled for that date. USAF is rapidly reverting to its 1950 dilemma of organizing "paper" understrength wings to provide an illusion of meeting its program when in fact its real combat strength is not increasing.

In presenting this airpower budget to Congress, Defense Secretary Wilson testified that:

"Nothing has occurred in the international situation during the past year which would indicate the necessity for any major change in these policies and concepts."

Yet, during the past year, all of the responsible leaders of the Air Force including its Chief of Staff, Gen. Nathan Twining; his vice chief, Gen. Thomas White; United States Air Force Secretary Donald Quarles; the Assistant Secretary for Research and Development, Trevor Gardner, and Lt. Gen. Thomas Power, commander of the Air Research and Development Command, have all publicly warned that the tremendous technical progress made by Russian airpower poses one of the gravest challenges ever faced by this Nation.

In the face of this glaring contrast between the urgent warnings of the top military airpower leaders and the bland complacency expressed by Defense Secretary Wilson and his fiscal 1957 Defense Department program, Congress should make the most strenuous efforts to determine our genuine airpower problems and examine them in minute detail before reaching a verdict on this vital budget.

We can expect a barrage of official propaganda to support the fiscal 1957 defense budget combined with ruthless attempts to suppress its critics among responsible military leaders.

But we are reaching a critical point in the technological race with the Russians for superior weapons. The stakes in the race far surpass a political victory or a military promotion. This is a time for men's consciences to speak out before the airpower budget fraud becomes a fact.

The Pot Calls the Kettle Black—GOP Foreign Policy Differs Little From Truman's

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, William Henry Chamberlin has called attention to the fact that while the Democrats condemn Mr. Dulles and his foreign policy, there is little difference between our current policy and that when Mr. Truman and Mr. Acheson called the shots. Mr. Chamberlin's article follows:

DESPITE DULLES TIFF, GOP FOREIGN POLICY DIFFERS LITTLE FROM TRUMAN'S

When an opposition party lacks issues, there is a temptation to sound off loudly on minor criticisms. This would seem to explain the furor over Secretary Dulles' remarks in Life magazine. There would be ground for criticism if Mr. Dulles had said that he led America to the verge of war three times. He said nothing of the kind. What he said was: "We were brought to the verge of war"—which is very different.

It is hard to see how the Democratic Party, without repudiating the whole foreign policy of the Truman Administration after 1946, could censure a Republican Secretary of State for facing up to the challenge of Communist aggression. We were brought to the brink of war, not by our own desire or fault, but by Mr. Truman's eminently correct decisions to give military and economic aid to Greece and Turkey and to refuse to be forced out or West Berlin. We were pushed over the brink of war when we refused to throw Korea to the wolves.

It might not have been necessary to fight in Korea had it not been for a careless speech by Secretary of State Dean Acheson, which omitted Korea from our defense perimeter. But, once the North Korean Army had moved in force into South Korea, President Truman's decision to fight was right and was backed by the majority of Republicans in Congress.

The three crises to which the Life article refers were all in the Far East and were all inherited from the previous administration. In the case of both Korea and Formosa, the Eisenhower administration was willing to settle for the half-loaf of the status quo, very much along the line marked out by its predecessor. To put it more concretely, we have made a big investment in giving Syngman Rhee the means to build up a powerful army, 650,000 strong. But we are not backing that army in any attempt to overrun North Korea.

We have given Chiang Kai-shek the protection of an alliance which pledges us to come to his aid if there is a Communist attempt to conquer Formosa. We have supplemented this with military and economic aid. But we have not made it technically possible for the Nationalists to attempt a landing on the mainland.

What to do in Indochina was a painful and difficult question, to which there is no sure or easy answer, even by hindsight. It is not happy to think of the huge sums which we poured down the drain of a French colonial war which could not be won militarily or politically. Yet there was no native force sufficiently popular and cohesive to represent an altogether promising alternative to the unsatisfactory policy of underwriting the annual French military deficits. Now a new chapter has begun in Indochina and perhaps it will be possible to bolster the government of Ngo Dinh Diem to a point where it will not be a pushover for an attack from the north.

Charges and countercharges in the field of foreign policy will be tossed back and forth during a hot election campaign. But the truth is that the Eisenhower-Dulles team has not steered the American ship of state as far from the course of its predecessor as some Republicans hoped and some Democrats feared. The talk has been a little tougher, the nationalist note has been struck more often, but the broad objectives have been the same: Peace without appeasement, holding the line against new Communist gains without taking the moral, political, and military responsibility of shooting first.

The decisive change in American foreign policy took place in 1946, when the inane idea that it was always up to us to get along with Stalin (with no corresponding obligation on his part) was abandoned. Unfortunately, the necessity of setting a firm barrier against Communist aggression in Asia was recognized later, after the attack on Korea and after China had been lost.

If one takes 1946 as the date of reference for Europe and 1950 for Asia, there is little the Eisenhower administration has attempted that was not implicit in the policy of its predecessor. German rearmament, which may get off the ground in 1956 or 1957, was first advocated by Acheson in 1950. Dulles has not departed from the model of NATO in encouraging SEATO for Southeast Asia and METO for the middle East.

It is all to the good that questions of foreign policy should be intelligently discussed. But there does not seem to be the basis for a great debate on party lines. On the basic issue of maintaining peace through strength and alliances with likeminded nations, there is no substantial difference of opinion along party lines

The Record Speaks for Itself

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am including an editorial appearing in the Mount Vernon (Ohio) News. I certainly am in accord that this editorial sets forth that the many charges of the New Dealers will not stand up. The record of President Eisenhower definitely establishes that the Republican administration has accomplished more in antitrust prosecutions than the previous New Deal administrations did in all the years they were in power. I am certain that the people will recognize this fact.

The editorial follows:

President Eisenhower, during his 3 years in office, has pursued a policy of modernization.

It is in keeping with the pledges he made during his campaign for the presidency.

He said then that if elected he would favor no minority; that he would serve in the best interests of all the people.

As a consequence he has the confidence of the people in all walks of life. The United States is unified as never before, in the opinion of some observers.

There have been charges of favoritism of big business from some Democrats.

These charges don't stand up, however. Let's look back at the Roosevelt and Truman administrations when the country's big corporations were under verbal and legal fire. They were blasted as "special interests" at every opportunity; nothing good was said of them.

Antitrust suits were numerous. Two of the Nation's biggest corporation, Du Pont and Aluminum Company of America, were brought into court on charges of restraining competition.

The corporations fought these and won their cases. That's not very much progress if breaking up big corporations is desirable just because they are big.

Mr. Eisenhower has done more in 3 years to win antitrust suits than the Roosevelt and Truman administrations combined, and without conducting warfare against bigness.

Two such suits were settled only recently, those against A. T. & T. and Interantional Business Machines, without long, expensive trials, in which the corporations agreed to make their patents available to other manufacturers.

The corporations, made angry by the Roosevelt and Truman thunder against them, fought back and won.

Mr. Eisenhower's policy of "moderation" did not produce any such resentment, and his administration won consent decrees from the two corporation giants.

It is difficult to see how the Democrats can use "big business" favoritism in the coming presidential campaign in view of the fact that the current Republican administration has accomplished more in antitrust prosecutions than the previous Democratic administrations did in all the years they were in power, and did it without any fanfare, just as a matter of duty as it saw it.

Rutgers University: The State University of New Jersey

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, we in New Jersey have long been proud of our State university. Evidence of this feeling may be seen in a recent article which appeared in the Newark Sunday News. It is a story of the State university from its beginning as a private denominational school with just a few students to the present day when it has campuses throughout the State. The article, written by John T. Cunningham, is of interest to anyone interested in education for it shows what can be accomplished by the people of our Nation even though they start from small beginnings. The article follows:

THE STATE UNIVERSITY

(By John T. Cunningham)

Rising on the banks of the Raritan River is an $8 million skeleton of the Rutgers University of tomorrow, the harbinger of an onrushing decade when Rutgers must be braced to meet a flood of students whose parents suddenly will awaken to the fact that New Jersey does have a State university.

The $8 million skeleton comprises three 6-story dormitories and a $4 million library. These are splendid additions, but the impression remains that in a sense these are not buildings for the future. Rather, they are in a sense hurried effort to catch up with the past; they will be in full use as quickly as they are finished.

Actually, the 3 new dormitories may even accelerate the problems Rutgers faces as a State university. Just as a new turnpike or parkway creates remarkably new traffic demands, so the dormitories will probably create sharpened needs. The 1,008 beds will be filled immediately—and a thousand more parents might in justice ask: If a thousand beds can be found for those, why can't a thousand beds be found for ours?

That's the way it is with a State university. It must be alert to public requirements and responsive to public demands, and in New Jersey the problem is magnified many times. After all, New Jersey has had only 10 years to get used to having a State university; many other States have had a century or more.

The problems extend far beyond the mere banks of the Raritan. When Rutgers and the State of New Jersey were united in long delayed wedlock in 1945, the responsibilities of Rutgers—the State university of New Jersey—automatically spread to touch every corner from Cape May to High Point.

The Rutgers University which became the State university 10 years ago had grown in hodge-podge fashion, especially in its heterogeneous commitments to the State of New Jersey. Someone has said that the Rutgers of 1945 was "like an old inner tube—with patches on the patches."

Two especially large patches quickly joined the old inner tube as the Rutgers of New Brunswisk absorbed the former University of Newark in 1947 and the College of South Jersey in Camden in 1950. Fortunately the old tube had surprising resiliency, and happily, the two big new patches proved sound.

If there is one thing Rutgers must have, it is resiliency. There is an increasing certainty on the part of educators that 10 to 15 years from now the State university may have to take the responsibility for educating twice—and maybe 3 or more times—as many New Jersey sons and daughters as it now serves.

As the tide of students rolls inward, a private institution may say: "We'll expand 10 percent, or 20 percent, and no more." A State university is not afforded that luxury—and if the State university happens to be Rutgers, where facilities already are inadequate to meet the relatively moderate demands of 1955, the problem for tomorrow calls for serious discussion.

There is no easy way to make simple the complexity of Rutgers. It encompasses in New Brunswick alone the men's colleges (including the college of agriculture) and Douglass College for women. It embraces several varied schools and colleges in Newark and Camden. It includes a separate university college, a degree-granting evening unit offering courses in New Brunswick and Newark. It reaches out to thousands upon thousands of other people through extension courses, short courses, and other special courses.

Separate articles in this series will deal with Douglass College and with the Rutgers colleges in Newark and Camden. This article, therefore, is concerned chiefly with the men's colleges in New Brunswick and with the State University administration as it centers "on the banks of the old Raritan."

Even such circumscribing leaves complexity. Within New Brunswick there are three distinct Rutgers men's campuses—the main or downtown campus; the College of Agriculture a mile across town, and the Hillside campus, on the Raritan's north bank behind the football stadium.

Here on the banks of the Raritan is the very spirit of Rutgers, no matter how complex it has become. Here rose in 1766 a college called Queen's and later called Rutgers. Here generations have sung about a college where father sent a son to "learn to be a man." Here the scarlet of Rutgers and the orange and black of Princeton played the first intercollegiate football game. Here has grown a tradition of high academic standards, still as firm as ever, State university or no.

To appreciate the Rutgers of today it is well to understand the two main threads running through her long history—the early kinship with the Dutch Reformed Church and the later affinity with the State of New Jersey. As the influence of the church gradually declined in the late 19th century and then disappeared entirely in 1920, the hot-and-cold flirtation between Rutgers and State grew stronger.

A dissenting wing of the Dutch Reformed Church secured a charter for Queen's College in 1766 and 5 years later started classes in, of all places, a former New Brunswick tavern called "The Sign of the Red Lion."

One of only nine American colleges founded before the Revolution (and, incidentally, the only colonial college to become a State university) Queen's never knew early solidarity. Just one man, a Matthew Leydt, stood in the first graduating class in 1774. Twice during the Revolution the college fled to the hinterlands, first to North Branch and later to Millstone.

War-time jitters persisted. In 1793 Queen's unsuccessfully sougth a merger with Princeton; from 1795 to 1809 and from 1816 to 1825 Queen's closed her doors completely. Surprisingly enough, during those depressing two decades, in some areas Rutgers had a wider academic breadth than Princeton—including even a reasonably well-established medical school.

Reopening in 1825 found Queens with two assets: A new name, Rutgers College, and a solid building, Old Queens, whose cornerstone had been laid in 1809. The new name symbolized optimism—it honored wealthy Col. Henry Rutgers, of New York, seemingly in "lively hope of favors to come" (as Rutgers' historian puts it). Colonel Henry responded promptly (if modestly) with a bell for Queens tower, valued at $200, and a $5,000 trust fund (whose interest is still paid annually).

Church influence tightened and didn't relax one whit until 1848, when college and seminary became separate entities. True physical separation waited until 1856, when the seminary moved into Herzog Hall on what undergraduates soon dubbed "Holy Hill." In those days "Holy Hill" seemed far to the west; today it splits the downtown campus in half.

Passage in 1862 of the Morrill Act to support education in agricultural and the mechanical arts suddenly made Federal money available—a total of $116,000 for New Jersey, on which the annual interest totaled $5,800. Someone had to get it, and both Rutgers and Princeton tried. Rutgers caught the State's eye by establishing the Rutgers Scientific School in 1863; the following year the legislature voted Rutgers the $5,800.

Ostensibly Rutgers received a windfall. In actual practice it proved anything but that, since Rutgers first had to buy a 90-acre college farm for $15,000 and had to arrange education for both engineers and agriculturalists. Most important, Rutgers had embarked on the long voyage leading to State university status.

The Morrill Act implied that any State accepting its provisions would cooperate financially. New Jersey ignored the issue for 26 years—giving not one cent until 1890, when it established the first Rutgers State scholarships. Until that time the legislators simply passed Federal funds on to Rutgers, and if sometimes the public mistakenly believed New Jersey had been generous to higher education, so much the better.

There can be many a slip between scholarship approval and scholarship payment, Rutgers found. The State comptroller refused to pay anything to Rutgers, although the college continued to accept scholarship students (many of them recommended, naturally, by legislators). Rutgers sued the State, and the case proceeded somewhat leisurely, even for New Jersey courts of those days, before a ruling favoring Rutgers could be secured in 1905. The State paid up $80,000 in back scholarships 15 years late.

The Dutch Reformed Church, on the way out in control of Rutgers, crossed paths with the State on the way in during the presidency of Dr. William H. S. Demarest from 1905 to 1924. This Demarest administration was the transition period in Rutgers development.

Four years after Dr. Demarest assumed office the trustees dropped an old requirement that two-thirds of the trustees should be members of the Reformed Church. In 1920 Rutgers amended its 1766 charter to eliminate entirely a 154-year-old requirement that the president be a member of the Reformed Church.

The little college on the banks of the Raritan grew in many ways. New buildings spread over the downtown campus—the engineering building (1909), the chemistry building (1911), Ford Hall (1914), and the ceramics building (1920). Across town on the "Ag" campus, State funds erected four important new buildings. Old Grad James Neilson gave the rest of what is now Neilson campus, across Hamilton Street from Old Queen's, and Rutgers foresightedly purchased the Bishop estate (where most of the modern growth is taking place).

When Dr. Demarest became president, only a few more than 200 students greeted him; when he stepped down enrollment totaled 734. Old Rutgers, bursting her seams, bought several old houses along College Avenue to house departmental offices—competing for the houses at times in the real-estate market with undergraduate fraternities, then also buying old residences for frat houses.

Dr. Demarest in 1924 turned over to Dr. John Martin Thomas the reins of Rutgers University—officially so-named the year Dr. Demarest retired. It seemed only a matter of short time before Rutgers became the State university in both fact and name.

By now the old inner tube had some odd patches. A 1917 legislative act made the Rutgers Scientific School (or agricultural college) the State University of New Jersey. New Jersey College for Women in 1918 became a department of the scientific school There was a patch here and a patch there of State money—the ceramics building, New Jersey Hall, some money expended on the chemistry and engineering buildings.

Clearly the time had come for the fine old spinster named Rutgers and the reluctant old suitor named the State of New Jersey to make clear their intentions. Their engagement had been at least tacit in 1864, but despite the fact that the State had contributed modestly to her support actively since 1905, Rutgers resisted marriage. The State appeared only too happy to have it that way.

A study by Arthur J. Klein of the United States Bureau of Education, in 1927 threw the strange relationship into full focus. Dr. Klein said quite pointedly that few persons recognized Rutgers as a State university. He gave many reasons—the Dutch Reformed Church ties were hard to live down, retention of the old name Rutgers suggested private financing and utilization of a long-established institution made for confusion. He stressed particularly the problems inherent in a self-perpetuating private board of trustees in control of a public university—something Governor Meyner stressed even more pointedly last spring.

The lengthly Klein report summed up, dispassionately and incisively, the long overdue need for action by both university and State. The State acted typically: More studies followed by more studies. True enough the depression made any move involving State funds difficult, but more important, neither university nor State showed much inclination to relinquish old privileges or to assume new burdens.

World War II brought with it a need for accelerated programs and wise heads recognized that postwar educational demands would be tremendous. An 81-year courtship became legal; Rutgers and the State of New Jersey solemnized their union in the spring of 1945, when the State university act moved through the legislature.

Under the 1945 act, all Rutgers departments were "to be utilized as an instrumentality of the State for providing higher education." The State gained nine new positions of the board of trustees and general powers of control and supervision of the State university became vested in the State board of education. In return for using the Rutgers facilities, the State agreed to appropriate just and reasonable sums for the university.

Many a son of Old Queen's feared the loss of old traditions. If on the night of the wedding they drank to the good old days of Rutgers, they had much to be sentimental about. They had the right to be sentimental about their colonial history and the traditions of Old Queen's. They had rightful pride in the strict academic principles of their college.

Old grads (and new grads, too) recalled proudly that the first intercollegiate football game was played at Rutgers on November 6, 1869. Princeton came up that day and 25 men on each side took off their coats and ripped into one another. Rutgers won, 6 to 4, possibly helped by the scarlet turbans their valiants wore—the first distinctive football headgear ever worn.

Football is always easiest to recall, but Rutgers also could claim New Jersey's first Phi Beta Kappa chapter was formed at Rutgers in 1845. The first issue of Targum, undergraduate newspaper, appeared in 1867 as one of the Nation's earliest college newspapers. The Targum, some might recall, suggested scarlet as the official Rutgers color in 1869. Surely some could remember the university yearbook, the Scarlet Letter, dated from 1870.

Down in fraternity row, the Delta Phi's of 1945 could trace a history back 100 full years, back to 1845. If anyone could recall that Rutgers and NYU met in the Nation's first intercollegiate debate in 1881, he would be esteemed; history has chosen to make far more to-do about the first football game than the first debate. Possibly as they raised their voices to On the Banks of the Old Raritan, scattered old grads might recall that Howard N. Fuller, class of '74, wrote those words in a single afternoon in 1873 for the college glee club to sing in Metuchen that night.

But there was no time for any but the most sentimental to die because dear old Rutgers had surrendered to State control; the huge surge of returning veterans caught up Rutgers and moved it forward so rapidly that few had time to remember the bygone days. Enrollment in the men's colleges in 1947 tripled those of 1940. Rutgers almost overnight moved from the status of a relatively small university to a State university among the Nation's top 20 in total enrollment.

Dr. Robert C. Clothier, who assumed the Rutgers presidency in 1932 in the midst of the most acute financial distress the world has ever known, guided Rutgers through tremendously difficult days—through a depression, World War II, the changover to State university status, and the alavanche of returning veterans. Dr. Clothier served 19 momentous years before turning the presidency over to Dr. Lewis Webster Jones in 1951.

Dr. Jones, who came to Rutgers from the presidency of the University of Arkansas, has used his 4 years in New Jersey to sell actively the idea and the ideal of a State university. He believes the campus of Rutgers extends to the borders of the State, and its mission affects every phase of the cultural and economic life of her people."

State appropriations have been moving swiftly upward from the $1,400,000 the State granted Rutgers in 1945. The budget in 1951, when Dr. Jones took office, included slightly more than $5 million in State funds; today that total is just over $10 million. In addition, New Jersey annually provides 1,000 State scholarships worth $400,000.

Increased State funds have served many ends, not all of them quickly obvious. The new $4 million library is being paid for with State funds, but the three big new dormitories rising nearby are being financed with $4,500,000 in private capital. Across the Raritan on Hillside Campus, the splendid new $3,500,000 building housing the Institute of Microbiology has been financed from streptomycin royalties.

Principal emphasis in using State funds has been on improving the tone of a Rutgers education, wherever it be encountered—in New Brunswick, in Newark, in Camden or in one of the many other areas of academic influence. The faculty has been expanded, with ever-improving quality. Faculty salaries have been raised, particularly at the lower levels. Research facilities and fields of investigation have been broadened.

High academic distinction continues to be stressed at Rutgers, often to the distress of those perennially young alumni who hint that lowered admission requirements might improve the football team. Rare among State universities, Rutgers continues its policy of selective admissions—stressing academic fitness. This year, for example, of the 900 freshmen entering the men's colleges in New Brunswick, 90 percent had stood in the upper two-fifths of their high school classes. There is an understanding that Rutgers entrance requirements parallel Ivy League standards.

New Jersey's highly diversified economic pattern makes the task of her State university difficult, yet Dr. Jones declares the State's great variety makes for "enormous opportunities." At the same time, consider the obligations—to serve the farmer, to serve an industrial area whose output covers a wide range from chemicals to fine jewelry, to serve one of the Nation's most polyglot populations.

This year the agricultural experiment station celebrates its 75th anniversary and the College of Agriculture observes its 91st birthday, both stronger than ever—not only within the State but in national prestige. The State university started in 1864 in the Agricultural College, but today agriculture is merely one responsibility.

Rutgers serves nearly 3,000 undergraduates in its men's college in New Brunswick, studying agriculture, liberal arts courses, the sciences, engineering and education. On its statewide campus, including Douglas College and colleges in Newark and Camden, Rutgers has the responsibility for educating another 3,000 full-time undergraduates. Close to 20,000 more young men and women of varying ages and varying intentions each year seek Rutgers help for everything from 2-week short courses in agriculture to 8-year evening schedules leading to a degree.

That means constant vigilance to see that on the one hand the needs of a State are being met, and on the other hand that university offerings are not being spread too thin. Rutgers has moved to meet some serious wants of the State—by improving its law schools and its school of education, by inaugurating such new schools as those in library science and social work. Next year's budget will include funds for increased psychological studies.

Perhaps the biggest stumbling block at the moment for Rutgers is its comparative youth as a true State university. Indeed, Rutgers may well be said to have two histories—179 years as a private college and university; 10 years as a State university. Some confuse the two—the present study of the university's heavy emphasis on private trustees is one illustration that the kinship is not wholly resolved.

A scant decade as State university poses other problems. Tuition rates at Rutgers are as high as any State institution in the land—far higher than most. Stated another way, higher educational opportunities for

New Jersey boys and girls are not nearly as readily available as they are in other States.

If Rutgers is to meet the overwhelming tide of students coming by 1965, its physical facilities must be greatly revamped. Even now in New Brunswick there are obvious limitations. Many of the buildings on Queen's and Neilson campuses are seriously outmoded—some hopelessly outmoded. Academic departments are housed in remodeled old houses along College Avenue—and these are far from adequate accommodations. This isn't Rutgers propaganda; this is obvious to the inquiring eye.

Whether Rutgers will be ready by 1965—that's only 10 years hence—is dependent partially on the taxpayer and partially on sound administration. The pressure will be tremendous, not only from the rapid rise in enrollments which mere rising birth rates would dictate, but also because from many areas may come a cry for lowered admission standards.

Dr. Jones is determined that academic standards will remain high. Nevertheless, he says "to cope with increased numbers of students we must rethink the whole problem of our quality. We can't necessarily equate small size with quality." That by no means means Rutgers can, or will, seek only to educate an elite. That stresses Dr. Jones, is undemocratic: "We can't measure ability that accurately and we can't aim our education at an upper intelligence for recondite research; we need too many different types of people in our society."

There are those people who think "quality and quantity are somehow incompatible," Dr. Jones says. They believe "any attempt to make higher education more generally available would spread our culture perilously thin." Dr. Jones replies:

"I don't think much of that metaphor. It implies that culture is a substance like peanut butter, that we haven't much of it, and that if we try to share it more widely all the children will be skimped on their sandwiches. But knowledge, unlike peanut butter, does not diminish by being shared. It is more likely to increase."

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate hearings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

Seeking God's Way for World Peace

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 7, 1956

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at the First Methodist Church, Milwaukee, Wis., on February 4, 1956, at the Congressional District Peace Conference, Milwaukee Council of Churches.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES THAT THE ANNUAL ONE GREAT HOUR OF SHARING BE THE GREATEST IN THE HISTORY OF THE AMERICAN CHURCH—SAYS THAT NEVER BEFORE HAS THE CHURCH HAD THE OPPORTUNITY TO REACH SO MANY IN THE SPIRIT OF CHRIST AT SO LITTLE COST

It is a real pleasure to be with this fine group of Wisconsin Christian leaders.

I can think of no greater responsibility or opportunity in this Atomic Age than that of "Seeking God's Way for World Peace."

Down through the ages men and women of conviction—followers of the Way Shower—have blazed new trails along which too few have had the courage to trod.

Too many of us—in every age—look out on a world torn by hate and ungodliness and lose the will to bring to the world the constructive power and redeeming love of the faith we profess.

It is a time for spiritual greatness.

It is a time to turn to the letter to the Hebrews for spiritual strength and guidance:

"Therefore lift your drooping hands and strengthen your weak knees. * * *

"Strive for peace with all men, and for the holiness without which no one will see the Lord."

MANKIND'S BASIC RELIGIOUS CONVICTIONS MAY BE ANNIHILATION INSURANCE

I was glad that a delegation of American Protestant leaders was named this week by the National Council of Churches to make a 10-day visit to Russia in an effort to increase mutual understanding. However, I agree with the note of caution in the comment by Dr. Eugene Blake, president of the council, when he announced this trip: "While we cannot be sure that an agreement can or should be reached at many points, we do hope that under the guidance of Almighty God that exchange of visits will contribute toward a large measure of understanding and good will."

We are living in an age where the only insurance from annihilation may be the basic religious convictions which—despite those who would deny them—I am convinced that all men share.

PRAYER IS THE POWER THAT LEADS TO CONSTRUCTIVE AND POSITIVE ACTION

What, then, is our real job in this time and age of crisis and confusion? I believe that there are three things that we must do if we would truly seek "God's way for world peace."

First, we must pray.

Prayer is the power that leads to constructive and positive action.

Prayer can be the point of departure for the better decisions which man is always capable of making.

May I suggest to you that a nation whose President opens each cabinet meeting with prayer is a nation that is earnestly seeking God's way to world peace.

May I say to you, also, that more decisions at high levels in our country are reached through prayer than anyone in America or the world realizes.

We must all turn to prayer if we are to achieve the calmness of spirit and the clear thinking that the terrible and awesome decisions of the atomic age require from us.

SHARING IS THE KEY

Secondly, we must share.

We must share the bounty of material blessings and know-how that have been showered upon our Nation.

During the past 2 months I have been working in Washington with the leaders of the major religious and secular overseas relief organizations who represent the American Council of Voluntary Agencies for Foreign Service, and with Mr. John B. Hollister, Director of the International Cooperation Administration. Effective and immediate action was needed and obtained in a stepped-up program of sharing of our surplus agricultural products.

I have been deeply impressed by the fact that the Catholic Relief Service of the National Catholic Welfare Conference, the Church World Service of the National Council of Churches of Christ in the United States of America, and the United Jewish Appeal of the Synagogue Council of America are working in common purpose in this great program of sharing.

During 1955 upward of 800 million pounds of surplus dairy products and cottonseed oil were distributed in over 50 countries to needy people who have no means with which to buy.

I am encouraged by this kind of sharing.

These agencies have recently—after the greatest of perseverance in battling Government redtape—been able to obtain the release of grains in 1956 in addition to the dairy products.

This will mean that the people of the United States will be distributing through these fine relief agencies more than 1.6 billion pounds of commodities during the calendar year of 1956.

SHARING IS A MAJOR RESPONSIBILITY OF THE CHURCH

Now where did this program, of sharing, start?

It was started in churches like this one, by people like yourselves. Our Christian conscience keeps telling us to share.

I have received a great deal of support for the suggestion that I made on Christmas Day that this matter of sharing be strengthened by the appointment of a White House expediter who would seek out and meet the needs of the hungry and needy people both at home and abroad.

Now if there is one thing that I would urge all of you to do in your seeking of world peace, it would be to make March 11, 1956, the date of the eight annual one great hour of sharing, the greatest in the history of the American church. Why? Because the one great hour of sharing will help make possible not only the distribution in countries overseas of the foodstuffs for needy peoples, but it will make possible medicines and other supplies in emergency situations, long-term health and nutrition programs, resettlement and rehabilitation of refugees, self-help projects in vocational training, and the broadest kind of ministry to the homeless and destitute.

May I say that the good that can and will be accomplished with the $11 million to be raised through the 1956 united appeal is incalculable. May I urge that all of you see to it that this giving is oversubscribed in your church.

HUMAN NEEDS EVERYWHERE MUST BE MET

Your big job—our real job, is to see that this one great hour of sharing is successful and that the major areas of world need—Korea, the Near East, India, Pakistan, Japan, Greece, Germany, Austria, Italy, France, and Hong Kong—will receive the best that Christian action can offer.

In Korea, the Vietnam, and the Near East refugee problems are still acute. Whole villages have been demolished, malnutrition and disease are widespread.

Japan is still rebuilding after overwhelming typhoon destruction. India and Pakistan have been devastated by floods.

In Hong Kong, 300,000 refugees still live in huts on cluttered hillsides.

In the Near East, hundreds of thousands of Arab refugees still exist in hopelessness and despair.

In Germany and Austria, millions of homeless are still crowded in refugee camps.

In Greece and Italy there are pressing human needs of all kinds.

These are but a few of the situations which are being met by the sharing which you and I can and must do.

Never has the church had the opportunity to reach so many in the spirit of Christ at such little cost.

WE MUST SET EXAMPLES FOR OTHERS

Thirdly, we must set an example for others.

If we can lead others from prayer to sharing then we are beginning to get on top of our real job as Christians. I do not think that this matter of an example to others has been said in any finer way than by that great and good man who is sharing his talents and Christian concern so deeply with other human beings—Albert Schweitzer:

"Example is not the main thing in influencing others. It is the only thing. Hope is renewed each time that you see a person you know who is deeply involved in the struggle of life helping another person. You are the unaffected witness and must agree that there is hope for mankind. And those who are not so tied down to the struggle for existence, who are freer, must give the example of service. Those not tied down by suffering are called to help those who are chained by suffering. But they should not think, 'Behold, I am giving an example;' that spoils it. Anyone who thinks of the example he will give to others is occupied with things he ought not be doing. He has lost his simplicity. Only as a man has simplicity can his example influence others."

CONCLUSION

I heard a very distinguished colleague of mine in the Senate say to us the other day that it is our thinking that determines the kind of example we are to others. He quoted the Wayshower and said "If you have faith as a grain of mustard seed" you can accomplish great things.

Jesus did not wipe out the armed aggressionof His day but He did teach that which, if understood, does away with evil in the individual. He stated that "God is a spirit and they that worship Him must worship Him in spirit and in truth." He also said "Lo, I am with you always, even unto the end of the world."

We were told not simply to love those that love us but to love our enemies—but above all we were told to love God supremely. Hate (pride, egotism, bigotry) and intolerance must be displayed with love, fear and courage, lust with purity. Thus, when the individual—and Jesus impacted individuals—learns the way to the more abundant life by right thinking, followed by right living and right doing, that individual obtains peace—that peace which He said, "I leave with you."

We know that nations would not war with nations if hatred and lust for power and gain were destroyed in the consciousness of the individuals.

Saul of Tarsus was blinded by the creed and dogmas of his day. So much so, that he was a fanatic, ready to kill and imprison those who did not agree with the concept of the state church at that time. Something happened to Saul on the way to Tarsus. The Bible relates that Jesus spoke to him and a new light impacted the consciousness of Saul. It changed him from a persecutor, an intolerant human being, to Paul—one who hungered to bring the light of the Spirit to his fellows.

Now he didn't revolt against the armed aggression of Rome, but he did feed the hungry of mind. Like Paul, we too can hear, "Lo I am with you always."

Perhaps our real job is to escape, as Moses of old did, the bondage of Egypt—the limiting thoughts of the modern Pharisee and the fears and doubts of the materialistic period in which we live. We need what Jesus called "the spirit of truth which would guide us into all truth"—away from the bewilderment of human experience—away from the alarms of the atomic age, to courage and competence and faith. Not the faith that is blind but the faith that will life us above the storms to a spiritual serenity such as John had when he said "Now are we the sons of God." That is what we need.

Our real job is to know even as the Wayshower knew that "in Him we live and move and have our being." God never deserts man. Man loses sight of Him by living empty lives and having empty hearts. We must, like Paul, after he had his experience on the way to Damascus claim our heirship. We are told that "Truth will make us free." It is our right to claim our heirship with the Almighty and to apply the truth that makes us free.

With faith we can destroy apathy and fear and assure ourselves of alertness and strength and confidence. "Where the spirit of the Lord is there is liberty."

Paul counselled you and me to "Be not conformed to this world, but be ye transformed by the renewing of your minds that ye may prove what is that good and acceptable and perfect will of God." He renewed his mind by casting out the old religious dogmas. He said, "Now is the time to awake out of sleep" and yet in his word to the Philippians he said "I count not myself to have apprehended, but this one thing I do, forgetting those things which are behind and reaching forth to those things which are before I press toward the mark of the pride of the high calling of God in Christ Jesus."

I have dwelt upon these spiritual truths because thinking on these things one becomes more competent and adequate to meet the problems that he is confronted with. I am sure that you who are leaders in your church, who are teachers of the word, recognize the significance of Paul's words when he said "Have that mind in you which was in Christ Jesus. Or to put it in another way "Have those thoughts, the spiritual food, the ideas that Jesus lived with and expressed."

Our real job then is simply a job of more prayer, more sharing, more setting of examples. It is always a task of forever understanding more of the great spirited truths.

I suggest again that now is the time for all of us here to "lift our drooping hands and strengthen our weak knees. * * * Let us strive for peace with all men and for that Holiness without which no one of us will see the Lord."

Fairbanks, Morse Raid Follows a Pattern

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. SCRIVNER. Mr. Speaker, again I call attention to the situation facing a stable American business concern and the possible overthrow of its sound business management by outsiders, who knowing a sound institution when they see it, seek to gain control, for purposes of their own, and best known to themselves.

It is not a new story. It is repeating a familiar strategic campaign as shown by the following article by Leslie Gould, financial editor of the New York Journal-American, which appeared in that paper on January 20, 1956:

BROKERS' FAIRBANKS, MORSE DEALS—PATTERN OF A RAID

(By Leslie Gould)

The purchase of Fairbanks, Morse shares in brokers' and nominee names forms an interesting pattern—a pattern of a raid—a bold takeover attempt.

Across it there falls a shadow—that of Leopold D. Silberstein and his Penn-Texas Corp., his vehicle for a long list of company takeovers.

This column exclusively revealed a group was buying Fairbanks, Morse stock in a move similar to that attempted by Louis E. Wolfson against Montgomery Ward & Co. Silberstein was named in that column. He denied that he or Penn-Texas or any associated company had bought any Fairbanks, Morse stock, but said a block of 10 to 15 percent was available and had been offered to Penn-Texas.

Salt should be taken with this denial, for in it Silberstein "emphasized that under no circumstances will Penn-Texas engage in a proxy fight for control of Fairbanks, Morse & Co."

DEALINGS WITH DU PONT

That block of available stock coincides with an accumulation of now more than 15 percent of Fairbanks, Morse shares in recent months. Most of this stock has been bought or transferred to the name of one of the larger New York Stock Exchange houses—F. I. du Pont & Co.

Most of Silberstein's and his company's stocks dealings are with the du Pont brokerage firm. His son-in-law—Peter M. Cats—is assistant manager of the firm's Savoy-Plaza office on Fifth Avenue. Mr. Cats, a Dutch national before becoming a naturalized American, has been with the du Pont firm since 1941, with time out for 3½ years in the United States Army intelligence. He came out of service with a second lieutenant's reserve commission.

Fairbanks, Morse has 1,200,000 shares outstanding, and 30 percent are held by Robert Morse, Jr., the president, his father, and the Morse family. So, the situation is somewhat different than in Montgomery Ward, where management held only a small percentage interest, but won nevertheless over the raiders.

The du Pont firm holds in its name as of late last week, 132,878 Fairbanks shares; Egger & Co., the nominee for a Zurich bank, around 52,000; Charles Frederic & Co., another nominee, 21,000, and Sutro Bros. & Co., another Stock Exchange firm close to Silberstein, 23,350.

HALF SINCE SEPTEMBER

These total 229,228 shares, and of these 191,064 have appeared in the above firms' names since September.

For a congressional committee interested in these takeover attempts, these stock transfers would provide meat for an interesting study.

Here's the transfer pattern:

	Sept. 9, 1955	Nov. 9, 1955	Dec. 9, 1955	Dec. 30, 1955	Jan. 6, 1956	Jan. 12, 1956
Du Pont	36,464	97,072	86,997	111,186	120,111	132,878
Egger	None	13,000	40,200	40,200	40,200	[1] 52,000
Frederic	400	100	20,900	21,000	21,000	21,000
Sutro Bros	1,300	600	16,000	23,725	23,700	23,350
All brokers	305,214	343,731	373,762	391,383	398,353	397,000

Another Proxy Fight Coming

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. SCRIVNER. Mr. Speaker, as I have previously stated I own no interest in Fairbanks, Morse & Co. My sole concern with their future welfare is based upon what might happen to one of their plants in my hometown where right at 1,000 fellow Kansas Citians are profitably employed. If the management is changed from that which has succeeded so well, no one can tell what the future holds for this plant, and others as well.

Mr. Speaker, I do not know Mr. Silberstein or of his management capabilities. But I do know many of those presently managing the corporation affairs. For that reason, and those above expressed, I trust no change will come about as the result of the proxy fight predicted in an article by Leslie Gould, financial editor of the New York Journal-American in the issue of January 27, 1956, part of which follows:

SILBERSTEIN NOW ADMITS HE'LL FIGHT FOR FAIRBANKS

(By Leslie Gould)

It is now out in the open—no thanks to the SEC—that Leopold D. Silberstein and his Penn-Texas Corp. are out after control of

the $125 million Fairbanks, Morse & Co. There will be a proxy fight.

After denials, the Silberstein interests confirm this column's exclusive 3 weeks ago that he and the Penn-Texas were after this old line, well-heeled company, headquartered in Chicago.

Silberstein, 51, came to these shores 8 years ago from Europe, and has built up in that short space of time a small industrial empire by a series of rapid take-overs of a wide variety of companies.

When this column first reported the Silberstein moves, he denied either he or any of his companies were buying stock, although he admitted a block of 10 to 15 percent had been offered to Penn-Texas. In his denial he made a surprising statement that "under no circumstances will Penn-Texas engage in a proxy fight for control of Fairbanks, Morse & Co."

The "no proxy" fight statement goes out the window with the rest of his denial, for he now says that having acquired 100,000 shares and agreements to buy more, he will force his way onto the Fairbanks, Morse board. That means a proxy fight unless the present management, headed by Robert Morse, Jr., backs down.

REVEALS SPLIT IN FAMILY

The Silberstein confirmation contained one surprise. The 82-year-old uncle of Robert Morse—brother of his father, who is board chairman—is selling 15,000 Fairbanks shares to Silberstein and has optioned 27,500 additional shares. This would amount to about 3½ percent of the outstanding Fairbanks shares.

The Morse family held around 30 percent of the shares. This will be reduced by the uncle's defection, and will give the Silberstein group between 20 and 25 percent. Purchases exceeding 225,000 shares have been bought in recent months through two stock exchange firms and a Swiss bank long associated with Silberstein. Silberstein's son-in-law, Peter M. Cats, is assistant manager in the Savoy-Plaza office of one of these house—F. I. du Pont & Co.

While shocked at his aged uncle's deal, Robert Morse, Jr., has vowed to fight any takeover.

HELPED BY VOTING RULE

Under the Illinois law, where Fairbanks, Morse is incorporated, there is cumulative voting. In a proxy fight Silberstein could get two or three places on the board. There are 1,226,000 shares outstanding.

This looks like a repetition of the Montgomery Ward fight, where Louis E. Wolfson, although he got three places on the board, lost his bid for control. He just resigned as a Ward director, giving up the fight.

Increases in Postal Rates

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. DINGELL. Mr. Speaker, I rise to criticize the President's communication on the Post Office and on postal rate raises released February 1, 1956.

While I am not convinced of the need for a postal rate raise, I am against an increase as recommended by the administration. The report of the Postmaster General requests legislation from Congress to raise postal rates of the little man. By this same program he seeks to raise rates on postal services which are already turning in a profit to the Treasury. It appears to be a payoff to the weekly periodicals, some of which, like Time, Life, and Fortune, are little better than house organs for the Republican Party.

The report starts out decrying the expense of the Post Office deficit in its first paragraph. Then some paragraphs further on, the Postmaster's report gets down to some of its really iniquitous aspects. It recommends the increase of first-class mail rates, the little man's mail, from 3 cents per ounce to 4 cents per ounce, or an increase of 25 percent. This increase is to take place at once, or immediately upon passage of the legislation authorizing it.

Now, it so happens that, from the latest information available, first-class mail, the kind most used by the little man, is a profitmaker for the Post Office. According to the deficit figures for the fiscal year 1955, it earned $63,327,680, yet the administration proposes to raise the rates to capture an additional $295 million.

Very piously the report states that 75 percent of the first-class mail is used by business and that the raise in rates will only cost the average family 12 cents per month. However, the administration's report does not say that by far the greatest portion of the little man's mail goes first class. Stated differently, the postal rate raise means that the little man will be taxed about one quarter of $295 million, or $73.75 million more for his mail, which already turns into the Treasury a profit.

In like manner, airmail rates are to go up 1 cent per ounce, from 6 cents per ounce to 7 cents per ounce. Airmail also turns into the Treasury a tidy profit, which was $3,598,035 during fiscal year 1955. Airmail might properly be called the poor man's telegram, since it will carry letters between many of the major cities overnight. The result is that the little man is again buffeted by the administration that raises rates on a service which benefits him, and which already turns in a profit. Now if airmail is so much in need of a rate hike to be profitable, why does the administration have 21,000 tons a year of first-class mail paid for at 3 cents an ounce carried by air, when airmail at 6 cents per ounce is unprofitable. (Washington Sunday Star, February 5, 1956, on p. A–28.)

On second-class mail, the administration proposes to increase rates, which are now about 2½ cents per pound, by 2 successive annual raises of 15 percent each. The handling cost of this mail was 11½ cents per pound prior to the last postal pay raise, and is presumably higher now. The first raise will be about $0.00375, or less than four-tenths of 1 cent per pound, to use the administration's own figure.

The rate after the first raise will then be approximately $0.02875 per pound. The handling cost to Uncle Sam will still be more than 11½ cents. The second annual rate raise will be about $0.0043125, or in round figures about $0.0043, making the charge $0.0331, or about 3.3 cents per pound, while it will still cost the Government more than 11½ cents to ship that same pound of second-class mail.

I want to lay special emphasis on the fact that this class of mail is used for the shipment of periodicals, such as Time, Life, and Fortune, whose publisher is powerful in the ranks of the Republican Party.

Note that these 2 raises on second-class mail will raise $17 million, while the raise on the first-class mail will bring in $295 million a year. And yet first-class mail brings into the Treasury a substantial profit.

There is proposed for third-class mail a raise amounting to 30 percent to bring in $77 million per annum. This is again a shifting of the burden to the little man. Such third-class mail is primarily advertising matter, and now has a deficit, or had in fiscal 1955 a deficit, of $147,187,173. Even the most optimistic cannot see how either the second- or third-class mail can be made to support itself under this plan. In the case of second-class mail there remains a deficit of over 7 cents for each pound shipped; in the case of third-class mail the deficit will at best only be cut in half.

The plan is obviously rotten, and cries to be defeated. I will vote to defeat it, and I know my colleagues will join me.

I herein insert a table showing some of the rates and losses which the periodicals cause by the rates as they stand, which I have taken from a statement by Hon. JOHN E. MOSS, JR., of California, in the CONGRESSIONAL RECORD of Wednesday, July 7, 1954, at page A9983 of the Appendix.

Itemized breakdown of the amounts of deficit occasioned in handling mail of 5 largest-circulation magazines and 5 largest-circulation newspapers

	Quarterly weight	Copies	Quarterly postage at present rate	Cost of handling	Quarterly loss	Annual loss
	Million pounds	*Millions*				
Magazines:						
Life	47.5	45.8	$1,273,000	$3,424,000	$2,151,000	$8,604,000
Saturday Evening Post	34.1	36.9	690,000	2,321,000	1,631,000	6,524,000
Ladies' Home Journal	10.2	7.7	215,000	623,000	408,000	1,632,000
Collier's	17.4	33.1	386,000	1,623,000	1,237,000	4,948,000
Reader's Digest	7.0	23.5	134,000	1,051,000	917,000	3,668,000
Newspapers:						
Chicago Tribune	5.9	9.8	154,000	601,000	447,000	1,788,000
New York Times	5.6	7.6	211,000	636,000	425,000	1,700,000
Detroit Free Press	.8	1.4	17,000	75,000	58,000	232,000
St. Louis Post Dispatch	1.7	2.6	37,000	150,000	113,000	452,000
Los Angeles Times	.5	.7	24,000	69,000	45,000	180,000

NOTE.—The above figures are based on mailings for the quarter ended Dec. 31, 1952. Postage paid has been adjusted for the 10 percent increase on Apr. 1, 1953. Costs are based on expenditures for the fiscal year 1952.

These figures are the latest I could find on a representative group of periodicals. Since all the cost estimates antedate the last postal-rate raise, the cost of subsidizing the large periodicals like Time, Life, and Fortune would be substantially higher today.

It is interesting to note that the figures of the Post Office for profit and deficit on the various classes of mail, usually released by this time of year, are not yet available. These would properly help us to determine the current cost to the Post Office of shipping the various classes of mail. The inference is clear that Mr. Summerfield would prefer not to have the figures showing while his rate raise is before the Congress.

The current edition of Life magazine, dated February 6, 1956, weighs 15½ ounces. Publishers of magazines of this kind are charged postage according to the amount of reading and advertising matter contained in the edition. Reading matter is $0.0195 per pound, and advertising matter is approximately $0.0475 per pound. This is based on certain zone rates. Figuring that there is about 50 percent reading and 50 percent advertising in this edition, the postage would be $0.0335 per pound, or approximately $0.0325 for this edition which weighs 15½ ounces. With the handling costs to the Post Office exceeding 11½ cents per pound, the uncompensated cost to the Government for the handling of each copy will be almost 8 cents. If an individual sent the same edition of Life, weighing 15½ ounces, it would cost him 2 cents for the first 2 ounces and 1 cent for each additional 2 ounces or fraction thereof, making the total cost 9 cents. Even under second-class-mail rates the little man is made to bear the larger part of the burden because of two different rates. Incidentally, there is a minimum charge for newspapers and magazines sent out under the second-class rate. In no instance can the charge per publication be less than one-eighth cent per publication. It is obvious that the handling costs are far in excess of this.

The answer is clear. If there must be a postal-rate raise, it will be one which puts all classes of mail, and all classes of mail users on the same footing. It will not be one which prefers one class of users over other classes of users.

Your Valley and Mine

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include an address by Brig. Gen. W. E. Potter, Missouri River division engineer, before the Mississippi Valley Association in St. Louis on February 6, 1956. General Potter's talk reveals a comprehensive understanding of the need for effective and coordinated development of our water resources.

The address follows:

YOUR VALLEY AND MINE

A geographic link of compelling importance binds together the people of the 23 States who are assembled here for the 37th annual convention of the Mississippi Valley Association.

This bond of mutual interest which brings us together today is a mighty river system, third longest in the world, that affects the economic and social welfare of an inland empire stretching from the Appalachians to the Rockies. Its drainage area comprises nearly one-half the land encompassed within the continental United States, the home of some 75 million Americans.

From early colonial days through the formative period of the young Republic of the United States, the Mississippi River system was a strategic factor in our history. Three Old World nations—England, France, and Spain—struggled for dominance in this New World, a struggle in which the great inland waterways played a dramatic role. For who controlled the Mississippi controlled the destiny of the West.

Some two centuries and a dozen wars later, we find ourselves assembled here in St. Louis for a purpose which involves the Mississippi system as a dominant influence in the growth and economic stability of our region and the Nation, both today and for the future. True, the emphasis has changed. The river is secured to us as a factor of national entity and solidarity. But we still need the river as urgently as we did in the year 1775. For water today, as never before, is the lifeblood of our expanding national existence.

Let us face an undeniable fact at the outset. There is no room for complacency in our approach to regional and national water resources problems. We have begun to make some progress in the last decade. But we are still a long, long way from mastery of the vast resources of the Mississippi and its skein of tributaries. We are still a long, tough distance from control and use of our water resources not only in this great mid-American region, but over the country as a whole. There still remains a tremendous job of planning, coordination, and execution, a job in which your association and its counterparts in other river basins must shoulder a major citizen responsibility.

This great river on whose banks we meet today still rolls along to the sea with much of its potential for human good neglected and wasted. Out of its mouth each year flows an average of 435 million acre-feet of water. Translated into gallons this amounts to about 142 trillion gallons a year, which is almost 5½ times the amount of water used by industry in the United States every year. Out of the Missouri's mouth some 16 miles above this city flows an average of 60 million acre-feet of water annually, and it, too, until recent years has had only a meager part of its total value skimmed off in the service of people. The same can be said broadly of the Ohio, the Arkansas, the Kansas, and other tributaries of what the Indians called the Father of Waters.

The Chief of Engineers, General Sturgis, whom I have the honor to represent here today, has repeatedly warned that the Nation is rapidly approaching a water crisis. Some of you in attendance today from the Ohio Valley heard him make such a statement at the October meeting of the Ohio Valley Improvement Association. This is what he said:

"The Nation's water supply problem is a most serious problem. In fact, I believe that this constantly growing, inexorable, nationwide demand for more and more water in face of constantly diminishing natural underground supply has now reached such proportions that the most critical single future water resources problem facing the Nation is that of providing an assured adequate supply of water for future domestic, industrial, and other needs."

Experience in recent years has shown that we cannot depend upon underground water for solution of the water supply problem. Already the rate of demand exceeds the rate of replenishment in many communities and this adverse ratio is likely to continue rather than diminish. This condition is even today having its detrimental effect upon industrial expansion and threatening to limit municipal growth in some localities. There is no cause for panic in this prospect if we but act wisely and expeditiously, if we recognize that more and more the Nation must look to surface water supply for the solution. But there is an inherent danger which we cannot overlook.

The trouble lies not in the amount of natural precipitation. Over the Nation on the average 30 inches of moisture falls every year. There has been no appreciable change in this average for more than 100 years. The average runoff in the United States is estimated at about 1,600 billion gallons daily. The total withdrawal of water in the Nation is estimated at 180 billion gallons daily. It is obvious, therefore, that the basic problem is one of conservation and distribution. It is not enough to plan and build river controls to stop floods, serve irrigation and navigation needs, and produce hydro power. We must include basic provision for water supply in our planning and development programs. I consider this vital to the whole problem of water control. I feel very strongly that in our future water resources development program, water storage for consumptive use must be recognized as an important part of comprehensive, multiple-purpose planning. Any revision of existing policy should, I am convinced, emphasize this concept in comprehensive, basinwide multipurpose planning and development.

Based on this approach let us examine the water problems in the Mississippi River Basin. This vast river network is made up of an intricate system of tributaries, your valleys and mine. Here we have probably as great diversity of water demand, climatic conditions and economic factors as are to be found anywhere in the country. We have areas of extremely low rainfall classified as arid or semiarid in the upper Missouri Basin where annual precipitation ranges from 8 to 14 inches. We have high water yield areas in the south and east part of the basin where rainfall is in the 40- to 50-inch range. We have extreme heat and extreme cold.

Our agricultural industry runs the gamut from small truck farms to great cattle and wheat ranches. We have populous industrial centers in the eastern part in some of which live more people than in the entire State of Montana or Wyoming or North Dakota or South Dakota. In the dry, sparsely settled ranch and wheat regions of the upper Great Plains, where precious water rights go with the land, the farms or ranches are measured in terms of sections rather than acres.

The types of economy differ widely over the basin, yet water supply is in many respects a common denominator. Each segment of the basin, regardless of its yearly rainfall pattern, is a contributor in some degree to the vital water yield of the region as a whole. Hence it is tied in with the broad basin water problems. The water produced on the eastern slopes of the Rockies in Montana and Wyoming is of vital concern to every State through which it passes down the Missouri and the lower Mississippi. The lower river cannot afford to look upon its segment of the river as something set apart for its own wholly selfish interests. Conversely, the upper tributary areas are not wholly independent and must consider lower basin needs.

There is, I think, an obvious analogy between the interdependence of the segment areas or tributary river basins which make up the Mississippi region as a whole, and the member basin organizations which are represented in this parent organization. I am sure you will agree that the membership in the Valley Association of affiliate tributary groups would be meaningless if such groups merely joined to foster local, selfish interests. Each group must accept a measure of basinwide interest and responsibility. Only in this way can true integration and effective coordination be carried on successfully.

Communities along the lower Mississippi depend upon the waters of the Missouri, upper Mississippi, Ohio, Illinois, Tennessee, Arkansas and other tributaries for vital water services. These include sufficient flows to accommodate an 80-million-ton navigation industry every year, and water for cities, industries and sanitation. The upper tributary areas, of course, have their own specific needs for water, an important one being irrigation which, over the Nation as a whole, uses an average of 88 billion gallons a day.

Obviously there are conflicts of interest over the available water supply, and they must be reconciled on a reasonable and equitable basis in order to insure the best service to all. This has been accomplished to a remarkable degree in the Missouri Basin where basinwide unity of purpose has been fostered and engendered by this and other organizations, the States and Federal agencies and the people. This spirit of unity and cooperation has guided the Missouri Basin program through 10 successful years of construction on probably the most unique program of the kind ever undertaken in the world.

This experience offers some excellent guideposts for comprehensive water resources development, though there are many problems yet unsolved. A quick look at where we are in the Missouri Basin will serve to exemplify the gains that can be made through unified action. Today the main stem of the Missouri from Glasgow, Mont., to Kansas City is substantially under control. This has been accomplished by integrated operation of four main stem dams which are now in full or partial service. They are the Fort Peck Dam in Montana, Garrison Dam in North Dakota, and Fort Randall and Gavins Point dams in South Dakota.

OMAHA WATER FLOW

This system of dams and reservoirs during the drought summer and fall months of 1955 when water demands were at their peak, supplied three-fourths of the flow in the Missouri River all the way from Yankton, S. Dak., down through Missouri. This was accomplished in face of an extremely low natural water yield which amounted to only about 60 percent of normal. The 2 million people who use the river for water supply to run their cities and industries, navigation and sanitation, experienced no shortage of supply. This stored water turned the turbines of 2 hydro powerplants which during the year produced 1,600,000,000 kilowatt-hours of electrical energy.

The dams and reservoirs in 1955 had the capacity to capture and control a record flood such as that of 1952 and reduce it to less than bankfull stages at Sioux City, Omaha, Kansas City, and other communities and agricultural areas along the river's course. The 4 operating reservoirs have a combined storage capacity of approximately 50 million acre-feet, which is roughly twice the average annual flow of the Missouri at Sioux City. This represents a major step toward control and conservation of a tremendous amount of this natural resource with which we are concerned today.

Without the main stem system of dams, which ultimately will be expanded to 6 16 million acre-feet of water would have passed out of the mouth of the Missouri last year with only a minimum of service to anyone—water wasted and lost. Instead, there is presently impounded in these projects over 13 million acre-feet of water, which will be put to beneficial use as needed in the months and years ahead. When all 6 dams are in operation their combined capacity will be over 73 million acre-feet, enough to carry through a drought period such as that of the 1930's for all the purposes of the basin program.

Notwithstanding these important gains, some of the major tributaries of the lower Missouri are as yet almost wholly uncontrolled. Adequate flood protection at Kansas City and on down the Missouri cannot be attained until these tributaries are similarly controlled by reservoirs, many of which are authorized, but lack the necessary local and area push to get them started. This means more waste of water and continued threat of disastrous floods.

Let us turn now to the upper Mississippi, a producer of a large annual supply of surface water runoff. How fully is this resource utilized? Since the middle 1930's a partial system of locks and dams has been built which has made possible a navigation industry amounting to some 15 million tons of commerce annually. It supplies water for the intakes of many cities and industrial plants. Yet a large part of the river's flow is not utilized to the full potential. Frequently the flow in the middle Mississippi falls so low that navigation is impeded and adequate channel depths aided only by flows from the Missouri, and each year's hydrograph shows important volumes wasted that conservation could have kept for later needs.

The Ohio is another major source of water supply only partially utilized. Its system of locks and dams facilitates a volume of 60 million tons of river commerce annually. It is the principal source of water supply for a highly industrialized region. Today the Ohio is barely able to meet the demands of a great and growing industrial component with the help of upstream reservoirs. Industries in the city of Youngstown, Ohio, for example, use an estimated 1½ billion gallons of water a day, and on some occasions this demand has exceeded the flow of the Mahoning River, the chief source of supply, by 14 times. Upstream reservoirs so far are doing all they can to protect the present scale of development, but the situation is not good, and a solution must be found for this industrial empire.

Even now other industrial areas along the Ohio Valley are feeling the pinch of water shortages, and this in a region of favored rainfall. Year in and year out enough moisture falls in the Ohio Valley to meet all the foreseeable water needs of the future. But much of it is wasted in floods and high-water periods because there are insufficient storage facilities to hold it where needed. Topographically, the Ohio Basin has many excellent storage sites, and it has a number of authorized reservoir projects. They constitute a part of the backlog of authorized but static projects to which I have referred.

Those of you who live in the Ohio Valley know that your industrial giant has by no means reached full stature. It was in your valley that the first big effects of industrial decentralization took place. This is still continuing, as witness the reports showing that 2,500 new industries located along the Ohio since World War II. I am sure the people of that region do not intend to lose their favorable industrial position through failure to provide for one of its basic requirements—water. The situation is soluble—technically, the solution is simple—but whether the time exists is questionable. The demands that growing industry will continue to throw on the Ohio Valley will continue to inconvenience, if not actually stifle, the major communities until the reservoirs are provided which will do the double duty of flood protection and water supply. You solved your pollution problems after years of effort; you can solve this problem.

The Arkansas-White Basin is another important component of the overall water resources program in the Mississippi Basin. It presents another contrasting problem of semiarid sections in the upper reaches and ample precipitation at the lower end. Definite progress is being made there on a planned, comprehensive program in which all the needs of water must be carefully evaluated if that basin is to play its essential role in fulfilling the needs of the future. Perhaps no other tributary presents quite such a diversity of problems which must be largely solved within the basin itself. Great progress has taken place in the lower basin, monumented by the names of such projects as Bull Shoals, Norfork, Gibson, Tenkiller Ferry, and others, but the remaining works, planned but not yet underway, are required items for continued success in meeting the demands of a blooming economy. The Arkansas-White-Red studies are not an end; they should be the stimuli for greater effort of all interests and a dedication to a task that will involve more than this generation.

The Red is similar to the Arkansas in its drainage of widely varying climate and rainfall conditions. Its problems are vital and need the continued drive that is so evident there now. Progress in the lower basin, I believe, can well be credited to the positive goals set up by a united organization. Texarkana and Bayou Bodcau are monuments to their efforts. They emphasize the importance of organization in achieving success.

Recent events have greatly accentuated the vital role the Illinois River holds in our developing inland waterway. It is the connecting link between the Mississippi complex and the Great Lakes. Already an important carrier of waterborne commerce feeding into the Mid-West from Chicago, its potential for the future has been enormously magnified by two new developments with which you are all familiar—the initiation of construction of the St. Lawrence seaway and the Calumet-Sag Canal.

These two developments, long delayed by sectional struggles, afford a classic example of the effects of lack of unity in arriving at a common goal of a greater Mississippi Basin.

The St. Lawrence project will bring ocean ports for world commerce some 800 miles close to mid-America. The two projects hold promise of breaking down the costly barriers of transportation cost differentials which have impeded development of the Mid-West. World commerce will be enabled to move into a number of Great Lakes ports such as Chicago, Duluth, Cincinnati, Buffalo, and others. The Calumet-Sag development will enable world goods to move by water, rail, and truck into our valley on a competitive basis with eastern seaboard industrial areas.

But this better competitive position is, in my mind, but a small part of the total achievement essential to providing a place for industrial expansion and population growth. Failure to provide these two channels would have forced expansion in already over-crowded areas outside our basin, to the great detriment of our national security and the economic health of our population.

I venture the further suggestion that these new developments may well be of great value in helping the United States in its fight to maintain a sound position in competitive world commerce. And I can foresee the possibility of Chicago and New Orleans becoming the future biggest ports in the Nation, with St. Louis sitting here as the focus of valley expansion. Such accomplishments will not be realized as a sequence of natural events. They will come only through imaginative, forceful and aggressive action. They will not materialize if our approach is from the selfish, local viewpoint

or if we lean solely upon the Federal Government for our thinking, planning, and unification of purpose.

There must, of course, be a measure of local approach to local water problems, but we must recognize that very few problems in water development can be solved in a local neighborhood. There is no such thing as a local navigation problem or a flood problem or a water supply problem that can be solved on an item basis. By and large our water resource for most dependable use in the Mississippi Basin is an interstate resource flowing in rivers which belong to all the people.

The course of progress, as we all have learned by sad experience, never runs smoothly. I want to say here that I think your organization can take considerable pride in the way it has solved some of its own internal problems in the last 3 years. It is to your great credit that you have been able to eliminate some elements of distrust and disorganization, and I think this is largely because you have recognized that integration, not sectionalism, is essential to your best contributions in this highly important field of water resources. This is evidenced by your policy of officer rotation and your insistence upon broad representation of all parts of the basin. I believe you are stronger and more ready to do a task that requires the existence of this group.

I did not conceive it within my province here today to specifically discuss national water resources policy, except to advance my own conviction that provision for water supply should be a specific function of Federal water resources development. Present laws do not make such provision. Although many reservoir projects of the Corps of Engineers throughout the country contribute substantially to water supply, such benefits are largely incidental to other primary, authorized functions.

It is my firm conviction that the reservoirs of the future should—not incidentally, but through deliberate, scientific planning and design—play increasing roles in the conservation of adequate water supply for the future. We of the Corps of Engineers believe that the time has come when no storage reservoir should be built by any agency, Federal or non-Federal, without appropriate provisions for inclusion of storage for the various needs of water supply.

To this I may add that I have a further conviction. It is that any developments for streamflow regulation by reservoirs, whether they be in the upper headwaters or on the main stream, should fit into and constitute part of an integral plan for the best interests of the entire stream basin. This means that upstream and downstream plans must be fully and carefully coordinated, not planned and built piecemeal.

And this leads to some final observations on the functions of public organizations such as yours which are devoted to the sound and effective use of our water resources. Stay broad in your thinking, planning and action; stay practical and work for integration of effort. Take an affirmative and constructive interest in the national study of warter policy. Your most important resource is at stake and its best use cannot be determined unless you do assess your interests and see that they are fully provided for in the determination of policy as it grows and expands with our Nation.

I think it must be obvious to all who have an interest in these problems that long-range planning, coordination and integration are basic ingredients for prevention of the tragic waste of the past, and positive action to meet the demands of a great and growing nation.

The alternative to such wise foresight and planning is written in the books of history which recount the story of ancient civilizations which have long since disappeared from the face of the earth.

Navaho Tribe Supports Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. ANTONIO M. FERNANDEZ
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. FERNANDEZ. Mr. Speaker, the Navaho Indian Tribe strongly supports the Colorado River storage project because of immediate, direct, and future benefits that this project will bring to the tribe. An effort has been made to belittle these benefits and to discount the support of the Navahos. Any confusion in the minds of Congressmen may be due to the nature of the Navaho projects. There are two developments proposed that would be of ultimate benefit to the Navahos: First, Navaho Dam, a mainstream storage unit on the San Juan River in northern New Mexico; and, second, Navaho irrigation project, which puts the water to use on land to be irrigated and farmed by members of the tribe.

The Navaho Dam has been thoroughly studied and found feasible. It is included in H. R. 3383, and as part of the Colorado River storage project, it is reimbursable and financially sound.

The Navaho irrigation project, which will provide irrigation to Indians as well as non-Indians, will be submitted to Congress at the proper time with firm engineering feasibility reports, for firm authorization. We have confidence, of course, that those reports when prepared will show feasibility and that Congress will authorize them. The water on the San Juan must be harnessed, controlled, and used. A part of it belongs to the Indians and no Congress is going to take it away from them.

In the meantime, the Navaho Dam will give definite aid to the Navaho Tribe as soon as it is constructed. For one thing, it will provide flood control. It also will control silt in the muddiest river in the Nation. It will provide for mineral development of certain areas of the Navaho Reservation, rich in raw materials but lacking the water and power for their development. This dam will open the door for industrial progress for the Navahos, and it is necessary to make possible the second phase of the Navaho development, the irrigation project.

I am informed that one company has plans to construct a major raw materials processing plant on the reservation. Leases have been signed and everything is ready to move ahead if the river can be regulated and a year-round flow provided. This one contemplated addition to the tribal economy is expected to provide jobs for as many as 1,000 people. That will be a very great and material aid for the Navahos. This is just one example.

To show how the Navahos feel about H. R. 3383, which includes the Navaho Dam, I have asked unanimous consent to place in the RECORD this telegram received from Paul Jones, a farsighted Navaho who is chairman of the Navaho Tribal Council, its chief. The telegram reads as follows:

Regret misinformed people say benefits from present Colorado River storage project are negligible without Navaho irrigation project. Present bill includes Navaho Dam, and this will help provide immediate and direct benefit by making possible the development of our resources, flood control, river regulation, and the establishment of new industries to provide jobs. We fully support the project.

PAUL JONES,
Chairman, Navaho Tribal Council.

Michigan's Houghton Lake Is Ice Fisherman's Bluegill Heaven

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. CEDERBERG. Mr. Speaker, national attention has recently been focused on Houghton Lake, Mich., located in the congressional district I have the honor to represent, as the result of several magazine articles on the fruitful ice fishing sport at this lake.

Houghton Lake is situated in Roscommon County at the community by the same name, and is famous for its summer and winter catches of bluegills, northern and walleyed pike, perch, and rock bass.

East winter fishermen swarm to this lake to enjoy fishing through the ice. They come not only from Michigan but from surrounding States. A few days ago Houghton Lake observed its annual Tipuptown festival and over 10,000 ice fishermen and winter vacationers attended the event.

The February issue of the Ford Times contains an article calling Houghton Lake the bluegill heaven and says "Houghton Lake is Michigan's largest lake and its most prolific fishpond."

A splendid word picture of the pleasures of Houghton Lake ice fishing is contained in the January-February edition of the Lincoln-Mercury Times. In this article entitled "Houghton Lake—Michigan Calls It the Bluegill Champ," Franklin M. Reck carries the reader among the numerous small communities of fish shanties and shelters on the lake to his favorite spot and describes the sport of "tipup" fishing.

I am pleased to present the article to my colleagues and invite you to come to the 10th Congressional District of Michigan, either winter or summer, to enjoy the glories of our great out of doors.

The article follows:

HOUGHTON LAKE: MICHIGAN CALLS IT THE BLUEGILL CHAMP

(By Franklin M. Reck)

A favorite occupation of almost any chamber of commerce in the north temperate Midwest is to claim the best bluegill lake in the United States. You'll find title claimants in most of the Corn Belt States and several southern sommonwealths, where bluegills are called bream.

Michigan looks on all the ballyhood with tolerance. She will readily admit the excellence of Wisconsin's Lake Geneva, the copious and sustained yields of Ohio's pay lakes and the unbelievable fertility of Alabama's manmade ponds. These bodies of water affect Michigan not at all, for Michigan has Houghton, and Houghton, she says, is the champ.

A champion ought to have some size to him, and Houghton Lake is big. It's the largest lake in Michigan. If you stand on the shore of East Bay and look northwest, you're gazing across 15 miles of water. If you go over to the Heights and direct your eyes across the lake's bulging waistline you're looking at a 4-mile span.

LAKE MADE FOR FISHING

The lake was made for fishing. Its greatest known depth is a mere 19 feet. Its vast area is splotched with weedbeds—South Shore, Muddy Bay, Middle Ground, king-size weedbeds a mile long. Most of the fishing goes on around the edges of these submarine farms in 8 feet of water.

There's no closed season on the obliging and prolific bluegill, and the fishing is likely to be good at any time of the year, but enthusiasm mounts when ice forms in December and the bluegill craze becomes a raging epidemic during the Tipuptown Festival in late January or early February.

Fishing during the festival—or for that matter on any sunny winter weekend—is a neighborly, congenial business. It could hardly be otherwise with as many as 3,000 men, women, and children out on the ice. Last winter this reporter had driven less than 50 yards down the wandering "street" of the South Shore shanty town when he was offered refreshment by a total stranger and asked to take the tenor part of "I Had a Dream, Dear." Everyone knows everyone on the ice.

A CITY ON LAKE OF ICE

When the fisherman arrives at Houghton Lake, he drives first to one of the numerous and well-stocked tackle shops that line the highway between the Heights and Prudenville. Here he picks up wigglers (larvae of the mayfly) and waxworms for bluegills, plus a pail of minnows for walleyes and northern pike. Then he drives down any one of the resort streets leading to the lake's edge and takes off onto Michigan's frozen inland sea.

There's no danger of getting stuck in the snow. The scrapers have been out, clearing ice-paved roadways to the various colonies. The wise fisherman doesn't spud a hole at the edge of the first concentration he comes to.

Instead he drives slowly along, carefully noting the scene, biding his time. Entirely apart from the strategy involved, this is entertaining business. Some of the parties are hidden in shanties. Others are fishing from the open doors of their sedans, the cars serving as windbreaks. The standard device of the open-air fisherman is a box open at the front. In the box is a lantern, burning merrily away. The fisherman sits on the box, his big coat draped over it, so that the heat from the lantern filters upward inside his clothes. He keeps minnows inside the box where they won't freeze.

Motor scooters go by, dragging sleds. A jalopy careens over the ice, pulling an old-fashioned sleigh behind it. A strange rig on skis powered by an airplane propeller scorns the cleared roads, heading straight from one weedbed to another over the deep snow. Here and there vans and trucks converted into traveling restaurants are dispensing coffee, hamburgers, and chili to frostbitten fishermen. The frigid breeze faintly bears the notes of the latest hit parade tune from some distant loudspeaker. The driver reads the license plates—Ohio, Illinois, Indiana—each a tribute to Houghton's preeminence as the bluegill mecca of the Nation.

But he's interested in something besides license plates and the carnival spirit. What he seeks as he drives along is evidence that fish are present.

When he comes to a spot where a fisherman is hauling them in and the pile of fish on the ice is impressive, he stops the car and spuds a hole not 10 feet from the lucky fisherman.

VARIETY OF SHELTERS

This is known as "spudding the man in," and the victim raises no objection. In fact, he welcomes you. Like all Houghton veterans, he believes that the more baits lowered in that vicinity, the more fish will be attracted to the spot, either by hunger or curiosity.

Last winter, we cruised for 5 or 6 miles over the south shore weedbed without finding any exciting action. We drove over to the middle ground weedbed, found a couple of fishermen doing a hand-over-hand business, "spudded them in," and in about 2 hours the 4 of us had our 60 bluegills. The next day we went out to the same spot and caught 60 more.

On the second day the temperature dropped and we had a good chance to try out Bill Moss' pop tent. This unique shelter is a dome-shaped tent with Fiberglas ribs that opens out something like a Japanese lantern. It can be erected in less than a minute and is large enough to accommodate two ice fishermen. We kept the interior warm with cans of Sterno. Each can lasted an hour and provided enough radiation to keep the interior snugly warm.

"FLAG UP" MEANS FISH

The ambitious fisherman usually tends 2 or 3 bluegills and a couple of tipups. He has trouble watching all this, but his neighbors are glad to help by yelling out "Flag up" whenever a tipup rig is tripped by a pike or walleye, allowing the small flag to spring erect. Then, for a moment, the fisherman abandons his bluegill fishing to haul in a big fish—or a bare hook.

Ice fishing at Houghton Lake lasts from early December to late March. There isn't much doing in early spring, but in June when the bluegills are on their beds in shallow water, fly-fishermen have a brief circus with light rods, trout flies, and small popping bugs.

When the fisherman finds that he has his limit in 2 hours and wonders what to do with his time, he can entertain himself by driving around the lake. The entire south shore is one continuous main street bordered by resorts, restaurants, motels, and shops. The sandy beaches make this shore one of the most popular summer vacation centers in Michigan.

Over on the northwest, where the Muskegon River begins in a 5-mile backwater, is the Dead Stream Swamp, 193,000 acres of cedar and oak, a fine refuge for bear, beaver, partridge, bobcats, and innumerable deer.

WILDLIFE AT ITS BEST

Here the wildlife photographer goes to get closeups of deer, but before he sets up his blind, he would do well to listen to one of the guides. This guide claims that city folks smell different from the "cedar savages" who live thereabouts. The cedar savages smell just like the woods, and the deer are less likely to take fright—so he says.

"If you put up a tent for a blind, let it air out for a couple of days to get the city smell out of it. Air yourself out, too. Then get in there with your camera and the deer will come right up to you."

Houghton Lake is a contradiction. It is one of the most heavily populated resorts in the State. At the same time it is one of the State's wildest regions, its woods and swamps teeming with the game that was here before the white man came.

All this adds to its attraction. But it is the bluegill—big, fat, and apparently unlimited in supply—that brings people from a half dozen States to Michigan's heavyweight champion year after year.

The Food and Drug Administration

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. DINGELL. Mr. Speaker, June 30, 1956, will be the 50th anniversary of the enactment of an important Federal law, which embraces every family in the Nation, to assure them pure food, effective drugs, safe cosmetics, and related protection at less than the cost of a postage stamp per person.

The Food and Drug Administration in the Department of Health, Education, and Welfare has the principal job of enforcing the Federal Food, Drug, and Cosmetic Act to insure that foods, drugs, therapeutic devices, and cosmetics are pure and wholesome, safe to use, made under sanitary conditions, and truthfully labeled.

The annual retail value of domestic and imported products subject to statutes enforced by the Food and Drug Administration is currently estimated at $65 billion. These products are consumed each year by a sharply increasing population who are spending an average of 25 percent of its personal disposable income for food alone.

The importance of the Federal Food, Drug, and Cosmetic Act to the public health and safety is great. The last few decades have seen an extensive revolution in the production and distribution of foods and drugs in this country.

The need for increasing the resources of the Food and Drug Administration was recognized and authorized by the President and the Congress in the 1956 Appropriation Act.

Upon request of the Secretary of the Department of Health, Education, and Welfare, and the President, the Congress acted favorably upon a request to establist a Citizens Advisory Committee to study the Food and Drug Administration. The committee appointed were indeed a broad-gaged, non-partisan group of citizens with varying degrees of familiarity with food and drug work, including representatives of consumers, industry, labor, educational institutions, medicine, law, and the judiciary.

The committee focused attention upon long-term objectives of how best to administer the food, drug, and cosmetic laws to reach the maximum compliance in the best interest of the public. In its major recommendations the committee stated that:

1. Compliance with all phases of the law is not completely satisfactory.

2. Satisfactory compliance can be obtained only if the Federal Food and Drug Administration and its functions are properly understood, supported, financed, and staffed.

3. The committee is firmly of the opinion

that (a) the scope and complexity of the present enforcement and regulatory problems, if dealt with inadequately, constitute a threat to the health and the welfare of our citizens; and (b) that the resources of the FDA are woefully inadequate to discharge its present responsibilities.

With the fiscal year 1956 as the base from which an expansion must be launched to implement the recommendations in the committee report, the President's budget estimate for fiscal year 1957 is the first major step in a program to strengthen the Food and Drug Administration and provide the staff and facilities needed to attain the objectives envisioned by the Citizens Advisory Committee for the Food and Drug Administration to properly serve a purpose that is essential to the health and welfare of every person in the Nation.

United States Policy in the Near East

EXTENSION OF REMARKS
OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. ASHLEY. Mr. Speaker, with the issuance yesterday of a joint declaration on the Near East by a number of Republican and Democrat Members of this body, a call to action has been made which I believe to be of profound significance.

As a signatory of this joint declaration, I would like to take this opportunity to state in detail the reasons why I support the substance of this message and the action which it urges to promote the self-defense of Israel.

It is impossible to understand the basis of the present tensions in the Near East without a proper historical perspective. For, in a very real sense, the hostile feelings which exist between the Arab peoples and the Jewish inhabitants of Israel can be traced to early Biblical times when Jews inhabited the regions of Palestine, with Jerusalem as their capital and Holy City. By the second century A. D., after years of revolt against Roman domination, Jewish resistance was crushed, Jerusalem destroyed, and the Jewish people dispersed throughout the Near and Middle East, the Mediterranean region, and later throughout the world. From that time until 1948, Palestine passed from one conqueror to another.

During World War I, when Britain defeated the Turks, Palestine fell under British military control. In 1917 the British Government issued the Balfour Declaration which stated that the establishment of a Jewish homeland in Palestine was looked upon favorably. The ambiguous wording of the declaration has lent itself to many interpretations, but the Zionists acted upon the assumption that the Balfour Declaration was a promise of a political as well as a spiritual homeland for the Jewish people.

In 1918 Palestine had a total population of 700,000—with Arabs outnumbering Jews 10 to 1. Between World War I and World War II, especially under the impetus of nazism, immigration swelled the number of Jews to 700,000, and by 1938, the ratio of Arabs to Jews had declined to 2 to 1.

In the 1930's, Arab fears and resentment, spurred by awakening nationalism, exploded in a series of rebellions. To curb the unrest, the British issued the White Paper of 1939 which rejected the idea of a Jewish state, put a stop to Jewish land purchases, and stipulated that after 5 years, further Jewish immigration would depend on Arab agreement. The Jews bitterly protested the White Paper, but the whole question was put in abeyance when World War II broke out.

At the end of the European conflict, Britain was caught between her interests in the Arab world and the question of what to do with the Jewish refugees. In 1946, President Truman issued a statement noting "that substantial immigration into Palestine cannot wait a solution to the Palestine problem and that it should begin at once." He mentioned 100,000 immigrants, and stated that the United States would lend its financial assistance in moving them. The Arabs, of course, opposed the suggestion, and the Secretary of the Arab higher committee, representing the Palestinian Arabs, threatened to ask the Arab League to sever all economic, cultural and diplomatic relations with the United States, revoke all oil and other concessions, and boycott American colleges if the plan was acted upon.

The British, on October 18, 1946, refused to grant any increase in the legal Jewish immigration quota into Palestine. Armed Jewish terrorist activities against the British stationed in Palestine became deadly frequent. Early in 1947, Britain presented the case to the United Nations. On November 29, 1947, 7 months later, the General Assembly voted 33 to 13—10 abstentions—for a partition plan creating an Arab state of 4,500 square miles and a Jewish state of 5,500 square miles, and an international regime for Jerusalem. The Soviet Union and the United States both supported the plan; Great Britain abstained from voting. The British were to withdraw their troops by August 1, 1948, while the 3 new entities were to come into being on October 1, 1948.

Upon announcement of the U. N. vote, heavy Arab-Jewish fighting broke out in Palestine. The United Nations-Palestine Commission, on February 16, 1948, reported the situation to the Security Council as follows:

> Powerful Arab interests, both inside and outside Palestine, are defying the resolution of the General Assembly and are engaged in a deliberate effort to alter by force the settlement envisaged therein.

Britain, which as a mandatory power was still responsible for law and order, informed the U. N. that it would take no direct action—such as the use of military force—in implementing the partition plan. The U. N. Security Council deemed that it had no authority to enforce the plan, and thereafter armed affrays and acts of terrorism became commonplace in Palestine.

On May 14, 1948, Britain terminated its mandate, and the same day the Jews of Palestine proclaimed the independence of the State of Israel. Although boundaries were not specified, the Jewish-held areas corresponded almost exactly to the partition plan approved by the U. N. Within 1 hour after the independence proclamation, President Truman announced that the United States recognized Israel's provisional government. Soviet recognition followed 3 days later. The following day, armies of Egypt, Lebanon, Syria, Iraq, and Jordan invaded the new State.

Between May 1948 and March 1949, hostilities between Israel and the Arab States went on intermittently. Efforts of the U. N. mediators to bring about peace were rewarded when negotiations between the 2 sides culminated in early 1949 in a series of armistice agreements between Israel, on the 1 hand, and the Arab States directly concerned, on the other.

The armistice terms greatly revised the U. N. partition plan. The proposed Arab State disappeared; the Arab countries received about 2,000 square miles of land formerly in mandatory Palestine, and Israel got a major portion of the Negev Desert, territory that had not been allotted to it under the partition plan. Control of Jerusalem was divided between Israel and Jordan. On May 11, 1949, Israel won admission to the United Nations by a 37 to 12 vote. As on the vote for partition, Britain abstained, while the United States and the Soviet Union approved.

The armistice agreements and the admittance of Israel into the family of nations did not, however, end the turmoil in the Middle East. If anything, the creation of Israel gave rise to new tensions. The problem of more than 800,000 Arabs who fled Palestine is a principal sore spot. Two hundred thousand now live in conditions close to destitution in Egypt's Gaza strip within sight of their former homes. Over 450,000 are in Jordan, the only Arab country which has offered the refugees citizenship but whose economy is so poor that it has proved difficult to absorb the newcomers. Syria and Lebanon also have sizable numbers of Palestine refugees.

Israel has offered the refugees compensation for their land but has refused to accept the return of the embittered and hostile Arabs who, it is argued, would be a security risk to the new nation. The Arabs are insisting on repatriation as a first step toward permanent peace with Israel.

A second troublesome problem has grown out of the haphazard delineation of boundary lines under the armistice agreements. The Arab States now maintain that the boundaries must be settled on the basis of the 1947 partition plan, which would deprive Israel of the Negev, almost one-third of her present territory. Israel, on the other hand, while it agrees that certain boundary rectifications of slight nature the justified, holds that the 1949 armistice lines should be the basis for peace negotiations since it was the Arab States themselves that went to war for the specific reason of destroying the

partition plan. Great Britain, France, and the United States, in what is now known as the Tripartite Declaration of 1950, are pledged to guarantee the present frontiers and armistice lines against forceful violations.

In the past 7 years, border clashes have been frequent. Israel claims to have had 1,100 citizens wounded or murdered, and has adopted a policy of retaliation for the raids, claiming that Jordan, Syria, and Egypt have the responsibility for controlling their citizens. The United Nations, however, has harshly censured Israel for its calculated attacks on Kibya, and more recently, for the raid into Syria near the Sea of Galilee.

Israeli officials feel that Arab determination to wipe out the new state has never abated. The purchase of arms last September by Egypt from Communist sources has added to Israel's uneasiness. On the other hand, competent observers of the Middle East say that there is a very real fear among the Arabs that if Israel continues to permit unlimited Jewish immigration, one day Israel will be compelled to expand territorially.

At the outset, the United States tangibly demonstrated its friendship for Israel by a loan in 1949 of $100 million from the Export-Import Bank. In 1951 a second loan of $35 million was granted. In addition to the loans, United States grants-in-aid, from the first grant approved in 1951 through June 30, 1955, have totaled well over $200 million.

In spite of the sizable economic aid of the last few years, Israeli officials since 1953 have been worried by United States policy in the Middle East.

Israel's Ambassador to the United States, Abba Eban, has attributed the gravity of American-Israel relations to "not so much a difference of opinion about American policy toward Israel, as a clash of judgment on American policy toward the Arab States." American policy makers, viewing with dread the possible loss of Middle East oil, communications, and bases to the Soviet orbit, have sought to maintain Western security in the Middle East through friendship with the Arabs as well as with Israel. However, the policy pursued by the United States is viewed in Israel as a threat to their security. The United States decision to arm Iraq set off vigorous protests from Israelis who asserted that even with the weapons Iraq could not stand up against a single Russian division, while on the other hand the weapons would be weighty if turned against Israel.

It is against this background, Mr. Speaker, that United States policy must be measured. Under the Tripartite Declaration of 1950, our Government recognized "that the Arab States and Israel all need to maintain a certain level of armed forces for the purpose of assuring their internal security and their legitimate self-defense and to permit them to play their part in the defense of the area as a whole." At the same time, we emphasized that an arms race between the Arab States and Israel should not be permitted to develop and, together with Great Britain and France, we expressed our readiness to take action to prevent violations of the frontier lines established with the armistice of 1949.

Since that time, United States policy has repeatedly been described as being based on the fundamental principle of sympathetic and impartial friendship for all states in the Near East.

In a major policy statement of August 26, 1955, Secretary of State Dulles indicated certain steps which the United States would be prepared to take to contribute toward a solution of the Arab-Israel dispute. With reference to the question of a security guaranty, Secretary Dulles said that—

> Given a solution of other related problems, he (President Eisenhower) would recommend that the United States join in formal treaty engagements to prevent or thwart any effort by either side to alter by force the boundaries between Israel and its Arab neighbors.

As we all know, Mr. Speaker, this statement was, and continues to be, meaningless because one of the "other related problems" which would have to be solved as a condition to the United States security guaranty is Arab-Israeli agreement upon their borders.

The unhappy fact of the matter is that recent United States policy has done nothing to relieve tensions in the Near and Middle East, nor has it been successful, in any significant measure, in meeting the ghastly threat of all-out violence in that area—violence which may well spread to other parts of the world.

Mr. Speaker, the American people are concerned because our policy of "impartiality" has not yet been clearly defined. It is important for us to state, for example, whether our Nation is prepared to support the present armistice lines or the U. N. Partition of 1947, or some compromise between them, as a basis for discussion.

The core of the problem for our country, Mr. Speaker, lies not in the Near East but here in the United States. We can make a real contribution only if we face the problem here—and this is a responsibility and a challenge which the administration and Congress must face up to.

Mr. Speaker, positive action is essential if we are to halt the drift toward war in the Near East. We must face the fact that the West is no longer able to curb an arms race in this area, as it has been successful in doing for more than 5 years. The reasons are clear. Moscow has become active; British troops are gone from the Suez Canal, and Britain's adherence to the Turco-Iraqi Pact has amounted to taking sides as between Arab League members. In short, the guaranties of moderation which have existed for nearly 5 years with some effectiveness have now vanished. The choices of policy now open to Western diplomats are narrow and none are attractive. The leapfrog move of the Soviets into the Middle East has made it clear that they intend to continue arming the Arab nations unless we scuttle our "northern tier" alliances with the nations along the southern border of the Soviet Union. Yet, if matters are allowed to ride, in the hope that time alone will prove the insincerity of Soviet promises, we run the high risk that in this interim period there will be an outbreak of fighting which, at the very least, would involve all the nations in the Middle East area.

Mr. Speaker, the joint declaration in which I joined with my Democrat and Republican colleagues includes the request that Israel be permitted to purchase $50 million of defensive arms which she needs for purposes of self-defense. I am sure that no one who signed this declaration believes for a moment that any long-range or permanent solution will evolve from the arming of Israel. Nor do I believe that there was any general feeling among us that this measure would, in any sense, reduce the present tensions which exist in the Near East.

The conviction, I believe, was that the sale of arms to Israel at this time is essential to the "internal security and legitimate self-defense" of that nation, and that the present threat of war will thereby—at least for a short period—be mitigated rather than increased.

It is not my purpose today to speak in a vein which is either pro-Israel or pro-Arab. Certainly, the best that any of us can do is to explore policies which have some promise of being propeace. However, I think that it can be stated accurately that no nation on earth today faces a more difficult geopolitical situation that does the nation of Israel.

With a population of only 1,600,000 and a territory of only 8,000 square miles, this tiny oasis of democracy is surrounded by hostile neighbors—Egypt, Saudi Arabia, Jordan, Syria, and Lebanon—with a total population of about 40 million and a total territory in excess of 1 million square miles. The Arab States have taken full advantage of Israel's geographical helplessness by blockading the country completely on land and as completely as they can manage by sea; Israel's ships are barred not only from the Suez Canal, but even from the Gulf of Aqaba, Israel's outlet to the Red Sea.

Can there be any question whether a weak and defenseless Israel can long survive these perilous circumstances? Surely not; and in 1950 our Government recognized this fact when, together with Great Britain and France, it entered into the Tripartite Declaration with recognized the necessity for Israel as well as the Arab States to maintain a certain level of armed forces.

Today, that need is all the more apparent and must again be acknowledged by positive declaration and action by this country.

We must face the fact that the realities of the situation in the Near East are not what they were a year ago. Soviet influence is now firmly established in Egypt which relies on the Communist bloc not only for arms, but as the main market for exports and as the source for economic aid and technical assistance. It is not by chance that Egypt's Nasser recently remarked that the arms deal alone "was worth more than a quarter of a billion dollars in propaganda to Soviet leaders."

Mr. Speaker, we must recognize that nothing, now, can keep Russian Embassies and emissaries out of the Near or Middle East, and that it is wisest to enlist them, as soon and as publicly as possible, in the ranks of those who do not want a second Palestine war. We must make it unmistakably clear that our

policy of selling arms to Israel is designed only as a short-range measure to preserve a tenuous peace; and that the lang-range task of reducing tensions and establishing a stable and permanent peace can only be accomplished by patient, but persistent, negotiation of the complex problems which as yet have found no solution.

Finally—and above all—we must assert positive leadership to dispel the paralyzing fear which grips the Middle East today. Opportunities for peace are precious because they are only momentary; they must be taken by free people with courage and conviction.

EIGHTY-SIX DEMOCRATIC CONGRESSMEN ISSUE JOINT DECLARATION REQUESTING ARMS FOR ISRAEL

Eighty-six Democratic Members of the House of Representatives joined today in a declaration calling upon the Government to permit Israel to purchase defensive arms in the United States.

Pointing out the dangers to Israel and the free world resulting from the Egyptian purchase of arms from Czechoslovakia, the Congressmen called for decisive action by the United States to end the threat of war in the Near East through the promotion of "an honorable peace settlement" between the parties.

They proposed that the United States and other interested nations seek to negotiate "formal treaties within the framework of the United Nations guaranteeing the existing frontiers of Israel and the Arab nations in the Near East that want peace and are ready to enter into such treaties."

However, in the absence of agreement by the Arab nationos to sit down at the peace table, there is the present danger of a major outbreak of hostilities, the Congressmen warned.

Accordingly, they proposed "that our Government permit Israel to purchase the $50 million of defensive arms which she seeks in this country strictly for purposes of self-defense."

They noted that "Israel is firmly a part of the free world and she may be counted upon not only to defend herself, but also to join in the defense of the free world."

While expressing opposition to an arms race in the Near East, the Congressmen asserted their belief that Israel's military capability for self-defense must be maintained.

"We believe the danger of war will be seriously increased if the Arab nations attain a military preponderance capable of use for aggression because of the Communist initiative," they declared.

At the same time they urged continued United States economic and technical assistance to the area and help in resettling the Palestine-Arab refugees "with impartial friendship to all in the Near East who will cooperate for peace."

They also expressed opposition to proposals that Israel be asked to yield territory to the Arab states, which they termed "the road to appeasement, not the road to peace."

The full text of the declaration and the names of the signers follow.

DECLARATION ON THE NEAR EAST

Under the Tripartite Declaration of 1950, our Government recognized "that the Arab States and Israel all need to maintain a certain level of Armed Forces for the purpose of assuring their internal security and their legitimate self-defense and to permit them to play their part in the defense of the area as a whole."

Communist weapons and technicians are now pouring into the Near East as a result of the Egyptian-Czech arms deal, imperiling the stability and peace of the region and weakening the defenses of the free world.

The Egyptian-Czech arms deal brings the front of the cold war to the Egyptian-Israel frontier, and the survival of Israel is directly and immediately menaced.

It is vital that our Government act decisively to end the threat of war in the Near East. The best way to do this is, of course, to promote an honorable peace settlement between the parties. To that end we urge that our Government and other interested nations seek by all possible means to negotiate formal treaties within the framework of the United Nations guaranteeing the existing frontiers of Israel and the Arab nations in the Near East that want peace and are ready to enter into such treaties. But to make peace we need agreement to negotiate and until there is agreement by the Arab nations to sit down at the peace table, there is the present danger of a major outbreak of hostilities.

Accordingly, we make this further specific suggestion: that our Government permit Israel to purchase the $50 million of defensive arms which she seeks in this country strictly for purposes of self-defense. Israel is firmly a part of the free world and she may be counted upon not only to defend herself, but also to join in the defense of the free world.

While we are opposed to an arms race in the Near East, we believe that the military capability for safeguarding Israel's national existence must be maintained. We believe the danger of war will be seriously increased if the Arab nations attain a military preponderance capable of use for aggression because of the Communist initiative.

Our Government should continue to offer economic and technical assistance and help to resettle the Palestine Arab refugees with impartial friendship to all in the Near East who will cooperate for peace.

We have heard with regret that there are proposals that Israel be asked to yield vital territory of her small area to the Arab States. We believe this is the road to appeasement, not the road to peace.

The American people will not tolerate anything so immoral as the sacrifice of Israel to Communist infiltration of the Near East. The time to act is now. Failure to take action will encourage the Communist offensive, increase tension, and endanger freedom.

The Human Side of Edison

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. DAVIS of Tennessee. Mr. Speaker, back in 1866, the great Thomas A. Edison was a resident of Memphis, Tenn., and worked as a telegraph operator. It was back in those days and in Memphis that he began to invent and improve the telegraph apparatus which, when completed, he sold to Western Union. The proceeds provided him with

capital to equip his research laboratory from which grew almost 1,100 inventions.

On today in the city of Memphis, Mr. George E. Stringfellow, senior vice president of the Thomas A. Edison Co., and longtime business associate of Mr. Edison, is speaking before the Civitan Club of that city.

Dr. Arthur R. Sample, past potentate of Al Chymia Shrine Temple and program chairman of the Civitan Club, introduced Mr. Stringfellow.

The speaker was a daily business associate of Mr. Edison for many years. He is now Imperial Assistant Rabban of the Imperial Council of Nobles of the Mystic Shrine, holds offices in many important organizations, has been highly honored by colleges and possesses numerous honors and awards for his superior leadership in worthy civic undertakings.

Because of the excellency of the address, I have asked leave to include it as a part of my remarks. The address follows:

THE HUMAN SIDE OF EDISON

(Address by George E. Stringfellow)

Mr. Chairman, members of the Civitan Club, and honored guests, because I am one of the few survivors of those who had the rare privilege of working closely with Thomas A. Edison, I have been asked to tell you some of my observations about the human side of the great inventor.

Your city directory of 1866 lists Edison as a telegraph operator. The telegraph company was then under military law. Edison lived at 40 North Court Street, and boarded at the Delta Restaurant. It was here in Memphis that he began to invent and improve the telegraph apparatus which, when completed he sold to Western Union. The proceeds provided him with capital to equip his research laboratory from which grew almost 1,100 inventions.

With the respect and admiration that we have for any great man, we also have a certain amount of curiosity about the influences that made him great. One of the things we like to speculate about is whether he would have fulfilled his potentialities had he lived in a different era. For instance, in the case of Edison, we know that he holds the world's record for patented inventions—1,097 of them. Had he lived in the days of the caveman, we wonder if he would have invented the bow and arrow. Had he been around when the horse and ox were domesticated, would he have invented the wheel? If he had been in Egypt at the time of Archimedes, would he have reduced the enemy fleet to flames with a thousand mirrors. Would he have developed the water-screw, the forerunner of the screw propeller, to irrigate the fields of Egypt with water from the Nile?

The bow and arrow were not invented. Neither was the wheel. They were the products of gradual evolution, over thousands of years, in widely separated places. With all his wizardry, Edison could not have invented them.

There is a possibility that Edison might have done as Archimedes did when he instructed his soldiers to polish up their shields and reflect the sun's light and heat on the enemy ships and set them aflame. That was ingenious and reflected the thinking of an inventor.

Although basically a man of peace, Edison too came to the defense of his country in World War I by helping the United States Naval Consulting Board to improve the efficiency of the Navy. He was responsible for 42 items of new or improved means of naval attack or defense, including an underwater searchlight, a turbine head for submarine projectiles, a reacting bell, and a collision mat.

Since Edison devoted much of his time to lightening the burden of labor of mankind, I suspect that he would have invented the waterscrew and thus eliminated the laborious task of transporting water by means of pails tied to ropes.

What was Edison like, you may ask? Except for his deafness, he was remarkably sound physically, no doubt due to the kind of life he lived. He didn't use alcoholic beverages. His principal dissipation was strong coffee, chewing tobacco, and cigars. A number of years ago an intimate friend of mine visited me and expressed a desire to see Mr. Edison. Mr. Edison was a very easy person to see. Appointments were never necessary. All we had to do was to find out where the "old man" was. About 80 percent of the time he was in the chemical laboratories, so we looked there first, and if he wasn't there, we went to the library where we usually found him.

On the way to present my friend to the great inventor, he remarked, "I understand Mr. Edison chews tobacco. Wouldn't it be a joke if I asked him for a chew?" Now to get the point of the story, my friend neither smoked nor chewed tobacco.

Soon after the introductions, I remarked to Mr. Edison, in all seriousness, "My friend would like a chew of your tobacco." The "old man," as we reverently called him ran his hand down his right pants pocket, pulled out a plug of tobacco in a little case, laid it on his desk, ran his hand in his other pants pocket, pulled out a knife, opened it, took the plug of tobacco out of the case and handed the knife and the tobacco to my friend and invited him to cut off a good hunk. My friend didn't want to decline and yet he didn't want the tobacco. Bravely he cut off a piece about the size you could put in your eye, but Mr. Edison insisted that he take a much larger piece. When my friend took a larger piece, it still didn't suit the "old man's" generosity, so he took the knife and tobacco and cut off a good hunk and passed it to my friend and said, "Try this. You will get the full flavor if you take a big mouthful, as I do." My friend got the full flavor all right. He got out of Mr. Edison's library as quickly as he could and got rid of the tobacco on the steps of the building. Edison's generosity with chewing tobacco just wasn't appreciated.

Mr. Edison was opposed to smoking cigarettes for he felt that inhaling the smoke was bad for the lungs and that the chemicals in the paper were injurious to health. He felt so strongly about it, he issued instructions that no one in the library or laboratory should smoke cigarettes. Those instructions still appear on the timeclock in the laboratory:

"Cigarette smoking in the laboratory must be stopped. Anyone disobeying this will be dismissed.—Thomas A. Edison."

His friend Henry Ford was equally opposed to cigarettes and together they wrote a book on why people should not smoke cigarettes. The book created so much publicity for cigarettes that it had an opposite effect to what the authors intended. As a result, so far as I know, both of them refrained thereafter from talking about the injurious effects of cigarettes.

Edison was 5 feet 9½ inches and weighed around 175 pounds. He spent more hours at work and less at sleep than most people. In common with Napoleon, he slept more soundly and got more rest in a given time than the average person. He was serene and relaxed—seldom agitated.

I remember one time, however, when he really lost his patience. The machine shop of the Edison laboratories is on the first floor and the drafting room on the second floor. Mr. Edison used to commute between those two departments. Many times each day he would run up the stairway as often as he would use the slow freight elevator.

The elevator was an old contraption. On one occasion Mr. Edison yanked on the rope and the elevator started. Halfway up, the belt came off the motor and Mr. Edison and the elevator were suspended midway between the two floors. It was about 20 minutes before we could lower the elevator and its occupant to the machine-shop floor. During that time he was anything but serene. He used some selected language, and he made sure he could be heard throughout the two departments. So far as I know, he never used that elevator again, with or without an operator.

His step at 80 was spry as that of most men of 40. Edison liked to repeat the story Chauncey DePew told when DePew was in his nineties and still going strong. When asked, "How do you get your exercise?" DePew replied, "By acting as pallbearer for my 50-year-old athletic friends."

Edison got most of his exercise in his laboratory. He rarely sat at his desk. He moved around from one instrument to another, going from scale to tube, from report to drawing board, and from building to building, covering as many yards as most businessmen cover on their round of golf.

Edison had great patience and determination. His most difficult invention was the nickel-iron-alkaline storage battery. After conducting more than 45,000 experiments without any measure of success, an associate asked, "Are you not discouraged?"

"Discouraged?" responded the genius. "Certainly not. I have learned 45,000 ways the job cannot be done, and I am therefore 45,000 ways nearer my goal."

Though recognized for his prodigious industry as well as for remarkable intellect, the "old man," as his associates affectionately called him, loved a joke, not so much the sophisticated, sharp-witted kind, but more of the homespun variety of Abraham Lincoln. For example, he would with humility, walk into his legal department and apply for a job as an inventor. Or he could and would imitate the accent of a city lowbrow, or the pompous manner of the holier-than-thou reformer, or a smooth promoter.

Edison contended that integrity is man's greatest asset, and he valued his integrity and his honor above material gains. On learning that a product bearing his name had developed defects in service, Edison closed one of his factories and requested his customers to return their purchases and get their money. The inventor felt that his integrity was involved, and this priceless ingredient was not for sale. He was always careful to see that his customers received a little more than he promised.

I am sometimes asked if Edison was a religious man. He was, indeed, but he cannot be made to fit into the frame or pattern of any of our orthodox denominations. Edison was not a materialistic thinker. While he was a master magician in dealing with material things, he was awed by what he called "the mystery of life," which he found it impossible to comprehend or fathom in terms of matter and physical concepts. While he admitted his uncertainty as to the meaning and scope of life after death, he did believe in the fundamental premise of eternal life.

Edison was many times a winner and an acknowledged champion in many fields, but he was a modest winner and a good loser. He suffered many failures with calm and stoicism. His concern was for the present and the future. He did not live in the past.

He knew and ever practiced the motto: "Sweet are the uses of adversity." For example he turned his deafness into an asset in helping Alexander Graham Bell convert the telephone from a scientific curiosity to a practical instrument. He made his deaf-

ness a courtship asset. He taught his best girl the Morse code. In noisy, chattering social groups they conversed by hand pressure. That was an excuse for them to sit closer together. Overcoming his natural shyness, Edison built up the courage to propose when he could do so by hand pressure rather than by sales pressure.

Edison's pleasures were simple—his books and his music, and greatest of all was his pleasure in work. He gave the world light, warmth, joy, and a higher living standard. He asked only for the opportunity to carry on his experiments for the benefit of mankind.

I like to think of Edison as exemplifying the faithful servant in the parable of the talents. You have read the story in St. Matthew's gospel: how the master, before going to a far country, called his servants to him. To one he gave 5 talents, to another 2, and to another 1. The servant with one talent buried his in the ground. He who had 2 gained still another 2, and he who had 5 gained still another 5. Wherefore, when their master returned, he was pleased with the stewardship of the two servants who had made the most of their gifts, and because they had been faithful over a few things, he set them over many.

Edison was indeed, a faithful servant. Vision, imagination, genius, industry, and character were the potentialities with which he was endowed. By the wise use of the talents committed to his care, the world has been enriched a thousandfold. Little wonder that his memory commands the devotion rooted deeply in human gratitude.

No Concern of Yours?

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following article entitled "No Concern of Yours?" which appeared in the Daily Real Estate Report, of Fresno, Calif., on January 11, 1956:

NO CONCERN OF YOURS?

A recent survey, conducted in 19 States in the Midwest, South, and Southeast, reveals that there are almost 21 million acres of rich, idle farmland available for crop production, whenever more food is needed to feed the Nation.

At the same time Government plans are underway to take additional acreage out of production because of the millions of tons of food the Federal Government now has stored in bins and caves around the country.

Despite these facts, Congress is being asked to approve the incredible upper Colorado River project to irrigate some 583,000 acres of arid mountain land in Colorado, New Mexico, Utah, and Wyoming at a cost to the Nation's taxpayers (yes, you're included) of $4 billion in added taxes.

Congressman CRAIG HOSMER, of California, said that he would present to the House of Representatives evidence to show that while the Federal Bureau of Reclamation is seeking approval of enormous costly new irrigation projects, at least 20,937,153 acres (United States Soil Conservation Service figures) of the best American cropland are unused for any purpose.

Where the Reclamation Bureau wants to build the multibillion-dollar upper Colorado River project, there is little population, few roads, no metropolitan markets, and few towns. The fabulous cost of establishing municipal governments, etc., would be added to the cost of developing the arid lands, and the crops would enhance the Federal Government food surplus.

Why is the Federal Bureau of Reclamation proposing such a project? Is there politics involved or Government job retention behind such a foolhardy scheme?

Many Californians, as well as citizens of other States, have shown little concern regarding this proposed tax-spending spree, but every thinking American should stand up and be counted in denouncing such fantastic and inconsistent plans.

Post Office Progress and Problems

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. CEDERBERG. Mr. Speaker, the Birmingham (Ala.) News on January 23 took editorial cognizance of the Post Office Department's efforts in the last 3 years to modernize the handling of our mail.

The editorial refers to steps taken by Postmaster General Arthur E. Summerfield to reorganize the Department's work to achieve the goal of faster, more efficient, and more economical mail service.

I present the editorial to my colleagues as an example of the recognition being given to the splendid efforts of the Postmaster General to place his Department on a business footing.

The editorial follows:

POSTOFFICE PROGRESS AND PROBLEMS

The United States Postoffice Department's 508,000 employees now handle more than 50 billion pieces of mail annually and its financial transactions involve more than $20 billion a year. It now deals with a volume of mail 45 percent greater than a decade ago.

During the last 3 years the Department has undergone considerable reorganization. Postmaster General Arthur E. Summerfield, reviewing the Department's work in the current Nation's Business magazine, believes the efforts have resulted in faster, more efficient and more economical mail service.

Broader and better use, Mr. Summerfield says, is being made of all facilities for speeding transportation, including expanded use of trucks and tractor-trailers, bus lines, highway postoffices and air cargo carriers. He further reports: Internal procedures of handling money, bookkeeping and financial reporting have been greatly streamlined, achieving a reduction of 5,000 positions from overhead. Postal operations have been decentralized into 15 regions and 91 districts and operated on a home-rule basis. Close cost control has been established over the 85,000 motor vehicles used; a postoffice fleet is being developed consisting of 4 basic standard production-line trucks instead of 7 former special-built types, resulting in savings of 20 percent in purchase prices and 20 percent or more in operating cost.

Unnecessary service units are being eliminated, with approximately 3,000 small postoffices having been closed, Mr. Summerfield says. But modern rural delivery service is being expanded and more city letter carrier routes are being added. Postoffices in most major cities are open longer and mail is collected later. A coordinated progressive personnel program has been established and practical training programs have been launched.

The Department has a major problem, however, in the inadequacy and deterioration of its physical plant. Many postoffices were built 50 or more years ago and others are badly rundown, outgrown, and outmoded.

Another major problem is the postal deficit, which amounted to $362,700,000 in the 1955 fiscal year and which, it is expected, would, under present postage rates, run around $500 million following the recently enacted employee pay raises costing $200 million a year. Mr. Summerfield points out that postal rates today are essentially the same as they were in 1932. To achieve a more nearly break-even basis in the Department, President Eisenhower asked Congress in his budget message to increase postal charges by enough to bring in $350 million additional money in the next fiscal year, though he did not specify what increases he had in mind.

Address by Hon. Frank E. Smith of Mississippi Before the Mississippi Valley Association Annual Meeting, St. Louis, Mo., February 6, 1956

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. DAVIS of Tennessee. Mr. Speaker, we have no more able Member in this House than FRANK E. SMITH, from the State of Mississippi. As a member of the Committee on Public Works, he is alert to the needs of our rivers and harbors and has a comprehensive understanding of the whole problem of water resources.

On yesterday, he delivered a splendid speech before the Mississippi Valley Association at their annual meeting in St. Louis, Mo. Because of the increasing emphasis which must be given the subject matter of his address, I have asked permission to include it in its entirety that the full membership of the House may have the benefit of his views.

The speech follows:

I am very pleased and honored to have a part in the program of the Mississippi Valley Association. As a Representative in Congress of a region that is a vital part of the Mississippi Valley, I am proud of the constructive influence that this organization has had upon public policy for many years.

Proper development and use of the water resources of the Mississippi Valley are essential to the economic growth of the valley and of our Nation. This organization has made and will make an important contribution to public policy in this field. We have achieved much in our effort to fully utilize the great natural resource that is the Mississippi River and its tributaries, but there is far more yet to be done in the years ahead of us.

I am concerned primarily today about two important issues having to do with the role of our National Government in the field of water resources. I approach the problem,

not from any politically partisan sense, but only in a partisanship that holds an aggressive water resources policy as one of the essential activities of our Federal Government.

The Mississippi Delta area that I have the honor to represent in the Congress was first settled by hardy pioneers who used the Mississippi and its tributary, the Yazoo, as their means of transportation from the other settled areas of the country. Our oldest settlements are on the Mississippi and the Yazoo. Historically, the Mississippi has been a great waterway, tying together the economy of the heartland of America. All of the early settlements along the Mississippi came into being because the river was the natural path of the advancing settlements. We have long since passed the day when new settlements must be confined to points available to water transportation, but we are today realizing more than ever that adequate water transportation is a vital part of the economic growth and expansion of our area.

The river brought settlement up and down the great valley, but it also threatened death and destruction and floods. Consequently, the history of most of the valley from the time of its first settlement has been a long fight to control the waters of the Mississippi and its tributaries. With adequate flood protection for the Mississippi Delta, we are making new advances in our economy, both in industry and in agriculture. This same equation holds true for the entire Mississippi Valley.

The use of our waterways as channels of commerce and protection from the ravages of floods have been accepted as a proper responsibility of the Federal Government for many years. Although private business, and local and State governmental subdivisions, have contributed vast sums to this overall program, it is recognized that there is no way to properly coordinate the work except through the Federal Government. The benefits from the water resources program are shared by all the people of the country, and it is proper that a major portion of the cost should be assumed by the Government.

We have had our ups and downs in the continuing struggle to make proper use of our national water policy, but today we face two specific problems that could disrupt the pattern of orderly progress which we have sought to create. The recommendations of the Hoover Commission Task Force on Water Resources point up one of these major problems. The Hoover Commission task force report was so blatantly partisan in its opposition to virtually every phase of water resources policy that perhaps it has already been discredited enough to prevent any major recommendations from being adopted. The Hoover Commission itself refused to adopt most of the task force proposals, but the Commission report made two proposals which still should be of grave concern to us. I refer, of course, to the proposed toll system for inland waterways and the plan to establish a new, independent, board of review for water policy.

I think the very vocal opposition expressed to the toll system all over the country from every element of our political and economic life has eliminated the possibility, at least for the time being, that the Congress would approve a toll system, so I am not going to dwell further on that proposal.

I believe we face a real threat, however, in regard to the plan to establish the new board of review. The Presidential Advisory Committee on Water Resources Policy has adopted this proposal in its recommendations made public a few weeks ago. It is not at all impossible that this board of review may be established through means of a reorganization plan under the authority granted the President in the current Reorganization Act. It is highly important that all of our people be alerted to the danger to prevent any possibility of the Congress' approving such a plan.

Just why should we be fearful of this new board of review? Primarily because it would be another barrier between the people and the Government in carrying on a sound national water policy. It would be a new instrument of bureaucratic control which would serve to delay and defeat navigation and flood-control projects vital to the sound development of our American system.

The people of the country act through their elected representatives in the Congress to establish water policy. I'm sure all of you are familiar with the long and complicated process that must be carried out in order to change a flood control or navigation project from an idea into a reality. There are at least 28 separate steps in the authorization of such a project. The process adds up usually to a number of years. Then, following authorization, there has been a long and sometimes even more difficult campaign to secure adequate appropriations to accomplish the work. The board of review proposal could only result in adding more years to this long process. It would serve as a bottleneck and an often insurmountable levee to hold back many projects that would normally gain approval of the Congress in rapid fashion. It could conceivably become a major instrument of political favoritism, far removed from the nonpartisan approach which most of our water agencies have adopted over the years as normal operating procedure.

Our Federal water agencies have made many mistakes in the past, and they are likely to make more in the future. There is no question but that there should be better coordination of policy from time to time, but these mistakes are minor by comparison with the possibilities of error that would be almost certain with any new centralized control.

We have achieved great progress in the past under our present system, and we are continuing to improve it. There is no demonstrable need for a new board of review, and I hope that we can prevent any such instrumentality from being established.

The other great problem which faces us in the field of water policy is the increasingly difficult fight we have to make to secure adequate appropriations for flood control and navigation projects.

In 1927 when the disastrous flood of that year had created nationwide interest in river control, the total approved program of civil works amounted, in estimated cost, to about $1,200 million, that is, some $1.2 billion. About $800 million had at that time been appropriated to carry out this authorized program, which means that a backlog existed even then of about $400 million worth of work, at 1927 prices.

In 1937, following the increased interest in flood control and waterway development reflected in the passage of the 1936 Flood Control Act—with its declaration of policy that prevention of floods in cooperation with the States and other local political subdivisions was a proper activity of the Federal Government—the backlog of uncompleted projects had grow from $400 million in 1927 to $900 million worth of construction, at 1937 prices. In 1947, after World War II, and when the concept of basinwide development was being generally accepted, the backlog had grown to $5.4 billion, at 1947 prices.

Today the estimated cost of construction of all civil works projects which have been approved for construction by the Congress is approximately $19 billion, of which a total of less than $7 billion has been appropriated; thus, there exists today a backlog of projects, either not started or not completed of about $12 billion worth of work, at today's prices.

Admittedly many of the projects in this backlog have now become obsolete, or for some other reason should not be built. For the sake of discussion, let us assume that one-third of all the work represented by today's accumulated backlog should, for some reason or another, never be built. Even so, there would still remain $8 billion worth of economically sound, urgently needed, congressionally approved work either not started or not finished. This amount—$8 billion—is greater than the accumulated total of all appropriations made since 1824 for new construction for the Corps of Engineers' civil-works projects.

Now certainly, if there is any statistical support needed for my belief that our water resources program is critically lagging, it can be found in this ever-mounting backlog of from $400 million in 1927 to the $8 billion of today. I submit that this is at least a red flag we must heed in connection with our endeavors to insure the welfare and even the survival of future generations.

An example of the present inadequate appropriations with which I happen to be familiar may be of interest to some of you in the audience who know the history of the St. Louis flood-protection project. I was a member of the committee which visited the site of the flood damage in this area in 1951. The long process of study and evaluation to remedy this situation and to provide adequate protection for St. Louis did not result in the authorization of the St. Louis project until 1955. The United States engineers told our committee that the project could be completed after 2 years' planning and 6 years' construction if adequate funds were made available during the period. I am told that in the budget for fiscal year 1957, less than 10 percent of the funds needed for planning alone are provided. If the appropriations do not develop at a better rate than this, the St. Louis flood-control project will be still a project and not a reality for many years beyond the 8-year goal that was first proposed.

A minor but vastly important failure of the Congress in the matter of appropriations in the past few years has been the drastic reduction in funds for examinations and surveys. These funds have been reduced so greatly that any major surveys must receive special earmarking from the Bureau of the Budget and the Congress. The reduction in survey funds has been defended with the false logic that there is such a huge backlog of already authorized projects that there is no point to allowing further studies for any new project that might be authorized.

This is a splendid example of that overworked term "false economy." It means that the Corps of Engineers is prevented from making adequate studies of any flood-control problem until some major or minor disaster occurs in the area, bringing sufficient pressure upon the Bureau of the Budget and/or the Congress to make special funds available for the study. It means the Corps is barred by lack of funds from exercising the normal review of the worth of existing projects which should be carried on at all times. I hope the Congress during this session will rid itself of this burden of sharply restrictive survey funds.

According to the United States Weather Bureau, the climatic patterns of the Northern Hemisphere are undergoing a change. It is believed that our country will be more and more affected by tropical hurricanes. More in recent years, and even more in the near future, it is believed, of these dreaded hurricanes will strike the United States mainland with their unleashed fury. Most of them bring torrential downpours. Since the newly developing patterns carry the hurricanes through the most highly industrialized and densely populated sections of the country, the awful possibilities—nay, probabilities—for disastrous catastrophes are truly frightening. Already this new pattern has cost the country 500 lives and an unknown amount of property damage var-

iously estimated at between $1 and $2 billion.

What is true of the Northeastern States in recent years is in varying degrees true of the entire Nation. There have been floods of major proportions elsewhere, too. In 1952 the upper Mississippi River Basin was the scene of a flood of disaster proportions; this and lesser floods throughout the Nation snuffed out lives of 54 human beings and wreaked damage up to an estimated quarter billion dollars. Again in 1953, the State of Maine experienced a sudden thaw which swelled most of its rivers out of their banks; northwestern Iowa and most of the State of Louisiana were the scenes of major flooding. These and numerous smaller floods cost 40 lives and over $120 million in property damage.

In 1954 the Midwest suffered three major floods; the Des Moines River, the Ohio River Valley, and the Chicago area were the worst sufferers. In the same year the Rio Grande Valley was a heavy sufferer from floodwaters. High waters in the wake of Hurricane Hazel wreaked considerable damage to the northeastern section of the country. Total damage last year amounted to over $1.6 billion and 44 people lost their lives. As yet, the final toll of the Christmas disaster in California has not been determined.

Special emphasis has been given by the administration and many Members of Congress toward developing some type of disaster-insurance program to cope with situations such as developed in New England last year. I hope that some program can be worked out to alleviate the financial hardship brought on by tragic disasters which cannot be prevented by man, such as hurricanes which come in from the sea. Perhaps there is even some way of helping to establish some reasonable type of flood insurance.

It would be a legislative disaster, however, if the Congress were to accept the idea that the only help we can give the country in our fight against floods is some type of insurance to compensate for damage. The only real insurance there can be is in the form of flood-control projects which will prevent floods. It will be far cheaper in the long run and it is the type of forward-looking, affirmative approach to the problem which is consistent with every ideal of our American economy.

Our country should no more turn to insurance as a remedy for floods than it should turn to insurance for polio victims instead of devoting the funds to study and research for the development of the Salk vaccine to prevent the disease. Our primary job with floods should be to prevent them, not to alleviate the suffering they cause, as much as we want to do this when a disaster does strike an unprotected area.

The development of American water resources has contributed vastly to the story of American progress. We cannot afford to neglect their proper development in the future. Unless we move at a more rapid rate than we have in the past few years, we will lose irretrievable ground, at great cost to our people and our Government.

National Seed Storage Facility

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. DIXON. Mr. Speaker, I sent to the desk a bill to be introduced as a companion measure to S. 3095, a bill to provide for the establishment of a national seed storage facility.

Mr. Speaker, President Eisenhower in his special agricultural message called attention to the fact that "we must find new crops offering new opportunities and benefits" to farmers. Much of the hope for increasing the economic well-being of agriculture and for keeping fully employed our agricultural resources depends upon developing new markets, new uses and new crops.

As you know, the President recommended an increase of 25 percent in the research appropriation for the Agricultural Research Service and for grants-in-aid to State experiment stations.

In the development of new plants and new crops, it is paramount that plant breeders have access to a wide variety of plant stocks since although the plants in themselves may not be valuable as new crops they often contain needed genetic characteristics which can be utilized in producing new commercial crops such as soybeans and grain sorghums which have become so important in our agriculture.

Although Federal and State experiment stations have been doing the best they can to preserve parent stocks of plants and seeds, they neither have adequate space nor appropriate storage facilities for holding such stocks over a long period of time. Since research is a primary activity of the Department of Agriculture and is carried on in the general public interest, it is necessary that the development of more extensive facilities to maintain crop plant and breeding materials must also primarily be carried on as a national function.

I, therefore, introduce for appropriate reference a bill to authorize and direct the Secretary of Agriculture to establish and maintain a national seed storage facility.

Let's Look at the Record, Mr. Truman

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. DEROUNIAN. Mr. Speaker, Harry S. Truman lately has been bandying around, contrary to any fact, the impression that our great Vice President called him a traitor. I commend to the American people and to Mr. Truman, who has demonstrated his proficiency at name calling, the following article by David Lawrence, as it appeared in today's issue of the New York Herald Tribune:

PRESIDENT'S VIEWS ARE CITED TO CLEAR UP "TRAITOR" ISSUE

WASHINGTON, February 6.—Nobody ever called Harry Truman a traitor or disloyal and the former President ought to know it. What his faulty memory is striving to recall rather vaguely, is that his administration was attacked in the 1952 and 1954 campaigns for being soft on communism. That's an issue which, if Mr. Truman wants it so, can readily be revived for public debate, and the facts spread upon the record once more.

For Mr. Truman has never explained why he signed two letters—one on April 30, 1946, and one on April 7, 1947, praising the late Harry Dexter White, whose connection with a Soviet spy ring had been called to his attention on February 4, 1946, by J. Edgar Hoover, director of the FBI.

When Attorney General Brownell disclosed the facts about the Harry Dexter White case in November 1953, he never called Mr. Truman disloyal, as the Trumanites were quick to charge in an effort to evoke sympathy for their side. What Mr. Brownell did was to question the judgment and administrative efficiency of the Truman administration in letting Communist stooges slip through their fingers. The most carefully worded statement of the case came not from Vice President NIXON or any other Republican spokesman but from General Eisenhower himself in an address delivered at Milwaukee on October 3, 1952.

The prepared text, which uses the word "treason" three times reads in part as follows:

"I have come to Milwaukee tonight to talk to you about communism and freedom. * * *

"These two ideas are as opposed as danger is to safety, as sickness is to health, as weakness to strength, as darkness to light. Great truths can, at times, be startlingly simple. This one is of that kind. It is so simple a truth that it seems almost too obvious, almost stale.

"But let not our memories be too short. Only a few years have passed since many moved among us who argued cunningly against this plain truth. Their speech was persuasive, and their vocabulary clever. Remember? It went like this: 'After all, while we stand for political democracy, they stand for economic democracy. Fundamentally these are but two slightly different roads to the same goal. We both believe in freedom.'

"We must all remember that sophisticated lie. We will never forget it. For it partly poisoned two whole decades of our national life. It insinuated itself into our schools, our public forums, some of our news channels, some of our labor unions and—most terrifyingly—into our Government itself.

"What did this penetration into Government mean? It meant contamination in some degree of virtually every department, every agency, every bureau, every section of our Government. It meant a government by men whose very brains were confused by the opiate of this deceit. These men were advisers in a foreign policy that—on one side of the world—weakly bowed before the triumph in China of Communists hailed as 'agrarian reformers.' On the other side of the world this policy condoned the surrender of whole nations to an implacable enemy whose appetite for conquest sharpened with every victory. This penetration meant a domestic policy whose tone was set by men who sneered and scoffed at warnings of the enemy infiltrating our most secret counsels.

"It meant—in its most ugly triumph—treason itself."

ILLUSION AND BETRAYAL

"These years have, indeed, been a harrowing time in our history. It has been a time of both honest illusion and dishonest betrayal—both terribly costly. It has been a time that should have taught us, with cold finality, the truth about freedom and communism.

"Most of us, young or old, wise or naive, have learned. An important few have not. They have learned very little—and they admit nothing. They are men about whom there is nothing great except their vanity and their complacency. They are proud prisoners of their own mistakes.

"Who are these men?

"They are those who cheered the blithe dismissal of the Alger Hiss case as a red herring. They are those who applauded 2

weeks ago when an administration servant grandly declared that Communists in our national life were not very important, and that we should not waste time chasing phantoms. They are those who slapped their sides with laughter when the same man dismissed the quest for Communists in our Government as a kind of silly game being played in the Bureau of Wildlife and Fisheries.

"Do you think these fish stories, ghost stories, and animal stories are really very amusing? Such comedy touches do little to relieve the tragic knowledge that we have been for years the gullible victims of Communist espionage experts. These experts in treason have plundered us of secrets involving our highest diplomatic decisions, our atomic research. Tragically, we do not know how much more our security may have been jeopardized. * * *

"You can never cure malignant growth just by a hearty bedside manner. I must be blunt, for this is a serious matter. I speak not as a partisan or as a candidate but simply as an American citizen—moved to honest anger by this persistent, gnawing threat of Communist treason in our national life. I know that millions of both parties today are moved to anger and to action.

"Neither these millions nor I have patience any longer with those whose complacency excuses our Government's failures as wholly unavoidable."

OBSERVED FIFTH COLUMNS

Mr. Eisenhower then recalled his own observation of fifth columns in Europe. He added that "it is the prerogative of government to set the strictest test upon loyalty" and that it is a privilege, not a right, to work for the United States Government. He declared that the Bill of Rights "contains no grant of privilege for a group of people to join together to destroy the Bill of Rights." He said:

"A group—like the Communist conspiracy—dedicated to the ultimate destruction of all civil liberties cannot be allowed to claim civil liberties as its privileged sanctuary from which to carry on subversion of the Government."

It is a great speech and certainly its doctrines should appeal equally today to the rank and file of Democrats as well as Republicans. Reprints should be widely distributed by the Fund for the Republic, since it has sent out literature on the other side of the same controversy.

Compensation to the Crow Indians for Lands Needed in Construction of Yellowtail Dam

EXTENSION OF REMARKS
OF
HON. ORVIN B. FJARE
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. FJARE. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include an editorial from the February 3, 1956, issue of the Sheridan Press, a newspaper in Sheridan, Wyo. The editorial indicates some of the reasons why I think my colleagues should support House Joint Resolution 516, which authorizes and instructs the Secretary of the Interior to accept the $5 million offer of the Crow Tribal Council for the lands that will be needed for the construction of Yellowtail Dam in Montana:

NO ACTUAL LOSS

Senator JAMES E. MURRAY, of Montana, appears to be the prime mover in the continued pressure against the Crow Indians to provide right-of-way for the Yellowtail Dam. The Montana Senator insists that a major appropriation of $4 million for the dam for the fiscal year of 1956 will be lost unless that right-of-way is provided immediately.

Because there could be such a loss of an appropriation, Senator MURRAY and the Department of the Interior are insisting that condemnation proceedings be used to acquire this right-of-way. In fact, the Department of the Interior has announced that it has already asked the Department of Justice to institute this method to wrest legal possession from the Crows of approximately 7,000 acres of land in the Big Horn Canyon.

From the beginning we have strenuously opposed this method of seizing land from the Crow Indians. It is nothing more than a use of legal force to take land from the tribe. And the project itself would provide about one-third of its total irrigation for other Indian-owned lands.

To justify such methods of using legal force against the Crows simply because an appropriation would be lost is certainly clouding the issue. There is no permanent loss in the loss of an appropriation. Even though the legal status of the appropriation may expire, there is no actual loss. If Congress saw fit to make such an appropriation a year ago, it shouldn't be too difficult to convince the committees and Members of the House and Senate that it should be made again if it was properly justified in the first place.

Actually, this loss of an appropriation is about like removing cash in a business house from the cash register to the safe for safety over night. Since the Treasury or the taxpayers still have the money, it can be made available for use at some future time. And if the project is still justifiable and good, Congress would almost certainly reappropriate it.

The mere fact there appears to be such pressure and such a demand for haste in a project for which there is no great immediate need makes one wonder if Senator MURRAY is concerned lest Congress may refuse to set the funds up again. The river, the canyon, and the lands will all still be there when Congress is ready. The loss of an appropriation is not excuse for the use of threatening tactics against the Crow Indians.

Clearly water development means a larger population, and a larger economy. It means progress and prosperity. It means growth.

And it is something Wyoming can do something about, utilizing its own abilities and resources.

For other things, Wyoming might have to wait, but through heads-up promotion and planning, as provided by the Natural Resource Board, this State can expect a consistent growth.

There is a future in water in Wyoming.

Babel Drowns Call To Battle in Slum Fight

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. VANIK. Mr. Speaker, please permit me to call the attention of the Members of Congress to a very scholarly series of articles relating to the housing problem in America prepared by Phil G. Goulding, of the Washington Bureau of the Cleveland Plain Dealer. The first article appeared on January 28, 1956, and is entitled "Babel Drowns Call To Battle in Slum Fight."

BABEL DROWNS CALL TO BATTLE IN SLUM FIGHT

(By Phil G. Goulding)

WASHINGTON, January 28.—Decay can be whipped and American cities saved from eventual bankruptcy only if the flood of new slums growing each day can be brought under control.

Success is mandatory.

This is the consensus of top Government officials, including Albert M. Cole, boss of the Housing Home Finance Agency, whose jurisdiction extends to all Federal housing departments.

How can it be done? The opinions range widely, both in the executive branch and Congress. Real estate and home builders' lobbies are powerful. There are liberal and conservative approaches.

But one point is clear: Something must be done, and soon.

MAJOR PROBLEMS

The human disease, the killing sicknesses, the juvenile delinquency, the charred bodies found in firetrap ashes are news to no one. Slums are directly involved in 45 percent of major crimes, 55 percent of young delinquency, 60 percent of tuberculosis cases, 35 percent of fires.

They also cost you money.

A southern metropolis collected only 5½ percent of its property tax money from slums but gave those districts 53 percent of its health, police, and fire facilities.

Columbus, Ohio, estimates that it costs each person $14.63 a year to pay for the city's losses in deteriorated sections. Milwaukee bought a fire engine for $25,000 for a new neighborhood. Operation expenses run $90,000 a year. The fire chief pointed out that the cleaning up of a single blighted ward would have released 1 of its 3 engine companies for the new homes and avoided the expenditure.

Even multipled across the country, these extravagances are pennies compared to losses sustained by keeping such areas out of production.

Chicago has a downtown decayed area now 40 percent delinquent in taxes. If redeveloped, this could provide 2 million square feet of space for commercial use, add 21,000 jobs, boost the annual payroll by $84 million and increase tax receipts 7 times.

Cost of effective nationwide slum clearance, with renewal, redevelopment, and relocation, is so gigantic that even educated estimates must be accepted with reservations.

An advisory committee appointed by President Eisenhower in 1953 predicted that it would take an outlay of $15 billion to clear slums and another $9 billion for public improvements in rehabilitated areas.

ONLY A START

This would be only the beginning. It has been estimated that 5 million units would have to be built to replace those torn down, plus the salvaging of deteriorating units, plus dealing with millions of additional units beyond hope outside of slum areas.

Commissioner James W. Follin of the Urban Renewal Administration—one of the several principalities in Cole's jurisdiction—notes that only 27.5 million of 39.3 million nonfarm dwellings in the United States are "good housing."

SUBSTANDARD

At least 7 million of the remaining 12.1 are "substandard." Half of these are badly dilapidated. The other 5.1 million have varying degrees of deficiencies requiring correction.

Many Americans maintain that there will always be slums until there is sufficient low-

rent housing, and that there will never be enough low-rent housing until the Federal Government comes through with a gigantic public housing program.

The National Housing Conference, for instance, declares that there should be 500,000 units a year if reasonable progress is to be made. While recognizing that this would be presently impossible, it recommends a return to the provisions of the 1949 Housing Act and grants of 200,000 a year until the original 810,000 units authorized then by Congress are exhausted.

Agreement comes neither from the present administration nor from the present Congress.

In 1954, the legislators approved 35,000 new units. Added to 33,000 already under contract, this gave a workload of 68,000 for the following two years. Last year, Congress authorized 45,000. It also eliminated an administration feature of the 1954 act which tied the allocation of new public housing starts to urban renewal programs.

This was contrary to the Eisenhower approach. Cole insists that public housing cannot be detached from the overall operation of neighborhood improvement. He emphasizes that it cannot be a free-wheeling activity, heedless of other efforts to halt city decay.

Part of the basic thinking behind the 1954 act was this theory that public housing should be given only to communities which have developed comprehensive plans on how to better the living conditions of all citizens living in substandard homes, blighted areas, and slums beyond the hope of salvage.

The new law was founded on the theory that you cannot rebuild a city of 10 million families; that practical considerations make it necessary to restore and to renovate where possible.

It brought into the language such terms as "workable program" and "urban renewal" and "FHA section 220."

Its philosophy was two-pointed: Piecemeal attacks of slums will not work; local responsibility and private enterprise are the keystones of action.

This series of stories will deal with its progress to date.

Planning Is First Weapon in War on Slums

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. VANIK. Mr. Speaker, please permit me to call the attention of the Members of Congress to the second of a series of articles on the housing problem in America, written by Phil G. Goulding, of the Cleveland Plain Dealer Bureau in Washington. This article appeared on January 30, 1956, and is entitled "Planning Is First Weapon in War on Slums":

PLANNING IS FIRST WEAPON IN WAR ON SLUMS

(By Phil G. Goulding)

WASHINGTON, January 29.—You can't fight a slum without a program.

Eighty United States cities have carried their fights to the point of obtaining Federal approval of a workable program.

Another 16 communities have submitted programs to the Housing and Home Finance Agency. Twelve of these are under review in regional offices. Four have been cleared to Washington.

Seventy more cities are in the process of developing these plans.

A workable program is more than a stack of papers in triplicate and a sheath of questionnaires. It is a preliminary analysis of a community's slum and blight problem and and an outline of how to solve it.

It must include an estimate of the cost and evidence of the financial capacity of the city to take action. It is a guaranty that there is something more in the works than an attempt to clear slums pocket by pocket, an approach believed to be fruitless by officials of this administration.

Approval by the city council is a prerequisite for the Federal aids to urban renewal—loans and capital grants, Federal Housing Administration mortgage insurance under sections 220 and 221. Prior to a 1955 congressional amendment, it was a prerequisite also for low-rent public housing.

NO PATERNALISM

The workable program must come first, officials explain, because the present anti-slum law is not a paternalistic measure. It is based upon the principle that the Federal Government will help cities help themselves.

Critics who complain that Washington's part should be greater are advised to take their complaints to Congress, which wrote the Housing Act in 1954.

When a city council approves a program, it commits the locality to the attainment of these essential objectives:

Sound housing and health codes, so that illegal and substandard structures and areas will no longer be tolerated.

ZONES TO BE PLANNED

Master planning for the community's development, designating residential, commercial, industrial, and public land; plotting the roads; identifying necessary public improvements.

Basic analysis of neighborhoods and the kind of treatment needed. Where are the slums and blighted areas, what is their extent and density, what are the racial and income characteristics of the people involved?

An effective administrative organization to run the program, to assure that there is adequate legal authority for agencies undertaking slum clearance and rehabilitation, to guarantee that standards in zoning, housing, building, plumbing, and electricity can be enforced.

Financial capacity to carry out the program. The Federal Government will pay as much as two-thirds of the costs of land acquisition and site clearing. Communities must contribute the rest.

Rehousing of displaced persons.

Citizen participation.

CITY'S PLAN APPROVED

Cleveland received approval of its workable program last June, becoming the first Ohio city and the 35th in the country to qualify for Federal assistance under the 1954 act.

More recently, Housing and Home Finance Administrator Albert M. Cole, has approved workable programs for three other Ohio cities—Cincinnati, Dayton, and Hamilton. Four more, Columbus, Martin's Ferry, Toledo, and Warren, have applications in the works.

Only New Jersey and Pennsylvania among Northern States have more plans approved or underway. Several Southern States, with smaller communities, are in the lead.

Cleveland had been engaged in various phases of urban redevelopment long before the 1954 act. So had many other cities. Slum clearance programs underway under the 1949 law could be continued or converted to take advantage of 1954 benefits.

Half Billion in Federal Funds Is Fighting United States Slums

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. VANIK. Mr. Speaker, please permit me to call the attention of the Members of Congress to the third of a series of articles on the housing problem in America which appeared in the Cleveland Plain Dealer under date of January 31, 1956, written by Phil G. Goulding, of the Cleveland Plain Dealer Bureau in Washington. Mr. Goulding's very scholarly summarization is entitled "Half Billion in Federal Funds Is Fighting United States Slums":

HALF BILLION IN FEDERAL FUNDS IS FIGHTING UNITED STATES SLUMS

(By Phil G. Goulding)

WASHINGTON, January 30.—More than one-half billion dollars of Federal money is working to prevent and eliminate United States slums.

For every Federal dollar spent, housing officials point out, private enterprise and local governments spend five.

The men running the Washington end of the show concede some flaws in the law and some flaws in administration. But they believe they are making real progress. So does President Eisenhower.

Sixty-one urban renewal projects were initiated last year.

Twenty-three moved into actual site operations.

At year's end, there were 340 federally assisted slum clearance and urban renewal projects approved by the Federal Government. These were in 218 communities—in Alaska, Hawaii, Puerto Rico, the District of Columbia, and 29 States.

PROCESSED IN STEPS

This does not mean teams of men were busy demolishing dilapidated houses in this many areas. Projects in which Federal money is involved are processed by the Urban Renewal Administration in these steps:

Preapplication, survey and planning application, preliminary planning, preliminary project report, final planning, application for loan-and-grant funds, project execution.

All of these follow the drafting and approval of a city's workable program if they were initiated after the effective date of the new Housing Act, August 2, 1954. Those with earlier origins are under the 1949 law, before the days of the workable program requirement.

ONE BIG DIFFERENCE

So far as the antislum program is concerned, there is one major difference between the two acts.

Under the earlier bill, communities could undertake to clear slum areas with Federal assistance.

The 1954 act provides help not only to clear and redevelop sections which cannot be saved but also to prevent the spread of blight into good areas and to rehabilitate those economically restorable.

Federal help comes in three forms: Preparation of the area for redevelopment or rehabilitation, the actual redevelopment and the rehousing of displaced families.

EXECUTING 110 PROJECTS

Outright financial assistance is available only in the first instance. Included are

planning advances made to help communities finance surveys before site operations get under way, temporary loans used by the cities as working capital in acquiring slum land and structures and clearing them, and capital grants for this purpose.

Of the 340 projects in the mill, 110 are in the execution stage. Local governments, directly or through a qualified public agency, are making the areas ready for redevelopment or rehabilitation. The land is then sold to private enterprise or to public bodies for the uses called for in urban renewal plans.

UNITED STATES PAYS TWO-THIRDS

The difference between the amount received from this sale and the total cost of land acquisition and demolition of buildings is considered the net cost. The Federal Government will pay two-thirds of this. Federal funds are not used for actual construction or rehabilitation of houses in project areas.

Another 106 projects among the 340 are in final planning stages. The urban renewal administration has approved a preliminary report and the local authority has perfected a plan and presented it in final form. Allocation of loan-and-grant funds is just ahead.

APPLICATIONS APPROVED

One hundred and twenty-four projects are in preliminary planning. Applications for assistance have been approved by the URA. Planning advances may be issued if the local authorities request the money. Some $21 million in such advances have been cleared, a hike of nearly 45 percent over a year ago.

Besides $135 million in grant contracts committed, the Federal Government has reserved $369 million for others of these specific projects in the planning cycle.

Of the 340 projects initiated, 266 are being carried out under the 1949 act and 74 under the 1954 legislation. Sixty-one of the latter began after passage of the new law; 13 were converted from old to new.

ALL FUNDS COMMITTED

All of $500 million authorized in 1949 has been committed or specifically reserved. The housing agency is now working on an additional $200 million appropriated last summer for this fiscal year. That appropriation included another $200 million for fiscal 1957 and $100 million to be used at the President's discretion.

President Eisenhower said in his budget message that major progress was in sight for the first time. He predicted that by the end of the year 49 projects would be completed, 237 actively underway, and 112 in the planning stage.

Eight Ohio cities are participating in urban renewal, with 15 projects. Only 2 are in the execution stage—1 in Cleveland and 1 in Cincinnati. Six are in final planning—Toledo, Hamilton, Dayton, Columbus, and two in Cleveland. Four in Youngstown and one each in Cleveland, Columbus, and Steubenville are in preliminary planning.

Other supplemental Government aids include:

Outright planning grants to cities of less than 25,000, to regional planning authorities, and to metropolitan planning groups. Congress voted $3 million for these special cases in 1954. Some $819,000 has been approved or is reserved.

Demonstration grants for selected pilot operations. The Federal Government will pay two-thirds of the cost, on the theory that the results will add sufficiently to general knowledge to benefit the Nation. One example is a proposed test in which the Cleveland Metropolitan Housing Authority wants to rehabilitate all dwellings on 15 parcels of land in one Garden Valley block.

Federal housing officials hope to get all of the 1949 law projects into development stage by June 30. They point out however, that they can only provide assistance. There are local, not Federal, projects.

Easier United States Slum Aid Bogged Down

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. VANIK. Mr. Speaker, please permit me to call the attention of the Members of the House to the fourth of a series of articles on the housing problem in America, prepared by Phil G. Goulding, of the Washington Bureau of the Cleveland Plain Dealer. This article appeared in the Cleveland Plain Dealer under date of February 1, 1956, and is entitled "Easier United States Slum Aid Bogged Down":

EASIER UNITED STATES SLUM AID BOGGED DOWN—OFFICIALS DENY CRITICS' CRY OF FAILURE

(By Phil G. Goulding)

WASHINGTON, January 31.—Federal Housing officials were jubilant over congressional action permitting liberal Government insurance of loans on homes and apartments in neighborhoods threatened by slums.

These sections of the law were to bring private money into the slum and urban renewal picture.

"They should do more to halt the decay of our cities than any single effort now being made."

This was the statement of Federal Housing Administrator Norman P. Mason. It was made in September 1954.

Sixteen months have passed.

Section 220 of the Housing Act provided for Federal Housing Administration mortgage insurance for single or multifamily rental dwellings in urban renewal areas, and for both new and rehabilitated structures.

Federal commitments have been made to only three projects, all in the Delano Village area of New York City.

FEW AUTHORIZED

Section 221 permits the FHA to stand behind mortgages on low-cost, owner-occupied private housing for persons displaced by slum-clearance operations.

A mere handful has been authorized.

Why has a law greeted with such enthusiasm apparently produced such meager results? Critics are crying failure. Government officials believe there has been no failure.

Since the results cited above appear to carry the case of the critics without further elaboration, these pieces will tell the Government's side of the story.

While other sections of the older housing law provided for Government insurance of mortgages on rental housing and individual homes, they were not designed for urban renewal. The new sections were.

Restrictions in the earlier act made it unfeasible for private builders to come into blighted areas. FHA could only go so far. The risk was in many cases considered too great for the Government to back apartment projects in slum areas with taxpayers' money.

Applications were submitted under sections 203 and 207 of the old act, and most of the projects initiated under that law have proceeded with Government insurance authorized by those provisions.

BELIEVED TOO BINDING

But the administration and the Congress believed the measure too binding. Principal difference is that under 220, passed in the 1954 act, the FHA can take into account the future redevelopment of an area under the urban renewal plan as its basis for accepting the mortgage risk.

Under other FHA mortgage programs, builders initiate their own undertakings, and apply through normal lending channels for Government insurance. Under 220, the initiative comes from local governments.

Before a project sponsor or builder may apply for section 220 insurance, the area in which he wants to build must first have been certified as eligible by housing and home finance administrator Albert M. Cole.

If the project is proceeding under the 1949 law, it must be established that it has received a Federal aid contract and meets other specific conditions.

THIRTY-FIVE JOBS CERTIFIED

If the project was initiated under the 1954 act, Cole's certification must follow approval of a workable program and completion of an urban renewal plan.

As of today, Cole has certified 35 projects as eligible for section 220.

Thirty-three received their eligibility stamp last April 19. These were in 11 States, the District of Columbia, Hawaii and Puerto Rico. Included was the Longwood project in Cleveland.

Two have been added more recently—one in Kansas City and another in Philadelphia.

The 35 certifications may be measured against the 110 urban renewal projects which have reached the stage of execution. The obvious charge: Why have fewer than one-third of the projects been declared eligible for a program so joyously hailed?

BEGUN UNDER OLD LAW

The answer of Government officials are two:

With two exceptions, all 110 projects were begun under the 1949 law, before the days of 220. Many of them are strictly slum clearance ventures which do not provide for residential reuse of the land and are consequently not eligible for 220. They have no need of it.

Not more than 40 of the old-law projects have requested 220 assistance. That is an HHFA estimate.

Housing authorities emphasize, and critics agree, that the hope for section 220 is under the 1954 act, in projects designed from the beginning to take advantage of it. These are in the earlier stages of planning. Rehabilitation is a major advantage of the new law. The earlier legislation had no such provisions.

While these logical positions may clear Administrator Cole of allegations that he has not moved quickly enough in certification, they leave unaswered the next major question:

With 35 certifications, why has Mason's FHA made only 3 commitments and these all to 1 general project?

The next story will go into the FHA part of the operation.

United States Can Aid, Cannot Force, Building Work

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. VANIK. Mr. Speaker, please permit me to call the attention of the

Members of Congress to the fifth of a series of articles on the housing problem in America by Phil G. Goulding, of the Washington bureau of the Cleveland Plain Dealer, which appeared in the Cleveland Plain Dealer on February 2, 1956. This very scholarly article is entitled "United States Can Aid, Cannot Force, Building Work."

UNITED STATES CAN AID, CANNOT FORCE, BUILDING WORK—FHA OFFICIALS ASSERT INVESTORS LAG

(By Phil G. Goulding)

WASHINGTON, February 1.—The Federal Government cannot put guns at the heads of private builders and demand that they start building.

This point is emphasized by top brass in the Federal Housing Administration when they are questioned about FHA-insured mortgages under section 220 of the 1954 Housing Act.

Thirty-five urban-renewal projects have been certified by the Housing and Home Finance Administration as eligible for such insurance. FHA has made only 3 commitments, and those 3 portions of 1 project.

That record looks poor. But officials point out, in at least half of the 35 areas there have been no active negotiations between private sponsors and FHA offices. Development authorities have not offered the land to builders. Builders have made no applications to take advantage of the certifications.

UNITED STATES NOT BUILDING

It is stressed that this is not a Federal program, such as the building of aircraft carriers, in which the Federal Government has only itself to blame for lack of progress. The Government is not supplying the money. It is not building the apartments. That is the job of the private builder, and it is the job of the local authorities running the cities' urban-renewal programs to offer land to builders and to interest them.

In seven cases, applications from builders have been received and are being processed.

Here is the rundown and the FHA comment on each:

Manhattantown, N. Y.: Negotiations began more than a year ago, simultaneously with those of Delano Village, where 762 units have received a commitment of $6,658,000. The sponsors were asked for credit information 9 months ago. This information has just been received.

SPEED EXPECTED

Pratt Institute in Brooklyn and Lenox Terrace in the Bronx: With the 2 above projects, these comprised the 4 original pilot cases. They all came in at the same time. It was agreed that priority would be given the others. These can now be wound up quickly, with action expected in 30 to 90 days.

St. John's Village in Jersey City and Parkway Triangle in Philadelphia: Applications were received last fall. Progress is good.

Southwest Tempoe, Philadelphia—application for 220 insurance has been in for more than a year. The FHA is all ready to go, and has been for some time. It is awaiting approval of plans by the Pennsylvania State Planning Commission.

Private Enterprise Redevelopment Corporation, Cleveland.—On the edge of commitment. It is believed that a contract satisfactory to the sponsor will be ready imminently—within a few days.

Several additional projects are being worked over in the preapplication stage, while Cleveland's Garden Valley has not been certified by Cole, negotiations with FHA have been underway for months.

CUTTING REDTAPE

Administrator Cole is hopeful of cutting redtape, but refuses to move without caution. He emphasizes that the impact of these projects will be felt for generations.

Activities involve separate considerations by municipal authorities, the Urban Renewals Administration, the Federal Housing Administration, the builder sponsors and lending institutions. All must be coordinated.

Critics point out that it is not entirely the fault of the builder if restrictions eliminating his profit keep him out of the program. Change the law to lure him in, they say, or relax overly strict interpretation.

Housing officials believe the major hobbling feature which discouraged builders was one written in the 1954 act.

Congress directed that proposed projects be appraised on a basis of estimated value. This meant that the character of the neighborhood was necessarily taken into consideration.

APPRAISAL CHANGED

While mortgages on rental structures of five or more units could be insured up to 90 percent of the appraisal, this resulted in far less than 90 percent of the builder's cost. A million-dollar project in the heart of an urban renewal area could not be given the same appraisal as one in a swanky residential neighborhood.

This became obvious during the first year of the law.

At the administration's request, Congress last year amended the measure to make appraisals based on actual replacement cost. Higher appraisals mean less equity from the sponsor.

It is felt that this will have tremendous impact. President Eisenhower estimates that applications for urban renewal mortgage insurance will rise from less than 2,000 units in 1955 to 75,000 in 1957.

Housing bosses believe the builders will come in, now that they can get liberal terms under section 220 denied them in any other FHA mortgage insurance.

A final story will spell out specific builders' objections to the section and the replies of Government officials.

Officials Deny Windfall—Ghost of FHA Still Walks

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. VANIK. Mr. Speaker, please permit me to call the attention of the Members of the House of Representatives to the sixth and last of a series of articles which appeared in the Cleveland Plain Dealer on February 3, 1956, on the housing problem in America. This article was written by Phil G. Goulding, of the Washington Bureau of the Cleveland Plain Dealer, and is entitled "Officials Deny Windfall Ghost of FHA Still Walks." This article very graphically illustrates the need for revising the Federal laws on housing:

OFFICIALS DENY WINDFALL—GHOST OF FHA STILL WALKS

(By Phil G. Goulding)

WASHINGTON, February 2.—Government officials scoff at the charge that the ghost of the infamous windfall scandals of 2 years ago still haunts the Federal Housing Administration.

Some builders and civic slum fighters allege that FHA is overly cautious in its administration of mortgage insurance for urban renewal projects, fearing a repetition of fantastic sponsor profits and embarrassing congressional investigations.

Authorities responsible for administering section 220 of the housing act contend that the ghost has been exorcised. They do admit to a period of ultraconservatism in the early days of the 1954 act, when the agency was still extremely windfall conscious.

Part of this conservatism sprang from congressional caution, which set up the yardstick to be used in appraising proposed projects. Amendments enacted last year changed the appraisal law and eliminated the major obstacle to 220 mortgage insurance.

TERMS LIBERALIZED

Part of it was exemplified in the FHA charter setup. The administration holds the majority of preferred stock in corporations established for 220 projects. Delayed dividend restrictions locked up the money put into the corporation by sponsor builders.

Thus hobbled, builders declined to participate. The terms were liberalized by FHA last February, so that builders could extract their money under certain circumstances. A recent directive removed the "bugs" of this liberalization, permitting sponsors to pay themselves back as return of capital rather than taxable earnings.

Housing officials here feel the second principal barrier to greater building activity under 220 was thus removed.

From the field, where sponsors are undergoing daily negotiations with local FHA offices, come many more complaints against the law and the manner in which it is being administered.

Here are a few with official answers:

The charge: That the law permits reasonable profit, but that FHA allows only 5 percent. With a 10 percent figure, the builder still must have cash equal to 3 percent of the total cost; with 5 percent profit, his equity must be 6 percent.

The reply: Congress warned FHA not to go over 10. A full 10 percent would amount to an outright subsidy in many areas. It is untrue that FHA will permit only five. In the one commitment made—three Delano village projects in New York—the builder was allowed 7 percent.

The pertinent directive to field offices reads that fees should be determined "on the basis of the utmost diligence exercised in determining the appropriate percentage, commensurate with the fees customarily being paid in the area for projects which are similar in type and size."

The charge: That FHA valuations resulted in mortgages below 90 percent of the actual cost to builders.

The reply: Before the 1955 amendment, FHA had to follow the law on appraisal. This did result in 85-percent-of-cost mortgages, which builders would not accept. It is no longer true, now that appraisals are based on replacement cost.

The charge: That there still is too much caution displayed, so much that Federal authorities are evidently not genuinely in sympathy with the law.

The reply: Tremendous risks are being taken. One example is the level-payment plan of amortization. The debt service is the same to begin with as it is in the 40th year. We are gambling that

the income of the project will remain constant throughout the life of the mortgage—a gamble against tenant dissatisfaction, inflation, and the character of the neighborhood. We are not required to heed the "economic soundness" required under section 207, and we do not.

Reporter's note: The only Federal people interviewed who appeared cool to the 220 program were a couple of oldtimers who felt that only wholesale public housing, and not Government insurance of private builders, could do the job.

The FHA official most directly responsible for 220 operations is W. Beverley Mason, Special Assistant for Urban Renewal, who is vitally interested, extremely able, and works far into the night on his job.

The charge: That there is no authority at the local level. Field personnel check and doublecheck with Washington on every detail.

The reply: Builders get this impression because they ask insuring offices for things far in excess of the law and administrative regulations. Some request 95, 100, or 110 percent insurance. We do need to perfect techniques on the rehabilitation advantages of 220, and we are now in the midst of boiling the process down.

The charge: That processing takes so long that banks will not become involved; they prefer to earn a return on their capital in other ways.

The reply: We know of no cases where the sponsor has failed to go ahead because he could not get bank financing.

The charge: That FHA is applying Shaker Heights standards to urban renewal apartment projects. The specifications: That in Garden Valley, for example, the Government has insisted upon the elimination of common walls in row houses, on blacktopping the parking area, on enlarging the buildings to make rooms of swanky-apartment size.

The reply: We seek the minimum construction that will have market acceptance. Garden Valley is on a slag fill, with settlement a major problem. The double wall was recommended so that the settlement of one unit would not pull down the adjoining one. Blacktop or asphalt-concrete was recommended for the parking area to cut down on the terrible slag dust.

Suggested change in building size was from 59 to 63 feet. The larger building provides for a living room 12.5 to 13 feet, 1 bedrom 9 by 12.5 and another 9 by 9.6. These are not luxury apartment standards. Rooms should be at least this large, to protect the taxpayers' money which is insuring the mortgage and to keep within the spirit of a law designed to improve housing conditions.

The charge: That rents proposed under 220 projects are too steep for persons whose homes are being lost as the slums they live in are being cleared and renewed.

The reply: Rental housing projects under 220 are not meant to be for these low-income families being displaced. Nowhere in the law, or in congressional comment on it, is this purpose suggested. There is wide misunderstanding on this point.

Section 220 is to help fight decay by establishing decent housing in areas now lost to communities. Public housing and private single-family homes under section 221 are designed for displaced low-income families.

Mortgage limitations written by Congress clearly indicate that 220 projects need not be low-rent projects. The law provides for a mortgage up to $2,250 per room. This may be hiked to $2,700 where elevators are included and an additional $3,700 in high-cost building areas. The mortgage on a 4-room apartment can, therefore, be $14,800.

Compare this with 221 limitations of a $8,600 top for a single house. It becomes obvious, not by administrative interpretation but by congressional law, that 220 was not enacted as a substitute for public housing.

Federal Housing Administration officials nonetheless strive to produce middle-income housing under the section—for those who earn too much to qualify for public housing, but not enough for decent private rental projects.

But communities and builders who want to improve slum property by shooting for the maximum limitation and more costly apartments will not be turned down. The Federal Government wants to lure private builders into constructing on slum land.

Rents, therefore, will vary tremendously. Where Garden Valley now proposes $85 for two-bedroom units, the rate in Delano Village in New York is $37 per room, $148 for a four-room suite. And on some slum land in Philadelphia, an air-conditioned project with elevators is on the way.

In Philadelphia's case, no Federal money went into the actual land acquisition or slum clearance. Building plans were delayed until passage of a 1955 amendment raising the limit on a single mortgage to private enterprise from $5 million to $12.5 million. Only 43 families were displaced, so relocation was not a major task.

But it remains one of the chief problems of the entire anti-slum fight—rehousing of those whose homes, however deteriorated, are leveled.

Adequate Funds for Vocational Education

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mrs. SULLIVAN. Mr. Speaker, I know that many of the Members will be interested in a letter I have received on the subject of vocational education from Assistant Commissioner H. Pat Wardlaw, of the division of instruction, department of education in our State of Missouri. Mr. Wardlaw is director of vocational education in our State and therefore very familiar with the value of the vocational education program and of the need for adequate Federal appropriations to help the States maintain and expand their work in this important field.

Mr. Wardlaw points out that although there has been no cut in the President's budget for the 1956–57 fiscal year from the amount appropriated for the current fiscal year for vocational education, people interested in vocational education are disturbed that the President has not asked for the full amount authorized under the George-Barden Act. He points out that there have been increases in budget requests for vocational rehabilitation, for apprenticeship training, for agricultural extension work, and for agricultural research, and he feels it would not have been unreasonable to provide a similar percentage increase—and it would be about the same percent—for vocational education to provide the full amount authorized under the recent statute.

In view of the hard fight which we have had to carry forward here on the House floor in recent years to assure adeuate appropriations for vocational education, particularly when the admininstration sets its sight too low in this field, I think there would be general interest in reading Mr. Wardlaw's letter, and therefore I am inserting it in the Appendix of the RECORD, as follows:

DEPARTMENT OF EDUCATION,
STATE OF MISSOURI,
Jefferson City, Mo., January 20, 1956.

MRS. JOHN B. SULLIVAN,
United States Representatives, House of Representatives, Washington, D. C.

DEAR MRS. SULLIVAN: People interested in vocational education in Missouri were pleased to note that President Eisenhower, in his recent budget message to Congress, recommended no cut in Federal appropriations for vocational education for fiscal 1957. They are concerned, however, that he could not see fit to recommend the full amount authorized under the provisions of the George-Barden Act ($29,267,080.58), which they believe is so badly needed. An increase of 10.4 percent over the appropriation of last year ($26,500,000) would finance the George-Barden program in full, and, in view of the President's recommended increases for Vocational Rehabilitation (9.6 percent), Bureau of Apprenticeship (9.3 percent), Department of Agricultural Extension Service (8 percent), and Department of Agricultural Research Service (12.6 percent), the full appropriation under the George-Barden Act would not seem at all unreasonable.

You are, of course, aware of the needs of the public schools in Missouri and the commendable efforts of the Missouri General Assembly and the people of our State in the pasage of new legislation providing a foundation program of education. This greatly increased State support is only a minimum program, however, and the needs for continued expansion of our vocational programs for youth and adults is very great. For the past few years those youth enrolled in our secondary schools have been from the very light crop of "depression babies" born in the thirties. For the years ahead our secondary schools will be literally swamped with youth from the heavy crop of babies born in the forties. Over twice as many of our youth in numbers will need vocational training in the immediate future.

Of the total funds spent for vocational education in Missouri during recent years the percentage of Federal funds declined from 28 percent to 21 percent in a period of 4 years (1950–54). Such a fast declining percentage in Federal funds will not allow for needed expansion in our program to reach more youth and adults, and, therefore, the recent actions of Congress in halting this decline have been of utmost impor-

tance in Missouri. Vocational enrollments in Missouri schools are yet only a small fraction of our annual labor replacement needs in industrial services, business, or agriculture as estimated by the United States Department of Labor.

Please accept my thanks and comemndations as well as those of many other Missourians for all that you have done for vocational education in past years. Any support you can give toward our effort to get the full amount for fiscal 1957, as authorized under the provisions of the George-Barden Act, will be greatly appreciated.

Respectfully yours,

H. PAT WARDLAW,
Assistant Commissioner, Division of Instruction, Director, Vocational Education.

President Eisenhower as a Candidate in the Minnesota Presidential Primary

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 7, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement I made at St. Paul, Minn., at the time I placed the name of President Eisenhower in the Minnesota presidential primaries as a candidate for President.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR THYE

The citizens of Minnesota in March of 1952 catapulted President Eisenhower into American political leadership with an unprecedented write-in vote in the Minnesota presidential primary. Today the Republican Party of Minnesota reaffirms its convictions and faith of 4 years ago by placing the name of President Eisenhower before the voters in the Minnesota primary to be held on March 20, 1956.

The petitions which have been filed in behalf of the President contain the names of approximately 1,000 people from all walks of life. We are entering the President in the Minnesota primary confident that he will be a candidate for reelection and certain that he will be returned to the White House for a second term by a landslide vote.

President Eisenhower's administration has been one of imagination, conscience, mind, and heart. He has breathed new life and has injected hope and faith into a sagging world.

During the campaign of 1952 he spoke plainly to the American people about world peace and domestic prosperity. This was done amid a backdrop of the Korean war, rigid controls on wages, prices, rents, a spiraling inflation, excessive deficit spending, high taxes, and a Government which was growing topheavy after 20 years of bureau operating on top of bureau.

Today just 3 years after his inauguration we find the United States at peace, enjoying an unprecedented prosperity without economic controls, and with a balanced budget in sight. Inflation has been arrested, taxes have been reduced, and Government operations have been streamlined. This all adds up to the fact that the President has kept faith with the American public and has fulfilled his campaign promises like no other presidential candidate in our time.

Today his opponents stand exposed before the public in a state of utter disbelief and frustration. These are the people who laughed in late 1952 when the President visited Korea personally in an attempt to end the Korean war. These are the same people who spread gloom and doom in 1953. They predicted a deep depression, the destruction of labor unions in the United States, and an isolationist approach to world affairs. They proved to be false prophets. They were wrong; President Eisenhower was a far greater leader than they were accustomed to.

President Eisenhower has unfolded a new and stimulating philosophy in government. It is neither radical nor reactionary. It does not constantly pull at the tender strings of emotion. It rejects the proposition that every phase of the individual's life must be planned and controlled from Washington. He has created an active partnership among the Federal Government, the State and local governments, and the individual citizen.

In foreign affairs the Republican administration has assumed world leadership which rejects the policy of appeasement toward Russia. We have made clear that we are desirous of world peace, but that we are prepared at the same time to thwart aggression wherever it may come. The United States has seized the initiative in the battle of nerves with Russia. No longer is our policy geared only to the timetable of Communist aggression.

As a vital part of this policy the administration has taken all steps to protect the security of the United States. The President with his military and diplomatic experience and background has been able to achieve these interrelated results by careful and prudent planning of our military needs and our diplomatic goals.

Perhaps the true greatness of the President can best be seen through his deep and sincere concern for the individual. It is in the field of human relations where we find the heart and conscience of a great humanitarian. He has charted a new course for the young and the aged. School construction and extended social-security benfits for millions will in time have a profound effect upon the population of this country. He has translated his compassion for the sick and bereaved into action by spearheading the drive for more intensive research into medical science to combat such ills as heart disease, cancer, polio, cerebral palsy, etc. Many have spoken pages of empty words about civil rights, but not since Lincoln have we had a President truly dedicated to the proposition that race, color, and creed do not determine the rights and privileges of our citizens. President Eisenhower has made it clear to all that every individual enjoys an inherent dignity which human bigotry cannot destroy. Herein lies the true reason why the President has become a member of every family in the United States.

President Eisenhower has brought out the best in our heritage of freedom, liberty, and opportunity. The American people will extend their thanks in November with a resounding vote of confidence in the President and the Republican Party.

The Peace Party's Pledge

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. JENSEN. Mr. Speaker, world history records that in a free economy such as ours and which must be preserved here, segments of the people have for relatively short periods experienced financial setbacks until the aftermath of wars has been completely erased.

Our farm belt has been passing through just such an era. It had its origin on the day in 1951 when the Democrats rolled back cattle prices 10 percent—that was the day all farm prices started down the toboggan.

By honorable, peaceful means—without the stimulant of war and its heartaches—the Republican Peace Party will earnestly strive, and will succeed, in leading the way to genuine prosperity.

That is our sacred pledge to the American people.

Trade Unions in America

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter I received from Mike J. Armano, business agent, Amalgamated Clothing Workers of America, CIO, Local No. 187, of Lawrence, Mass., enclosing the most interesting and inspiring address of Mr. Vincent LaCapria, comanager of the New York joint board of the Amalgamated Clothing Workers of America.

The letter and address follows:

AMALGAMATED CLOTHING
WORKERS OF AMERICA, CIO.,
Lawrence, Mass., February 3, 1956.

Congressman THOMAS J. LANE,
Lawrence, Mass.

DEAR MR. LANE: We are enclosing a copy of the speech made by Mr. Vincent LaCapria, comanager of the New York joint board of the Amalgamated Clothing Workers of America at our annual installation of officers banquet which was held on Saturday evening, January 28, 1956, at Central Catholic Auditorium, Lawrence, Mass., at which time he installed the officers and executive boards of Local No. 187, Lawrence, Mass., and Locals No. 559 and No. 709, Lowell, Mass.

Sincerely,

MIKE J. ARMANO,
Business Agent, A. C. W. A., Local No. 187.

SPEECH OF VINCENT LACAPRIA

The installation of officers of an amalgamated local union is always a happy event. Only too often, however, we all become deeply involved in the forms and lose sight of the great material and spiritual values implicit in the installation ceremony. It is these values I would like to recall for you during these brief observations.

A labor union is a brotherhood. It does for men and women what they cannot do for themselves, singly as individuals. Without a union to give them collective strength, individual workers are as nothing when confronted by the great business corporations and other aggregations of industrial financial power.

In our modern society, it is the union, perhaps more than any other human agency, which helps the individual worker retain his self-respect, his sense of human dignity. Work by the sweat of our brow, without the

retention of dignity; and the conviction that man is made in God's image, belongs to the Dark Ages, and could only mean a bestial existence.

The labor union does other things beside helping man retain the sense of manhood, and a woman worker her womanhood. I put human dignity first, of course, because man does not live by bread alone, and bread without roses can be an existence only on a low animal plane.

But the union does bring a higher standard of living. It makes the necessities possible, and some of the luxuries. The late beloved Philip Murray put it simply, when he said the average worker aspires to a rug on the floor and a picture on the wall. The union makes this possible, and it makes possible a comprehensive system of social welfare benefits, including health, life, maternity, hospitalization, surgical, and retirement benefits, which cushion the blows of illness and death of the breadwinner, and the insecurities of old age.

The union does more. It makes possible better educational opportunities for our children, it makes possible vacation with pay and true leisure time in which we can consult our soul and indulge those simple pleasures which round out our lives and make them tolerable.

Finally, the unions help make workers a real part of the community. No longer are they disfranchised or second-class citizens. They participate in politics, in community welfare, in the great crusades against disease. There isn't a single Red Cross campaign, or community chest appeal, or fight against the ravages of polio, cancer, tuberculosis, and heart disease in which we do not participate. As a matter of fact, there isn't a humanitarian cause today that could get off the ground, without active labor support.

All this adds meaning and satisfaction to our lives as men and women. We are part of the community, and the community relies on us. And all this flows from the fact that labor unions in America have come of age, are strong and responsible and play their part in the life around us.

Furthermore, unions carry on an unceasing fight for civil liberties and civil rights, in the struggle against discrimination and segregation, in the fight for minorities, in the struggle for racial and religious equality.

Trade unions in America are a natural outgrowth of our democratic way of life. They are free associations of men and women who aspire to a better life, who understand that in unity there is strength and that mutual benefits carry mutual responsibilities.

When we install a new administration in a local labor union, or reelect an old one, we show our confidence in these men and women for their term of office. We believe they will do their duty conscientiously and well, that they will be guided by the best interests of the membership, that they will be inspired by the great traditions of the Amalgamated Clothing Workers of America.

It is fitting also, while we bask in the sunshine and security of our great influence and prestige today, and in the strength of our 400,000 members all over the land and in Canada, that we remember that all this was achieved not without a struggle and the great sacrifice of men and women, many of them nameless, who forged this union. Out of the sweatshops and the slums and the tenements of America they forged this mighty labor organization, so that they and those who came after them would enjoy the benefits of decent wage and working standards, security, and human dignity.

Let us remember and give thanks to those valiant men and women who fought in the shops and on the picket lines, who starved and bled, who sacrificed the little they had to make these blessings possible for all of us.

It is in this spirit of rededication to our highest ideals, our great and heroic past, and to our future goals, that I now install the officers of this Amalgamated local for the ensuing term.

Operation Pork Lift

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 7, 1956

Mr. HRUSKA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement in the form of a summary of efforts made by various communities in my State and in the neighboring State of Iowa to increase the consumption of meat stocks. Admittedly a publicity venture and gimmick, it nevertheless does show the efforts of some of our local people to make intelligent and alert efforts to solve a very trying problem.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OPERATION PORK LIFT

(Statement by Senator HRUSKA)

Many studies of our farm problems have shown that consumption of our farm products lags far behind production despite our population increase and lower farm prices. As a result, we have plied up huge surpluses which hang over the market further depressing prices.

Statistics show that the American consumer is spending less money for meat despite his higher take-home pay. And, although the United States is the world's fifth largest meat producer, our meat consumption per capita lags far behind per capita meat consumption in Uruguay, Australia, Argentina, and other meat producing countries.

When pork prices dropped recently, Nebraskans and Iowans faced up to these facts and made a frontal attack on them. The result was a help your neighbor campaign, operation pork lift, aimed at increasing pork consumption and strengthening hog prices.

At the suggestion of the West Pottawattamie County, Iowa, Farm Bureau last December, operation pork life was organized in Omaha and Council Bluffs. Working committees were set up in each city, spearheaded by their respective chambers of commerce, and coordinated through the Omaha-Council Bluffs joint steering committee.

These groups represented all segments of the pork economy—producers, packers, labor unions, marketing interests, retail grocers, restaurants, and consumers. No advance notice was given the consumer so that he could save up his pork purchasing before a 3-day campaign held January 12 through 14.

Promotional material for the eat pork campaign was carried by the press, radio, and television, and in groceries, nonfood retailers, and restaurants. Pork featured school lunches, hospital meals, and service organization lunches.

At the end of the campaign not one food retailer was found who had not at least doubled his pork sales, and several reported increases up to 600 percent. The dollars-and-cents results for pork producers were immediate; at the end of the campaign week the Omaha hog market closed with hog prices 25 cents to 50 cents a hundred pounds higher, and the closing top, $12.25 a hundredweight, was the highest since November.

With Govs. Victor Anderson, of Nebraska, and Leo Hoegh, of Iowa, acting as spearheads, Operation Porklife now has reached statewide proportions.

A public-spirited city in each State—Cozad, Nebr., and Audubon, Iowa—symbolized the intensiveness of these campaigns by contesting for a pork-consumption championship. Each city enlisted surrounding cities and towns in the week-long effort, and caravans of pork purchasers visited each city daily. Airplanes were used as the contest neared an end to keep retailers supplied with pork products. Otoe County, Nebr., began its Porklife January 21.

Presented with the first ham sold in the Cozad campaign, President Eisenhower wrote Cozad citizens, "The friendly competition between Audubon and Cozad cannot fail to focus attention on the pork-disposal problem of the country as a whole."

The impact of these campaigns on our farm problems is, indeed, a significant one. In addition to encouraging pork consumption and working to relieve the surplus, these campaigns lead to better health by encouraging more consumption of pork in a greater variety. Housewives found more uses for other than the demand cuts which make up only about one-third of the hog, but have the same protein value.

This Nebraska-Iowa leadership shows the country, Mr. President, the contribution it can make directly toward licking our surplus problems. It again demonstrates that local initiative and resourcefulness can secure results quickly and economically without the need for Government interference.

The following item is taken from the Omaha World-Herald of January 31, 1956:

"A PINK GLOW IN THE SKIES

"Sure, it was a publicity gag.

"It won't solve the farm problem.

"But what a glorious time the people of Audubon, Iowa, and Cozad, Nebr., had in last week's pork-sale derby.

"And not the residents of those two towns only. Hosts of people flocked in from nearby communities—and far-away ones too—to take part in the contest. That probably is one of the big reasons why Audubon won. It has more neighbors.

"As for the spirit of the two towns, there wasn't much to choose. Both were superb. Both threw themselves into the contest with that high-octane enthusiasm which is experienced only by people who work selflessly for their neighbors and their community.

"We imagine there will be a pink glow in the skies over Audubon and Cozad for many a week to come."

Unsatisfactory Mail Service in Montana

EXTENSION OF REMARKS
OF
HON. JAMES C. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 7, 1956

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a letter which was sent to the Postmaster General on January 27, 1956, regarding unsatisfactory mail service in Montana. The letter was signed by the junior Senator from Montana [Mr.

MANSFIELD] by Representative METCALF, and myself.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 26, 1956.

The Honorable ARTHUR E. SUMMERFIELD,
Postmaster General,
Post Office Department,
Washington, D. C.

DEAR MR. SUMMERFIELD: From time to time we have contacted you or other members of your Department regarding unsatisfactory mail service in Montana. Recently complaints have been increasing.

They have come from Stanford, where the Commercial Club assigned a committee to investigate the "rapidly deteriorating mail service."

They have come from an official of the State of Montana, who reports that Montanans may suffer "serious financial loss" due to discontinuance of the post-office directory service.

They have come from a Miles City businessman who is disturbed by rumors that the Post Office Department is considering discontinuing the railway postal service between Miles City and Butte on Milwaukee trains 15 and 16.

They have come from major cities, like Billings, and from small communities like Forest Grove, between Lewistown and Winnett, the mail to this community having been curtailed, we are told, to 3 days a week.

Protests against proposed closing of small post offices continue to come in. And, as our voluminous correspondence on the matter indicates, there has been considerable dissatisfaction over discontinuance of week-end RPO service in northeastern Montana.

There, in outline, is the picture we are getting of inadequate mail service in Montana. This morning's mail indicates that Montana is not unique. The publisher of a daily newspaper with nationwide circulation reports an increasingly large number of complaints of poor mail delivery service from "almost every State in the Union."

A typical complaint, reports the publisher, is that his subscribers receive no papers at all for a week or 10 days, and then get all the missing numbers in 1 day's delivery.

We need not remind you, I am sure, of the Republican Party's 1952 platform pledge to provide a more efficient and frequent mail delivery service, which was followed by President Eisenhower's assurance that this program would be carried out to the letter.

We respectfully request that your personal attention be directed to the deteriorating postal delivery situation in Montana.

Sincerely yours,

JAMES E. MURRAY,
United States Senator.
MIKE MANSFIELD,
United States Senator.
LEE METCALF,
Member of Congress.

Funds for Forest Recreation Areas

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 7, 1956

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in the Great Falls Tribune, of Great Falls, Mont., on January 21, 1956. The editorial is entitled "METCALF Seeks More Funds for Forest Recreation Areas," and deals with Representative METCALF's bill, H. R. 1823.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

METCALF SEEKS MORE FUNDS FOR FOREST RECREATION AREAS

Last year, after many unfruitful discussions of previous years about the inadequacy of national park facilities to meet growing tourist demands, Congress finally took action to provide money for a start on an extensive park improvement program.

There is, however, an even broader and more constant increase of recreation use in our national forests related to which the national parks are only special preserves. Provisions for this greater use have so far been spotty and inadequate.

Representative LEE METCALF, of Montana, has given a great deal of attention to this matter and his efforts have gained favorable national attention.

He is author of a bill (H. R. 1823) now pending in the House which would provide more money to restore wornout recreational facilities in our national forest and build for the future.

In support of his measure, he points out that "the public's forests are making money for us." Receipts in fiscal 1955 from timber sales, grazing permits, recreation, and the like totaled more than $84 million. The same year Congres appropriated $66 million for care and improvement of the national forests—a net gain to the Treasury of $18 million.

METCALF's bill proposes for reinvestment of some of the profits in the business. It would declare public recreation use of the national forests to be a policy of Congress. Watershed protection and timber production at present are the primary objectives of the forest system.

Second, it would earmark 10 percent of the national forest receipts each year for recreation use, improvement and maintenance of wild habitat and provisions for adequate safety, sanitation, and health in connection with uses of the national forests—the amount so set aside not to exeeced $5½ million in any one year.

There are other features of the bill which would further implement the recreation use objectives. Its passage would be of benefit to the Nation as well as to Montana and other regions of extensive forest acreage.

Make It Permanent

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Mirror of Tuesday, February 7, 1956:

MAKE IT PERMANENT

The United States Merchant Marine Academy at Kings Point, Long Island, is a valuable institution to this area and, in the larger sense, to the defense of the Nation.

It deserves to become a permanent school for the training of marine officers.

That is the opinion of Senator MAGNUSON, Democrat, of Washington, and Senator PAYNE, Republican, of Maine, who as chairman and member, respectively, of the Senate Interstate and Foreign Commerce Committee, have just concluded a long study of Federal and State merchant marine academies.

They recommended the passage of the Kings Point bill (H. R. 6043) and continued Federal air for maritime academies in Maine, Massachusetts, and California.

The Senators refuted a false contention by the Defense Department and some labor unions that comparatively few graduates of the academies go to sea. The majority do. They also add to the strength of the Naval Reserve.

We believe the bill will bolster United States seapower both in commerce and war and that it should be passed.

Let the Farmers Run Their Own Business

EXTENSION OF REMARKS
OF
HON. HERMAN WELKER
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, February 7, 1956

Mr. WELKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Let the Farmers Run Their Own Business. They Can Do It Better, and At No Cost to the Taxpyer," which was written by Lester J. Bell, of 300 Eiden Drive, Boise, Idaho. I commend the reading of the article to my colleagues, so that they may have the thoughts of this distinguished Idahoan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET THE FARMERS RUN THEIR OWN BUSINESS—THEY CAN DO IT BETTER, AND AT NO COST TO THE TAXPAYER

Until farmers themselves take control of their affairs there will be no long-time solution of the problem of overproduction and low prices. Any kind of Government planning, support, or control is at best only a temporary palliative that does nothing to eradicate the cause of the trouble. And, while failing to give the farmer any sound, long-time assistance, Government help to date has resulted mostly in shouldering the taxpayer with the burden of billions of dollars spent for loans, incentives, purchases, and storage of surplus farm products.

The solution is so obvious that it appears to have escaped attention of the planners who have looked beyond the foreground to far horizons. The individual farmer has always seen it but his weak voice has been lost in the noise of the winds rushing toward state-planned economy.

To cure the sickness that ails agriculture Government only has to (1) enact basic legislation permitting and encouraging nationwide organizations of farmers on a commodity basis, (2) provide for referendums of producers to authorize and accept organization authority, and (3) loan sufficient funds to the organizations to set them up in business.

The organizations, so formed, would:

1. Set goals at exactly 100 percent of parity.
2. Permit marketing only at parity.
3. Establish production controls as needed and issue marketing cards.
4. Dispose of any surplus produced by: Selling on competitive foreign markets, donating to famine-stricken nations, diverting to industrial use, storing to meet future shortages, or letting the farmer keep it to

use on his own farm or turn in on next year's allotment.

5. Loan money to members unable to sell immediately on a glutted local market.

Legislation will undoubtely be necessary to permit organizations of such gigantic size, to supervise and control referendum elections, to provide for establishing parity, to establish any advisable police control and in general to protect free enterprise and the consuming public.

Full parity for the farmer is so eminently fair that no honest criticism can be raised; it is fundamental to national welfare whether imposed by Government or demanded by the farmer himself. The parity price should be set by the Secretary of Agriculture as necessary to meet changing levels of national economy.

The law of supply and demand, featuring agriculture to the exclusion of other productive enterprises, has been overworked in recent years; it has beaten down the price at the farm and brought no relief to the housewife for the food she buys. Demand, per capita, is greater today than at any period in our history. Under this suggested system the commodity group would exactly supply domestic demand, and any surplus could not be used as a leverage by the processor, middleman or speculator for his own gain; any extra would not be fighting for domestic consumptive acceptance but would be owned by the organization, or its members, to be disposed of elsewhere as seen fit. It would not depress the market. It would not burden the taxpaying public.

Production controls imposed by the organization should be on a bushel, bale, pound, and so forth, basis, not on acreage as in the past. The way it has actually worked is that the farmer, having his acreage cut down, has farmed the remaining acres better, trying to raise enough extra, at a reduced price, to still meet his money goals. The only possible outcome has been pyramiding surpluses—to be taken over by Government.

With a unit allotment the farmer will produce it on fewer acres and better husbandry. Having met his money goal by knowing how much he can sell and the price he will get he will plant the diverted acres to lower income on noncompetitive crops, try new crops that he cannot risk at present, or retire the acres to his own soil bank that won't cost the Government a cent. He will have every incentive for better farming and new initiative.

Under any type of full control, or freedom from all controls, bountiful Nature often brings forth harvests in overabundance. It is not Nature's plan to penalize a man for her own bounty. Any such surplus, whether held by individual farmers or stored in the organization's ever normal granary should contribute no evil to national welfare; on the contrary, it would be a blessing of security to meet future shortages, war or the uncertainties of the future. Our phenomenal national growth has thrived on the availability of abundance—even surplus—of everything our population needs. Today, we have more automobiles, TV sets, bath tubs than absolutely essential to meet lowest requirements; we have a few thousand able-bodied men without jobs; stores, factories and services are running full-tilt. Does that mean we're in a bad way? Individually or nationally, if we become financially pressed, we can wear last year's clothes or drive the 3-year-old jalopy, but we cannot live on the food we ate last year. The farmer does have a market, never better, and the working man has the means to satisfy a healthy appetite.

Tradition has it that farmers cannot get together nor stick together. That was undoubtedly true 40 years ago the same as it was in other walks of life when the economy of "dog eat dog and the devil take the hindmost" prevailed. But times have changed and everyone except the farmers are organized for their own protection. The heavy hand of Government has, instead of elevating the farmer to a par with others, actually held him under paternal bondage with an implied promise of a gift that has never been delivered. If he had been let alone, he would have long since organized as have his city cousins. Notwithstanding, Government controls and nursing has taught Mr. Farmer two things: he will get no real help from Government, and the individual must bow to a higher authority whether it be imposed by Uncle Sam or the mutual welfare of his own group.

The national soil-bank plan is the new promise of salvation for agriculture. Dozens of other schemes have been advanced and tried the past 20 years and each has been proclaimed the panacea of the ages. They have all had one outstanding characteristic in common: pay the farmer for not doing something. Erstwhile plans have failed, as will this one, for we are bucking nature and the history of progress if we insist on placing a reward on doing nothing instead of doing something.

The security of abundance, balance of national economy, and the well-being of agriculture will be attained when we let the farmers manage their own business. The boss himself can do it better than the hired man or the foreman.

The McCarran-Walter Act

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 7, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the New York Journal American of Monday, January 23, 1956. It is entitled "Needs Fixing." It points out the injustice and unfairness of the present quota system, and calls for an amendment of the McCarran-Walter Act.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEEDS FIXING

An important piece of unfinished business has been called to the attention of Congress by President Eisenhower.

It concerns proposed changes in our immigration laws.

Specifically, it concerns the discriminations inherent in certain provisions of the Immigration and Nationality Act of 1952, generally known as the McCarran-Walter act.

This legislation was in many ways constructive, and it contains many good features (screening out Communists who would sneak into the United States, for instance) favored by virtually all Americans.

But it also has provisions which create an "urgent need" for revision of the law, as the President put it in his state of the Union message. And it should be kept in mind that in calling for a revision of the act neither President Eisenhower nor this newspaper is urging or favors outright repeal of the McCarran-Walter measure. The distinction between "revision" and "repeal" is, we hope, clear to everyone interested in seeing that such an important act reflects the ageless principles of true Americanism.

The most pressing need is for revision of that section of the act containing the formula may have been, it is in effect discrim-

Whatever the original purpose of this formula may have been, it is in effect discriminatory.

Under the act as now written, immigration quotas are set up according to the national origins of the white population in the United States at the time of the 1920 census.

The practical result of this formula has been to assign about 82 percent of the annual immigration quota to the nations of northern and western Europe, and to discriminate cruelly against the others.

What the present law says, in effect, is that an Englishman or a German, for instance, is welcome in the United States, but that a Greek, or an Italian, or a Jew from eastern Europe is not.

This, obviously, is notoriously contrary to the American concept of judging a man by his individual worth, not by his nationality or religion, and the contrast is so stark that the Communists have seized upon it to make propaganda against America all over the world.

Ironically, the present act is keeping out of this country literally thousands of worthy and distressed human beings—many of them fugitives from Communist oppression—whose presence in this country would be an asset to the Nation.

A Disgusting Incident

EXTENSION OF REMARKS

OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. DAVIDSON. Mr. Speaker, I have no doubt that our Communist adversaries are busy today—busy telling a shameful story to confused people all over the world. The story is being circulated in India, in the Middle East, in the Far East—all over the globe. It is a powerful but completely distorted and false story of the American people.

We have spent billions to bring the truth to those already enslaved and on the brink of Communist enslavement, and now in one brief and disgusting incident, we and our message have suffered a setback from which we may never fully recover.

A small mob of cowardly hooligans, blinded by ignorance and hate, inflamed by liquor and bigoted venom, have caused all this, and have destroyed all that we have worked so assiduously to accomplish. The objective of this foul rabble's hatred is a single defenseless girl named Autherine Lucy, 26 years old. She happens to be a Negress. When she attempted to attend classes at the University of Alabama, the mob collected and greeted her with stones, mud balls, and eggs as fetid as the breath used by these erstwhile men, turned to beasts, in their vituperative catcalls.

To all of this, Alabama's Governor Folsom has as yet made no comment.

It is required for someone to say that this is not a picture of America. True Americans are agonized by this spectacle and pray to God that the Communist propaganda machine will not make the

people of the world lose confidence in America or faith in democracy.

Respect for the dignity of the individual is still the essence of democracy and the American creed, the actions of a disgraceful riotous mob of 1,000 cowards to the contrary notwithstanding.

Brink by Brink

EXTENSION OF REMARKS
OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. FORAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address delivered by Senator CLINTON P. ANDERSON at the congressional dinner, nationalities division of the Democratic National Committee, in Washington, D. C., on January 28, 1956.

The address follows:

Anyone who walks the corridors of the Capitol today finds his elected representatives absorbed by two problems: the farm problem and the problem of our foreign relations. Every participant in this nationalities group is immediately attracted to these questions because so many of us have ties back to another country where the way of life is largely agricultural. Naturally, many of these farmers who immigrated to this country found their way into agricultural pursuits. All through the States of Iowa, Wisconsin, Minnesota, the Dakotas and Nebraska you find whole areas that were built up by those individuals who say in America a chance for freedoms, opportunities and the pursuit of happiness which they had not known in their homeland.

On my bookshelves at home I have a book entitled "The Swedes in South Dakota." There were huge immigrations of Swedes in the 1860's and as I turn the leaves of the book I find not only the name of my father, but of my cousins and uncles and aunts. A whole section of the Dakotas was filled by the Swedish migration.

They came looking for land, land that was free. Jim Hill became their patron saint because as he stretched his railroads across the western prairies he made advantageous sales to the Scandinavian and German immigrants. They could acquire one quarter of a section by homestead route, another quarter section by a tree claim, and then buy the alternate quarters from the railroad to give them a full section of land. It was a day of great opportunity not only to those who entered agriculture but to those who were employed in industry because if they did not like their jobs they could pick up their belongings and go west to make a new home and a good living.

It's because my father was born in Sweden that by instinct and inheritance I am attracted to the problems of the farm and to those matters of international relationships which touch the peoples in lands over the seas.

Every time we come closer to an election the farm problem gets more attention. For 3 years farm prices have been moving downward. We Democrats occasionally differ among ourselves as to causes and sometimes as to proposed remedies, but we are agreed on one subject. That is that the farmer has been getting proportionately less and less of the consumer's dollar, a smaller and ever smaller share of national income, and a persistent reduction in his markets at home and abroad.

I'm sure Secretary Benson has good intentions, but he may be headed the wrong way. For instance, he said this to the Farm Bureau Convention on December 16, 1953: "Let me assure you that though the solution of the farm problem may still be in the future, considerable progress has been made along the road to recovery. I believe that 1953 has marked the turning point—in the right direction."

Let's look at the farmer's road to recovery. On the day that Mr. Eisenhower was elected President, parity stood at 99 percent. I know it had been higher and I know it got lower before Mr. Eisenhower was inaugurated because people worried over what his administration would do to the farmers, but on the day he was elected, parity stood at 99 percent. And today it stands at 80 percent. That's the lowest it has been since 1940. That is one landmark on the road to recovery.

When Mr. Eisenhower was elected President, the farmer's share of the consumer's dollar was 47 percent. True, it had been up to 54 percent in 1945, but it went on down until today it stands at 38 percent, almost a record low and the lowest it has been since 1939. That is another milestone on the road to recovery.

When Mr. Eisenhower was elected, net farm income was running at the rate of 15 billions per year. Today it is running at the rate of 10.5 billion per year and the Department estimates it may drop lower in 1956. That is the third milestone on the road to recovery. From these we may conclude that what Mr. Benson referred to as the right direction is not the direction that agriculture was traveling during the years of Democratic administration.

When I read these comments by the Secretary, I am reminded of a flier who flew the Atlantic Ocean but claimed that he really thought he was flying to the west coast. The press named him "Wrong Way Corrigan." Now I worry, because the Secretary said on December 15, 1954, "We are headed in the right direction at last." That talk of the right direction bothers me because what seems to be meat to him is poison to the American farmers.

Of course the recent blast by Republican Congressmen against the Secretary might have been brought on by the speech of Secretary Benson to the National Council of Farm Cooperatives only 2 weeks ago in which he proclaimed that there was, and I quote, "a new buoyancy in the market place—a new hope—a new vigor and zest." Right after he said it, all grain prices dropped. The zest was not in the bulls, it was in the bears. Every farmer knows the difference.

Someone urged me to see a new film called "I'll Cry Tomorrow," I could not, farmers are crying today.

Frankly, I do a little farming myself, and my experience helps me understand the protests from livestock producers. On the 14th of January 1955, I bought 208 calves that weighed 87,155 pounds and I paid $15,339.47 for them. I put them on rough pasture for a few months, then on irrigated permanent pasture, and then put them in a feed lot and fed them ensilage, chopped alfalfa and oats with a generous mixture of prepared supplement with stilbestrol. I sold them in the last 2 weeks. I had lost a few head by bloat in the rich pasture where I kept them all summer, but the 198 head that remained weighed 140,750 pounds. They brought me $19,669.88 in the market. By the time I took off commissions, feed enroute to the market, charges of the livestock meat board, trucking and a delivery charge, I netted about $17,000 for cattle that had cost me a year ago $15,339. When I then take out the cost of the supplement I find that I broke even so far as cash is concerned. I got nothing for my roughage, nothing for my pasture, nothing for my ensilage, nothing for my alfalfa, nothing for my oats, nothing for the services of the men who fed them. In fact, I could sing the song, "I Got Plenty of Nothing." My only comfort is that my wife and I have had the company of the cattle all year long.

But on January 16 an Associated Press dispatch tells that John Morrell & Co., packers, reported that their net income for the last fiscal year has risen from 64 cents a share in the previous year to $3.37 a share this past year. The packers did all right but I was not looking in that direction. The movie star may cry tomorrow, but the farmers are crying today.

Now to pass from the dismal farming scene to a happier, more buoyant portion of the national spectrum. I refer to that very hopeful, happy, optimistic note sounded by the Secretary of State who is now engaged in a heroic effort to rewrite history in his own image and likeness. We had four brinks in the same week, one of them was the solution to a robbery in Boston, and the other three were triumphs in diplomacy. I am not sure which was the most fascinating recital, but I know that I read with wonder and amazement how we had been brought three times to the verge of war without getting into the war. Whether that is or is not what Mr. Dulles calls "the necessary art," people were certain to be attracted to the frankness of the observations by the Secretary of State to this effect: "If you are scared to go to the brink, you are lost."

Now in addition to the diplomatic consequences there may have been political consequences all along the pathway to the brink. Let's take a look—brink by brink.

The first brink came in 1953 when Syngman Rhee ordered the release of thousands of Communist war prisoners. Let's accept the appraisal of his accomplishment by Mr. Dulles, although in the published record at the time I find no evidence whatever that an American ultimatum was delivered, hinted at, or even contemplated. Right now my question is: What took place thereafter on the American scene where the people I know do not believe that the closer you get to war the nearer you are to peace? I overlook the possibility that the Communists may find in a magazine article excellent material for their propaganda mill as I try to see what took place at home.

From the Democratic standpoint, the first brink in 1953 did us no damage. That fall the Democrats won 6 out of 7 congressional elections. Two of these districts we won for the first time in history—the victory of LESTER JOHNSON in the Ninth District of Wisconsin and of HARRISON WILLIAMS in the Sixth District of New Jersey.

Also, in the fall of 1953, the Democrats won a victory of enormous strategic importance by the election of able and attractive Robert B. Meyner to the Governorship of New Jersey, the first time a Democrat had been elected Governor in that State in 20 years. So the 1953 brink was not so bad for us Domocrats at the polls.

Many touching scenes are connected with these heroic and historical episodes. For example, there was the very sweet scene which followed the dramatic speech of the President as he took office. He announced to a cheering joint session of the Senate and House that he was unleashing Chiang Kai-shek and would no longer allow the Sixth Fleet to hold him bottled up in Formosa but would let him rain his savage blows upon the Communists on the mainland of China. See him today as the Generalissimo stands among the tea gardens in Formosa and says over and over to himself:

"How dear to my heart are the scenes on the mainland
Since Ike has unleashed me to battle the Reds.
But now that we're free to depart from Formosa,
We pull up the covers and sleep in our beds."

The second brink was Indochina in early 1954. I have no way of knowing whether Eden did or did not find himself able to bargain from Dulles' strength, as the magazine article claims. If our Secretary of State was so pleased by what he accomplished at Geneva, why did he pack his bags and come home in high dudgeon? But if I accept for the moment his claims of great accomplishment in the Indochina crisis of 1954, I wonder what happened at home after we passed the brink? How did it affect the Americans? And particularly, what did it do to the Democrats?

That fall, to put it briefly, we won 25 out of 38 Senate races. Our Democratic candidates for Congress got the highest percentage of popular votes that they had received since 1934—a period of 20 years. We won 500 seats in State legislatures from the Republicans and we lost only 5—a nice comfortable ratio of 100 to 1.

We won eight more governors and lost none. We won in Maine, Minnesota, and Pennsylvania for the first time in 20 years, in New York for the first time in 12 years. New York and Pennsylvania, by the way, have the greatest number of votes in our electoral college. As a westerner I am glad we won in Connecticut with able and popular Governor Abe Ribicoff, but I take more joy out of the fact that we redeemed part of the great Democratic desert that had been building up in the arid Southwest. We won back the governorships of Arizona, Colorado, and New Mexico. In these three, the desert now flourishes like the rose, and drought will never again invade our pleasant pastures. That brink wasn't too tough.

So I come to the third brink—Formosa Straits in 1955. The effects of this brink are not quite so stimulating to the Democrats because Democrats helped in the passage of a resolution which clarified the American position on Formosa and gave strength to the President in his position as our leader in foreign affairs. I do not regret that the Democrats displayed the true measure of a responsible party promptly upon taking over control of the Congress, but I point out that the brink itself did not disappoint our party. In California we elected the first Democratic State senator since 1912. In West Hartford we took control of the council for the first time in 100 years. In Michigan the Democrats won 5 out of 8 statewide contests, the first time they have had such success in a spring statewide election since 1933. In November, Indiana Democrats did a wonderful job in municipal elections, to the end that the Democrats now control the mayors' offices in 73 cities, whereas the partys' previous high record was 56 in 1930, just ahead of the Franklin Roosevelt landslide. So the third brink didn't hurt us.

Isn't there a nursery rhyme (if not, I'm sure there should be)—a nursery rhyme that goes like this:

"Every time he touched the brink
He plunged his party in the drink."

Now that we have joined the brink-of-the year club, no one knows where the 1956 salvation will take place. I can only predict that it will probably result in the same political disaster as have these past endeavors. We have won the cities after one of the brinks. We've won the legislatures after another brink. We won the governorships and control of the House and Senate after a third brink.

What can the fourth brink bring us except the Presidency itself, and to that task of winning the White House in 1956 I am sure the nationalities groups will steadfastly dedicate their endeavors from now until November.

Address by Hon. Abe Stark

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Abe Stark, president of the Council of the City of New York, at a dinner given in his honor by the Jewish National Fund at the Hotel St. George, Brooklyn, N. Y., on Sunday, January 29, 1956:

Mr. Chairman, distinguished guests, ladies and gentlemen, I am deeply moved by the warmth of your greeting, and even more gratified to learn that this is the largest and most successful dinner ever sponsored by the Brooklyn division of the Jewish National Fund.

To all of you go my congratulations of the success of this affair. And to each one of you, personally, may I express my sincerest appreciation for your kindness in selecting me as your guest of honor tonight.

My friends, the economic development of the State of Israel is the cornerstone of Israel's future. Land is of tremendous significance to a people without roots. And Israel's soil is an inspiration to the Jewish people who have a deep-seated longing for security in a world beset by tension, trouble, and unrest.

The programs of the Jewish National Fund, including land reclamation and soil improvement, have given birth to hundreds of villages which have arisen, as if by magic, in the midst of desert land. Surrounding many of these settlements are newly-planted forests which embrace Israel's frontiers in a cloak of security and protect its borders against foreign invasion.

As a result of this evening's dinner, I understand that 10,000 trees will be planted in Israel in honor of Mrs. Stark and myself. These trees will be in good company indeed, just as I am tonight. I hope that they will be planted alongside of those already dedicated in honor of Benjamin Browdy, Judge Albert Schanzer, the late Senator Robert F. Wagner, and his distinguished son, my dear friend and colleague, the mayor of New York.

But perhaps we will be planting much more than forest seeds alone. Perhaps these seeds can truly become the seeds of peace, prosperity and understanding in the Middle East. Perhaps we can grow trees whose branches will stretch across the Arab border, offering an open hand of friendship. Let this be the beginning of a new harvest of mutual prosperity for Jew and Arab alike, instead of a continuing nightmare of mutual distrust.

But though a longing for peace is uppermost in our minds, it must not be a peace purchased at any price. It must not be a peace which will destroy the political independence, the territorial integrity or the civil liberties of Israel's population and above all, it must be a peace without appeasement.

In the next few days, Britain's Prime Minister, Anthony Eden, will arrive in Washington to confer with Secretary of State Dulles on the future of the Middle East. In the course of these discussions, we must make absolutely certain that Israel does not become a second Munich. The American people have the right to expect, and a right to demand, a full public accounting of these negotiations in accordance with Woodrow Wilson's doctrine of "open covenants openly arrived at."

America today is living under a shadow of secrecy. We have been told by Mr. Dulles that foreign policy cannot be discussed this year. In the short space of one week, our Secretary of State has taken us from the brink of war to the brink of silence.

My friends, the brink of war was bad enough, but the brink of silence is even more intolerable.

Democracy was once threatened by the outmoded theory of the divine right of kings. Today democracy is threatened by the divine right of the diplomats. But ladies and gentlemen, neither kings nor diplomats are always right, and American foreign policy is not the private domain of any appointive official—not even the Secretary of State.

I firmly believe that National debate on international issues is essential to the American way of life. And I also believe that President Eisenhower should be asked, once and for all, to repudiate Secretary Dulles' attempt to stifle public discussion on the crisis in the Middle East.

Our country's foreign policy must be just as sound and just as sensible as the economic policy of the Jewish National Fund. The JNF is helping to lay the foundations for a permanent economic peace in the Middle East. It is the responsibility of those in government to meet the challenge of diplomacy—by guaranteeing a world whose goal will be peace and whose policy will be brotherhood for all of mankind.

Mr. Representative

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 7, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. Representative," which appeared in a recent issue of the Legion News of Punxsutawney, Pa. It deals with Representative LEON GAVIN, of Oil City.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. REPRESENTATIVE

A number of years ago our town was on the fortunate end of an act of Congress. Due to a shift of population the legislative sections of our area were redistricted. In the shuffle we were moved from the Cambria-Indiana County area and placed in with Venango, Clarion, Warren, and several other counties to the north. For this we have much cause to be thankful.

It would be useless to pretend that this transformation was accomplished in peace and harmony. Far from it. Petitions were signed, appeals were made and the crepe hangers had a field day predicting the dire and drastic results of such a revolutionary move. Our tycoons of the market place wailed and beat their chests. Our editorial giants screamed like ruptured ducks and our citizens resolved to die in their front yards defending their rights to mediocrity. All those who resist change simply because they are afraid cried to heaven for surcease and gloom settled over the Mahoning Valley.

Despite our laments, progress had its way and as we gradually cut our way through the mist of hysteria and stick-in-the-mud philosophers we made a startling discovery. It would seem that in His wisdom the Lord passed His blessings to us and taught us the lesson that progress is ever forward and never backward or stationary.

Our new Representative was LEON GAVIN, of Oil City. Before Mr. GAVIN was on the job many months it became apparent to the thinking element of our population that we never knew what representation in the Congress of the United States was. In the past we had become accustomed to lipservice representation in the Halls of Congress. We saw our Representative along about every election time when he called at our town and contacted a few of the local big wheels. If he represented the desires of any but a favored few it was news to most of the local voters. In fact we did not even know whether he attended any sessions of the Congress or not.

LEON H. GAVIN gave us, for the first time, a Representative in the Congress who was not only ready but anxious to use the power of his office for the welfare of his district. In him we have a Representative whom every citizen of Jefferson County can be proud to claim. He has worked long and energetically to promote the welfare of not only this county but all the other counties in his district. Punxsutawney has much to thank him for. Our flood-control program was secured mostly by his efforts during a time when his party voted on the minority side of the House. If this does not speak for his ability what possibly could?

Recently Congressman GAVIN has secured a Federal armory building for our city. In this project the opposition was considerable. Despites the obstacles Congressman GAVIN represented us very efficiently and left no stone unturned until he carried the project to a successful conclusion. Some of us who know of the difficulties that had to be overcome realize that many times during the negotiations Representative GAVIN could have dropped the matter and not one of us could have found cause to be critical, but he stood his ground and fought back when the going got the toughest.

That makes LEON GAVIN our kind of a man and it makes us exceedingly proud to have him represent us in the Congress of the United States. The Legion does not endorse candidates according to their political affinity, but the Legion would be remiss if it did not point out the accomplishments of our men in public office. LEON GAVIN served in France in World War I and is a member of the Oil City Post. Regardless of your personal political registration Representative GAVIN has given this section the kind of representation it did not know existed prior to his inherting our section.

We hope that Mr. GAVIN has many, many more years in the Congress of our country as our Representative. We are proud to say that we come from Mr. Representative's district.

Partners in Progress

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, February 7, 1956

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Partners in Progress," which appeared in the January 30, 1956, issue of the Salisbury Times, Salisbury, Md. This editorial is an excellent account of the progress of a small business, and is indicative of the healthy state of our free-enterprise economy. It describes in particular the growth of the Delmarva Peninsula.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PARTNERS IN PROGRESS

Today's Salisbury Times tells of the Delmarva Peninsula as we have seen it develop in the last few years. It tells of a history that should be recorded now, for it is a story of progress.

And yet all indications are that the progress over the last few years is merely the foundation for more spectacular growth, great population increase, and business and industrial development.

We at the Times had faith in the growth of the peninsula back in 1937 when the Times was purchased to become a part of Brush-Moore newspapers. That faith, expressed in dollars and cents, has been more than justified. This year the Times is spending several times its original purchase price in the construction and equipping of a new and modern newspaper plant to serve present and future needs.

CIRCULATION GROWTH IS CITED

In 1937 the Times had a circulation of less than 3,000, centered in Salisbury, a typical smalltown daily newspaper with a skeleton staff, a plant that had to work overtime to get out an 8- or 10-page paper, an 8-page press that would print approximately 2,400 papers an hour and no photographic or engraving facilities. It occupied only a part of its Main Street building.

In 18 years the Times outgrew its press, installed one with double capacity, outgrew that one, and is now printing with a tubular press that prints 20,000 papers an hour with a capacity of 24 pages. Each section of today's Times was printed separately and put together by hand.

As the Times grew it became one of a select 61 newspapers, out of 1,786 in the Nation, which have daily circulation larger than the population of the town in which it is printed.

The Times plant is outgrown, its Main Street building completely occupied and an adjoining building leased for newspaper purposes.

The 24-page press is outgrown, and its new press, in the new building, will be a high-speed metropolitan press of the type used by Baltimore, Washington, Philadelphia, and New York newspapers.

In the early days of 3,000 circulation newsprint consumption was 300 tons a year at $46 a ton, and an adequate supply of paper could be stored in the pressroom. Today consumption is 1,250 tons a year at $131 a ton and storage space is rented until the new building will provide adequate room to store as much as nine freight carloads of paper at a time.

COSTS MORE THAN PRICE RECEIVED

The Times now has a staff of 92 persons and each day's paper requires 696 man-hours to produce. Each copy of the Times, for which you pay 5 cents, actually costs 10.4 cents to publish and deliver.

Our circulation has spread out, first to saturation in Wicomico County and now into lower Delaware, the Eastern Shore of Virginia, and Worcester, Somerset, Dorchester, and Caroline Counties in Maryland. Our staff of 15 newsboys in Salisbury has grown to 152 in 57 Eastern Shore communities. Eight rural drivers fan out from Salisbury every afternoon, covering more than 100 miles each, making bundle drops for newsstands and newspaperboys throughout the lower peninsula, delivering more than 21,500 papers.

The Times has, as its circulation area has grown and the peninsula prospered, become one of Maryland's most accepted advertising mediums. Its advertising lineage has, for several years, exceeded that of every daily newspaper in the State with the exception of Baltimore City.

HAS OWN CORRESPONDENTS

Today the Times has its own correspondents throughout its circulation area, has its own photographers, it own darkroom facilities and makes it own newspaper cuts by electronics. Electronics have invaded the composing room, producing type automatically at formerly unheard of speeds.

The Times' new building gives room for growth. New equipment is on order.

As we look back to the days of 1937 we believe our faith in the future of our community was justified. As we pause to catch our breath, plan, build and occupy a new building this year, we are just as confident that those persons and businesses who, with us, believed in a prosperous and progressive peninsula are right in believing that our real future is ahead of us.

The Delmarva Peninsula is a land of progress, and to Delmarva and its progressive businesses this progress edition is dedicated. We at the Times are happy to have had a part in Delmarva's progress.

Speech by Grand Commissioner of Education George W. Lee to the Improved Benevolent Protective Order of Elks of the World at Independence Hall, Philadelphia, Pa., January 28, 1956

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. REECE of Tennessee. Mr. Speaker, Lt. George W. Lee, grand commissioner of education of the Improved Benevolent Protective Order of Elks of the World, made an address at the citizenship dinner at Philadelphia, January 28, 1956, which holds national interest, and I am pleased to present it for the RECORD, that it may be more widely read.

The educational department of the Improved Benevolent Protective Order of Elks of the World, under the commissionership of Lieutenant Lee, sponsored last year, as it does each year, the awarding of some 50 Elks scholarships to students to go into the various colleges and universities of the United States. These scholarships are awarded on a competitive basis. They are making possible educational opportunities to these students which would not otherwise be open to them.

Lieutenant Lee and the grand exalted ruler, Robert H. Johnson, and the other officials deserve high commendation for the fine service which is being rendered.

The address follows:

Grand exalted ruler, grand daughter ruler, officers and members of the grand lodge, we have gathered here in this historic Hall of Independence to celebrate the rebirth of a new freedom. History changing from year

to year is being made so swiftly by our unhampered progress in the field of chemistry and technology that its stirring drama dims the whole story of the distant past and sometimes we almost forget the great events and the great men of our own American story. A story of tragic grandeur and impassioned beauty, but the world would be poor indeed if it failed to recognize among its great ones, heroes without laurels and conquerors without the jubilation of conquest. Even now with our democracy being challenged by communism all over the world for the rebirth of a new freedom and our Supreme Court coming forward with an act which might to the nonwhite world indicate that America is now determined to give up race prejudice as a motive for action; we must not forget that this is only another chapter in the book which our Founding Fathers began nearly two centuries ago.

Our fathers made one chapter come true at Appomatox when our Nation shivered amid fierce civil strife. Back there in the dim and distant past they stood like druids of old symbolizing a great faith in God and man. Even Valley Forge could not put out the light of their hope and faith that all men wanted to be free and would struggle against odds to attain that freedom which is the aim of man, the hope of the ages, the dream of the prophets. Long ago men had lit torches for the hills of freedom and kept them burning despite the efforts of dictators who sought to quench every spark in rivers of blood. A torch was lit by Moses when he led his people out of bondage. One was lit by Jesus of Nazareth when He cried out in the shadow of the cross, "I have overcome the world." Pericles lit one when he threw open the city of Athens to the world.

Jefferson and Franklin lit one when Jefferson wrote the Declaration of Independence, the only commentation of the Sermon on the Mount, and Franklin with the Constitution shaped a Nation into the proudest story of time. While the voice of the Liberty Bell proclaimed the dawn or a new era in human history. Lincoln lit one to illuminate the meeting ground of oppressed people in his Emancipation Proclamation which loosed freedom from the ugly grasp of night.

Eisenhower lit one when he made Washington a free city for all men. Like Jesus driving the money changers from the temple, he drove out discrimination from Washington hotels and restuarants and opened parks, playgrounds, golf courses, and theaters to all; integrated schools, forced bus and streetcar companies to have competent men regardless of color. In his state of the Union message he created an atmosphere in which a man is to be judged by what he is, rather than by his color or religion.

Many governments have risen and declined since the days of the Cross, the days of Athens, the days of Bunker Hill, and the days of Appomatox. But men armed with faith and hope have met the tyrants of the earth and refused for any length of time to be starved or tortured to death, but with bloody and unbowed heads have marched on through the corridors of the centuries carrying that torch nearer to the goals of the Founding Fathers. The torch of freedom flickered and almost died when Greece, the center of a free world, menaced by a world in chains failed and fell. It almost died again when the glory that was Rome's crumbled to dust; and still again in England sustained by minds as great as the world ever knew, yet refused to reverse its political policy on colonialism until it was too late. Only in America could Thomas Jefferson, Benjamin Franklin, and James Madison, authors of the Constitution, light the torch of freedom so brightly that it would never again go out.

All of us feel proud when we think of the contribution men of color have made along with others to make America the only free country that the world ever knew. We do not need to recall that when Von Steuben, a Prussian, was the drillmaster of Washington's army 200 men of color were guarding his tent and leaving their footprints of blood upon the snows of Valley Forge. While DeGrass, the French Admiral was bottling up Cornwallis at Yorktown, Peter Salem, a soldier of color was stopping Pitcairn at Bunker Hill. At Bunker Hill the enemy General Pitcairn, flashing the sword of his king cried to his advancing, "Onward, the day is ours." From the ranks, thin, weary and bleeding stepped Peter Salem. "It is not the day, sir, but the deed that counts," he said, and in a moment Pitcairn lay dead at his feet. Years later Daniel Webster said at Bunker Hill, "I stand near the spot where the blade of Salem flashed against the sun of victory."

While Thomas Jefferson the Virginian was completing the Declaration of Independence, Alexander Hamilton a man of color who came from the Virgin Islands at the age of 19 was creating the monetary system of our country. While Carl Miller, the Swedish sculptor, was dreaming of the foundation of our modern museum of art, Benjamin Bannacker, a man of color, was laying out plans for the construction of our Nation's Capitol. President Jefferson had been souly disturbed about the plans for laying out the Capitol. They had been entrusted to a French architect who in a huff had returned to is native land. It was then that Benjamin Franklin lifted Bannacker to the notice of Jefferson. Washington today is but the revelation of a stirring picture of what Franklin saw deep beneath the surface of the abject black man.

The American of color makes no boast, he enters no controversy with fellow natives, pleads no favors in the task, asks no special role, and yet he alone is native to American freedom. He and only he can say that around his fortunes, over his hopes, and amid his anxious tears gathered the great minds and souls of this Nation; he can say that around him broke the storm which shook heaven and earth and all but dismembered the Nation. He listens without alarm to the bruising words and unkind speech of angry orators of 44 southern organizations who would defy the Supreme Court mandate on integration and thus change the structure of American government. He remains unshakable in his faith that Eisenhower will move boldly in the glorious traditional path blazed by Lincoln.

The wand of destiny still moves above his onward march through a hundred years of freedom in which he has captured the attention of art, and music has entrusted her charm to his joyous care. His magic genius has opened the closed door, his achievements under the Stars and Stripes whether in lowly walks or amid the choicer realms of conquest engage the wonder of civilized man. He has yet to produce a Rosenberg, a Gold, a Greenglass, a Burgess, a Meredith, or Hiss. Though covered with a mantle of abuse such as no other race of modern times, he has cried out to his traducers, "Though you slay me, yet I trust you."

Now we are engaged in a great social war to prove that the State cannot evade or defy a clear mandate of the Supreme Court, a war to save the American Constitution and extend first-class citizenship to all. But the Constitution, as great as it is, cannot of itself create satisfactory relations between human beings, between North and South, East and West. If it could we would have no incentive to be here today. Only when the Constitution is rewritten in the heart of every American can it become a living reality for all Americans. This is the big, unfinished job which confronts us today. We hold with Bishop William T. Watkins when he says, "We can extend wholesome and healing influence in these days when some very good and sincere men are genuinely distressed. We are essentially conservative, especially in the South, but conservatism alone is like a spinister with noble ancestors but no descendants." Conservatism did not discover America or write the Constitution. The history of this country is a series of reforms.

Every day we read about the gathering storm of revolution of some section of our Southland against the Constitution and against race and religion. Teaching Americans how race prejudice can prevent men from uniting for a common cause, how it could set them fighting among themselves especially in America where people are drawn from all corners of the earth and where unity depends on equality in a nation whose essential life and vitality springs from the belief that men of the most diverse religions, colors and creeds can be Americans all, is a part of our unfinished job.

Not long ago we read about the children in Maryland and Delaware rioting against desegregation in the local schools. Teaching the parents how to give emotional security and comfort to their children when they encounter these new situations through good manners, good conduct, self-confidence, and self-pride is also a part of our unfinished job. Not since the days of Lincoln and Douglass has the prospects of a State defying the Constitution loomed so large. Teaching Americans that America must solve the problem of two groups who do not resemble each other in face and feature in order to carry out the dream of the Founding Fathers is another part of the unfinished job.

There are some 800 million people in the world who are not committed in the struggle between communism and democracy. America can win these people only by proving that Christianity is working. I believe we have arrived at the point where we must determine through interracial discussions at the grass roots what can be done to give direction to the Christian aspect of our American patriotism which makes it clear that it is our duty to share with others those things we cherish for ourselves.

These are the unfinished parts of the job that the department of education and other departments of the Improved Benevolent Protective Order of Elks of the World along with other groups are tackling. All of us are moved by a deep love of America. We are called upon to complete that job on our domestic scene in order that we might carry the torch of freedom and democracy to light up the pathway of oppressed people everywhere and thus fulfill the dream of the Founding Fathers, a dream of freedom and brotherhood of man, dedicated to life, liberty and the pursuit of happiness. We pray that with God's help it shall come to pass.

Dr. Jonas E. Salk

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. DAVIDSON. Mr. Speaker, on January 26, 1956, I was privileged to participate in the ceremonies attendant to the presentation to Dr. Jonas E. Salk of a gold medal on behalf of the Congress of the United States. The medal was presented by the Honorable Marion B. Folsom, Secretary of the Department of the Department of Health, Education, and Welfare.

As the one who introduced the resolution authorizing this unique recognition for Dr. Salk, I was invited by Mr. Folsom to say a few words. What I said at that time is of no particular importance. I attempted merely, on behalf of the Congress, to pay tribute to a great scientist who had made an outstanding contribution to the welfare of humanity. What is important is what was said by Jonas E. Salk. His remarks reveal a spirit of dedication, a modest and selfless scientific approach to the problems of mankind which I believe warrant perpetuation.

I therefore respectfully submit the remarks of this great man for insertion in the Appendix of the RECORD.

REMARKS BY JONAS E. SALK ON PRESENTATION OF CONGRESSIONAL MEDAL

It is difficult to separate one from among the many feelings and thoughts that arise on this occasion, and it is difficult for me to acknowledge merely, in the brief manner that may be customary, what has transpired. I hope you will bear with me if I depart from convention and share with you some thoughts that came while thinking about this occasion.

Imagine a tall campanile, or bell tower, that had been in the process of being built for a long time—one that was needed and wanted by the people, to be used to call them to defend their city and themselves against attack. For years they contributed so that they might some day have what they wanted. And they gave still more; they gave of their time and effort, and they made personal sacrifice to build this bell tower, and to build it in a way that would be useful and would last. It had to be built soon and soundly because the attackers from without were getting stronger at each assault.

The tower was ready and was tested. When the bell rope was pulled the bell rang clear, and the people rejoiced. But this moment was long in coming; there had been differences of opinion on how it could be built, how it could be made to work, how it could be finished. It could have been a Tower of Babel, but it was not. This was not chance alone—there were the leaders who recognized the need, the solution, and the means for its implementation. And so, in togetherness the tower was built.

There was rejoicing, and the giving of accolades. The pleasure and satisfaction of near-completion could not be distinguished from the relief that came from the joyful dismissal of feelings of fear of an ever-present and impending danger.

It was not, however, the rejoicing and the giving of accolades that provided the incentive that moved each to contribute—it was not for glory, but for use, that each gave what he could. When one useful contribution was placed carefully upon another, it was soon discovered that the whole was greater than the sum of the parts. When the whole was together, the feelings of gratitude of each man for his neighbor, for what each contributed for all and for each, was showered upon but one—and he was from among the last of the many whose contributions were made near to the end. But they knew that the end could not have come without the beginning, and without all that transpired between the beginning and the end.

They wanted to do more; they wanted to build bastions, walls, and towers against other fears that plagued them. They had learned a new way and they became impatient. They were intoxicated by a concoction of fears, dreams, desires, and the fire of hope. In sobriety they remembered that Rome was not built in a day; but they remembered, also, that their bell tower might not have been, for a long time to come, were it not for those who wanted to have it built, and who gave moral and material support; and, were it not for mortar, and brick, and iron, and for those who labored.

There were some who heard the sound of the bells and who contemplated the significance of occasions of celebration of the near-completion of the tower. They were concerned and they hoped wisely that the comfort of its existence would not become the complacency of its presence.

And so—on an occasion such as this, when one reflects upon the passing of time and of events and of distinctions made among men—we realize the role of chance in time and in place and in the opportunities that we encounter. But, where there is freedom of opportunity, there then is choice of what to do, what to take, and what to give in return. For myself, and I will speak, too, for those whose contributions came before, but whose lot it was not to become a symbol for honor, I feel that the greatest reward for doing is the opportunity to do more.

To the President, to you, Mr. Secretary, to the Members of Congress, and to the people of our country, my response to the many warm sentiments that have been shared with me will be better expressed in my efforts to contribute what I can to enhance the health and happiness of people throughout the world.

Mr. Speaker, these simple words were the expressions of Dr. Jonas E. Salk, a man who wants nothing for himself but the opportunity to serve his fellowman. I am sure that the mothers, the fathers, and the children of America will agree that Dr. Jonas E. Salk has served us well.

Comparison of School Construction Financing

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, because of the paramount interest in legislation dealing with Federal aid to school construction, I am submitting figures showing a comparison between H. R. 7535, the Kelley bill, and S. 2905, the administration bill.

Under the provisions of H. R. 7535, the requirements are that matching funds should be on a 50–50 basis over a 4-year period. Four hundred million dollars for 4 years amounts to $1,600,000,000. The column on the left shows what each State would receive from the Federal Government for a period of 4 years.

Under the provisions of S. 2905, the requirements are that $250 million be allotted annually, but on a different formula and for a period of 5 years. Two hundred and fifty million dollars for 5 years amounts to $1,250,000,000. The column on the right shows what each State would receive from the Federal Government for a period of 5 years.

Consequently, S. 2905 penalizes the wealthier States.

	H. R. 7535 [1]	S. 2905 [2]
Alabama	$37,591,776	$44,205,000
Arizona	10,256,416	9,595,000
Arkansas	22,907,488	26,610,000
California	105,817,232	50,195,000
Colorado	13,973,760	11,025,000
Connecticut	19,292,896	7,585,000
Delaware	3,208,320	1,430,000
Florida	31,356,608	25,050,000
Georgia	41,748,560	44,730,000
Idaho	7,003,280	7,025,000
Illinois	81,102,448	42,285,500
Indiana	36,709,360	24,050,000
Iowa	25,844,352	23,070,000
Kansas	19,247,712	15,070,000
Kentucky	33,660,912	34,500,000
Louisiana	32,937,984	34,995,000
Maine	9,397,952	7,165,000
Maryland	24,568,880	17,040,000
Massachusetts	43,058,848	25,740,000

A Memorandum From the Kentucky Distillers' Association

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION, JR.
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. ROBSION. Mr. Speaker, we in Kentucky are greatly concerned over present inequitable trade agreements which permit millions of dollars worth of whisky being imported into this country from the United Kingdom while limiting our exports of the same product to that area to a negligible amount. I would like to submit for the consideration of this House a very informative statement on the subject by Hon. Millard Cox, counsel for the Kentucky Distillers' Association, as made to the Interdepartmental Committee on Trade Agreements and the Committee for Reciprocity Information, as follows:

The members of Kentucky Distillers' Association, comprising 17 operating companies, are manufacturers of premium quality American whiskies. They have been in continuous operation since the repeal of na-

tional prohibition except for the 4-year period during World War II when their facilities were devoted to production of alcohol for war purposes.

The repeal of national prohibition (December 5, 1933) opened up a vast American market for alcoholic beverages of all kinds. The supply of whisky of American origin was wholly insufficient to meet consumer demands; and since the manufacturing process for most whisky involves several years' storage before it is regarded ready for bottling and consumption, our Government undertook to help supply the demand by opening up the American market to imports from Canada and the United Kingdom.

This was done through the machinery of the original Trade Agreements Act of 1934. Acting under the authority of the act, the President of the United States, on November 15, 1935, signed a trade agreement with Canada, under the terms of which the then existing import duty of $5 per proof gallon on whisky was reduced to $2.50 with respect to whisky which had been aged in wooden containers for 4 years or more.

On November 18, 1935, the State Department announced that a trade agreement with Canada had been negotiated and in doing so gave the following reason for including whiskey in the list of products on which the 50-percent maximum reduction in import duty was granted:

"During the period of prohibition in the United States large quantities of whisky of American type (rye and bourbon) were manufactured in Canada. With the end of the prohibition period, Canadian distillers were left with great stocks of American type whisky for which Canada afforded only a small market. The shortage of properly aged whisky in the United States since the repeal of the prohibition amendment has created a demand for this Canadian supply. The 50-percent reduction in the heretofore high duty of $5 per gallon applies also to Scotch, Irish, and all other whisky aged 4 years or more in wood."

Regardless of the validity of the original reason for including whisky as an item for import concessions under the first Trade Agreements Treaty, it was not long before the situation in the United States was vastly changed due to revival of legitimate distillery operations.

By 1939 there were ample supplies of aged domestic whiskies available, and there have been ever since. Nevertheless, whisky has been included as an item of import concession in each renewal of the trade agreement with Canada and the United Kingdom.

On January 1, 1948, the duty was again cut in half, reducing it to $1.50 per gallon; and on June 6, 1951, a further reduction to $1.25 was made with respect to all distilled spirits except Scotch and Irish whisky which still take the $1.50 rate.

Under the Trade Agreements Extension Act of 1955, authority is delegated to the President to reduce present rates of duty by as much as 15 percent over a 3-year period. The notice of your honorable committees lists whisky as one of the imported articles (schedule 8, par. 802, p. 42) on which the United States may offer import concessions in forthcoming trade-agreement negotiations; so that a further reduction in the duty on this product is in prospect.

IMPORTANCE OF THE INDUSTRY IN THE DOMESTIC ECONOMY

The alcoholic beverage industry is a tremendously important factor in the economy of our country. Starting from scratch, so to speak, just 22 years ago, it employs about 1,200,000 persons at all levels, or 1 out of every 60 adults. Its payrolls exceed $3 billion; it uses the products of more than 400 other domestic industries; and pays to United States farmers for the purchase of their grains the annual sum of about $260 million.

Tax levies on alcoholic beverages constitute the largest single source of tax revenue to our Federal Government with the exception of personal and corporate income taxes. Each year our industry supplies Federal, State, and local governments with more than $3,500,000,000 in tax revenues.

OUR INDUSTRY'S ECONOMIC CONDITION

If for no other reason than that of the revenue which it produces, our Government should be vitally interested in the economic health of the American distilling industry, which at present is far from good.

The industry's domestic market is a contracting one due almost entirely to the effect of the exorbitant rate of the Federal excise tax. From a prewar rate of $3 per gallon, the levy has been successfully raised since 1941 until today it is $10.50. The Revenue Act of 1944 which increased the rate from $6 to $9 per proof gallon carried a provision under which the tax was to revert to $6 6 months after the cessation of hostilities. The fiscal condition of the Treasury and subsequent world events not only prompted Congress to continue indefinitely the $9 rate, but to increase it to $10.50.

As a result of this high excise tax, distilled spirits consumption in the United States is less today than it was in 1942. Witness the figures:

Apparent consumption in 1942, 190,248,257 wine gallons; apparent consumption in 1954, 189,470,688 wine gallons; decrease, 777,569.

The consumption of distilled spirits in the United States decreased over three-quarters of a million gallons during this 12-year period, although during the same period there was a population increase of approximately twenty-eight million. There appears to be only one answer: distilled spirits are priced so high, because of the tax situation, that they have been effectively put beyond the reach of the pocketbooks of many people in the middle- and lower-income groups even though the country's income is at an all time high.

While the present total consumption of distilled spirits is less than it was in 1942, it becomes interesting to note the amazing progress which imported distilled spirits have made during the same period.

THE INCREASE IN IMPORTS

Imports of distilled spirits have more than doubled during this period.

United States imports of distilled spirits for consumption in 1942, 10,804,639 gallons; in 1954, 22,127,106 gallons.

Thus we see that during this 12-year period, two forces have been at work, to the detriment of the American distiller. The exorbitant rate of excise taxation has materially reduced consumption; and a considerable portion of what was the domestic market has been captured by whiskies of foreign origin, the importation of which has become increasingly easy under our liberal laws and regulations and successive tariff reductions.

We know of no country in the world, with whom we have trade treaties, whose alcoholic beverages do not come into the United States in free and open competition with our own domestic products on an equal basis, with the exception of slight and almost insignificant tariff differentials. We have no governmentally erected trade barriers against these products of foreign origin.

NEED FOR EXPANDED MARKETS

Finding itself saddled with the exorbitant excise tax which is strangling its domestic markets, our industry is nevertheless prepared to help fight its way out of its difficult position if we can get Government aid in developing expanded markets abroad. It is a job, however, which our industry is powerless to do alone, because when we seek export markets for American whiskies we are constantly met at foreign ports of entry by governmental trade barriers in the form of high duties, exchange controls, import licenses, quotas, and other restrictions which have the practical effect of completely excluding our American goods. If the products of all other countries were similarly treated we would have no just cause for complaint. But such is not the case. Products of some other countries enjoy import privileges to the exclusion of American merchandise. All that American distillers ask is an opportunity to compete in foreign markets on an even and nondiscriminatory basis.

Whenever negotiations have been announced for the making or renewal of a treaty under the authority of the Trade Agreements Act, we have called the attention of our government representatives to the discriminations which exist against our exports. Briefs have been filed by our industry urging that trade barriers be removed, nevertheless they still exist, and although we have had ample evidence that our products have a definite appeal to peoples of many lands, not only they, but even our own citizens are denied the pleasure of enjoying American whiskies while traveling abroad.

According to recently available statistics, American tourists abroad spend approximately $1 billion a year. About one-third of this amount is spent in Europe and the Mediterranean area.

BRITISH TOKEN IMPORT PLAN

One of the principal beneficiaries of the American tourist trade is the United Kingdom. But in Great Britain it is all but impossible for the touring American to obtain the whiskey of his own country.

The trade barrier in the United Kingdom is a regulation of the Board of Trade known as the British Token Import Plan. Under its provisions, importations of American whiskies into the United Kingdom are limited to a percentage of the imports during the base period of 1936–38. During those years American distillers had little or no goods for exportation. Repeal had so recently come about that they did not have sufficient aged whiskies to supply the domestic market, much less any for export. As a consequence, the total exports today of American whiskies into the United Kingdom is limited to about $1,500 worth a year. For all intents and purposes therefore, the United Kingdom may be said to exclude entirely, whiskies of American origin. The same is true in greater or lesser degree in many of the other countries with which trade agreement negotiations are pending.

When contrasted with the importations of Scotch whisky into the United States, and the freedom with which the traveling Englishman may buy his native drink here, the discrimination being practiced against our industry and particularly against Americans touring in Great Britain is a considerable one and calls for correction.

We have recently made direct requests through British governmental sources for permission to send into the United Kingdom reasonable quantities of American whiskies so as to make them available to American tourists in the hotels and restaurants.

For the information of your honorable committees we quote below excerpts from an Associated Press dispatch of August 26 of this year taking notice of the situation:

"LONDON, August 26.—American bourbon whisky may soon be available in increased quantities to the Scots, English, and Welsh.

"The Board of Trade said today it was considering a three-cornered request to allow more American whisky to enter Britain.

"Behind the move are: the British Travel and Holiday Association, the Scotch Whisky Association and the Kentucky Distillers' Association.

"Only a token quantity of American whisky now enters Britain because of Board of Trade restrictions. Bourbon is allowed in at a rate of about $1,500 worth a year, a board spokesman said.

"Scotch whiskey producers sell about 21 million pounds ($58,800,000) worth of their produce in the United States.

"A spokesman for the Scotch whisky producers said:

" 'We are anxious to help the American producers. They often help us.'

"British newspapers reported that should the appeal to the Board of Trade for more bourbon be turned down American distillers may seek to curb the import of Scotch in the United States. Scotch is one of the country's best dollar earners.

" 'This is a request,' said The Evening Standard, 'that the Board of Trade should agree to without delay.' "

This report encourages us to believe that we may be making some headway, but the complete attainment of our objective will also require vigorous help from our Government, which we earnestly solicit through the medium of your honorable committees.

Reforms in the Electoral College

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 7, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a series of articles by Mr. Charles Lucey, of the Scripps-Howard newspapers, and also an editorial appearing in the Memphis Press-Scimitar January 31, 1956, dealing with the need for changing the electoral college system of choosing the President.

Mr. Edward J. Meeman, editor of the Memphis Press-Scimitar, is a farsighted, thoughtful editor, and I think that what he has to say about the possibility of a compromise between the Daniel-Kefauver plan and the Mundt-Coudert plan deserves the thoughtful consideration of Members of the Senate.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of January 23, 1956]

CONGRESS TO DEBATE NEEDED CHANGE—ELECTORAL COLLEGE SYSTEM THWARTS WILL OF AMERICAN VOTERS

(By Charles Lucey)

Congress will begin debate soon on proposals for a basic change in the most important step in the American political process, the election of a President.

The object of reform is the electoral college system which each 4 years gobbles up millions of votes cast nationwide for the Presidency and translates them into electoral votes.

Political sages have brooded 150 years about this. The electoral college is only a rubber stamp; in fact, it elects no one and it is too decrepit to be collegiate. Its usefulness ended even before there were torchlight parades and hard-cider campaigns.

Change is needed because the present electoral college machinery does not reflect the people's will accurately.

It thwarts that will.

It actually disfranchises millions, and in effect counts their votes not for the man they voted for but for the man they opposed.

Proposals before Congress now would amend the Constitution so the antiquated system of electing a President can be revised to make democracy work better.

GOAL

Simply, the goal is to end the unit rule or winner-take-all system of apportioning each State's electoral vote and to divide the electoral vote among candidates more nearly according to their popular vote.

If the American people knew the basic unfairness of the outmoded electoral-college system—if they knew that in effect millions lose the vote they cast for the Presidency—they almost certainly would do something about it.

Political students long have seen and acknowledged the existing flaws. But because the system is so complex—hard to understand and explain—the popular sentiment necessary to reform has been difficult to generate.

Only 50 to 60 percent of the total popular vote for President ordinarily has real effect.

In 1952 Dwight Eisenhower received 34 million votes and Adlai Stevenson 27,300,000. Mr. Eisenhower had 55 percent; Mr. Stevenson, 44.4 percent. Yet Mr. Stevenson got only 89 electoral votes to Mr. Eisenhower's 442.

Only 3,200,000 Stevenson votes were effective—less than 12 percent—in winning electoral votes for him.

In 1948 Harry Truman's nearly 3 million votes in New York counted for Thomas E. Dewey, who got the State's total 45 electoral votes. But in Illinois nearly 2 million Dewey votes went into the electoral vote for Mr. Truman.

FOUR PROPOSALS

Today four different proposals are before Congress to change this electoral system. The Senate leadership is ready to bring the issue to the floor if proponents can work out a compromise with a fair chance of acceptance. To amend the Constitution takes a two-thirds vote in both Senate and House, then a ratification by 36 of the 48 State legislatures.

None of the proposals would affect this year's presidential election.

To understand the need for reform, it is important to trace the development of the electoral college.

When the Founding Fathers wrote the Constitution they scarcely thought in terms of today's brand of democracy. There was limited faith in the ordinary citizen's ability to vote wisely. Constitutional convention delegates were chary of giving one and all a shot at the ballot box.

"It were as natural," said Virginia's George Mason, "to refer the choice of a proper character for chief magistrate to the people as it would be to refer a trial of colors to a blind man."

Popular election proposals got nowhere. The convention voted first to give Congress power to choose the President—and then changed its mind. But there was insistence on interposing some kind of election mechanism between the masses and the President. The final choice was to let States choose as electors well-informed men who in turn would choose a President.

The States could do this as they wished. Legislatures could name electors or they could be chosen by districts or on statewide tickets standing in block for one party or one candidate—the method used today.

It didn't take long for State political leaders to see they'd have more influence nationally if they could wield a whole State block of electoral votes than if the votes were split among candidates. Out of this grew today's winner-take-all system by which the candidate who gets the most votes in the State—by no matter how thin a margin—takes the State's total electoral vote.

There is a wide field for mischief in this museum piece. Electors actually could ignore the vote in their States and go their own way—and in a close election with the pressures great they might do just that. In 1948 a Tennessee elector ran on both Democratic and States Rights slates, then cast his vote for States Righter Strom Thurmon instead of Harry Truman despite the fact the State went for Mr. Truman.

It wasn't important—but conceivably it could happen when it would be important.

The idea of a presidential elector exercising independent judgment perished long ago. They're automatons now, hardly doing more than cluttering up the ballot in many States. But there's another hazard in this, too.

JUST SUPPOSE

What would happen, political students ask, if a man elected President in November died before taking office in January? Independently minded men might choose a President wisely, but what of today's obscure electoral college?

Remote, maybe, yet possible—and capable of chaos. Horace Greeley, who happened to be defeated by Ulysses S. Grant in 1872, died soon after the election. Suppose General Grant had died—or that Mr. Greeley had been the victor? It could have meant vast confusion—and while this has not often happened, the risk recurs with each presidential election.

Not one knows how many million Americans stay home and don't bother to vote each four years because of the winner-take-all system. Mr. Eisenhower's unusual personal appeal drummed up a fair vote in the South in 1952, but ordinarily Republicans there haven't turned out because they knew their States would go Democratic and their own vote would be lost.

If a State's electoral vote were split this would not be true. There would be greater incentive for Democrats to vote, also, if real competition came into Southern elections.

[From the Washington Daily News of January 24, 1956]

A BETTER WAY TO ELECT A PRESIDENT—CONGRESS HAS PLANS TO CHANGE OUTDATED ELECTORAL COLLEGE

(By Charles Lucey)

For 150 years political authorities have believed the United States should find a better way to elect its President and today a new ferment stirs in Congress to do something about it.
